International GAAP[®] 2026

Generally accepted practice for IFRS accounting
and IFRS sustainability disclosures

About this book

2026 Edition

The 2026 edition of *International GAAP*® has been revised to provide expanded guidance by:

- Updating the chapter discussing the requirements of IFRS 18 *Presentation and Disclosure in Financial Statements*, that will replace IAS 1 *Presentation of Financial Statements* for periods beginning on or after 1 January 2027, with new illustrations as well as frequently asked questions covering a range of issues relating to aspects of the new requirements in IFRS 18.
- Addressing the amendments to IFRS 9 *Financial Instruments* and IFRS 7 *Financial Instruments: Disclosures on Classification and Measurement of Financial Instruments*, including changes to derecognition requirements for financial liabilities settled through electronic payment systems and new classification and measurements requirements for certain contracts referencing nature-dependent electricity.
- Updating the chapters on IFRS sustainability disclosure standards (or ISSB standards) by incorporating the additional guidance provided to support the implementation of ISSB standards through the ISSB's educational material.
- Discussing the new agenda decisions issued by the IFRS Interpretations Committee and the narrow scope amendments proposed by the IASB since the preparation of the 2025 edition.
- Addressing the amendments to IFRS accounting standards and the potential consequential changes to accounting requirements, as well as the many other initiatives that are currently being discussed by the IASB and the ISSB.
- Providing further insight on the many issues relating to the practical application of IFRS accounting standards and IFRS sustainability disclosure standards, based on the extensive experience of the book's authors in dealing with current issues.

The book is published in 54 chapters along with a Supplement on IBOR Reform.

Preface

The International Accounting Standards Board (IASB) which is responsible for the IFRS accounting standards reported in 2025 that 148 of the 169 jurisdictions they had researched require the use of IFRS accounting standards for all or most domestic publicly accountable entities (listed companies and financial institutions) in their capital markets, and a further 11 jurisdictions permit the use of IFRS accounting standards.¹

Over the past five years, the IFRS Foundation has undergone significant changes to expand its remit and support two Boards at different stages of development. Additionally, it has integrated staff and intellectual property from various organisations and moved to a multi-location model. In June 2025, Erkki Liikanen, Chair of the IFRS Foundation Trustees, noted at the first day of the IFRS Foundation Conference, that following these rapid changes "...the Trustees undertook an organisation review. That review has resulted in a two-year transformation programme to build a stronger, more focused and more resilient Foundation that is fit for the future and appropriately resourced to meet its public-interest mission."² The programme comprises four phases, which include: a reorganisation and streamlining of operations, cost reduction and reduction in sizes of the Boards, steps to increase revenues, and a refresh of the IFRS Foundation's mid-to-long term strategy. We believe that by reconsidering the strategy, the Trustees have the opportunity to put the IFRS Foundation on a more robust footing and set its direction for the coming decades.

In the past few years, the International Sustainability Standards Board (ISSB) has taken significant steps towards meeting the needs of global capital markets for a comprehensive global baseline of sustainability disclosure requirements. Emmanuel Faber (Chair of the ISSB) noted in a recent speech that "Our responsibility in the next several years will now be to support the jurisdictions, the investors, the companies and the assurance profession to ensure that the language of ISSB Standards is properly used. And that it finally can be decision-useful and enable capital allocation decisions by the capital markets, who will make better decisions with that language."³ To support practitioners with this, International GAAP covers the ISSB sustainability disclosure standards in two separate chapters on the general requirements of IFRS S1 and climate-related disclosures of IFRS S2.

New IFRS accounting standards

In the past year, the IASB finalised its maintenance projects on contracts referencing nature-dependent electricity and amendments to IFRS 19. In addition, the IFRS Interpretations Committee published agenda decisions on classification of cash flows related to variation margin calls on 'collateralised-to-market' contracts, recognition of intangible assets resulting from climate-related expenditure, guarantees issued on obligations of other entities, recognition of revenue from tuition fees, and assessing indicators of hyperinflationary economies. Also, the IFRS Foundation published a revised practice statement on management commentary and updated educational material to support the consistent application of IFRS accounting standards related to going concern assessments. While limited in scope, the amendments, agenda decisions and

1 [Media release](#): *Who uses IFRS Accounting Standards?*, May 2025. Available on the IFRS Foundation website.

2 [Speech](#): *Taking stock and building for the future*, by Erkki Liikanen, 23 June 2025. Available on the IFRS Foundation's website.

3 [Speech](#): *Emmanuel Faber's speech at the 2025 Beijing International Sustainability Conference*, by Emmanuel Faber, 4 July 2025. Available on the IFRS Foundation's website.

educational materials provide nonetheless welcome clarifications that ensure consistent application of IFRS accounting standards.

IFRS 18 *Presentation and Disclosure in Financial Statements*, which was issued last year, is aimed at improving comparability and transparency of communication in financial statements and requires an entity to classify all income and expenses within its statement of profit or loss into one of five categories: operating; investing; financing; income taxes; and discontinued operations. It also requires disclosure of management-defined performance measures and includes new requirements for aggregation and disaggregation of financial information based on the identified 'roles' of the primary financial statements and the notes. The chapter on IFRS 18 in this edition of *International GAAP®* has been significantly expanded to include frequently asked questions and additional interpretations.

Current work plan

The IASB is currently working on the projects in its work plan for the period from 2022 until 2026, which can be divided into four elements: standard-setting, research, application questions, and maintenance.

A new standard resulting from the project on rate-regulated activities, which affects a more limited group of preparers, is now expected to be published in the first half 2026. The remaining standard-setting projects – amortised cost measurement, equity method, financial instruments with characteristics of equity, dynamic risk management, and business combinations–disclosures, goodwill and impairment – could significantly change financial reporting for many companies in the future.

The IASB also has three projects on its active research agenda: intangible assets; post-implementation review of IFRS 16 *Leases*; and statement of cash flows and related matters.

The IASB's application questions and maintenance projects largely focus on narrow-scope projects that address certain aspects of existing IFRS accounting standards. However, the maintenance projects on disclosures about uncertainties in the financial statements and provisions-targeted improvements address a broader set of issues. The IASB aims to publish, in late 2025, illustrative climate-related examples that address stakeholders' concerns about the inconsistent application of IFRS accounting standards to uncertainties in financial reporting.

The IASB's current work plan is covered in detail in separate future developments sections in each of the chapter affected.

International GAAP® 2026

This edition of *International GAAP®* covers the many interpretations, practices and solutions that have now been developed based on our work with clients, and discussions with regulators, standard-setters and other professionals. We believe that *International GAAP®*, now in its twenty-first edition, plays an important role in ensuring consistent application of IFRS accounting standards and ISSB sustainability disclosure standards and helping companies as they address emerging issues (e.g., accounting for and disclosure of the impact of climate change and related legislation). These issues can be complex and give rise to many practical financial reporting and sustainability questions about a variety of recognition, measurement, presentation and disclosure requirements.

Contributors

Our team of authors and reviewers hails from all parts of the world and includes not only our global technical experts but also senior client-facing professionals. This gives us an in-depth knowledge of practice in many different countries and industry sectors, enabling us to go beyond mere recitation of the requirements of standards to explaining their application in many varied situations.

We are deeply indebted to many of our colleagues within the global organisation of EY for their selfless assistance and support in the publication of this book. It has been a truly international effort, with valuable contributions from EY people around the globe.

Our thanks go particularly to those who reviewed and edited the drafts, most notably:

Principal authors

Harrisah Abdul	Prahalad Halgeri	Ayesha Moosa
Martin Beyersdorff	Brendan van der Hoek	Irfaan Omarjee
David Bradbery	Lennart Hoogerwaard	Tina Patel
Glenn Brady	Jane Hurworth	Laura L Rodriguez
Vincent Van Caloen	Etienne Jordaen	Tim Rogerson
Luis Cañal	Valentina Khromova	Sarah Samarghandi
Victor Chan	Maria Kingston	Alvar A Strandvold
Wei Li Chan	Keith Lamera	Yasutoshi Takeshita
Larissa Connor	Sharon MacIntyre	Aikaterini Vatzaki
Pieter Dekker	Emily Moll	Minh Xuan Vo
Archibald Groenewald	Richard Moore	

Principal reviewers

Elisa Alfieri	Costas Karayiannis	Christiana Panayidou

Lists of chapters

- 1 Introduction to IFRS accounting standards
- 2 The IASB's conceptual framework
- 3 Presentation of financial statements and accounting policies - IAS 1
- 4 Presentation and disclosure in financial statements - IFRS 18 and IFRS 19
- 5 Non-current assets held for sale and discontinued operations
- 6 First-time adoption
- 7 Consolidated financial statements
- 8 Consolidation procedures and non-controlling interests
- 9 Separate and individual financial statements
- 10 Business combinations
- 11 Business combinations under common control
- 12 Investments in associates and joint ventures
- 13 Joint arrangements
- 14 Disclosure of interests in other entities
- 15 Fair value measurement
- 16 Foreign exchange
- 17 Hyperinflation
- 18 Intangible assets
- 19 Property, plant and equipment
- 20 Investment property
- 21 Impairment of fixed assets and goodwill
- 22 Borrowing costs
- 23 Inventories
- 24 Leases
- 25 Government grants
- 26 Service concession arrangements
- 27 Provisions, contingent liabilities and contingent assets
- 28 Revenue
- 29 Income taxes
- 30 Share-based payment
- 31 Employee benefits
- 32 Operating segments
- 33 Earnings per share
- 34 Events after the reporting period
- 35 Related party disclosures
- 36 Statement of cash flows
- 37 Interim financial reporting
- 38 Agriculture
- 39 Extractive industries

Abbreviations

The following abbreviations are used in this book:

Professional and regulatory bodies:

AASB	Australian Accounting Standards Board
AcSB	Accounting Standards Board of Canada
AICPA	American Institute of Certified Public Accountants
AOSSG	Asian-Oceanian Standard-Setters Group
APB	Accounting Principles Board (of the AICPA, predecessor of the FASB)
ARC	Accounting Regulatory Committee of representatives of EU Member States
ASAF	Accounting Standards Advisory Forum
ASB	Accounting Standards Board in the UK
ASBJ	Accounting Standards Board of Japan
ASU	Accounting Standards Update
CASC	China Accounting Standards Committee
CDSB	Climate Disclosure Standards Board
CESR	Committee of European Securities Regulators, an independent committee whose members comprised senior representatives from EU securities regulators (replaced by ESMA)
CICA	Canadian Institute of Chartered Accountants
EC	European Commission
ECB	European Central Bank
ECOFIN	The Economic and Financial Affairs Council
EDTF	Enhanced Disclosure Task Force of the (FSB)
EFRAG	European Financial Reporting Advisory Group
EITF	Emerging Issues Task Force in the US
EPRA	European Public Real Estate Association
ESMA	European Securities and Markets Authority (see CESR)
EU	European Union
FAF	Financial Accounting Foundation
FASB	Financial Accounting Standards Board in the US
FCAG	Financial Crisis Advisory Group
FEE	Federation of European Accountants
FSB	Financial Stability Board (successor to the FSF)
FSF	Financial Stability Forum
G4+1	The (now disbanded) group of four plus 1, actually with six members, that comprised an informal 'think tank' of staff from the standard setters from Australia, Canada, New Zealand, UK, and USA, plus the IASC
G7	The Group of Seven Finance Ministers (successor to G8)

G8	The Group of Eight Finance Ministers
G20	The Group of Twenty Finance Ministers and Central Bank Governors
GPPC	Global Public Policy Committee of the six largest accounting networks
GRI	Global Reporting Initiative
HKICPA	Hong Kong Institute of Certified Public Accountants
IASB	International Accounting Standards Board, or the Board
IASC	International Accounting Standards Committee. The former Board of the IASC was the predecessor of the IASB
IASCF	International Accounting Standards Committee Foundation (predecessor of the IFRS Foundation)
ICAEW	Institute of Chartered Accountants in England and Wales
ICAI	Institute of Chartered Accountants of India
ICAS	Institute of Chartered Accountants of Scotland
IFAC	International Federation of Accountants
IFASS	International Forum of Accounting Standard Setters
IFRS IC	The IFRS Interpretations Committee (formerly the International Financial Reporting Interpretations Committee (IFRIC)) of the IASB
IGC	Implementation Guidance Committee on IAS 39 (now disbanded)
IOSCO	International Organisation of Securities Commissions
IPSASB	International Public Sector Accounting Standards Board
IPTF	International Practices Task Force (a task force of the SEC Regulations Committee)
ISDA	International Swaps and Derivatives Association
ISSB	International Sustainability Standards Board
ITG	IFRS Transition Resource Group for Impairment of Financial Instruments
IVSC	International Valuation Standards Council
KASB	Korea Accounting Standards Board
RICS	Royal Institution of Chartered Surveyors
SAC	Standards Advisory Council, predecessor of the IFRS Advisory Council which provides advice to the IASB on a wide range of issues
SASB	Sustainability Accounting Standards Board
SEC	Securities and Exchange Commission (the US securities regulator)
SIC	Standing Interpretations Committee of the IASC (replaced by IFRIC)
TCFD	Taskforce for Climate-related Disclosures
TEG	Technical Expert Group, an advisor to the European Commission
TIG	Transition Implementation Group
TPT	Transition Plan Taskforce
TRG	Joint Transition Resource Group for Revenue Recognition

Accounting and sustainability related terms:

ADS	American Depositary Shares
AFS	Available-for-sale investment
ARB	Accounting Research Bulletins (issued by the AICPA)
ARS	Accounting Research Studies (issued by the APB)
ASC	Accounting Standards Codification®. The single source of authoritative US GAAP recognised by the FASB, to be applied to non-governmental entities for interim and accounting periods ending after 15 September 2009
ASU	Accounting Standards Update
BCUCC	Business Combinations Under Common Control
CCIRS	Cross Currency Interest Rate Swap
CDO	Collateralised Debt Obligation
CLO	Collateralized Loan Obligation
CF	Conceptual Framework
CGU	Cash-generating Unit
CO ₂	Carbon dioxide
CO ₂ e	Carbon dioxide equivalent
CU	Currency Unit

Authoritative literature

The content of this book takes into account all accounting standards and other relevant rules issued up to September 2025. Consequently, it covers the IASB's *Conceptual Framework for Financial Reporting* and authoritative literature listed below.

References in the main text of each chapter to the pronouncements below are generally to the versions of those pronouncements as approved and expected to be included in the Blue Book edition of the Bound Volume 2026 IFRS Accounting Standards - Consolidated without early application - Official pronouncements applicable on 1 January 2026, to be published by the IASB.

References to those pronouncements below which have an effective date after 1 January 2026 are to the versions of those pronouncements that are expected to be included in the Red Book edition of the Bound Volume 2025 IFRS Accounting Standards - Official pronouncements issued at 1 January 2026, to be published by the IASB.

US GAAP accounting standards are organised within a comprehensive FASB Accounting Standards Codification®, which is now the single source of authoritative US GAAP recognised by the FASB to be applied to non-governmental entities and has been applied in this publication.

† The standards and interpretations marked with a dagger have been withdrawn or superseded.

Overview

This chapter discusses the structure and governance of the IFRS Foundation (Foundation) and the International Accounting Standards Board (IASB), the technical agenda of the IASB and the adoption of IFRS accounting standards around the world.

IFRS accounting standards have become widely adopted in capital markets worldwide in the past two decades and is now a globally recognised accounting framework. To support the development of a single set of high-quality, understandable, enforceable and globally accepted accounting standards and to promote and facilitate the adoption of the standards, a governance structure has been put in place for this global initiative involving a wide variety of stakeholders including preparers, users, standard-setters, auditors, academics, and regulators. IFRS accounting standard setting activities are subject to the due process to ensure transparency and accountability. However, convergence with other national accounting frameworks is no longer a significant driver of the agenda setting process.

The manner in which IFRS accounting standards are adopted varies across jurisdictions. Instead of the full adoption of IFRS accounting standards, some jurisdictions have converged, or have a plan to converge, their standards with IFRS accounting standards. To maximise the benefits from using a consistent set of accounting standards by companies throughout the world, IFRS accounting standards need to be applied, audited and enforced on a consistent basis in each jurisdiction.

More recently, the Trustees of the Foundation (Trustees) have established the International Sustainability Standards Board (ISSB) to set IFRS sustainability disclosure standards within the existing governance structure (see Chapter 52 for further discussion).

What you need to know

- IFRS accounting standards are required for all or most domestic publicly accountable entities (e.g., listed companies) in the capital markets of 148 jurisdictions.
- The development of IFRS accounting standards is supported by the standard-setting structure and governance.
- The remit of the Foundation has been expanded to include setting IFRS sustainability disclosure standards.

1 Why international financial reporting standards matter

With globalisation has come the increasing integration of world markets for goods, services and capital - with the result that companies that traditionally were reliant on their domestic capital markets for financing now have substantially increased access to debt and equity capital, both inside and outside their national borders.

Yet - perhaps not entirely surprisingly - the world of financial reporting was slow to respond reflecting, no doubt, a widespread nationalism in respect of countries' own standards.

Undoubtedly, one of the main advantages of a single set of global accounting standards is that it would enable the international capital markets to assess and compare inter-company performance in a much more meaningful, effective and efficient way. This should increase companies' access to global capital and ultimately reduce the cost thereof. Thus, the request for global standards came both from regulatory bodies and from preparers of financial statements. As early as 1989, the International Organisation of Securities Commissions (IOSCO), the world's primary forum for co-operation among securities regulators, prepared a paper noting that cross border security offerings would be facilitated by the development of internationally accepted standards. For preparers, greater comparability in financial reporting with their global peers had obvious attractions.

Notwithstanding these anticipated benefits, it has only been since 2000 that there has been a serious effort made toward such global standards. This came about largely as a result of the European Commission's announcement in June 2000 that it would present proposals to introduce the requirement that all listed European Union (EU) companies report in accordance with International Accounting Standards by 2005. This requirement not only changed the face of European financial reporting, but global reporting as well after many other countries followed Europe's lead. Indeed, the Foundation reports that 148 jurisdictions require IFRS accounting standards for all or most domestic publicly accountable entities (e.g., listed companies) in their capital markets.¹

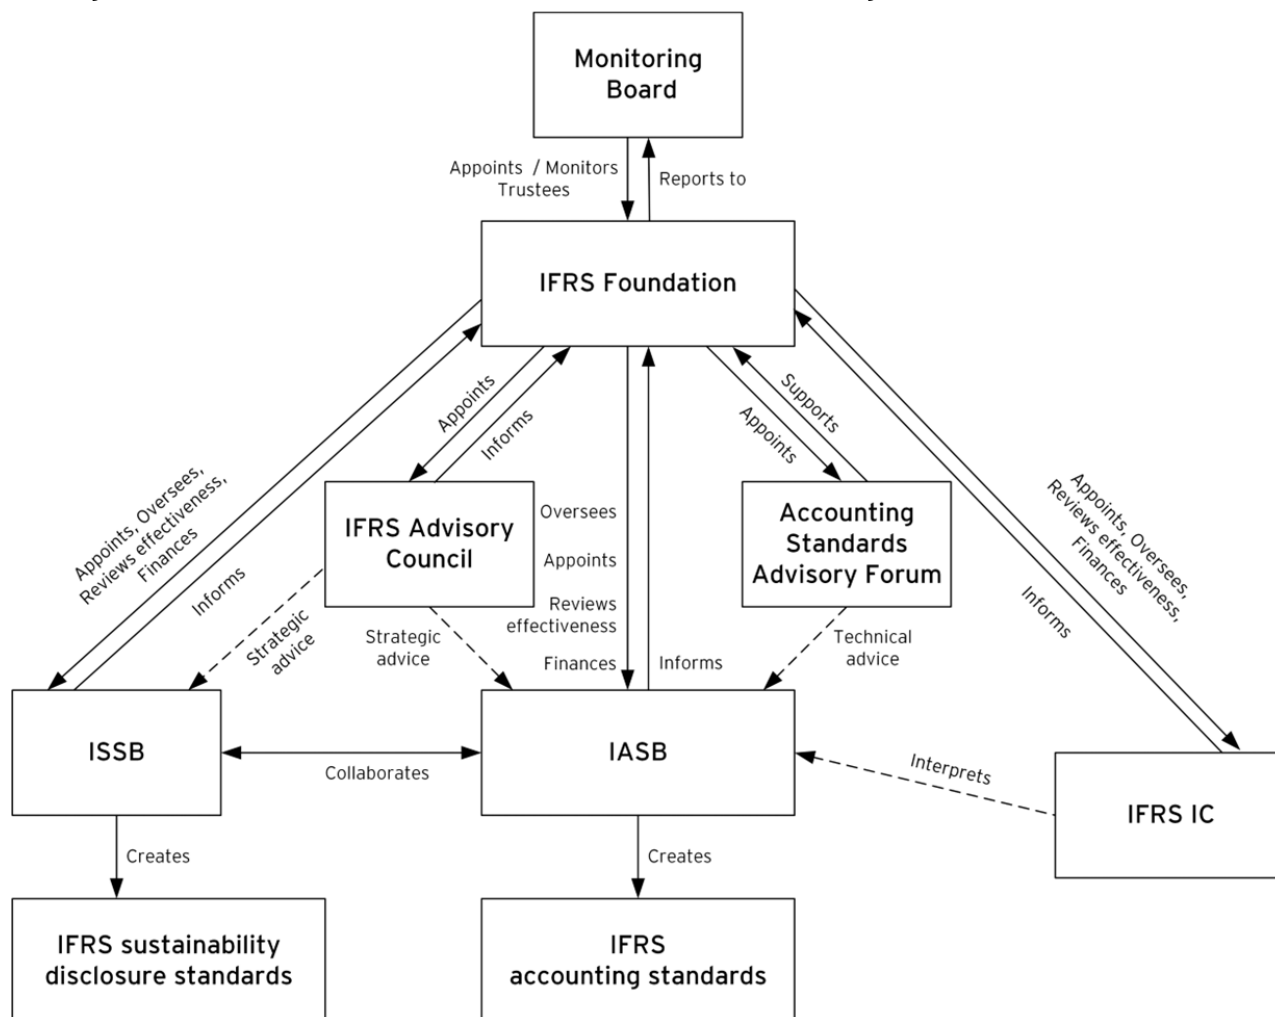

Thus, global financial reporting has ceased to be characterised by numerous disparate national systems to the point at which there are today essentially only two - IFRS accounting standards and US GAAP.

¹ [IFRS - Who uses IFRS Accounting Standards?](#), available on IFRS Foundation's website (accessed on 14 August 2025).

2 The IFRS Foundation and the IASB

2.1 The standard-setting structure

The diagram below illustrates the structure within which IFRS accounting standards are set.

The various elements of the structure are discussed further below.

Unless indicated otherwise, references to IFRS accounting standards include the following:

- International Financial Reporting Standards - accounting standards developed by the IASB
 - International Accounting Standards (IAS) - accounting standards developed by the International Accounting Standards Committee (IASC), the predecessor to the IASB
 - Interpretations developed by the IFRS IC or its predecessor, the Standing Interpretations Committee (SIC)
- And
- International Financial Reporting Standards for Small and Medium-sized Entities (IFRS for SMEs) - a stand-alone accounting standard for general purpose financial statements of small and medium-sized entities (as defined)

Refer to Chapter 52 for an introduction to ISSB and the IFRS sustainability disclosure standards.

2.2 The IFRS Foundation

The governance of the Foundation primarily rests with the Trustees who, in turn, act under the terms of the Foundation *Constitution* (the Constitution).² Section 18 of the Constitution requires a review, every five years, of the structure and effectiveness of the Foundation. The last review was completed in September 2021 and, as a result, the Constitution was revised in the same year. The amendments were made to establish the ISSB under the Foundations' governance and to reflect the intended interconnectivity between the IASB and the ISSB.³

It is a requirement of the Constitution that, in order to ensure a broad international basis, there must be:⁴

- Six Trustees appointed from the Asia/Oceania region
- Six Trustees appointed from Europe
- Six Trustees appointed from the Americas
- One Trustee appointed from Africa

And

- Three Trustees appointed from any area, subject to maintaining overall geographical balance

The appointment of Trustees to fill vacancies caused by routine retirement or other reasons is the responsibility of the remaining Trustees but subject to the approval of the Monitoring Board as discussed in section 2.3 below. The appointment of the Trustees is normally for a term of three years, renewable once.⁵

The Constitution requires that the Trustees comprise individuals that, as a group, provide a balance of professional backgrounds, and have an interest in promoting and maintaining transparency in corporate reporting globally. This includes individuals with global experience at a senior level in securities market regulators, firms representing investors, international audit networks, preparers, users, academics and officials serving the public interest. To achieve such a balance, Trustees are selected after consultation with the accounting and audit profession, the securities market and other public interest bodies, regulators, investors, preparers, users and academics. The Trustees are required to establish procedures for inviting suggestions for appointments from these relevant organisations and for allowing individuals to put forward their own names, including advertising vacant positions.⁶

The Constitution provides that "all Trustees shall be required to show a firm commitment to the Foundation and the IASB and the ISSB as a high quality global standard-setter, to be financially knowledgeable, and to have an ability to meet the time commitment. Each Trustee shall have an understanding of, and be sensitive to, the challenges associated with the adoption and application of high quality global accounting standards developed for use in the world's capital markets and by other users".⁷

The Trustees are responsible also for appointing the members of the IASB, ISSB, IFRS IC, IFRS Advisory Council (the Advisory Council)⁸ and the Accounting Standards Advisory Forum (ASAF).⁹ In addition, their duties include the following:¹⁰

- Appointing the Executive Director, in consultation with the IASB and ISSB Chairs, and establishing his or her contract of service and performance criteria.
- Reviewing annually the strategy of the Foundation, the IASB and the ISSB and its effectiveness, including consideration, but not determination, of the IASB's and ISSB's agenda.
- Assuming responsibility for establishing and maintaining appropriate financing arrangements.
- Approving annually the budget of the Foundation and determining the basis for funding.
- Reviewing broad strategic issues affecting corporate reporting standards, promoting the Foundation and its work and promoting the objective of rigorous application of IFRS accounting and sustainability disclosure standards, provided that the Trustees are excluded from involvement in technical matters relating to corporate reporting standards.

9 Accounting Standards Advisory Forum: Terms of Reference/Charter.

10 IFRS Foundation *Constitution*, November 2021, Sections 14 and 16.

- Establishing or amending operating procedures for the Trustees.
- Establishing and amending operating procedures, consultative arrangements and due process for the IASB, the ISSB, IFRS IC and the Advisory Council and reviewing their compliance.
- Approving amendments to the Constitution after following a due process, including consultation with the Advisory Council and publication of an exposure draft for public comment and subject to the voting requirements given in the Constitution.
- Exercising all powers of the Foundation except for those expressly reserved to the IASB, the ISSB, the IFRS IC and the Advisory Council.
- Fostering and reviewing the development of educational programmes and materials that are consistent with the Foundation's objectives.

And

- Publishing an annual report on the Foundation's activities, including audited financial statements and priorities for the coming year.

The majority of the Foundation's funding is from voluntary contributions, including ISSB seed funding, contributions from jurisdictions, philanthropic grants and contributions from companies. Most jurisdictions have established either a levy on companies or a system of publicly supported financing, although funding mechanisms differ. In addition, earned revenue comes from licensing intellectual property. Licensing agreements allow companies and other entities to use IFRS accounting and sustainability disclosure standards for translation, publication or commercial use.¹¹ In 2023, the major funders of the Foundation were Canada, Germany and the United Kingdom.¹²

2.3 The Monitoring Board

The Monitoring Board provides a formal link between the Trustees and public authorities. This relationship seeks to replicate, on an international basis, the link between accounting standard-setters and those public authorities that have generally overseen accounting standard-setters.¹³

The Charter of the Monitoring Board notes that the Monitoring Board's mission is:¹⁴

- To cooperate, to promote the continued development of IFRS accounting and sustainability disclosure standards as a high-quality set of global standards.
 - To monitor and reinforce the public interest oversight function of the Foundation, while preserving the independence of the IASB and the ISSB. In that regard:
 - To participate in the selection and approval of the Trustee appointments.
 - To advise the Trustees with respect to the fulfilment of their responsibilities, in particular with respect to regulatory, legal and policy developments that are pertinent to the Foundation's oversight of the IASB and ISSB and appropriate sources of Foundation funding.
- And
- To discuss issues and share views relating to IFRS accounting and sustainability disclosure standards, as well as regulatory and market developments affecting the development and functioning of these standards.

The responsibilities of the Monitoring Board are to:¹⁵

- Participate in the process for appointing Trustees and approve the appointment of Trustees.
 - Review and provide advice to the Trustees on the fulfilment of their responsibilities - there is an obligation on the Trustees to report annually to the Monitoring Board.
- And
- Meet with the Trustees or a sub-group thereof at least annually; the Monitoring Board has the authority to request meetings with the Trustees or separately with the chair of the Trustees and with the chair of the IASB and the ISSB to discuss any area of the work of the Trustees, the IASB or the ISSB.

12 IFRS Foundation Annual Report 2024, IFRS Foundation, 2025.

13 IFRS Foundation *Constitution*, November 2021, Section 19.

14 Charter of the IFRSF Monitoring Board, 2023.

15 IFRS Foundation *Constitution*, November 2021, Section 20.

At the time of writing, the Monitoring Board comprises representatives of:¹⁶

- The IOSCO Board
 - The IOSCO Growth and Emerging Markets Committee
 - The Financial Services Agency, Japan
 - The European Commission
 - The Securities and Exchange Commission, United States of America (US SEC)
 - The Comissão de Valores Mobiliários, Brazil
 - The Financial Services Commission, Republic of Korea
 - The Ministry of Finance, People's Republic of China
 - The Financial Conduct Authority (FCA) of the United Kingdom
- And

- The Basel Committee on Banking Supervision (observer)

The current chairman is the representative of the Financial Services Agency, Japan. Membership of the Monitoring Board is assessed based on the following criteria:¹⁷

- The member must be a capital market authority responsible for setting the form and content of financial reporting in its jurisdiction.
- The jurisdiction has made a clear commitment to moving towards application of IFRS accounting standards and promoting global acceptance of a single set of high-quality international accounting standards as the final goal.
- The IFRS accounting standards to be applied should be essentially aligned with IFRS accounting standards developed by the IASB.
- The jurisdiction is considering the use of the IFRS sustainability disclosure standards according to its own legal frameworks for adopting, applying or otherwise making use of international standards.
- The jurisdiction is committed to contributing to interoperability between its domestic standards and the IFRS sustainability disclosure standards.
- The jurisdiction can be regarded as a major market for capital-raising based on the size of market capitalisation, the number of listed companies and capital market activity.
- The jurisdiction makes financial contributions to setting IFRS accounting standards.
- The jurisdiction has a robust enforcement mechanism to ensure proper implementation of relevant accounting standards.

And

- The relevant national or regional standard-setting body is committed to contributing actively to the development of IFRS accounting standards.

Historically the motivation for the use of IFRS accounting standards was to facilitate cross-border capital raising and, therefore, the membership of the Monitoring Board was focused on capital markets authorities that were committed to the development of high-quality global accounting standards. While this continues to be a criterion for membership, beginning from the 2016 review of its members, the Monitoring Board will evaluate the integration of IFRS accounting standards for domestic issuers in that member's jurisdiction.¹⁸

¹⁸ IFRS Foundation Monitoring Board Press Release, *Monitoring Board finalizes assessment approach for membership criteria and announces Chair selection*, 1 March 2013.

2.4 The International Accounting Standards Board (IASB)

Members of the IASB are appointed by the Trustees.¹⁹ Currently, the IASB comprises 14 members. The main qualifications for membership of the IASB are professional competence and recent relevant professional experience.²⁰

The Trustees are required to select IASB members so that the IASB, as a group, will comprise the best available combination of technical expertise and diversity of international business and market experience, including auditors, preparers, users, academics and market and/or financial regulators. No individual should be both, a Trustee and a member of the IASB at the same time.²¹ Furthermore, the IASB, in consultation with the Trustees, is expected to establish and maintain liaison with national standard-setters and other official bodies concerned with standard-setting to assist in the development of IFRS accounting standards and to promote the convergence of national accounting standards and IFRS accounting standards.²²

The IASB will normally be required to comprise:²³

- Four members from Asia/Oceania
- Four members from Europe
- Four members from the Americas
- One member from Africa
- And
- One member appointed from any area, subject to maintaining overall geographical balance

The responsibilities of the IASB are listed in Section 37 of the Constitution. Its primary role is to have complete responsibility for all IASB technical matters including preparing and issuing IFRS accounting standards (other than interpretations) and exposure drafts, each of which is required to include any dissenting opinions; and final approval of and issuing interpretations developed by the IFRS IC.²⁴

Approval by at least eight members of the IASB is required for the publication of an exposure draft and IFRS accounting standards (which includes final interpretations of the IFRS IC), if there are fewer than 14 members of the IASB. If there are 14 members, approval is required by at least nine members.²⁵ Other decisions of the IASB, including the publication of a discussion paper, require a simple majority of the members present at a meeting that is attended by at least 60% of the members.²⁶ The IASB has full discretion over its technical agenda and over project assignments on technical matters. It must, however, consult the Trustees on its agenda, and the Advisory Council on major projects, agenda decisions and work priorities. In addition, the IASB is required to carry out public consultation every five years in developing its technical agenda.²⁷ The IASB is also required to establish procedures in order to achieve the objective of developing IFRS accounting standards that are compatible, and avoid inconsistencies and conflicts, with IFRS sustainability disclosure standards issued by the ISSB.²⁸

The IASB meets monthly, but not in August. These meetings are open to the public and meeting materials are available on the IASB's website.

2.4.1 Agenda consultation

As discussed above, under the Constitution, the IASB is required to carry out a public consultation on its technical agenda every five years from the date of the most recent public agenda consultation. The objective of this agenda consultation is to gather views on:

- The strategic direction and balance of the IASB's activities
- The criteria for assessing the priority of financial reporting issues that could be added to the work plan
- And
- New financial reporting issues that could be given priority in the IASB's work plan

¹⁹ IFRS Foundation *Constitution*, November 2021, Section 25.

²⁰ IFRS Foundation *Constitution*, November 2021, Section 26.

²¹ IFRS Foundation *Constitution*, November 2021, Section 26.

²² IFRS Foundation *Constitution*, November 2021, Section 28.

²³ IFRS Foundation *Constitution*, November 2021, Section 27.

²⁴ IFRS Foundation *Constitution*, November 2021, Section 37(a).

²⁵ IFRS Foundation *Constitution*, November 2021, Section 36.

²⁶ IFRS Foundation *Constitution*, November 2021, Section 36.

²⁷ IFRS Foundation *Constitution*, November 2021, Section 37(d), (e) and (h).

²⁸ IFRS Foundation *Constitution*, November 2021, Section 37(i).

The IASB began the last completed agenda consultation in March 2021. In July 2022, it released the feedback statement on the consultation. The IASB has decided to leave the current level of focus on its main activities mostly unchanged and its priorities from 2022 to 2026 include the following:²⁹

- Continuing to progress research and standard-setting projects on the IASB's current work plan
 - Completing the required post-implementation review of IFRS 9 *Financial Instruments*, conducting the required post-implementation reviews of IFRS 15 *Revenue from Contracts with Customers* and IFRS 16 *Leases*, and to undertake possible priority follow-on projects where applicable
 - Starting new projects to review the accounting requirements for intangible assets, the accounting requirements for the statement of cash flows and related matters; and responding to any time-sensitive issues that may arise after the agenda consultation
 - Creating a reserve list of two projects on operating segments and pollutant pricing mechanisms that will be added to its work plan if additional capacity becomes available before its next five-yearly agenda consultation
 - Working with the ISSB on relevant projects, such as, the IASB's current project on management commentary, its new research project on intangible assets and its reserve-list project on pollutant pricing mechanisms
 - Starting a new, narrow-scope project to determine whether and, if so, what further actions might be needed to improve the accounting for climate-related risks in the financial statements, after the publication of the Foundation's educational material on the effects of climate-related matters on financial statements and application of the ISSB's future standard on climate-related disclosures. The IASB will coordinate any work on this topic with the ISSB
- And
- Completing, together with its consultation body the SME Implementation Group, the second comprehensive review of the IFRS for SMEs and publishing educational materials to help preparers understand and apply IFRS for SMEs.

2.5 The IFRS Interpretations Committee (the IFRS IC)

For IFRS accounting standards to be truly global standards, consistent application and interpretation is required. The IFRS IC assists the IASB in improving financial reporting through timely assessment, discussion and resolution of financial reporting issues identified within the IFRS accounting framework.³⁰

The national accounting standard-setting bodies and regional bodies involved with accounting standard-setting are often consulted on issues referred to the IFRS IC.³¹ The IFRS IC is expected to address issues:³²

- “(a) that have widespread effect and have, or are expected to have, a material effect on those affected;
- (b) where financial reporting would be improved through the elimination, or reduction, of diverse reporting methods;
- (c) that can be resolved efficiently within the confines of existing IFRS standards and the *Conceptual Framework for Financial Reporting*; and
- (d) the matter is sufficiently narrow in scope that the Board or the IFRS IC can address it in an efficient manner, but not so narrow that it is not cost-effective for the Board or the IFRS IC and stakeholders to undertake the due process required to change a standard.”

The IASB may seek the assistance of the IFRS IC in developing narrow-scope amendments (which include annual improvements), drawing on the IFRS IC's experience of the application of IFRS accounting standards.³³

If the IFRS IC does not plan to add an item to its work programme, it publishes a tentative agenda decision in the *IFRIC Update* and on the Foundation website and requests comments on the matter. The comment period for tentative agenda decisions is normally at least 60 days. After considering comments received, the IFRS IC will either confirm its decision and publish an agenda decision, revise its tentative agenda decision and re-expose for comment a revised tentative agenda decision, add the issue to its work programme or refer the matter to the IASB.³⁴

29 [Third Agenda Consultation: Snapshot](#), IASB, July 2022, available on the IFRS Foundation's website (accessed on 29 July 2025).

30 IFRS Foundation *Due Process Handbook*, August 2020, para. 1.3.

31 IFRS Foundation *Due Process Handbook*, August 2020, para. 5.15.

32 IFRS Foundation *Due Process Handbook*, August 2020, para. 5.16.

33 IFRS Foundation *Due Process Handbook*, August 2020, para. 5.18.

34 IFRS Foundation *Due Process Handbook*, August 2020, para. 8.2.

Before an agenda decision is published, the IASB is asked- at its first public meeting at which it is practicable to present the agenda decision - whether it objects to the agenda decision. Specifically, IASB members are asked whether they object to (a) the IFRS IC's decision that a standard-setting project should not be added to the work plan, and (b) the IFRS IC's conclusion that the agenda decision does not add or change requirements in IFRS accounting standards. If four or more IASB members object, the agenda decision is not published and the IASB decides how to proceed.³⁵

The IFRS IC has 14 voting members. The chair, who is appointed by the Trustees, is a member of the IASB, the Director of Technical Activities or an appropriately qualified individual. The chair does not have the right to vote. The Trustees may appoint representatives of regulatory organisations, who have the right to attend and speak at meetings but not the right to vote.³⁶ Currently, the Basel Committee on Banking Supervision, European Commission and IOSCO have observer status. The quorum for a meeting is 10 members,³⁷ and approval of draft or final interpretations requires that not more than four voting members vote against the draft or final interpretation.³⁸

The IFRS IC meets six times a year. All technical decisions are taken at sessions that are open to public observation. Although the IFRS IC develops interpretations because they are part of the respective IFRS accounting standards, they must be ratified by the IASB.³⁹

2.5.1 Agenda decisions

An agenda decision explains why a standard-setting project has not been added to the work plan and, in many cases, includes explanatory material.⁴⁰ It cannot add or change requirements in IFRS accounting standards. Instead, explanatory material explains how the applicable principles and requirements in IFRS accounting standards apply to the transaction or fact pattern described in the agenda decision.⁴¹ Explanatory material derives its authority from the standards themselves. Accordingly, an entity is required to apply the applicable IFRS accounting standard(s), reflecting the explanatory material in an agenda decision.⁴²

In December 2018, the IASB discussed the timing of application of accounting policy changes that result from an agenda decision published by the IFRS IC and confirmed its view that it expects companies to be entitled to sufficient time to implement changes in accounting policy.

In March 2019, the IASB further explained its position on agenda decisions. Firstly, the Board acknowledged that agenda decisions often provide new information that should be seen as helpful and persuasive. It follows that a company does not make an error simply because its application of IFRS accounting standards was inconsistent with an agenda decision. Secondly, regarding how quickly companies are expected to implement an accounting policy change that results from an agenda decision, the IASB formally acknowledged that it may take time to implement such an accounting policy change. The IASB believes that this reflects its expectations of what is reasonable for preparers, assists companies in implementing any such change, and ultimately supports consistent application of IFRS accounting standards by facilitating accounting policy changes. What constitutes 'sufficient time' would depend on the particular facts and circumstances, taking into account the accounting policy change and the reporting entity and would require judgement. What the IASB had in mind was 'a matter of months rather than years'. However, it is not expected that sufficient time would include the time needed to undertake related steps, such as changing affected covenants in documents nor the time to wait to see whether any of the IASB's projects could remove the need to make an accounting policy change (to avoid two changes in accounting in a short period of time).⁴³ The IASB also made it clear that companies need to consider agenda decisions and implement any necessary accounting policy changes on a timely basis (i.e., as soon and as quickly as possible). If necessary, companies should be in a position to explain their implementation process and, if material, consideration should be given to whether disclosure related to the accounting policy change is required.⁴⁴ The Due Process Handbook (The Handbook) has also been amended in August 2020 to reflect this.⁴⁵

45 IFRS Foundation *Due Process Handbook*, August 2020, para. 8.6.

2.6 The Due Process Handbook

The Trustees' Due Process Oversight Committee (DPOC) is responsible for overseeing the due process procedures of the IASB and IFRS IC throughout all the development stages of a standard, the IFRS Taxonomy or an interpretation, including agenda-setting and post-implementation reviews (PIRs).⁴⁶ The Foundation published the revised Handbook in August 2020. The main changes are:⁴⁷

- Clarifying the authority of agenda decisions published by the IFRS IC and their role in supporting consistent application of IFRS accounting standards and enhancing the related due process by formally involving the IASB in their finalisation
- And
- Reflecting recent developments in the IASB's effect analysis process - assessing the likely effects of a new or amended IFRS accounting standards - that emphasise the role of such analyses in standard-setting and make it clear that such analyses take place at all stages of standard-setting

In addition, the amendments enhance and streamline the consultation requirements for adding major projects to the IASB's work plan; update and enhance the minimum amount of review required for educational material produced by the Foundation; and clarify the DPOC's role in overseeing the IFRS Taxonomy due process.

The Handbook describes the due process requirements of the IASB and IFRS IC.⁴⁸ The requirements are built on the following principles:⁴⁹

- Transparency - the IASB and the IFRS IC conduct their standard-setting process in a transparent manner
- Full and fair consultation - considering the perspectives of stakeholders globally
- And
- Accountability - the IASB analyses the potential effects of its proposals on affected parties and explains the rationale for why it made the decisions it reached in developing or amending a standard

In order to gain a wide range of views from interested parties throughout all stages of the development of IFRS accounting standards, the Trustees and the IASB have established consultative procedures with the objective of ensuring that, in exercising its independent decision-making, the IASB conducts its standard-setting process in a transparent manner.⁵⁰ The Handbook specifies some minimum steps that the IASB and the IFRS IC are required to follow before a standard or interpretation can be issued.⁵¹ The following due process steps are mandatory:⁵²

- Debating any proposals in one or more public meetings
- Exposing for public comment a draft of any proposed new standard, proposed amendment to a standard or proposed interpretation with minimum comment periods
- Considering in a timely manner those comment letters received on the proposals
- Considering whether the proposals should be exposed again
- Consulting the IFRS Advisory Council (see section 2.7 below) and the ASAF (see section 2.8 below) on the work plan, major projects, project proposals and work priorities
- And
- Ratification of an interpretation by the IASB in a public board meeting

The steps specified in the Constitution that are 'non-mandatory' include:⁵³

- Publishing a discussion document (for example, a discussion paper) before an exposure draft is developed
- Establishing consultative groups or other types of specialist advisory groups
- Holding public hearings
- And
- Undertaking fieldwork

⁴⁶ IFRS Foundation *Due Process Handbook*, August 2020, para. 2.4.

⁴⁷ [IFRS Foundation publishes revised Due Process Handbook](#), available on IFRS Foundation's website (accessed on 28 July 2025).

⁴⁸ IFRS Foundation *Due Process Handbook*, August 2020, para. 1.5.

⁴⁹ IFRS Foundation *Due Process Handbook*, August 2020, para. 3.1.

⁵⁰ IFRS Foundation *Due Process Handbook*, August 2020, para. 1.2.

⁵¹ IFRS Foundation *Due Process Handbook*, August 2020, para. 3.43.

⁵² IFRS Foundation *Due Process Handbook*, August 2020, para. 3.44.

⁵³ IFRS Foundation *Due Process Handbook*, August 2020, para. 3.45.

If the IASB decides not to undertake any of the non-mandatory steps, it is required to inform the DPOC of its decision and reason (known as the 'comply or explain' approach). Those explanations must be published in the decision summaries and in the Basis for Conclusions with the exposure draft or IFRS accounting standard in question.⁵⁴

Although not mandatory, the IASB conducts public meetings and roundtables to ensure that it has appropriate input from its constituents.

The IASB normally allows a minimum period of 120 days for comment on an exposure draft. If the matter is narrow in scope and urgent, the IASB may consider a comment period of no less than 30 days, but it will only set a period of less than 120 days after consulting, and obtaining approval from, the DPOC.⁵⁵

Under a 'fast track' comment process, if the matter is exceptionally urgent, and only after formally requesting and obtaining prior approval from 75% of the Trustees, "the IASB may reduce the period for public comment on an exposure draft to below 30 days but may not dispense with a comment period".⁵⁶

In December 2024, the Foundation published the exposure draft *Proposed Amendments* to the Handbook to reflect the creation of the ISSB and to enhance and clarify the Foundation's due process. The comment letter period closed in March 2025. At the time of writing, the next milestone is to decide the project direction in October 2025.⁵⁷

2.7 The IFRS Advisory Council

The Advisory Council (whose members are appointed by the Trustees) provides a forum for geographically and functionally diverse organisations and individuals with an interest in international corporate reporting to:

- Provide input on the IASB's and ISSB's agenda, project timetable and project priorities
- And
- Give advice on projects, with emphasis on application and implementation issues, including matters that may warrant the attention of the IFRS IC⁵⁸

A secondary objective of the Advisory Council is "to encourage broad participation in the development of IFRS as high-quality, globally-accepted standards".⁵⁹

The Advisory Council comprises thirty or more members, having a diversity of geographical and professional backgrounds. The chair of the Council is appointed by the Trustees, and may not be a member of the IASB, the ISSB or a member of its staff.⁶⁰ The Advisory Council normally meets at least two times a year, and its meetings are open to the public. The matters on the agenda for the Advisory Council's meetings will include those strategic matters and other priorities identified through consultation with the chair of the Advisory Council and representatives of the Trustees, the IASB and the ISSB. In addition, the Trustees must consult the Advisory Council in advance of any proposed changes to the Constitution.⁶¹

Members are appointed for an initial term of three years and may be asked to remain for up to three additional years.⁶²

62 IFRS Advisory Council, *Terms of reference and operating procedures*, July 2014.

2.8 Accounting Standards Advisory Forum

The ASAF, established in 2013, is an advisory group consisting of national accounting standard-setters and regional bodies, the purpose of which is to provide technical advice and feedback to the IASB.

The membership of the ASAF consists of a minimum of 12 and a maximum of 16 non-voting members (appointed by the Trustees), plus the chair, who is the IASB chair or vice-chair. The 12 to 16 individuals represent national standard-setters and regional bodies from around the globe. The appointment is not in their personal capacity.⁶³ To ensure a broad geographical representation, the members are from the following geographic regions:⁶⁴

- One member from Africa
 - Three members from the Americas (North and South)
 - Three members from the Asia/Oceania region
 - Three members from Europe (including non-EU)
- And
- Six members appointed from any area of the world at large, subject to maintaining overall geographic balance

The ASAF meets four times a year and additional meetings can be scheduled upon request by either the Chair of the ASAF or ASAF members. Meetings are normally conducted in person but the Chair of the ASAF has the discretion to decide to hold meetings by videoconference following consultation with ASAF members.

The objective of the ASAF is “to provide an advisory forum where members can constructively contribute towards the achievement of the IASB’s goal of developing globally accepted high-quality accounting standards.” The ASAF was established to:⁶⁵

- Support the Foundation in its objectives, and contribute towards the development, in the public interest, of a single set of high quality understandable, enforceable and globally accepted IFRS accounting standards.
 - Formalise and streamline the IASB’s collective engagement with the global community of national standard-setters and regional bodies in its standard setting process to ensure that a broad range of national and regional input on major technical issues related to the IASB’s standard setting activities are discussed and considered.
- And
- Facilitate effective technical discussions on standard-setting issues, in sufficient depth, with representatives at a high level of professional capability and with a good knowledge of their jurisdictions/regions. The technical discussion would focus primarily on the IASB’s work plan but may include other issues that have major implications for the IASB’s work.

65 [Accounting Standards Advisory Forum, Terms of Reference effective from 1 January 2025](#), available on IFRS Foundation’s website (accessed on 28 July 2025).

2.9 Other advisory bodies

In addition to the Advisory Council and the ASAF, discussed in sections 2.7 and 2.8 above, respectively, the IASB has a number of other formal advisory bodies that provide input on its work and resources to consult. Meetings with the advisory bodies are held in public and meeting materials are available on the IASB's website.

The IASB's other advisory bodies are as follows:⁶⁶

- Integrated Reporting and Connectivity Council - provides guidance on how reporting required by the IASB and the ISSB could be integrated and how the IASB and the ISSB could consider applying principles and concepts from the Integrated Reporting Framework to their projects
 - Capital Markets Advisory Committee - provides the IASB with regular input from the international community of users of financial statements
 - Emerging Economies Group - enhances the participation of emerging economies in the development of IFRS accounting standards
 - Global Preparers Forum - provides the IASB with input from the international community of companies preparing financial statements
 - IFRS Taxonomy Consultative Group - advises the IASB and ISSB on their respective digital taxonomies and related activities
 - Islamic Finance Consultative Group - focuses on potential challenges in applying IFRS accounting standards to Shariah-compliant instruments and transactions
 - SME Implementation Group - considers questions on the implementation and application of the *IFRS for SMEs* accounting standard and decides which questions merit published educational material. It also considers the need to amend the *IFRS for SMEs* accounting standard and make such recommendations to the Board
 - Consultative Group for Rate Regulation - informs the project on rate regulation
- And
- Management Commentary Consultative Group - provides the IASB with access to practical experience and expertise in developing, implementing and using management commentary regimes, and to advise the IASB as it progresses the work on the management commentary project

3 The IASB's technical agenda and convergence with US GAAP

3.1 The IASB's current priorities and future agenda

The IASB's 2025 activities focused on:⁶⁷

- Publishing an exposure draft on the *Dynamic Risk Management* project which will develop and refine 'core areas' that are central to an accounting model that might enable investors to understand the effect of a company's dynamic risk management
 - Deciding the project direction on the *Equity Method* project. The project objective is to develop answers to application questions about the equity method, as set out in IAS 28 *Investments in Associates and Joint Ventures*, using the principles derived from IAS 28 where possible
 - Publishing the final standard on rate-regulated activities. The new standard will replace IFRS 14 *Regulatory Deferral Accounts*
- And
- Deciding the project direction on the *Statement of Cash Flows and Related Matters* project. In this initial phase, the IASB will perform research on the nature and extent of perceived deficiencies in the requirements of IAS 7 *Statement of Cash Flows*

At the time of writing, the IASB's work plan reflects that work on a number of these projects will continue into 2026 and beyond.

3.2 IFRS accounting standards/US GAAP convergence

'Convergence' is a term used to describe the coming together of national systems of financial reporting and IFRS accounting standards. Between 2002 and 2013, the IASB and Financial Accounting Standards Board (FASB) had various projects to both improve IFRS accounting standards and US GAAP, respectively, and to achieve their convergence. In addition, the US SEC took steps towards the acceptance of IFRS accounting standards in the US. In 2007, the US SEC began permitting foreign private issuers to file IFRS financial statements without reconciliation to US GAAP.

While the IASB and FASB continue to collaborate on areas of mutual interest (e.g., via regular joint meetings), in 2013, the convergence process between the IASB and the FASB largely came to an end. In fact, The Handbook, which was revised in 2013, removed convergence from the list of factors that are influential in setting the agenda.

⁶⁷ [IFRS Foundation work plan](#), available on IFRS Foundation's website (accessed on 28 July 2025).

4 The adoption of IFRS accounting standards around the world

4.1 Worldwide adoption

Since 2001, there has been a tremendous increase in the adoption of IFRS accounting standards around the world. The precise way in which this has happened has varied among jurisdictions. This section sets out a brief description of how a number of key jurisdictions in each continent have approached the adoption. Some have adopted full IFRS accounting standards, i.e., IFRS accounting standards as issued by the IASB. Other jurisdictions have converged, or have a plan to converge, their standards with IFRS accounting standards.

An entity is required to apply IFRS 1 *First-time Adoption of International Financial Reporting Standards* when it first asserts compliance with IFRS accounting standards. The IASB has, therefore, established unambiguously the principle that full application of its standards and related interpretations is necessary for an entity to be able to assert that its financial statements comply with IFRS accounting standards (as issued by the IASB). Consequently, it is necessary for countries that align their national standards with IFRS accounting standards to require the application of IFRS 1 so that entities reporting under those standards can assert compliance with IFRS accounting standards. In addition, an entity that applies IFRS accounting standards as amended by a local authority cannot assert compliance with IFRS accounting standards.

The following table summarises the adoption of IFRS accounting standards (generally for consolidated financial statements) in selected jurisdictions with significant capital markets. For further details on selected locations, see sections 4.2 to 4.6 below. In addition, the Foundation is developing profiles of application of IFRS accounting standards. At the time of writing, profiles for 168 jurisdictions have been completed and are available on the IASB's website.

Jurisdiction	Required use of IFRS accounting standards	Permitted use of IFRS accounting standards
Australia	Required for all publicly accountable for-profit private sector entities that are required by legislation to prepare financial statements that comply with accounting standards, and any entities preparing general purpose financial statements that elect not to apply the Simplified Disclosure Standard (SDS). Non-publicly accountable for-profit private sector entities required by legislation to prepare financial statements that comply with accounting standards, or required by their constituting document or another document to prepare financial statements that comply with Australian Accounting Standards are required to apply IFRS recognition and measurement requirements, but can provide simplified disclosures under SDS.	
Brazil	Required for regulated public companies, with exemptions for banks and real estate companies; other companies must follow converged national standards.	
Canada	Required for publicly accountable entities.	Permitted for all other entities.
Mainland China	Substantially converged national standards.	
European Union	IFRS accounting standards as adopted by the European Union (EU) (EU IFRS - see section 4.2.1 below) are required for consolidated financial statements of all EU companies listed on an EU regulated market. Exemption for non-EU companies applying for listing on an EU regulated market that apply certain GAAPs determined by the European Commission to be equivalent to EU IFRS.	EU member states may permit or require the application of EU IFRS by unlisted companies and in separate financial statements.
France	See European Union.	EU IFRS permitted for the consolidated financial statements of non-listed entities.
Germany	See European Union.	EU IFRS permitted for the consolidated financial statements of non-listed entities.
Hong Kong	HKFRS accounting standards (converged with IFRS accounting standards) is required for all Hong Kong	Permitted for listed companies incorporated overseas.

Jurisdiction	Required use of IFRS accounting standards	Permitted use of IFRS accounting standards
	incorporated companies (listed and non-listed).	
India	Indian Accounting Standards are converged with IFRS accounting standards, with some mandatory and certain optional departures from IFRS accounting standards and apply in phases from financial years beginning on or after 1 April 2016. The Institute of Chartered Accountants of India (ICAI) is making efforts to reduce these carve-outs, to the extent possible.	Until Indian Accounting Standards were introduced, listed companies with subsidiaries were permitted to apply IFRS accounting standards in consolidated financial statements. This option is no longer available.
Italy	EU IFRS is required in the separate financial statements of companies on the Italian regulated stock exchange and for all other non-listed PIEs (banks, asset management companies and other regulated financial institutions) except insurance companies.	EU IFRS permitted in the statutory separate and consolidated financial statements of all other non-listed entities and non-regulated enterprises (except SMEs).
Japan	Mandatory adoption has been put on hold for the time being.	Permitted for most companies that are listed or planning to be listed on a domestic stock exchange.
Korea	IFRS accounting standards as adopted by Korea without modification (K-IFRS) is required for all listed entities, unlisted financial institutions and state-owned entities.	K-IFRS permitted for non-listed entities.
Saudi Arabia	IFRS accounting standards (as adopted by the local regulators - mainly with some additional disclosure requirements) is required for banks, insurance companies and listed entities.	Non-listed entities have the option to adopt either full IFRS accounting standards or IFRS for SMEs. Self-regulated entities can choose, but are not required, to adopt IFRS accounting standards.
Singapore	Singapore incorporated entities listed on the Singapore Exchange are required to file financial statements prepared in accordance with converged national standards equivalent to IFRS accounting standards (Singapore Financial Reporting Standards (International) - SFRS(I)). Foreign entities that are listed on the Singapore Exchange are required to file financial statements prepared in accordance with SFRS(I), IFRS accounting standards or US GAAP.	Singapore incorporated entities are permitted to file IFRS financial statements with approval.
South Africa	Required for all listed companies. Non-listed companies generally use either IFRS accounting standards or IFRS for SMEs.	
Spain	See European Union.	EU IFRS permitted for non-listed groups for consolidated financial statements; no reversion to local GAAP once an entity has voluntarily applied EU IFRS.
Switzerland	Issuers of equity securities that are incorporated in Switzerland and listed under the International Reporting Standard on the SIX Swiss Exchange (SIX) must apply either IFRS or US GAAP. Other listed entities incorporated in Switzerland must apply IFRS, US GAAP or Swiss GAAP FER or the	IFRS accounting standards permitted in consolidated statutory financial statements of listed and non-listed entities.

Jurisdiction	Required use of IFRS accounting standards	Permitted use of IFRS accounting standards
	accounting rules of the Swiss Banking Act. Entities not incorporated in Switzerland must apply IFRS, US GAAP or a national GAAP deemed to be equivalent by the SIX.	
Taiwan	Standards and interpretations endorsed by the local regulators apply for financial statements beginning on or after 1 January 2025. The effective dates for standards and interpretations for 'Taiwan IFRS' are mostly aligned with global effective dates, except for IFRS 17 <i>Insurance Contracts</i> ; however, early adoption is generally not permitted. IFRS 17 will be effective for annual reporting periods beginning on or after 1 January 2026 but earlier application is not permitted.	IFRS accounting standards permitted for foreign issuers, with reconciliation to 'Taiwan-IFRS'.
Thailand	Domestic companies in Thailand have to adopt Thai Accounting Standards. Thai Accounting Standards are substantially converged with IFRS accounting standards. Normally, the effective date of Thai Accounting Standards which are translated from IFRS accounting standards will be effective 1 year later than the effective date of the respective IFRS accounting standards.	IFRS accounting standards permitted for foreign companies.
United Arab Emirates	Companies incorporated in the United Arab Emirates, in general apply IFRS accounting standards. However, other frameworks such as the International Public Sector Accounting Standards (IPSAS) and Accounting and Auditing Organization for Islamic Financial Institutions (AAOIFI) financial accounting standards may be applied by government entities and Islamic institutions, respectively.	
United Kingdom	UK companies must apply UK-adopted international accounting standards rather than EU IFRS. This is discussed further in section 4.2.2 below.	UK-adopted IAS permitted for all companies, except in the charities sector; restrictions on reversion to local GAAP once an entity has applied UK-adopted international accounting standards.
United States	Substantial convergence of selected standards.	Permitted for foreign private issuers preparing financial statements in accordance with IFRS accounting standards as issued by the IASB. There is no endorsement process in the US.

4.2 Europe

4.2.1 EU

In July 2002, the European Parliament adopted Regulation No. 1606/2002 (the Regulation), which required publicly traded EU incorporated companies⁶⁸ to prepare, by 2005 at the latest, their consolidated financial statements under IFRS accounting standards 'adopted' (as discussed further below) for application within the EU. Although an EU regulation has direct effect on companies, without the need for national legislation, the Regulation provides an option for EU member states to permit or require the application of adopted IFRS accounting standards in the preparation of annual unconsolidated financial statements and to permit or require the application of adopted IFRS accounting standards by unlisted companies. This means that EU member states can require the uniform application of adopted IFRS accounting standards by important sectors, such as banking or insurance, regardless of whether companies are listed. An analysis of the implementation of the Regulation published in 2012 shows that nearly all EU member states use the option to permit the application of adopted IFRS accounting standards in the consolidated accounts of some or all types of unlisted companies. More than half of the EU member states also permit the application of adopted IFRS accounting standards in the annual financial statements of some or all types of unlisted companies.⁶⁹

The Regulation established the basic rules for the creation of an endorsement mechanism for the adoption of IFRS accounting standards, the timetable for implementation and a review clause to permit an assessment of the overall approach proposed. The European Commission took the view that an endorsement mechanism was needed to provide the necessary public oversight. The European Commission considered also that it was not appropriate, politically or legally, to delegate accounting standard-setting unconditionally and irrevocably to a private organisation over which the European Commission had no influence. In addition, the endorsement mechanism is responsible for examining whether the standards adopted by the IASB satisfy relevant EU public policy criteria.

The role of the endorsement mechanism is not to reformulate or replace IFRS accounting standards, but to oversee the adoption of new standards and interpretations, intervening only when they contain material deficiencies or have failed to cater for features specific to the EU economic or legal environments. The central task of this mechanism is to confirm that IFRS accounting standards provide a suitable basis for financial reporting by listed EU companies. The mechanism is based on a two-tier structure, combining a regulatory level with an expert level, to assist the European Commission in its endorsement role.

The recitals to the Regulation state that the endorsement mechanism should act expeditiously and also be a means to deliberate, reflect and exchange information on international accounting standards among the main parties concerned, in particular national accounting standard-setters, supervisors in the fields of securities, banking and insurance, central banks including the European Central Bank (ECB), the accounting profession and users and preparers of accounts. The mechanism should be a means of fostering common understanding of adopted international accounting standards in the EU community.⁷⁰

The European Commission is advised on IFRS accounting standards by EFRAG (European Financial Reporting Advisory Group). In addition to EFRAG, the European Commission seeks approval from its member states through the Accounting Regulatory Committee (ARC). EFRAG is a private sector body established by the European organisations prominent in European capital markets, e.g., Accountancy Europe and the European Banking Federation. In addition to advising the European Commission on endorsement of IFRS accounting standards, EFRAG is the mechanism by which Europe as a whole can participate in the global debate on accounting standards and it coordinates European responses to IASB proposals. EFRAG plays a proactive role issuing discussion papers, field-test reports and feedback statements on outreach events. The objective of the proactive work is to involve European stakeholders at an early stage in identifying necessary improvements to financial reporting to influence the IASB. EFRAG's activities also include assessments of whether the IASB's proposals and IFRS accounting requirements are conducive to the European public good. This includes the interaction with economic concerns, such as financial stability and growth.

68 This means those with their securities admitted to trading on a regulated market within the meaning of Article 1(13) of Council Directive 93/22/EEC (on investment services in the securities field) or those offered to the public in view of their admission to such trading under Council Directive 80/390/EEC (coordinating the requirements for the drawing up, scrutiny and distribution of the listing particulars to be published for the admission of securities to official stock exchange listing).

69 *Implementation of the IAS Regulation (1606/2002) in the EU and EEA*, European Commission, 7 February 2012.

70 Regulation (EC) No 1606/2002 of the European Parliament and of the Council of 19 July 2002, European Commission, Recital 11.

EFRAG includes representatives of European stakeholder organisations and national standard-setters respectively national organisation chapters and are led by its Presidents, who are nominated by the European Commission after having heard the European Parliament and the Council. EFRAG is responsible for all EFRAG positions and operates based on a consensus-based decision-making process with the objective of Europe speaking with one voice. The European Commission, the European supervisory authorities and the ECB participate in EFRAG in an observer capacity. EFRAG takes all its decisions after considering the advice of the EFRAG Technical Expert Groups and the results of EFRAG's due process, and after making all assessments deemed relevant from the political perspective.

The EU endorsement process for IFRS accounting standards is only completed when the standard, interpretation or amendment is published in the Official Journal of the European Union. The advice from EFRAG and the vote by the ARC are not sufficient to adopt a standard, an interpretation or an amendment.

4.2.1.A Endorsed IFRS accounting standards

To date, apart from the carve-out from IAS 39 *Financial Instruments: Recognition and Measurement*, an optional exemption from the requirement to apply annual cohorts to intergenerationally-mutualised and cash flow-matched contracts under IFRS 17 and the decision not to endorse IFRS 14, all IFRS accounting standards that are currently effective have ultimately been endorsed. IFRS 18 *Presentation and Disclosure in Financial Statements* and IFRS 19 *Subsidiaries without Public Accountability Disclosures* with an effective date on or after 1 January 2027 have not been endorsed for use in the EU yet and the pending endorsement of IFRS 18 and IFRS 19, all IFRS accounting standards which are currently effective have ultimately been endorsed.

IAS 39 as endorsed for use in the EU is currently different in one important respect from the version published by the IASB. Certain text has been carved out so that, essentially, the EU version allows the use of macro fair value hedge accounting in situations that the full version of IAS 39 does not. The European Commission has continued to emphasise the need for the IASB and representatives of European banks to find an appropriate technical solution to allow the removal of the carve-out as rapidly as possible. However, there has been moderate progress on this issue and IFRS 9 does not remove the reasons for the carve-out. Consequently, the carve-out continues to be available for entities that prepare their financial statements in accordance with IFRS accounting standards as endorsed for use in the EU and continue to apply the macro fair value hedge accounting requirements of IAS 39.

On 19 November 2021, the EC enacted through the Official Journal of the European Union the commission regulation on the adoption of IFRS 17.⁷¹ The regulation endorses IFRS 17 with an exemption to provide an option not to apply the annual cohort requirement as defined in IFRS 17.22 for specific types of contracts. Article 2 of the regulation permits (i.e., it is an option) companies in the scope of the regulation to depart from IFRS 17.22. In the recitals to the regulation, the European Commission pointed out that the annual cohort requirement as a unit of account for groups of insurance and investment contracts does not always reflect the business model, nor the legal and contractual features of intergenerationally-mutualised and cash flow matched contracts that are common in some member states of the EU. Those contracts represent more than 70% of the total life insurance liabilities in the EU. According to the European Commission, the annual cohort requirement applied to such contracts does not always have a favourable cost-benefit balance so that companies should have the option to exempt intergenerationally-mutualised and cash flow matched contracts from the annual cohort requirement of IFRS 17. As investors should be able to understand if an entity has applied the exemption from the annual cohort requirement for groups of contracts, the regulation introduces specific disclosure requirements if an entity applies the exemption. The regulation also includes in its article 3 a review clause for the optional exemption in article 3, i.e., the European Commission should review it by 31 December 2027 and, where appropriate propose to amend or end the exemption.

In addition to the above-mentioned modifications to the content of IFRS accounting standards, there were previously standards and several IFRS IC interpretations that have had delayed application dates. The most notable is the effective date for IFRS 10 *Consolidated Financial Statements*, IFRS 11 *Joint Arrangements*, IFRS 12 *Disclosure of Interests in Other Entities*, IAS 27 *Separate Financial Statements* and IAS 28 for which the European Commission permitted a one-year deferral to the mandatory effective date set by the IASB.

⁷¹ Commission Regulation (EU) 2021/2036 of 19 November 2021 amending Regulation (EC) No 1126/2008 adopting certain international accounting standards in accordance with Regulation (EC) No 1606/2002 of the European Parliament and of the Council as regards International Financial Reporting Standard 17, 19 November 2021.

4.2.1.B Evaluation of the Regulation

In 2014, the European Commission started an evaluation of the Regulation on the application of IFRS accounting standards to assess whether the Regulation achieved its objective in an efficient and effective manner, the criteria that all new IFRS accounting standards should meet to become EU law are appropriate, the process for adoption of standards works properly and the governance structure of the bodies developing the standards and advising the European Commission is appropriate. The evaluation mainly included a public consultation, an informal expert group, and a review of literature on the impact of the mandatory adoption of IFRS accounting standards in the EU and on the performance of IFRS accounting standards during the financial crisis. The results were included in a report issued in 2015. The key findings showed that IFRS accounting standards were successful in creating a common accounting language for capital markets and that there is still no well-defined alternative to IFRS accounting standards. However, the report also identified room for improvement in some areas.

On 31 January 2018, the High-Level Expert Group (HLEG) on Sustainable Finance, established by the European Commission, published its final report setting out strategic recommendations for a financial system that supports sustainable investments.⁷² In this report, the HLEG recommends the European Commission to change the Regulation to specify that international accounting standards should only be adopted if they are 'conducive to the European public good, including its sustainability and long-term investment objectives and to provide the power to the EU to adjust specific aspects of IFRS accounting standards adopted by the IASB before transposing them into EU law'.

Reference to the HLEG report was made when the European Commission launched in March 2018 a consultation document *Fitness Check on the EU Framework for Public Reporting by Companies* which generally sought stakeholder views on whether the EU framework for public reporting by companies is fit for purpose.⁷³

Stakeholders from 23 Member States and 25 third countries submitted 338 responses on the public consultation. Most respondents commented that the EU framework for public reporting overall brings added value and is coherent, effective and relevant for achieving its main intended objectives of safeguarding stakeholders' interests, ensuring financial stability, developing the internal market, integrated EU capital markets and promoting sustainability. Most respondents supported the status quo about the EU IFRS accounting endorsement process and cautioned against 'EU carve-ins' that could lead to 'EU-IFRS accounting'.

4.2.2 United Kingdom

For financial years beginning on or after 1 January 2021, UK incorporated companies that do not apply UK GAAP will use UK-adopted international accounting standards (IAS) rather than EU IFRS. The UK Endorsement Board has the delegated authority to endorse new or amended standards. UK incorporated entities with securities admitted to trading on non-UK regulated markets may need to confirm they have followed the appropriate frameworks, such as EU-adopted IFRS or IFRS accounting standards as issued by the IASB, in addition to UK-adopted IAS.

4.3 Americas

4.3.1 US

See section 3.2 above for a discussion of the status of US adoption of IFRS accounting standards.

4.3.2 Canada

For publicly accountable enterprises, the Accounting Standards Board (AcSB) adopted IFRS accounting standards as Canadian GAAP for fiscal years beginning on or after 1 January 2011, with some deferrals for certain types of entities, which have now expired, and with the exception of pension plans and benefit plans that have characteristics similar to pension plans. Such plans follow the accounting standards for pension plans issued by the AcSB as of 1 January 2011, rather than IAS 26 *Accounting and Reporting by Retirement Benefit Plans*.

⁷² *Financing a Sustainable European Economy*, European Union High-Level Expert Group on Sustainable Finance, 31 January 2018.

⁷³ *Consultation Document Fitness Check on the EU Framework for Public Reporting by EU Companies*, European Commission, 21 March 2018.

The definition of 'publicly accountable enterprises' is essentially the same as 'publicly accountable entity' in IFRS for SMEs. Canadian publicly accountable enterprises that are registered with the US SEC are permitted to apply US accounting standards rather than IFRS accounting standards. Securities regulators have indicated that they will consider permitting the use of US standards by Canadian rate-regulated entities that file with Canadian securities commissions even if they are not US SEC registered. A number of these entities have been granted permission to use US standards.

For non-publicly accountable enterprises and not-for-profit organisations, the AcSB has developed new bases of accounting that are derived from Canadian standards rather than IFRS accounting standards, although IFRS accounting standards are also available for use by those entities on a voluntary basis.

The adoption of IFRS accounting standards in Canada for publicly accountable enterprises means that the AcSB has effectively ceased to make final decisions on most matters affecting the technical content and timing of implementation of standards applied to publicly accountable enterprises in Canada. The AcSB's plans for incorporating new or amended IFRS accounting standards into Canadian standards include reviewing all IASB documents issued for comment. As part of this process, the AcSB seeks the input of Canadian stakeholders by issuing its own 'wraparound exposure draft' of the IASB proposals, together with a document highlighting the key elements of the IASB proposals that are particularly relevant to Canadian stakeholders. In addition, the AcSB may perform outreach activities such as public roundtables. Any changes to IFRS accounting standards must be approved by the AcSB before becoming part of Canadian GAAP.

While the AcSB retains the power to modify or add to the requirements of IFRS accounting standards, it intends to avoid changing IFRS accounting standards when adopting them as Canadian GAAP. Accordingly, the AcSB does not expect to eliminate any options within existing IFRS accounting standards. As issues relevant to Canadian users of financial information arise in the future, the AcSB will work to resolve them through the IFRS IC or the IASB. In the event that a resolution by the IFRS IC or IASB is not possible, the AcSB will stand ready to develop additional temporary guidance.

The AcSB has an IFRS Discussion Group to provide a public forum to discuss the application of IFRS accounting standards in Canada and to identify matters that should be forwarded to the IFRS IC for further consideration. The Group does not interpret IFRS accounting standards or seek consensus on its application in Canada. It meets in public up to four times per year and has generated several submissions for the IFRS IC's agenda.

4.3.3 Brazil

Local accounting standards in Brazil (CPCs) have been converged with IFRS accounting standards since 2010 and public companies regulated by the 'Comissão de Valores Mobiliários' (CVM) are also required to make a formal statement of compliance with IFRS accounting standards as issued by the IASB for their consolidated financial statements. The previous exception for homebuilding companies, which were temporarily permitted to continue to apply IAS 11 *Construction Contracts* rather than IAS 18 *Revenue* under IFRIC 15 *Agreements for the Construction of Real Estate*, was eliminated with the adoption of IFRS 15. However, local regulators have established specific accounting policies for homebuilding revenue recognition and the financial statements of entities in the industry do not refer to IFRS accounting standards as issued by the IASB as the basis of preparation.

Banks are regulated by the Brazilian Central Bank, which continues to require preparation of financial statements under its pre-existing rules. However, larger companies, as defined by law, including banks, are also required to prepare annual financial statements in accordance with IFRS accounting standards since 2010, which must be made publicly available. Insurance companies were required to adopt the local CPCs, and hence IFRS accounting standards, in 2011.

Non-public companies outside financial services are required to apply the CPCs. Smaller non-public companies are permitted to apply CPCs for SMEs which is an equivalent of IFRS for SMEs.

4.4 Asia

4.4.1 China

4.4.1.A Mainland China

The Ministry of Finance in China (the MOF) - through its Accounting Regulatory Department - is responsible for the promulgation of accounting standards, which are applicable to various business enterprises.

Representatives of the China Accounting Standards Committee (CASC), which falls under the Accounting Regulatory Department of the MOF, and the IASB met in Beijing in November 2005 to discuss a range of issues relating to the convergence of Chinese accounting standards with IFRS accounting standards. At the conclusion of the meeting, the two delegations released a joint statement (2005 Beijing Joint Statement) setting out key points of agreement, including the following:

- The CASC stated that convergence is one of the fundamental goals of its standard-setting programme, with the intention that an enterprise applying Chinese accounting standards should produce financial statements that are the same as those of an enterprise that applies IFRS accounting standards.
- And
- The delegation acknowledged that convergence with IFRS accounting standards will take time and how to converge with IFRS accounting standards is a matter for China to determine.

Since February 2006, the MOF issued a series of new and revised Accounting Standards for Business Enterprises (ASBE), which included the Basic Standard and 41 specific accounting standards. In April 2010, the MOF issued the *Road Map for Continual Convergence of the ASBE with IFRS* (the MOF Road Map), which requires the application of ASBE by all listed companies, some non-listed financial enterprises and central state-owned enterprises, and most large and medium-sized enterprises. The MOF Road Map also states that ASBE will continue to maintain convergence with IFRS accounting standards.

In November 2015, representatives of the Trustees of the Foundation and the MOF held a bilateral meeting in Beijing, China. During the meeting, both parties noted the success of 2005 Beijing Joint Statement, between CASC and IASB. It is the view of both parties that 2005 Beijing Joint Statement has achieved its objectives. In particular, the ASBE is now substantially converged with IFRS accounting standards and the use of those standards has significantly enhanced the quality and transparency of financial reporting in China. Recognising these developments, both parties updated the 2005 Beijing Joint Statement to reflect progress made in China and set out the following bases for future cooperation:

- Reaffirming the goal of full convergence
- Enhancing continued cooperation
- And
- Establishing a joint working group for further cooperation

To maintain continuous convergence with IFRS accounting standards, during the period from July 2024 to June 2025, the MOF released an interpretation to specify that when entity issue insurance contracts with direct participation features, for which the underlying items include investment property, the entity may choose either the fair value model or the cost model for all investment property backing liabilities that pay a return linked directly to the fair value of, or returns from, specified assets including that investment property. This requirement is consistent with IAS 40 *Investment Property* paragraph 32A-32B, which was consequential amendments by IFRS issued May 2017.

4.4.1.B Hong Kong

The Hong Kong Institute of Certified Public Accountants (HKICPA) is the principal source of accounting principles in Hong Kong. These include a series of Hong Kong FRS accounting standards, accounting standards referred to as Hong Kong Accounting Standards (HKAS) and Interpretations issued by the HKICPA.

HKFRS accounting standards are fully converged with IFRS accounting standards (subject to the exceptions discussed below) with effect from 1 January 2005. The HKICPA Council supports the integration of its standard-setting process with that of the IASB.

Although the HKICPA Council has a policy of maintaining convergence of HKFRS accounting standards with IFRS accounting standards, the HKICPA Council may consider it appropriate to include additional disclosure requirements in an HKFRS accounting standard or, in some exceptional cases, to deviate from an IFRS accounting standard. Each HKFRS accounting standard contains information about the extent of compliance with the equivalent IFRS accounting standard. When the requirements of an HKFRS accounting standard and an IFRS accounting standard differ, the HKFRS accounting standard is required to be followed by entities reporting within the area of application of HKFRS accounting standards. However, in practice, exceptions to IFRS accounting standards are few and relate to certain transitional provisions.

Certain smaller companies or groups meeting the necessary requirements and size criteria are permitted (but not required) to adopt the *HKFRS Private Entities Accounting Standard*.

4.4.2 Japan

Gradual convergence of Japanese GAAP towards IFRS accounting standards has been ongoing for a number of years. Currently, IFRS accounting standards may be adopted on a voluntary basis by listed companies or those applying for listing who are able to state that they meet certain governance conditions around IFRS accounting standards in their consolidated financial statements. Standalone financial statements must be prepared using Japanese GAAP.

IFRS accounting standards as issued by the IASB is the basis for voluntary adoption of the standards in Japan, as designated by the Financial Services Agency. Each IFRS accounting standard issued by the IASB is endorsed for the voluntary adoption through a formal process and all IFRS accounting standards issued by the IASB currently have been designated in a timely manner without any changes at the time of writing. In addition, from 2015, a second endorsement mechanism led to the issuance of Japan's Modified International Standards (JMIS). JMIS differs from IFRS accounting standards in that it requires goodwill to be amortised and requires all items recorded in other comprehensive income to be recycled to profit or loss eventually. Currently, no companies apply JMIS.

The number of the companies adopting IFRS accounting standards in Japan voluntarily (including those who have announced their plan to adopt them in the future) increased to approximately 290 as of July 2025, mostly being larger companies. Whilst this is a small proportion of the of total number of listed companies in Japan, it represents a significant proportion of the market capitalisation of the Tokyo Stock Exchange, accounting for about 50% of the total market capitalisation at the time of writing.

4.4.3 India

Accounting standards in India are formulated by the ICAI. The central government prescribes the standards of accounting or any addendum thereto, as recommended by the ICAI, in consultation with and after examination of the recommendations made by the National Financial Reporting Authority (NFRA). The Ministry of Corporate Affairs (MCA) notifies the standards under the Companies Act by publishing them in the Gazette of India. Notified standards are authoritative under Indian law. Until the financial year ended 31 March 2016, all companies registered under the Companies Act were required to follow local GAAP known as Accounting Standards (ASs), which are based on old versions of IFRS accounting standards and contain many key differences from IFRS accounting standards.

In February 2015, the MCA notified the Companies (Indian Accounting Standards) Rules, 2015, laying down roadmap for application of IFRS-converged standards, known as Indian Accounting Standards (Ind AS), to Indian companies other than banking companies, insurance companies and non-banking financial companies (NBFCs). In accordance with the roadmap, listed as well as non-listed non-financial companies having net worth equal to or more than INR 5,000 million (approx. USD 57 million), including their group entities (i.e., their holding, subsidiary, associate and joint venture companies) were required to apply Ind AS from financial year beginning on or after 1 April 2016. Currently, Ind AS application is mandatory for all non-financial companies whose debt or equity securities are listed on any recognised stock exchange in India/ outside India, non-financial companies in the process of listing, non-financial non-listed companies having net worth exceeding INR 2,500 million (approx. USD 29 million) and all their group entities.

In January 2016, the MCA notified roadmap for phase-wise applicability of Ind AS to NBFCs. Phase 1 of the roadmap required NBFCs having a net worth equal to or exceeding INR 5,000 million (approx. USD 57 million) and their group entities to prepare Ind AS financial statements from the financial year beginning on or after 1 April 2018. Currently, the application of Ind AS is mandatory for all listed NBFCs, NBFCs in the process of listing their securities, non-listed NBFCs having net worth equal to or exceeding INR 2,500 million (approx. USD 29 million) and their group entities. However, if NBFC has any banking or insurance company as its subsidiary, associate or joint venture, then the banking or insurance company is not permitted to adopt Ind AS for preparation of its own standalone or consolidated financial statements. Rather, the banking or insurance company will provide group reporting package to the NBFC to facilitate preparation of consolidated financial statements by the NBFC.

Companies not covered under the roadmap can either apply Ind AS voluntarily or continue applying existing standards, i.e., ASs. If Ind ASs are applied voluntarily, this option will be irrevocable. Voluntary adoption of Ind AS is permitted for all companies other than NBFCs. In 2009, the SEBI permitted listed companies with subsidiaries to submit their consolidated financial statements in accordance with IFRS accounting standards as issued by the IASB. Few companies in India have availed themselves of this option, which is no longer available for companies.

With regard to banks, the Reserve Bank of India had originally indicated that Ind AS will apply in phases to banks starting from 1 April 2018 onward. However, pending necessary legislative amendments and considering the level of preparedness of many banks, implementation of Ind AS to the banks has been deferred until further notice.

The Insurance Regulatory and Development Authority of India (IRDAI) initially expected Ind AS to be applied to insurers from the same date as banks. However, due to the issuance of IFRS 17 by the IASB, it was decided that the effective date of implementation will be decided after the finalisation of IFRS 17 by the IASB. IFRS 17 has since been issued by the IASB and Ind AS 117 (corresponding to IFRS 17) has also been notified by the MCA and is applicable to insurance contracts issued by non-insurance companies from financial year beginning on or after 1 April 2024. However, it is still not applicable to the insurers or insurance companies who may continue to provide their group reporting package prepared in accordance with Ind AS 104 (corresponding to IFRS 4 *Insurance Contracts*) for the preparation of consolidated financial statements by their parent/ investor/ venturer until the IRDAI formally notifies the adoption of Ind AS. The IRDAI is working on implementation of Ind AS in the insurance sector including new standard on insurance contracts in India which is equivalent of IFRS 17. The IRDAI has also constituted an Expert Committee on Implementation of Ind AS/ IFRS in the insurance sector to address implementation issues of Ind AS/ IFRS in the insurance sector.

4.5 Australia

Australia has a regime in which IFRS accounting standards are issued under its legal framework as Australian Accounting Standards (AAS). These are essentially word-for-word copies of IFRS accounting standards (IFRS equivalent). AAS also include some additional Australian specific paragraphs for not-for-profit and public sector entities.

In addition to the IFRS equivalent AAS, there are some additional Australian specific standards for entities such as superannuation entities, not-for-profit entities and public sector entities and some additional disclosures exist within certain standards.

Compliance by Australian for-profit private sector entities with AAS will result in compliance with IFRS accounting standards as issued by the IASB, unless they are not publicly accountable and elect to apply the Simplified Disclosure Standard (SDS). Explicit statements of compliance with IFRS accounting standards as issued by the IASB - when they are compliant- are required to be made by the preparers (in the notes to the financial statements and in the Directors' Declaration required by the Corporations Act), as well by the auditors in their reports. Not-for-profit and public sector entities cannot make an explicit statement of compliance with IFRS accounting standards, as they are required to also comply with other Australian specific accounting standards and Australian specific paragraphs when preparing their financial statements.

Australia has not adopted the IFRS for SMEs because of measurement differences and the removal of options as compared to IFRS accounting standards. SDS is available to for-profit private entities that are not publicly accountable (per definition in IFRS for SMEs) and required either: a) by legislation to prepare financial statements that comply with accounting standards, or b) by their constituting document or another document to prepare financial statements that comply with AAS (subject to certain grandfathering provisions). SDS is also available to for-profit public sector or not-for-profit entities that are reporting entities⁷⁴ and other for-profit entities that elect to apply the *Conceptual Framework for Financial Reporting* and the consequential amendments to other pronouncements set out in AASB 2019-1 *Amendments to Australian Accounting Standards - References to the Conceptual Framework*. SDS requires such entities to apply all recognition and measurement requirements of AAS, but provide simplified disclosures. The disclosures are closely based on those in the IFRS for SMEs accounting standard, with an overlay of certain Australian specific disclosures. Financial statements prepared under SDS are general purpose financial statements, but cannot be held out as being in compliance with IFRS accounting standards as issued by the IASB.

The Australian standard-setter has not endorsed and incorporated IFRS 19 into its local accounting framework. At the time of writing, the AASB is expected to seek feedback in the second half of 2025 about whether SDS should be updated considering the effects of amendments made to IFRS for SMEs accounting standard, IFRS 19 and other standards.

⁷⁴ A reporting entity is one in respect of which it is reasonable to expect the existence of users who rely on the entity's general purpose financial statements for information that will be useful to them for making and evaluating decisions about the allocation of resources. A reporting entity can be a single entity or a group comprising a parent and all of its subsidiaries.

4.6 South Africa

For periods beginning on or after 1 January 2005, the South African securities exchange, JSE Limited (JSE), has required that all listed companies prepare financial statements under IFRS accounting standards. Effective 1 May 2011, the South African Companies Act permits different accounting frameworks to apply to different categories of companies based on their 'public interest score'. Listed companies are required to use IFRS accounting standards, however, other companies (depending on their public interest score) may apply IFRS accounting standards, IFRS for SMEs, or in certain situations (introduced, in particular, for micro-entities) entity-specific accounting policies as determined by themselves.

In addition to the disclosure requirements of IFRS accounting standards and IFRS for SMEs, the South African Companies Act and the JSE impose certain additional disclosure requirements on reporting entities. Further, the previous South African standard-setter - the Accounting Practices Board - has issued three Financial Reporting Guides. While these interpretations are specific to issues in the South African environment, IFRS reporters in South Africa make use of them as they are based on a framework equivalent to that used for IFRS accounting standards. These are updated for developments in IFRS accounting standards.

5 Consistency in application of IFRS accounting standards

The use of a consistent set of accounting standards by companies throughout the world has the potential to improve the comparability and transparency of financial information. The provision of higher quality information has been shown to reduce financial statement preparation costs and, it is believed, to enable capital markets participants to make better decisions. The global adoption of IFRS accounting standards is a necessary condition for global comparability, but, on its own, it is insufficient. Global comparability cannot be achieved without a rigorous and consistent application of the standards. However, consistent application of the standards cannot be achieved unless countries adopt IFRS accounting standards without modifying the standards issued by the IASB. Studies into the impact of the use of IFRS accounting standards indicate reduced cost of capital and improvements in share prices and trading, resulting in part from increased disclosure and enhanced information comparability. However, the research concludes that these improvements occur in countries with strong legal enforcement.⁷⁵ The adoption of IFRS accounting standards alone is, therefore, unlikely to produce uniform financial reporting. The standards need to be applied, audited and enforced on a consistent basis in order to get the most out of comparability.⁷⁶

Practitioners and regulators agree that enforcement of accounting standards is an integral part of achieving accounting quality under IFRS accounting standards. With this in mind, ESMA has agreed on common enforcement priorities and has made the consistent application of IFRS accounting standards one of its primary objectives. In December 2014, ESMA's guidelines on enforcement of financial information (the Guidelines) became effective. They replace earlier versions of the guidelines from ESMA and its predecessor, the Council of European Securities Regulators (CESR). The Guidelines apply to all EU national competent authorities and other bodies in the EU that undertake enforcement responsibilities. The Guidelines build on a common approach to the enforcement of financial information and reinforce coordination among European enforcers. In addition, the Guidelines codify European common enforcement priorities and include a requirement to discuss views on accounting matters prior to taking enforcement decisions.⁷⁷

In addition to enforcement, ESMA contributes to the standard-setting process by engaging with the IASB and the IFRS IC by submitting comment letters and identifying areas of diversity in practice (including areas in which a lack of clarity in standards could lead to diversity in practice). In addition, the Foundation and ESMA have entered into a joint Statement of Protocols, which reaffirms the cooperation between the two entities as well as describes additional areas of cooperation including electronic reporting, the implementation of new standards and emerging financial reporting issues.⁷⁸

The Foundation and IOSCO have entered into a joint Statement of Protocols to facilitate consistency in the application of IFRS accounting standards. This is in addition to the memorandum of understanding between the capital markets authorities that formed the Monitoring Board (see section 2.3 above) and the Foundation.⁷⁹

The US SEC stresses the importance of enforcing IFRS accounting standards, not only through its filing review process of foreign private issuers, but also through its collaboration with foreign counterparts bilaterally and through IOSCO.⁸⁰

Although consistent application of IFRS accounting standards is not the primary responsibility of the IASB, it understandably takes a keen interest. The ASAF was established (see section 2.8 above) to coordinate interaction with national and regional standard-setting bodies to, among other things, identify where divergence occurs across borders.⁸¹ The post-implementation reviews of all major standards and interpretations are intended to identify and rectify difficulties in consistency that are identified only after the standard is used. The IFRS IC plays a key role as well.

Much has been written about consistency in IFRS accounting standards, but a recurring message is that it requires a coordinated effort by standard-setters, preparers, regulators and auditors.

6 Summary

IFRS accounting standards are now, together with US GAAP, one of the two globally recognised financial reporting frameworks. Although the goal of a single set of high-quality global accounting standards has not been fulfilled, given the number of countries that have adopted or converged with IFRS accounting standards or have plans to in the future, it is safe to say that IFRS accounting standards have become 'International GAAP'.

Overview

This chapter discusses the *Conceptual Framework for Financial Reporting* (the *Framework*) as published by the IASB in 2018. Readers interested in predecessor versions should refer to earlier editions of *International GAAP*. The effective date for the revised *Framework* for preparers of financial statements was, broadly speaking, January 2020, although there are some exceptions to this.

Relevant chapters in this book will discuss, as appropriate, references to the *Framework* in the standards with which they deal.

What you need to know

- The purpose of the *Framework* is to assist the Board to develop IFRSs that are based on consistent concepts.
- The *Framework* describes the objective of, and the concepts for, general purpose financial reporting.
- The *Framework* is not a standard and nothing in it overrides any specific standard or any requirement of one; however, some accounting standards make reference to it.
- If an entity needs to develop an accounting policy in the absence of a specifically applicable IFRS it is required, *inter alia*, to consider the applicability of the definitions, recognition criteria and measurement concepts in the *Framework*.

1 Introduction

There have been numerous attempts over many decades to define the purpose and nature of accounting. Perhaps not surprisingly, most of the earlier studies were carried out by individual academics and academic committees in the US; for example, the writings in 1940 of Paton and Littleton¹ were intended to present a framework of accounting theory that would be regarded as a coherent and consistent foundation for the development of accounting standards, whilst the studies carried out over the years by various committees of the American Accounting Association have made a significant contribution to accounting theory.² In addition to the research carried out by individuals and academic committees, professional accounting bodies around the world have also, from time to time, issued statements that deal with various aspects of accounting theory. These can be seen as the first attempts at developing some form of conceptual framework.

With the globalisation of business and the increased access to the world's capital markets that goes with it, there are essentially only two truly global systems of financial reporting - IFRS and US GAAP.

In 2004, the IASB and FASB began a joint project to develop a single conceptual framework, the first phase of which was completed in September 2010. This version of the IASB's conceptual framework (the 2010 *Framework*) comprised two sections finalised in this first phase of the joint project with the FASB, together with other material carried forward from the conceptual framework issued by the former IASC in 1989 ('the 1989 *Framework*'), which was originally intended to be replaced in a second phase of the joint framework project. The 1989 *Framework*, although not jointly developed with the FASB, nevertheless drew heavily on the FASB's then current conceptual framework. No further joint work was undertaken by the two boards and in September 2012 the IASB decided to restart the project as an IASB-only project.

In July 2013 the IASB published a discussion paper³ which was followed by an exposure draft of an updated framework in May 2015.⁴

In March 2018 the IASB published *Conceptual Framework for Financial Reporting* (the *Framework*).

This chapter discusses the *Framework* as published in 2018. Readers interested in predecessor versions should refer to earlier editions of *International GAAP*. The effective date for the revised *Framework* for preparers of financial statements is, broadly speaking, January 2020, although there are some exceptions to this. Furthermore, certain IFRS accounting standards make reference to earlier versions of the *Framework*. This is discussed in section 2 below.

1.1 What is a conceptual framework?

In general terms, a conceptual framework is a statement of generally accepted theoretical principles which form the frame of reference for a particular field of enquiry. In terms of financial reporting, these theoretical principles provide the basis for both the development of new reporting practices and the evaluation of existing ones. Since the financial reporting process is concerned with the provision of information that is useful in making business and economic decisions, a conceptual framework will form the theoretical basis for determining which events should be accounted for, how they should be measured and how they should be communicated. Therefore, although it is theoretical in nature, a conceptual framework for financial reporting has a highly practical end in view.

1 W. A. Paton and A. C. Littleton, *An Introduction to Corporate Accounting Standards*, Monograph No. 3, American Accounting Association, 1940.

2 See, for example: American Accounting Association, Executive Committee, *A Tentative Statement of Accounting Principles Affecting Corporate Reports*, Accounting Review, June 1936, pp.187-191; American Accounting Association, Executive Committee, *Accounting Principles Underlying Corporate Financial Statements*, Accounting Review, June 1941, pp.133-139; American Accounting Association, Committee to Prepare a Statement of Basic Accounting Theory, *A Statement of Basic Accounting Theory*, 1966; American Accounting Association, Committee on Concepts and Standards for External Financial Reports, *Statement on Accounting Theory and Theory Acceptance*, 1977. The 1977 report concluded that closure on the debate was not feasible, which is perhaps indicative of the complexity of the problem.

3 Discussion Paper DP/2013/1: *A Review of the Conceptual Framework for Financial Reporting*, IASB, July 2013.

4 Exposure Draft ED/2015/3: *Conceptual Framework for Financial Reporting*, IASB, May 2015.

1.2 Why is a conceptual framework necessary?

A conceptual framework for financial reporting should be a theory of accounting against which practical problems can be tested objectively, and the utility of which is decided by the adequacy of the practical solutions it provides. However, the various standard-setting bodies around the world initially often attempted to resolve practical accounting and reporting problems through the development of accounting standards, without such an accepted theoretical frame of reference. The end result was that standard-setters determined the form and content of external financial reports, without resolving such fundamental issues as:

- What are the objectives of these reports?
- Who are the users of these reports?
- What are the informational needs of these users?
- What types of report will best satisfy their needs?

Consequently, standards were often produced on a haphazard and 'fire-fighting' basis with the danger of mutual inconsistencies. By contrast, an agreed framework would, in principle, provide standard-setters with a basis for designing standards that facilitate more consistent external financial reports that meet the needs of the user.

The main role of a conceptual framework is to assist the standard-setter and this is the focus of the discussion in the remainder of this section.

Experience of the last thirty years also shows that, in the absence of an agreed comprehensive conceptual framework, the same theoretical issues were revisited on numerous occasions by different standard-setting bodies. This inevitably sometimes resulted in the development of standards that were internally inconsistent and inconsistent with each other, or which were founded on incompatible concepts. For example, inconsistencies and conflicts have existed between and within individual standards concerning the emphasis placed on substance versus form; neutrality versus prudence; and whether earnings should be determined through balance sheet measurements or by matching costs and revenue. Some standard-setters have permitted two or more methods of accounting for the same set of circumstances, whilst others permitted certain accounting practices to be followed on an arbitrary or unspecified basis. These inconsistencies and irrationalities perhaps reflect the fundamental difficulty of determining what is required in order to give a faithful representation of economic phenomena.

Standard setters have adopted different approaches to the realisation of their conceptual frameworks in specific accounting standards. This can be seen by comparing the standards issued by the FASB with those issued by the IASB. In the US the FASB, in spite of its pioneering work on a conceptual framework, has produced a large number of highly detailed accounting rules. The IASB, on the other hand has tended to produce less detailed standards, relying on preparers and auditors to consider the general principles on which they are based in applying them to specific situations. Clearly, the proliferation of accounting standards in the US stems from many factors, not least the legal and regulatory environment. However, a more satisfactory conceptual framework might reduce the need for such a large number of highly detailed standards, since the emphasis would be on general principles rather than specific rules. Indeed, this change of emphasis has been specifically considered by the US authorities following the financial reporting problems that led, in the US, to the Sarbanes-Oxley Act and the establishment of the Public Company Accounting Oversight Board. This is not to say that the IASB's more general 'principles-based' approach to standard setting is necessarily more satisfactory than the FASB's; rather, the legal and regulatory environment within which non-US businesses habitually work is quite different from that of the US.

The political and economic environment influences not only the approach taken to standard setting, but also the nature of the conceptual framework on which standards are based. Following the widespread incorporation of IFRS into the national GAAPs of many other countries, the IASB is faced with many stakeholders with a variety of needs and expectations. These different stakeholders often express differing views on proposals issued by the IASB and expect their views to be taken into account. Under these circumstances, an agreed conceptual framework is of great value, although the best defence against undue interference in the standard-setting process is the need of the capital markets for financial reporting that provides a sound basis for decision making, which in turn implies a system of financial reporting characterised by relevance, faithful representation, practicality and understandability. While it is probable that these characteristics are more likely to be achieved using a sound theoretical foundation, the converse also applies: namely that the framework must result in standards that account appropriately for actual business practice and economic reality. Otherwise how, for example, is an industry to be persuaded that a particular accounting treatment perceived as adversely affecting its economic interests is better than one which does not?

An agreed framework is therefore not the panacea for all accounting problems. Nor does it obviate the need for judgement to be exercised in the process of resolving accounting issues. What it can provide is a framework within which those judgements can be made. Indeed this is happening, as the principles expressed in the IASB's framework are frequently referred to in IFRSs and during the process of their development. Unfortunately, there is also evidence of the IASB issuing standards that contravene its own conceptual framework. For example, IAS 38 *Intangible Assets* requires the capitalisation of goodwill as an asset, despite the fact that goodwill does not meet the definition of an asset in the IASB's framework. Similarly, IAS 12 *Income Taxes* requires recognition of deferred tax assets and liabilities that arguably do not meet the definitions of asset and liability under the framework.

2 Development of the IASB's Conceptual Framework and effective date

The IASB published *Conceptual Framework for Financial Reporting 2010* in September 2010. This was effectively work-in-progress, comprising two chapters developed in the first phase of the then joint project of the IASB and FASB to develop an agreed framework (see section 1 above), together with material carried forward from the former IASC's 1989 *Framework* (which was adopted in 2001 by the then newly-constituted IASB).

Following the completion of the first phase in 2010, the joint project with the FASB stalled somewhat until, in 2012, the IASB indicated that it no longer saw convergence between IFRS and US GAAP in the area of the conceptual framework as a primary objective and, moreover, that active work on the conceptual framework would resume shortly. This resulted in the publication by the IASB in July 2013 of a discussion paper DP/2013/1 - *A Review of the Conceptual Framework for Financial Reporting*. The discussion paper noted this was no longer a joint project with the FASB, but the IASB's own project.⁵ The IASB followed the discussion paper with an exposure draft of an updated framework in May 2015 (*Exposure Draft ED/2015/3: Conceptual Framework for Financial Reporting*).

In March 2018 the IASB published *Conceptual Framework for Financial Reporting* (the *Framework*). This fully revised document replaced the sections of the 2010 version previously carried-forward from the 1989 *Framework* and also made amendments to the sections produced in 2010.

This chapter discusses the *Framework* as published in 2018. Readers interested in predecessor versions should refer to earlier editions of *International GAAP*.

The *Framework* itself has no explicit effective date. However:

The Board and the IFRS Interpretations Committee (IFRS IC) commenced using the 2018 *Framework* immediately it was issued. If, when developing a draft Interpretation, the IFRS IC is faced with an inconsistency between a standard (including any standard developed on the basis of the 1989 *Framework* or the 2010 *Framework*) and the concepts in the 2018 *Framework*, it will refer the issue to the Board, as required by the IFRS Foundation Due Process Handbook. [CF BC0.27].

Preparers of financial statements could be affected by the changes to the *Framework* if they need to use it to develop an accounting policy when no standard applies to a particular transaction or other event or when a standard allows a choice of accounting policy (see Chapter 3). To achieve transition to the *Framework* for such entities, the Board issued *Amendments to References to the Conceptual Framework in IFRS Standards* in March 2018 (CF References). Where appropriate, that document updated references in standards to refer to the new *Framework* and updated related quotations. [CF BC0.28]. These changes became effective for periods beginning on or after 1 January 2020.⁶

Relevant chapters in this publication discuss, as appropriate, references to the *Framework* in the standards with which they deal. At a more general level, it should be noted that not all such references have been changed to refer to the new *Framework*; some continue to refer to previous versions as discussed below.

The following continue to refer to the version of the framework in effect when they were developed:

- IFRIC 12 *Service Concession Arrangements* and IFRIC 19 *Extinguishing Financial Liabilities with Equity Instruments* continue to refer to the 1989 *Framework*. [IFRIC 12 references, IFRIC 12.BC20, IFRIC 19 references, IFRIC 19.BC16].
- IFRS 14 *Regulatory Deferral Accounts*, IFRIC 20 *Stripping Costs in the Production Phase of a Surface Mine* and IFRIC 22 *Foreign Currency Transactions and Advance Consideration* continue to refer to the 2010 *Framework*. [IFRS 14.13, IFRS 14.BC10, IFRIC 20 references, IFRIC 20.BC7, IFRIC 22 references, IFRIC 22.BC17]. And
- IFRS 3 *Business Combinations* continues to refer to the 2010 *Framework* until, at the latest, periods beginning on or after 1 January 2022.⁷ For subsequent periods, references in IFRS 3 are to the new *Framework* (see Chapter 10). [IFRS 3.11, IFRS 14.13]. There remains an exception to this requirement whereby IFRS 3 requires reference to IAS 37 *Provisions, Contingent Liabilities and Contingent Assets* rather than the *Framework* in certain circumstances. The Board added this exception to avoid an unintended consequence of updating the reference. Without the exception, an entity would have recognised some liabilities on the acquisition of a business that it would not recognise in other circumstances. Immediately after the acquisition, the entity would have had to derecognise such liabilities and recognise a gain that the Board did not consider to depict an economic gain. The Board expects this exception to remain in IFRS 3 for as long as the definition of a liability in IAS 37 differs from the definition in the latest version of the *Conceptual Framework*.

3 Contents, purpose and scope of the IASB's Conceptual Framework

3.1 Contents of the Conceptual Framework

The *Framework* comprises an introductory section dealing with its status and purpose (discussed in section 3.2 below), followed by eight chapters and an appendix of defined terms. The appendix is an editorial device which extracts (or derives) definitions from the *Framework* itself. As these are dealt with in this chapter in the relevant sections the appendix is not reproduced.

The chapters are as follows:

- Chapter 1 - The objective of general purpose financial reporting (discussed in section 4 below)
 - Chapter 2 - Qualitative characteristics of useful financial information (discussed in section 5 below)
 - Chapter 3 - Financial statements and the reporting entity (discussed in section 6 below)
 - Chapter 4 - The elements of financial statements (discussed in section 7 below)
 - Chapter 5 - Recognition and derecognition (discussed in section 8 below)
 - Chapter 6 - Measurement (discussed in section 9 below)
 - Chapter 7 - Presentation and disclosure (discussed in section 10 below)
- And
- Chapter 8 - Concepts of capital and capital maintenance (discussed in section 11 below)

3.2 Status and purpose of the Conceptual Framework

The purpose of the *Framework* is to assist:

- The Board to develop IFRSs that are based on consistent concepts. However, the Board notes that to meet the objective of general purpose financial reporting, it may sometimes specify requirements that depart from aspects of the *Framework*. If it does so, it will explain the departure in the basis for conclusions on that standard. [SP 1.3].
 - Preparers of financial statements to develop consistent accounting policies when no standard applies to a particular transaction or other event, or when a standard allows a choice of accounting policy (see Chapter 3).
- And
- All parties to understand and interpret IFRS.

The *Framework* describes the objective of, and the concepts for, general purpose financial reporting. [SP 1.1]. It is not a standard, and nothing in it overrides any specific standard or any requirement of one. [SP 1.2].

The *Framework* may be revised from time to time in light of the IASB's experience of working with it. Revisions to it will not automatically lead to changes to the standards; any decision to amend a standard would require the Board to go through its normal due process. [SP 1.4].

The Board states that its work serves the public interest by fostering trust, growth and long-term financial stability in the global economy and that the *Framework* contributes to the development of standards that bring transparency, accountability and efficiency to financial markets. The IASB describes its *Framework* as providing the foundation for standards that:

- Contribute to transparency by enhancing the international comparability and quality of financial information, enabling investors and other market participants to make informed economic decisions; strengthen accountability by reducing the information gap between the providers of capital and the people to whom they have entrusted their money. Standards based on the *Framework* provide information needed to hold management to account. As a source of globally comparable information, those standards are also of vital importance to regulators around the world; and contribute to economic efficiency by helping investors to identify opportunities and risks across the world, thus improving capital allocation. For businesses, the use of a single, trusted accounting language derived from standards based on the *Framework* lowers the cost of capital and reduces international reporting costs. [SP 1.5].

4 Chapter 1: The objective of general purpose financial reporting

Chapter 1 of the *Framework* discusses the objective of general purpose financial reporting: [CF 1.1]

Extract from the Conceptual Framework

Introduction

- 1.1 The objective of general purpose financial reporting forms the foundation of the *Conceptual Framework*. Other aspects of the *Conceptual Framework*—the qualitative characteristics of, and the cost constraint on, useful financial information, a reporting entity concept, elements of financial statements, recognition and derecognition, measurement, presentation and disclosure—flow logically from the objective.

The Chapter is divided into three main sections dealing with:

- The objective, usefulness and limitations of general purpose financial reporting
 - Information about a reporting entity's economic resources, claims, and changes in resources and claims
- And
- Information about an entity's use of such resources

The first of these is discussed in section 4.1 below; section 4.2 below deals with the other two items.

4.1 Objective, usefulness and limitations of general purpose financial reporting

4.1.1 Objective and usefulness

The *Framework* defines the objective of general purpose financial reporting as being: to provide financial information about the reporting entity that is useful to existing and potential investors, lenders and other creditors in making decisions relating to providing resources to the entity. Those decisions involve decisions about: buying, selling or holding equity and debt instruments; providing or settling loans and other forms of credit; or exercising rights to vote on, or otherwise influence, management's actions that affect the use of the entity's economic resources. [CF 1.2].

Existing and potential investors, lenders and other creditors (collectively, 'users' or 'primary users') cannot generally require reporting entities to provide information directly to them and must rely on general purpose financial reports for much of the financial information they need. Consequently, they are the primary users to whom general purpose financial reports are directed. [CF 1.5]. Moreover, financial reports are prepared for users with a reasonable knowledge of business and economic activities who can review and analyse the information diligently. [CF 2.36].

Other parties, such as regulators and members of the public, may also find general purpose financial reports useful. However, those reports are not primarily directed to these other groups. [CF 1.10]. This draws out an interesting facet of the Board's objective for financial reporting being restricted to the information needs of those providing resources to a reporting entity. It excludes other common uses of financial information, notably the levying of corporation taxes and restrictions on distribution to members. These two very important areas of corporate activity will typically take as a starting point a measure of profit as reported in the entity's financial reports. Self-evidently, if these uses are not considered in the development of accounting requirements, there is a risk that financial statements will be less suitable for these purposes.

The decisions described in the objective depend on the returns that existing and potential investors, lenders and other creditors expect, for example, dividends, principal and interest payments or market price increases. Investors', lenders' and other creditors' expectations about returns depend on their assessment of the amount, timing and uncertainty of (the prospects for) future net cash inflows to the entity and on their assessment of management's stewardship of the entity's economic resources. Existing and potential investors, lenders and other creditors need information to help them make those assessments. [CF 1.3].

In doing so, users need information about: [CF 1.4]

- The economic resources of the entity, claims against the entity and changes in those resources and claims (see section 4.2 below)
- And
- How efficiently and effectively the entity's management and governing board have discharged their responsibilities to use the entity's economic resources (see section 4.2.3 below)

4.1.2 Limitations

The *Framework* acknowledges that general purpose financial reports do not, and cannot, provide all of the information needed by providers of capital. Users of financial reports need to consider other pertinent information, such as general economic and political conditions, and industry and company outlooks. Moreover, general purpose financial reports are not designed to show the value of a reporting entity, but to provide information to allow users to estimate it for themselves. [CF 1.6, CF 1.7].

General purpose financial reports are focused on meeting the needs of the maximum number of primary users, who may have different, and possibly conflicting, needs for information. However, this does not preclude a reporting entity from including additional information that is most useful to a particular subset of primary users. [CF 1.8]. It should be noted, however, that IAS 1 *Presentation of Financial Statements* contains the requirement that the understandability of financial statements must not be reduced by obscuring material information with immaterial information. [IAS 1.30A]. Similar requirements have been carried over to IFRS 18 *Presentation and Disclosure in Financial Statements*, which replaces IAS 1 from 1 January 2027 at the latest. [IFRS 18.41(e), IFRS 18.B3, IAS 8(2027).27E]. IAS 1 and IAS 8 *Accounting Policies, Changes in Accounting Estimates and Errors* are discussed in Chapter 3; IFRS 18 is discussed in Chapter 4. Management of an entity need not rely on general purpose financial reports, since the relevant information can be obtained internally. [CF 1.9].

The IASB notes that, to a large extent, financial reports are based on estimates, judgements and models rather than exact depictions. The *Framework* establishes the concepts that underlie those estimates, judgements and models. The concepts should be seen as a goal which the IASB and preparers should strive towards, but are unlikely to achieve in full, at least in the short term, because it takes time to understand, accept and implement new ways of analysing transactions and other events. Nevertheless, the IASB believes that setting such a goal is essential if financial reporting is to evolve so as to improve its usefulness. [CF 1.11].

4.2 Information about the economic resources of an entity and the use made of them, claims against the entity, and changes in resources and claims

General purpose financial reports provide information about:

- The financial position of a reporting entity (the economic resources of, and claims against, the entity) - see section 4.2.1 below
- And
- The effects of transactions and other events that change the economic resources of, and claims against, the entity - see section 4.2.2 below

Both types of information provide useful input for decisions about providing resources to an entity. [CF 1.12].

4.2.1 Economic resources and claims

Information about the nature and amounts of a reporting entity's economic resources and claims can help users to:

- Identify the entity's financial strengths and weaknesses
- Assess the entity's liquidity and solvency, its needs for additional financing and how successful it is likely to be in obtaining that financing
- And
- Assess management's stewardship of the entity's economic resources

Information about the priorities and payment requirements of existing claims helps users to predict how future cash flows will be distributed among lenders and creditors. [CF 1.13].

Different types of economic resources affect a user's assessment of the entity's prospects for future cash flows in different ways. Some future cash flows result directly from existing economic resources, such as accounts receivable. Other cash flows result from the entity using several resources in combination to produce and market goods or services to customers. Although those cash flows cannot be identified with individual economic resources (or claims), users need to know the nature and amount of the resources available for use in an entity's operations. [CF 1.14].

4.2.2 Changes in economic resources and claims

Changes in a reporting entity's economic resources and claims result from that entity's financial performance and from other events or transactions such as issuing debt or equity instruments. In order to assess properly the prospects for future cash flows of the entity and management's stewardship of resources, users need to know the extent to which the reporting entity has increased its available economic resources, and thus its capacity for generating net cash inflows through its operations rather than by obtaining additional resources directly from providers of capital. [CF 1.15, CF 1.18, CF 1.21].

Information about a reporting entity's financial performance helps users to understand the return that the entity has produced on its economic resources. Information about the return can help users to assess management's stewardship of the entity's economic resources. Information about the variability and components of that return is also important, especially in assessing the uncertainty of future cash flows. Information about a reporting entity's past financial performance and how its management discharged its stewardship responsibilities is usually helpful in predicting the entity's future returns on its economic resources. [CF 1.16].

Financial performance is reflected by changes in the entity's economic resources and claims other than by obtaining additional resources directly from providers of capital. [CF 1.15, CF 1.18]. This is sometimes described as a 'balance sheet approach' to recording financial performance, whereby financial performance for a period is essentially derived as part of the overall movement in the entity's financial position during that period. This is discussed more explicitly in the section of the *Framework* dealing with the elements of financial statements (see section 7 below).

Consistent with this 'balance sheet approach', financial performance is based on accrual accounting, which depicts the effects of transactions and other events and circumstances on a reporting entity's economic resources and claims in the periods in which those effects occur, even if the resulting cash receipts and payments occur in a different period. This provides a better basis for assessing the entity's past and future performance than information based solely on cash flows. [CF 1.17].

Information about an entity's financial performance may also indicate the extent to which events such as changes in market prices or interest rates have changed the entity's economic resources and claims, thereby affecting the entity's ability to generate net cash inflows. [CF 1.19]. Nevertheless, information about an entity's cash flows during a period also helps users to assess the entity's ability to generate future net cash inflows, understand the entity's operations, evaluate its financing and investing activities, assess its liquidity or solvency, assess management stewardship and interpret other information about financial performance. [CF 1.20].

4.2.3 Information about the use of economic resources (stewardship)

Management is responsible for the use of an entity's economic resources - for example, by protecting those resources from unfavourable effects of economic factors, such as price and technological changes, and ensuring that the entity complies with applicable laws, regulations and contractual provisions. [CF 1.23].

Information about how efficiently and effectively the reporting entity's management has discharged its responsibilities to use the entity's economic resources helps users to assess management's stewardship of those resources. Such information is also useful for predicting how efficiently and effectively management will use the entity's economic resources in future periods. Hence, it can be useful for assessing the entity's prospects for future net cash inflows. [CF 1.22].

5 Chapter 2: Qualitative characteristics of useful financial information

The *Framework* states that the types of information likely to be most useful to providers of capital are identified by various qualitative characteristics, [CF 2.1], comprising:

- Two ‘fundamental qualitative characteristics’ (see section 5.1 below):
 - Relevance
 - And
 - Faithful representation [CF 2.5]

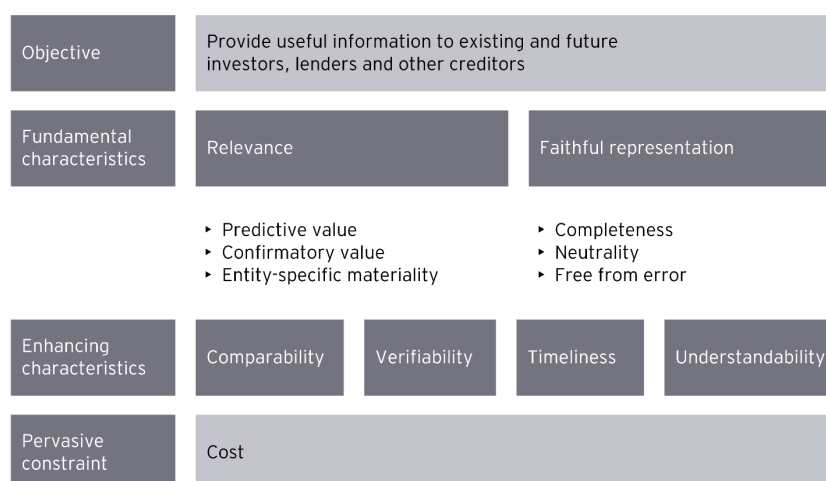

Supplemented by:

- Four ‘enhancing qualitative characteristics’ (see section 5.2 below):
 - Comparability
 - Verifiability
 - Timeliness
 - And
 - Understandability [CF 2.23]

Chapter 3 of the *Framework* also notes the role of cost as a ‘pervasive constraint’ on a reporting entity’s ability to provide useful financial information. [CF 2.39]. This is discussed further in section 5.3 below.

The relationship between the objective, fundamental characteristics, enhancing characteristics and the pervasive cost constraint can be represented diagrammatically:

Figure 5-1: Components of the Conceptual Framework

Monetary amounts in financial reports will not always be observed directly and must instead be estimated; in such cases measurement uncertainty arises. The use of reasonable estimates is an essential part of the preparation of financial information and does not undermine the usefulness of the information if the estimates are clearly and accurately described and explained. Even a high level of measurement uncertainty does not necessarily prevent such an estimate from providing useful information. This is discussed further in section 5.1.3 below. [CF 2.19].

Financial reports provide information about the reporting entity’s economic resources, claims against the reporting entity and the effects of transactions and other events and conditions that change those resources and claims (collectively referred to in the *Framework* as ‘the economic phenomena’). Some financial reports also include explanatory material about management’s expectations and strategies for the reporting entity, and other types of forward-looking information. [CF 2.2]. The IASB’s work on management reports is discussed in section 12 below.

The qualitative characteristics of useful financial information apply to all financial information, whether provided in financial statements or in other ways. All financial information is also subject to a pervasive cost constraint on the reporting entity’s ability to provide useful financial information. However, the considerations in applying the qualitative characteristics and the cost constraint may be different for different types of information. For example, applying them to forward-looking information may be different from applying them to information about existing economic resources and claims and to changes in those resources and claims. [CF 2.3].

5.1 Fundamental qualitative characteristics

In order to be useful, financial information must be relevant (see section 5.1.1 below) and faithfully represent what it purports to represent (see section 5.1.2 below). [CF 2.4].

5.1.1 Relevance (including materiality)

Extract from the Conceptual Framework

- | | |
|-----|---|
| 2.6 | Relevant financial information is capable of making a difference in the decisions made by users. Information may be capable of making a difference in a decision even if some users choose not to take advantage of it or are already aware of it from other sources. |
| 2.7 | Financial information is capable of making a difference in decisions if it has predictive value, confirmatory value or both. |

[CF 2.6, CF 2.7].

Financial information has predictive value if it can be used as an input to processes employed by users to predict future outcomes. Financial information with predictive value need not itself be a prediction or forecast, but is employed by users in making their own predictions. Financial information has confirmatory value if it confirms or changes previous evaluations. [CF 2.8, CF 2.9].

The predictive value and confirmatory value of financial information are interrelated. For example, information on revenue for the current year can be used both as the basis for predicting revenues in future years, and as a point of comparison with predictions made in prior years of revenue for the current year. The results of those comparisons can help a user to correct and improve the processes that were used to make those previous predictions. [CF 2.10].

The *Framework* refers to materiality as “an entity-specific aspect of relevance based on the nature or magnitude, or both, of the items to which the information relates in the context of an individual entity’s financial report”. In other words, information is material (and therefore relevant) if omitting it, misstating it, or obscuring it could reasonably be expected to influence the decisions of users of financial information about a specific reporting entity. Because of the specificity of materiality to a particular reporting entity, the IASB cannot specify a uniform quantitative threshold for materiality or predetermine what could be material in a particular situation. [CF 2.11].

5.1.2 Faithful representation

The *Framework* observes that financial reports represent economic phenomena in words and numbers. To be useful, financial information must not only represent relevant phenomena, but it must also faithfully represent the substance of the phenomena that it purports to represent. In many circumstances, the substance of an economic phenomenon and its legal form are the same. If they are not the same, providing information only about the legal form would not faithfully represent the economic phenomenon (see section 7.1.3 below). [CF 2.12].

A perfectly faithful representation would be:

- Complete
- Neutral
- And
- Free from error

The IASB’s objective is to maximise those qualities to the extent possible, while acknowledging that perfection is seldom, if ever, achievable. [CF 2.13].

A complete depiction includes all information, including all necessary descriptions and explanations, necessary for a user to understand the phenomenon being depicted. For example, a complete depiction of a group of assets would include, at a minimum:

- A description of the nature of the assets
- A numerical depiction of the assets
- And
- A description of what the numerical depiction represents (for example, historical cost or fair value)

For some items, a complete depiction may also entail explanations of significant facts about the quality and nature of those items, factors and circumstances that might affect their quality and nature, and the process used to determine the numerical depiction. [CF 2.14].

A neutral depiction is one without bias in the selection or presentation of financial information. A neutral depiction is not slanted, weighted, emphasised, de-emphasised or otherwise manipulated to increase the probability that financial information will be received favourably or unfavourably by users. That is not to imply that neutral information has no purpose or no influence on behaviour. On the contrary, relevant financial information is, by definition, capable of making a difference in users' decisions. [CF 2.15].

The *Framework* has a discussion of the word 'prudence', the exercise of which is considered by the Board to support neutrality. The IASB considers prudence to be the exercise of caution when making judgements under conditions of uncertainty. This is said to mean that:

- Assets and income are not overstated and liabilities and expenses are not understated
But also that
- The exercise of prudence does not allow for the understatement of assets or income or the overstatement of liabilities or expenses

Such misstatements can lead to the overstatement or understatement of income or expenses in future periods. [CF 2.16].

This is not, perhaps, a universally accepted view of the meaning of the word prudence - which to many may mean a more cautious approach to recognising gains and assets and a less cautious approach to recognising losses and liabilities.

The IASB addresses this by stating that the exercise of prudence does not imply a need for asymmetry, for example, a systematic need for more persuasive evidence to support the recognition of assets or income than the recognition of liabilities or expenses. Such asymmetry is not considered by the Board to be a qualitative characteristic of useful financial information. Nevertheless, particular standards may contain asymmetric requirements if this is a consequence of decisions intended to select the most relevant information that faithfully represents what it purports to represent. [CF 2.17].

The *Framework* stresses that the term 'free from error' does not necessarily imply that information is accurate in all respects. Rather, information is 'free from error' if there are no errors or omissions either in the description of the economic phenomenon being depicted or in the selection or application of the process used to produce the reported information. For example, an estimate of an unobservable price or value cannot be determined to be accurate or inaccurate. However, a representation of that estimate can be faithful if the amount is described clearly and accurately as being an estimate, the nature and limitations of the estimating process are explained, and no errors have been made in selecting and applying an appropriate process for developing the estimate. [CF 2.18].

5.1.3 Applying the fundamental qualitative characteristics

In order to be useful, information must be both relevant and provide a faithful representation. In the IASB's words "neither a faithful representation of an irrelevant phenomenon nor an unfaithful representation of a relevant phenomenon helps users make good decisions". [CF 2.20].

The most efficient and effective process for applying the fundamental qualitative characteristics would, subject to the effects of the enhancing qualitative characteristics (see section 5.2 below) and the cost constraint (see section 5.3 below), usually be as follows:

- Identify an economic phenomenon, information about which is capable of being useful to users of the reporting entity's financial information.
- Identify the type of information about that phenomenon that would be most relevant.
And
- Determine whether that information is available and whether it can provide a faithful representation of the economic phenomenon.

If so, the process of satisfying the fundamental qualitative characteristics ends at that point. If not, the process is repeated with the next most relevant type of information. [CF 2.21].

The *Framework* notes that, potentially, a trade-off between the fundamental qualitative characteristics may need to be made in order to meet the objective of financial reporting, which is to provide useful information about economic phenomena. This is illustrated by reference to estimation which, as noted in section 5 above, is an essential part of the preparation of financial information and does not undermine the usefulness of it. The example given is where the most relevant information about a phenomenon may be a highly uncertain estimate. In some cases, the level of measurement uncertainty involved in making that estimate may be so high that it may be questionable whether the estimate would provide a sufficiently faithful representation of that phenomenon. In some such cases, the most useful information may be the highly uncertain estimate, accompanied by a description of the estimate and an explanation of the uncertainties that affect it. In other such cases, if that information would not provide a sufficiently faithful representation of that phenomenon, the most useful information may include an estimate of another type that is slightly less relevant but is subject to lower measurement uncertainty. In limited circumstances, there may be no estimate that provides useful information. In those limited circumstances, it may be necessary to provide information that does not rely on an estimate. [CF 2.22].

5.2 Enhancing qualitative characteristics

The usefulness of relevant and faithfully represented financial information is enhanced by the characteristics of comparability (see section 5.2.1 below), verifiability (see section 5.2.2 below), timeliness (see section 5.2.3 below) and understandability (see section 5.2.4 below). These enhancing characteristics may also help determine which of two ways should be used to depict a phenomenon if both are considered equally relevant and faithfully represented. [CF 2.4, CF 2.23].

5.2.1 Comparability

The IASB notes that: [CF 2.24]

Extract from the Conceptual Framework

2.24 Users' decisions involve choosing between alternatives, for example, selling or holding an investment, or investing in one reporting entity or another. Consequently, information about a reporting entity is more useful if it can be compared with similar information about other entities and with similar information about the same entity for another period or another date.

Comparability is the qualitative characteristic that enables users to identify and understand similarities in, and differences among, items. Unlike the other qualitative characteristics, comparability does not relate to a single item, since - by definition - a comparison requires at least two items. The IASB clarifies that, for information to be comparable, like things must look alike and different things must look different, adding that "comparability of financial information is not enhanced by making unlike things look alike any more than it is enhanced by making like things look different." [CF 2.25, CF 2.26, CF 2.27]. Although a single economic phenomenon can be faithfully represented in more than one way, permitting alternative accounting methods for the same economic phenomenon diminishes comparability. [CF 2.29].

The *Framework* stresses that consistency (that is, the use of the same methods for the same items, either from period to period within a reporting entity or in a single period across entities) helps to achieve comparability, but is not the same as comparability. The IASB adds that comparability is not the same as uniformity, but without any definition of 'uniformity' or clarification of how it differs from comparability. Some degree of comparability is likely to be attained simply by satisfying the fundamental qualitative characteristics. In other words, a faithful representation of a relevant economic phenomenon by one entity should naturally be comparable with a faithful representation of a similar relevant economic phenomenon by another entity. [CF 2.26, CF 2.27, CF 2.28].

5.2.2 Verifiability

Verifiability helps assure users that information faithfully represents the economic phenomena that it purports to depict. Verifiability means that different knowledgeable and independent observers could reach a consensus, although not necessarily complete agreement, that a particular depiction is a faithful representation. Quantified information need not be a single point estimate to be verifiable. A range of possible amounts and their related probabilities can also be verified. [CF 2.30].

The IASB notes that verification can be direct or indirect. Direct verification means verifying an amount or other representation through direct observation. Indirect verification means checking the inputs to a model, formula or other technique and recalculating the outputs using the same methodology. Some explanations and forward-looking financial information may not be verifiable until a future period, if at all. To help users decide whether to use such information, it would normally be necessary to disclose the assumptions, other factors and circumstances underlying the information, together with the methods of compiling the information. [CF 2.31, CF 2.32].

5.2.3 Timeliness

Timeliness means that information is available to decision-makers in time to be capable of influencing their decisions. Generally, the older the information is the less useful it is. However, some information may continue to be timely long after the end of a reporting period, for example because some users may need to identify and assess trends. [CF 2.33].

5.2.4 Understandability

Information is made understandable by classifying, characterising and presenting it clearly and concisely. [CF 2.34]. The IASB concedes that some phenomena are so inherently complex and difficult to understand that financial reports might be easier to understand if information about those phenomena were excluded. However, reports prepared without that information would be incomplete and therefore possibly misleading. Moreover, financial reports are prepared for users with a reasonable knowledge of business and economic activities who can review and analyse the information diligently. Even such users, however, may need to seek specialist advice in order to understand information about complex economic phenomena. [CF 2.35, CF 2.36].

5.2.5 Applying the enhancing qualitative characteristics

The *Framework* stresses that, while the enhancing qualitative characteristics should be maximised to the extent possible, they cannot, either individually or as a group, make information useful if that information is irrelevant or does not give a faithful representation. [CF 2.37].

Applying the enhancing qualitative characteristics is an iterative process that does not follow a prescribed order. Sometimes, one enhancing qualitative characteristic may have to be diminished in order to maximise another. For example, applying a new standard prospectively (that is, with no restatement of prior periods) will reduce comparability in the short term. However, that may be a price worth paying for improved relevance or faithful representation in the longer term. Appropriate disclosures may partially compensate for the lack of comparability. [CF 2.38].

5.3 The cost constraint

The IASB acknowledges that cost is a pervasive constraint on the information provided by financial reporting, and that the cost of producing information must be justified by the benefits that it provides. Interestingly, the IASB argues that, while there is clearly an explicit cost to the preparers of financial information, the cost is ultimately borne by users, since any cost incurred by the reporting entity reduces the returns earned by users. In addition, users incur costs not only in analysing and interpreting any information that is provided, but also in obtaining or estimating any information that is not provided. [CF 2.39, CF 2.40, CF 2.42].

Relevant and faithfully representative financial information helps users to make decisions with more confidence, resulting in a more efficient functioning of capital markets and a lower cost of capital for the economy as a whole. An individual provider of capital also receives benefits by making more informed decisions. However, it is not possible for general purpose financial reports to provide all information relevant to every user. [CF 2.41].

In assessing whether the benefits of reporting particular information are likely to justify the cost, the IASB seeks information from providers of financial information, users, auditors, academics and others about the expected nature and quantity of the benefits and costs of that standard. In most situations, assessments are based on a combination of quantitative and qualitative information, and will normally be considered in relation to financial reporting generally, and not in relation to individual reporting entities. However, an assessment of costs and benefits will not always justify the same reporting requirements for all entities. Differences may be appropriate because of different sizes of entities, different ways of raising capital (publicly or privately), different needs of users or other factors. [CF 2.42, CF 2.43].

6 Chapter 3: Financial statements and the reporting entity

Chapter 3 of the *Framework* deals with two questions:

- What are financial statements? (Discussed in section 6.1 below.)
And
- What is the 'reporting entity' which prepares financial statements? (Discussed in section 6.2 below.)
[CF 3.1, CF 3.10].

6.1 Financial statements

Financial statements provide information about economic resources of the reporting entity, claims against the entity, and changes in those resources and claims, that meet the definitions of the elements of financial statements (discussed in section 7 below). [CF 3.1].

6.1.1 Objective and scope of financial statements

The objective of financial statements is to provide financial information about the reporting entity's assets, liabilities, equity, income and expenses that is useful to users of financial statements in assessing the prospects for future net cash inflows to the reporting entity and in assessing management's stewardship of the entity's economic resources (discussed in section 4 above). [CF 1.1, CF 1.2, CF 3.2].

The *Framework* goes on to note: [CF 3.3]

Extract from the Conceptual Framework

3.3 That information is provided:

- (a) in the statement of financial position, by recognising assets, liabilities and equity;
- (b) in the statement(s) of financial performance,⁹ by recognising income and expenses; and
- (c) in other statements and notes, by presenting and disclosing information about:
 - (i) recognised assets, liabilities, equity, income and expenses (see paragraph 5.1), including information about their nature and about the risks arising from those recognised assets and liabilities;
 - (ii) assets and liabilities that have not been recognised (see paragraph 5.6), including information about their nature and about the risks arising from them;
 - (iii) cash flows;
 - (iv) contributions from holders of equity claims and distributions to them; and
 - (v) the methods, assumptions and judgements used in estimating the amounts presented or disclosed, and changes in those methods, assumptions and judgements.

⁹ The *Conceptual Framework* does not specify whether the statement(s) of financial performance comprise(s) a single statement or two statements.

The subject of presentation and disclosure is discussed in section 10 below; recognition and derecognition is discussed in section 8 below.

6.1.2 Reporting period and comparative information

Financial statements are prepared for a specified period of time (reporting period) and provide information about:

- Assets and liabilities (including unrecognised assets and liabilities) and equity that existed at the end of the reporting period, or during the reporting period
And
- Income and expenses for the reporting period [CF 3.4]

To help users of financial statements to identify and assess changes and trends, financial statements also provide comparative information for at least one preceding reporting period. [CF 3.5].

Information about possible future transactions and other possible future events (forward-looking information) is included in financial statements if it:

- Relates to the entity's assets or liabilities (including unrecognised assets or liabilities) or equity that existed at the end of the reporting period, or during the reporting period, or to income or expenses for the reporting period
- And
- Is useful to users of financial statements

For example, if an asset or liability is measured by estimating future cash flows, information about those estimated future cash flows may help users of financial statements to understand the reported measures. Financial statements do not typically provide other types of forward-looking information, for example, explanatory material about management's expectations and strategies for the reporting entity. *[CF 3.6]*. Financial statements include information about transactions and other events that have occurred after the end of the reporting period if providing that information is necessary to meet the objective of financial statements (see section 4 above). *[CF 3.7]*.

6.1.3 Perspective adopted in financial statements

Financial statements provide information about transactions and other events viewed from the perspective of the reporting entity as a whole, not from the perspective of any particular group of the entity's existing or potential investors, lenders or other creditors. *[CF 3.8]*.

6.1.4 Going concern assumption

Financial statements are normally prepared on the assumption that the reporting entity is a going concern and will continue in operation for the foreseeable future. Hence, it is assumed that the entity has neither the intention nor the need to enter liquidation or to cease trading. If such an intention or need exists, the financial statements may have to be prepared on a different basis. If so, the financial statements describe the basis used. *[CF 3.9]*.

6.2 The reporting entity

A reporting entity is an entity that is required, or chooses, to prepare financial statements. A reporting entity can be a single entity or a portion of an entity or can comprise more than one entity. A reporting entity is not necessarily a legal entity. *[CF 3.10]*.

Sometimes one entity (parent) has control over another entity (subsidiary). If a reporting entity comprises both the parent and its subsidiaries, the reporting entity's financial statements are referred to as 'consolidated financial statements'. If a reporting entity is the parent alone, the reporting entity's financial statements are referred to as 'unconsolidated financial statements' (see section 6.2.1 below). *[CF 3.11]*.

If a reporting entity comprises two or more entities that are not all linked by a parent-subsidiary relationship, the reporting entity's financial statements are referred to as 'combined financial statements'. *[CF 3.12]*.

Determining the appropriate boundary of a reporting entity can be difficult if the reporting entity:

- Is not a legal entity
- And
- Does not comprise only legal entities linked by a parent-subsidiary relationship *[CF 3.13]*

In such cases, determining the boundary of the reporting entity is driven by the information needs of the primary users of the reporting entity's financial statements. Those users need relevant information that faithfully represents what it purports to represent. Faithful representation requires that:

- The boundary of the reporting entity does not contain an arbitrary or incomplete set of economic activities.
- Including that set of economic activities within the boundary of the reporting entity results in neutral information.
- And
- A description is provided of how the boundary of the reporting entity was determined and of what constitutes the reporting entity. *[CF 3.14]*.

Without being explicit, this discussion in the *Framework* seems to confirm that combined financial statements can be said to comply with IFRS (subject, of course, to the matters in the bullets above and to compliance generally with IFRS for the ‘combined’ reporting entity).

The Basis for Conclusions, however, suggests a certain hesitancy by the Board. It articulates that the IASB is of the opinion that combined financial statements “can provide useful information to users of financial statements in some circumstances” and for this reason the *Framework* “acknowledges the concept of combined financial statements.”

This view is somewhat attenuated by the Board stating that the *Framework* “does not discuss when or how entities could prepare combined financial statements” and that “such discussion would be best developed if the Board decides in the future to develop a Standard on this topic”. [CF BC3.21].

The *Framework* remains silent on a similar matter regarding what is frequently called ‘carve-out’ accounting. This is where a reporting entity is determined to be part of a legal entity.

How we see it

In our view, considerations similar to those discussed in the *Framework* regarding combined financial statements should apply to financial statements prepared on a ‘carve-out’ basis.

6.2.1 Consolidated and unconsolidated financial statements

Consolidated financial statements provide information about the assets, liabilities, equity, income and expenses of both the parent and its subsidiaries as a single reporting entity. That information is useful for existing and potential investors, lenders and other creditors of the parent in their assessment of the prospects for future net cash inflows to the parent. This is because net cash inflows to the parent include distributions to the parent from its subsidiaries, and those distributions depend on net cash inflows to the subsidiaries. [CF 3.15].

Consolidated financial statements are not designed to provide separate information about the assets, liabilities, equity, income and expenses of any particular subsidiary. A subsidiary’s own financial statements are designed to provide that information. [CF 3.16].

Unconsolidated financial statements are designed to provide information about the parent’s assets, liabilities, equity, income and expenses, and not about those of its subsidiaries. That information can be useful to existing and potential investors, lenders and other creditors of the parent because:

- A claim against the parent typically does not give the holder of that claim a claim against subsidiaries
And
- In some jurisdictions, the amounts that can be legally distributed to holders of equity claims against the parent depend on the distributable reserves of the parent

Another way to provide information about some or all assets, liabilities, equity, income and expenses of the parent alone is to present it in the notes to consolidated financial statements. [CF 3.17].

Information provided in unconsolidated financial statements is typically not sufficient to meet the information needs of existing and potential investors, lenders and other creditors of the parent.

Accordingly, when consolidated financial statements are required, unconsolidated financial statements cannot serve as a substitute for consolidated financial statements. Nevertheless, a parent may be required, or choose, to prepare unconsolidated financial statements in addition to consolidated financial statements. [CF 3.18].

7 Chapter 4: The elements of financial statements

As discussed in section 4 above, it is the central tenet of the *Framework* that users of financial information require information concerning:

- The economic resources of and claims against an entity
And
- Changes in those resources and claims

These are described in the *Framework* as being linked to the 'elements' of financial statements which are: assets, liabilities, equity, income and expense.

They are analysed as follows. [CF 4.1, CF 4.2, CF 4.3, CF 4.4, CF 4.26, CF 4.63, CF 4.68, CF 4.69].

Economic resources are rights which have the potential to produce economic benefits.

Assets are present economic resources controlled by an entity as a result of past events (discussed in section 7.2 below):

Claims against an entity comprise:

- *Liabilities*, which are present obligations to transfer economic resources as a result of past events (discussed in section 7.3 below)
- *Equity* is the residual interest in the assets of an entity after deducting all its liabilities (discussed in section 7.4 below)

Changes in economic resources and claims comprise:

- *Income and expenses* (discussed in section 7.5 below)
And
- *Other changes*

Income is increases in assets, or decreases in liabilities, that result in increases in equity, other than those relating to contributions from holders of equity claims.

Expenses are decreases in assets, or increases in liabilities, that result in decreases in equity, other than those relating to distributions to holders of equity claims.

Other changes are:

- Exchanges of assets or liabilities that do not result in increases or decreases in equity
And
- Contributions from and distributions to holders of equity claims

The recognition and derecognition of elements is discussed in section 8 below. Measurement of the elements is discussed in section 9 below and presentation in section 10 below.

It is apparent that the approach to the elements of financial statements reflects what is sometimes described as a 'balance sheet approach' to recording financial performance, whereby financial performance for a period is essentially derived as part of the overall movement in the entity's financial position during that period. What this means is that all non-owner changes in equity comprise 'performance' in its broadest sense. A difficulty for the Board in developing the *Framework* is that there is in financial reporting a well-established idea of profit (and hence, a profit and loss account) which contains only a subset of all such performance. The provisions of the *Framework* in this regard are discussed in section 10.2.3 below.

7.1 Matters concerning both assets and liabilities

The *Framework* discusses three concepts which will apply both to assets and liabilities and are relevant for accounting purposes. These are: unit of account, executory contracts and the substance of arrangements. These are discussed in turn below.

7.1.1 Unit of account

The unit of account is the right or the group of rights, the obligation or the group of obligations, or the group of rights and obligations, to which recognition criteria and measurement concepts are applied.

[CF 4.48].

A unit of account is selected for an asset or liability when considering how recognition criteria and measurement concepts will apply to that asset or liability and to the related income and expenses. In some circumstances, it may be appropriate to select one unit of account for recognition and a different unit of account for measurement. For example, contracts may sometimes be recognised individually but measured as part of a portfolio of contracts. For presentation and disclosure, assets, liabilities, income and expenses may need to be aggregated or separated into components. [CF 4.49].

If an entity transfers part of an asset or part of a liability, the unit of account may change at that time, so that the transferred component and the retained component become separate units of account (derecognition is discussed in section 8.3 below). [CF 4.50].

A unit of account is selected to provide useful information, which implies that:

- The information provided about the asset or liability and about any related income and expenses must be relevant. Treating a group of rights and obligations as a single unit of account may provide more relevant information than treating each right or obligation as a separate unit of account if, for example, those rights and obligations:
 - Cannot be or are unlikely to be the subject of separate transactions
 - Cannot or are unlikely to expire in different patterns
 - Have similar economic characteristics and risks and hence are likely to have similar implications for the prospects for future net cash inflows to the entity or net cash outflows from the entity
 Or
 - Are used together in the business activities conducted by an entity to produce cash flows and are measured by reference to estimates of their interdependent future cash flows
 - The information provided about the asset or liability and about any related income and expenses must faithfully represent the substance of the transaction or other event from which they have arisen. Therefore, it may be necessary to treat rights or obligations arising from different sources as a single unit of account, or to separate the rights or obligations arising from a single source. Equally, to provide a faithful representation of unrelated rights and obligations, it may be necessary to recognise and measure them separately. [CF 4.51].

Also relevant here is the discussion in the *Framework* of the substance of rights and obligations - see section 7.1.3 below.

Just as cost constrains other financial reporting decisions, it also constrains the selection of a unit of account. Hence, in selecting a unit of account, it is important to consider whether the benefits of the information provided to users of financial statements by selecting that unit of account are likely to justify the costs of providing and using that information. In general, the costs associated with recognising and measuring assets, liabilities, income and expenses increase as the size of the unit of account decreases. Hence, in general, rights or obligations arising from the same source are separated only if the resulting information is more useful and the benefits outweigh the costs. [CF 4.52].

Sometimes, both rights and obligations arise from the same source. For example, some contracts establish both rights and obligations for each of the parties. If those rights and obligations are interdependent and cannot be separated, they constitute a single inseparable asset or liability and hence form a single unit of account. For example, this is the case with executory contracts (see section 7.1.2 below). Conversely, if rights are separable from obligations, it may sometimes be appropriate to group the rights separately from the obligations, resulting in the identification of one or more separate assets and liabilities. In other cases, it may be more appropriate to group separable rights and obligations in a single unit of account treating them as a single asset or a single liability. [CF 4.53].

Treating a set of rights and obligations as a single unit of account differs from offsetting assets and liabilities (see section 10.2.1.A below). [CF 4.54].

The Framework provides the following examples of units of account: [CF 4.55]

Extract from the Conceptual Framework

- 4.55 Possible units of account include:
- (a) an individual right or individual obligation;
 - (b) all rights, all obligations, or all rights and all obligations, arising from a single source, for example, a contract;
 - (c) a subgroup of those rights and/or obligations—for example, a subgroup of rights over an item of property, plant and equipment for which the useful life and pattern of consumption differ from those of the other rights over that item;
 - (d) a group of rights and/or obligations arising from a portfolio of similar items;
 - (e) a group of rights and/or obligations arising from a portfolio of dissimilar items—for example, a portfolio of assets and liabilities to be disposed of in a single transaction; and
 - (f) a risk exposure within a portfolio of items—if a portfolio of items is subject to a common risk, some aspects of the accounting for that portfolio could focus on the aggregate exposure to that risk within the portfolio.

7.1.2 Executory contracts

An executory contract is a contract, or a portion of a contract, that is equally unperformed. That is, either: neither party has fulfilled any of its obligations, or both parties have partially fulfilled their obligations to an equal extent. [CF 4.56].

An executory contract establishes a combined right and obligation to exchange economic resources. The right and obligation are interdependent and cannot be separated. Hence, the combined right and obligation constitute a single asset or liability. The entity has an asset if the terms of the exchange are currently favourable; it has a liability if the terms of the exchange are currently unfavourable. Whether such an asset or liability is included in the financial statements depends on both the recognition criteria (see section 8 below) and the measurement basis (see section 9 below) selected for the asset or liability, including, if applicable, any test for whether the contract is onerous. [CF 4.57].

To the extent that either party fulfils its obligations under the contract, the contract is no longer executory. If the reporting entity performs first under the contract, that performance is the event that changes the reporting entity's right and obligation to exchange economic resources into a right to receive an economic resource. That right is an asset. If the other party performs first, that performance is the event that changes the reporting entity's right and obligation to exchange economic resources into an obligation to transfer an economic resource. That obligation is a liability. [CF 4.58].

7.1.3 Substance of contractual rights and contractual obligations

The terms of a contract create rights and obligations for an entity that is a party to that contract. To represent those rights and obligations faithfully (discussed in section 5.1.2 above), financial statements report their substance. In some cases, the substance of the rights and obligations is clear from the legal form of the contract. In other cases, the terms of the contract or a group or series of contracts require analysis to identify the substance of the rights and obligations. [CF 4.59].

All terms in a contract, whether explicit or implicit, are considered unless they have no substance. Implicit terms could include, for example, obligations imposed by statute, such as statutory warranty obligations imposed on entities that enter into contracts to sell goods to customers. [CF 4.60].

Terms that have no substance are disregarded. A term has no substance if it has no discernible effect on the economics of the contract. Terms that have no substance could include, for example:

- Terms that bind neither party
Or
- Rights, including options, that the holder will not have the practical ability to exercise in any circumstances [CF 4.61]

A group or series of contracts may achieve or be designed to achieve an overall commercial effect. To report the substance of such contracts, it may be necessary to treat rights and obligations arising from that group or series of contracts as a single unit of account. For example, if the rights or obligations in one contract merely nullify all the rights or obligations in another contract entered into at the same time with the same counterparty, the combined effect is that the two contracts create no rights or obligations. Conversely, if a single contract creates two or more sets of rights or obligations that could have been created through two or more separate contracts, an entity may need to account for each set as if it arose from separate contracts in order to represent faithfully the rights and obligations (see the discussion of unit of account in section 7.1.1 above). [CF 4.62].

7.2 Definition of assets

As noted in section 7 above, the definition of an asset is an economic resource subject to three criteria: it is a right of the entity; it has the potential to produce economic benefits; and it is controlled by the entity. Each is discussed in turn in the following sections. [CF 4.5].

7.2.1 Rights

It is observed that rights that have the potential to produce economic benefits take many forms, including:

- Rights that correspond to an obligation of another party (see section 7.3.1 below), for example, rights to:
 - Receive cash
 - Receive goods or services
 - Exchange economic resources with another party on favourable terms. Such rights include, for example, a forward contract to buy an economic resource on terms that are currently favourable or an option to buy an economic resource
 And
 - Benefit from an obligation of another party to transfer an economic resource if a specified uncertain future event occurs
- Rights that do not correspond to an obligation of another party, for example, rights:
 - Over physical objects, such as property, plant and equipment or inventories. Examples of such rights are a right to use a physical object or a right to benefit from the residual value of a leased object.
 And
 - To use intellectual property [CF 4.6]

Many rights are established by contract, legislation or similar means. For example, an entity might obtain rights from owning or leasing a physical object, from owning a debt instrument or an equity instrument, or from owning a registered patent. However, an entity might also obtain rights in other ways, for example:

- By acquiring or creating know-how that is not in the public domain (see discussion of control in section 7.2.3 below).
- Or
- Through an obligation of another party that arises because that other party has no practical ability to act in a manner inconsistent with its customary practices, published policies or specific statements - that is, a constructive obligation discussed in section 7.3.1 below. [CF 4.7].

Some goods or services, for example, employee services, are received and immediately consumed. An entity's right to obtain the economic benefits produced by such goods or services exists momentarily until the entity consumes the goods or services. [CF 4.8].

Not all of an entity's rights are assets of that entity; to be assets the rights must also satisfy the other two criteria noted above (the potential to produce economic benefits, discussed in section 7.2.2 below; and, control, discussed in section 7.2.3 below). For example, rights available to all parties without significant cost - for instance, rights of access to public goods, such as public rights of way over land, or know-how that is in the public domain - are typically not assets for the entities that hold them. [CF 4.9].

An entity cannot have a right to obtain economic benefits from itself. Accordingly:

- Debt instruments or equity instruments issued by the entity and repurchased and held by it (for example, treasury shares) are not economic resources of that entity.
And
- If a reporting entity comprises more than one legal entity, debt instruments or equity instruments issued by one of those legal entities and held by another of those legal entities are not economic resources of the reporting entity. [CF 4.10].

In principle, each of an entity's rights is a separate asset. However, for accounting purposes, related rights are often treated as a single unit of account that is a single asset (unit of account is discussed in section 7.1.1 above). For example, legal ownership of a physical object may give rise to several rights, including:

- The right to use the object
- The right to sell rights over the object
- The right to pledge rights over the object
And
- Other rights [CF 4.11]

In many cases, the set of rights arising from legal ownership of a physical object is accounted for as a single asset. Conceptually, the economic resource is the set of rights, not the physical object. Nevertheless, describing the set of rights as the physical object will often provide a faithful representation of those rights in the most concise and understandable way. [CF 4.12].

In some cases, it is uncertain whether a right exists. For example, an entity and another party might dispute whether the entity has a right to receive an economic resource from that other party. Until that existence uncertainty is resolved, for example, by a court ruling, it is uncertain whether the entity has a right and, consequently, whether an asset exists (see section 8.2.1.A below). [CF 4.13].

7.2.2 Potential to produce economic benefits

An economic resource is a right that has the potential to produce economic benefits. For that potential to exist, it does not need to be certain, or even likely, that the right will produce economic benefits. It is only necessary that the right already exists and that, in at least one circumstance, it would produce for the entity economic benefits beyond those available to all other parties. [CF 4.14].

A right can meet the definition of an economic resource, and hence can be an asset, even if the probability that it will produce economic benefits is low. Nevertheless, that low probability might affect decisions about what information to provide about the asset and how to provide that information, including decisions about whether the asset is recognised (see section 8.2.1.B below) and how it is measured (see section 9 below). [CF 4.15].

An economic resource could produce economic benefits for an entity by entitling or enabling it to do, for example, one or more of the following:

- Receive contractual cash flows or another economic resource
- Exchange economic resources with another party on favourable terms
- Produce cash inflows or avoid cash outflows by, for example:
 - Using the economic resource either individually or in combination with other economic resources to produce goods or provide services
 - Using the economic resource to enhance the value of other economic resources
Or
 - Leasing the economic resource to another party
- Receive cash or other economic resources by selling the economic resource
Or
- Extinguish liabilities by transferring the economic resource [CF 4.16]

Although an economic resource derives its value from its present potential to produce future economic benefits, the economic resource is the present right that contains that potential, not the future economic benefits that the right may produce. For example, a purchased option derives its value from its potential to produce economic benefits through exercise of the option at a future date. However, the economic resource is the present right, that is the right to exercise the option at a future date. The economic resource is not the future economic benefits that the holder will receive if the option is exercised. [CF 4.17].

There is a close association between incurring expenditure and acquiring assets, but the two do not necessarily coincide. Hence, when an entity incurs expenditure, this may provide evidence that the entity has sought future economic benefits, but does not provide conclusive proof that the entity has obtained an asset. Similarly, the absence of related expenditure does not preclude an item from meeting the definition of an asset. Assets can include, for example, rights that a government has granted to the entity free of charge or that another party has donated to the entity. [CF 4.18].

7.2.3 Control

Control links an economic resource to an entity. Assessing whether control exists helps to identify the economic resource for which the entity accounts. For example, an entity may control a proportionate share in a property without controlling the rights arising from ownership of the entire property. In such cases, the entity's asset is the share in the property, which it controls, not the rights arising from ownership of the entire property, which it does not control. [CF 4.19].

An entity controls an economic resource if it has the present ability to direct the use of the economic resource and obtain the economic benefits that may flow from it. Control includes the present ability to prevent other parties from directing the use of the economic resource and from obtaining the economic benefits that may flow from it. It follows that, if one party controls an economic resource, no other party controls that resource. [CF 4.20].

An entity has the present ability to direct the use of an economic resource if it has the right to deploy that economic resource in its activities, or to allow another party to deploy the economic resource in that other party's activities. [CF 4.21].

Control of an economic resource usually arises from an ability to enforce legal rights. However, control can also arise if an entity has other means of ensuring that it, and no other party, has the present ability to direct the use of the economic resource and obtain the benefits that may flow from it. For example, an entity could control a right to use know-how that is not in the public domain if the entity has access to the know-how and the present ability to keep the know-how secret, even if that know-how is not protected by a registered patent. [CF 4.22].

For an entity to control an economic resource, the future economic benefits from that resource must flow to the entity either directly or indirectly rather than to another party. This aspect of control does not imply that the entity can ensure that the resource will produce economic benefits in all circumstances. Instead, it means that if the resource produces economic benefits, the entity is the party that will obtain them either directly or indirectly. [CF 4.23].

Having exposure to significant variations in the amount of the economic benefits produced by an economic resource may indicate that the entity controls the resource. However, it is only one factor to consider in the overall assessment of whether control exists. [CF 4.24].

Sometimes one party (a principal) engages another party (an agent) to act on behalf of, and for the benefit of, the principal. For example, a principal may engage an agent to arrange sales of goods controlled by the principal. If an agent has custody of an economic resource controlled by the principal, that economic resource is not an asset of the agent. Furthermore, if the agent has an obligation to transfer to a third party an economic resource controlled by the principal, that obligation is not a liability of the agent, because the economic resource that would be transferred is the principal's economic resource, not the agent's. [CF 4.25].

7.3 Definition of liabilities

As noted in section 7 above, the *Framework* defines a liability as: [CF 4.2, CF 4.26]

Extract from the Conceptual Framework

4.26 A liability is a present obligation of the entity to transfer an economic resource as a result of past events.

For a liability to exist, three criteria must all be satisfied:

- The entity has an obligation
 - The obligation is to transfer an economic resource
- And
- The obligation is a present obligation that exists as a result of past events [CF 4.27]

These criteria are discussed in turn below.

7.3.1 Obligation

The first criterion for a liability is that the entity has an obligation. An obligation is a duty or responsibility that an entity has no practical ability to avoid. An obligation is always owed to another party (or parties). The other party (or parties) could be a person or another entity, a group of people or other entities, or society at large. It is not necessary to know the identity of the party (or parties) to whom the obligation is owed. [CF 4.28, CF 4.29].

If one party has an obligation to transfer an economic resource, it follows that another party (or parties) has a right to receive that economic resource. However, a requirement for one party to recognise a liability and measure it at a specified amount does not imply that the other party (or parties) must recognise an asset or measure it at the same amount. For example, particular standards may contain different recognition criteria or measurement requirements for the liability of one party and the corresponding asset of the other party (or parties) if those different criteria or requirements are a consequence of decisions intended to select the most relevant information that faithfully represents what it purports to represent. [CF 4.30].

Many obligations are established by contract, legislation or similar means and are legally enforceable by the party (or parties) to whom they are owed. Obligations can also arise, however, from an entity's customary practices, published policies or specific statements if the entity has no practical ability to act in a manner inconsistent with those practices, policies or statements. The obligation that arises in such situations is sometimes referred to as a 'constructive obligation'. [CF 4.31].

In some situations, an entity's duty or responsibility to transfer an economic resource is conditional on a particular future action that the entity itself may take. Such actions could include operating a particular business or operating in a particular market on a specified future date, or exercising particular options within a contract. In such situations, the entity has an obligation if it has no practical ability to avoid taking that action. [CF 4.32].

A conclusion that it is appropriate to prepare an entity's financial statements on a going concern basis also implies a conclusion that the entity has no practical ability to avoid a transfer that could be avoided only by liquidating the entity or by ceasing to trade. [CF 4.33].

The factors used to assess whether an entity has the practical ability to avoid transferring an economic resource may depend on the nature of the entity's duty or responsibility. For example, in some cases, an entity may have no practical ability to avoid a transfer if any action that it could take to avoid the transfer would have economic consequences significantly more adverse than the transfer itself. However, neither an intention to make a transfer, nor a high likelihood of a transfer, is sufficient reason for concluding that the entity has no practical ability to avoid a transfer. [CF 4.34].

In some cases, it is uncertain whether an obligation exists. For example, if another party is seeking compensation for an entity's alleged act of wrongdoing, it might be uncertain whether the act occurred, whether the entity committed it or how the law applies. Until that existence uncertainty is resolved, for example, by a court ruling, it is uncertain whether the entity has an obligation to the party seeking compensation and, consequently, whether a liability exists (see section 8.2.1.A below). [CF 4.35].

7.3.2 Transfer an economic resource

The second criterion for a liability is that the obligation is to transfer an economic resource. To satisfy this criterion, the obligation must have the potential to require the entity to transfer an economic resource to another party (or parties). For that potential to exist, it does not need to be certain, or even likely, that the entity will be required to transfer an economic resource; the transfer may, for example, be required only if a specified uncertain future event occurs. It is only necessary that the obligation already exists and that, in at least one circumstance, it would require the entity to transfer an economic resource. [CF 4.36, CF 4.37].

An obligation can meet the definition of a liability even if the probability of a transfer of an economic resource is low. Nevertheless, that low probability might affect decisions about what information to provide about the liability and how to provide that information, including decisions about whether the liability is recognised (see section 8.2.1.B below) and how it is measured (discussed in section 9 below). [CF 4.38].

Obligations to transfer an economic resource include, for example, obligations to:

- Pay cash
 - Deliver goods or provide services
 - Exchange economic resources with another party on unfavourable terms. Such obligations include, for example, a forward contract to sell an economic resource on terms that are currently unfavourable or an option that entitles another party to buy an economic resource from the entity.
 - Transfer an economic resource if a specified uncertain future event occurs
- And
- Issue a financial instrument if that financial instrument will oblige the entity to transfer an economic resource [CF 4.39]

Instead of fulfilling an obligation to transfer an economic resource to the party that has a right to receive that resource, entities sometimes decide to, for example:

- Settle the obligation by negotiating a release from the obligation
 - Transfer the obligation to a third party
- Or
- Replace that obligation to transfer an economic resource with another obligation by entering into a new transaction

In these situations, an entity has the obligation to transfer an economic resource until it has settled, transferred or replaced that obligation. [CF 4.40, CF 4.41].

7.3.3 Present obligation existing as a result of past events

The third criterion for a liability is that the obligation is a present obligation that exists as a result of past events. That is:

- The entity has already obtained economic benefits or taken an action
- And
- As a consequence, the entity will or may have to transfer an economic resource that it would not otherwise have had to transfer [CF 4.42, CF 4.43]

The economic benefits obtained could include, for example, goods or services. The action taken could include, for example, operating a particular business or operating in a particular market. If economic benefits are obtained, or an action is taken, over time, the resulting present obligation may accumulate over that time. [CF 4.44].

If new legislation is enacted, a present obligation arises only when, as a consequence of obtaining economic benefits or taking an action to which that legislation applies, an entity will or may have to transfer an economic resource that it would not otherwise have had to transfer. The enactment of legislation is not in itself sufficient to give an entity a present obligation. Similarly, an entity's customary practice, published policy or specific statement of the type mentioned in section 7.3.1 above gives rise to a present obligation only when, as a consequence of obtaining economic benefits, or taking an action, to which that practice, policy or statement applies, the entity will or may have to transfer an economic resource that it would not otherwise have had to transfer. [CF 4.45].

A present obligation can exist even if a transfer of economic resources cannot be enforced until some point in the future. For example, a contractual liability to pay cash may exist now even if the contract does not require a payment until a future date. Similarly, a contractual obligation for an entity to perform work at a future date may exist now even if the counterparty cannot require the entity to perform the work until that future date. [CF 4.46].

An entity does not yet have a present obligation to transfer an economic resource if it has not yet obtained economic benefits, or taken an action, that would or could require the entity to transfer an economic resource that it would not otherwise have had to transfer. For example, if an entity has entered into a contract to pay an employee a salary in exchange for receiving the employee's services, the entity does not have a present obligation to pay the salary until it has received the employee's services. Before then the contract is executory; the entity has a combined right and obligation to exchange future salary for future employee services (executory contracts are discussed in section 7.1.2 above). [CF 4.47].

7.4 Definition of equity

As noted in section 7 above, equity is the residual interest in the assets of the entity after deducting all its liabilities; accordingly, equity claims are claims on this residual interest. Put another way, equity claims are claims against the entity that do not meet the definition of a liability. Such claims may be established by contract, legislation or similar means, and include, to the extent that they do not meet the definition of a liability:

- Shares of various types, issued by the entity
- And
- Some obligations of the entity to issue another equity claim [CF 4.63, CF 4.64]

Different classes of equity claims, such as ordinary shares and preference shares, may confer on their holders different rights, for example, rights to receive some or all of the following from the entity:

- Dividends, if the entity decides to pay dividends to eligible holders
- The proceeds from satisfying the equity claims, either in full on liquidation, or in part at other times
- Or
- Other equity claims [CF 4.65]

Sometimes, legal, regulatory or other requirements affect particular components of equity, such as share capital or retained earnings. For example, some such requirements permit an entity to make distributions to holders of equity claims only if the entity has sufficient reserves that those requirements specify as being distributable. [CF 4.66].

Business activities are often undertaken by entities such as sole proprietorships, partnerships, trusts or various types of government business undertakings. The legal and regulatory frameworks for such entities are often different from frameworks that apply to corporate entities. For example, there may be few, if any, restrictions on the distribution to holders of equity claims against such entities. Nevertheless, the *Framework* makes clear that the definition of equity applies to all reporting entities. [CF 4.67].

7.5 Definition of income and expenses

Income and expenses are the elements of financial statements that relate to an entity's financial performance. Users of financial statements need information about both an entity's financial position and its financial performance. Hence, although income and expenses are defined in terms of changes in assets and liabilities, information about income and expenses is just as important as information about assets and liabilities. [CF 4.71].

Those terms are defined as follows:

- Income is increases in assets, or decreases in liabilities, that result in increases in equity, other than those relating to contributions from holders of equity claims.
- Expenses are decreases in assets, or increases in liabilities, that result in decreases in equity, other than those relating to distributions to holders of equity claims.

A consequence of these definitions is that:

- Contributions from holders of equity claims are not income
- And
- Distributions to holders of equity claims are not expenses [CF 4.68, CF 4.69, CF 4.70]

Different transactions and other events generate income and expenses with different characteristics. Providing information separately about income and expenses with different characteristics can help users of financial statements to understand the entity's financial performance (see section 10.2.3.A below). [CF 4.72].

8 Chapter 5: Recognition and derecognition

Recognition is described in the *Framework* as the process of capturing for inclusion in the statement of financial position or the statement(s) of financial performance an item that meets the definition of one of the elements of financial statements (that is, an asset, a liability, equity, income or expenses).

8.1 The recognition process

Recognition involves depicting the item in one of those statements (either alone or in aggregation with other items) in words and by a monetary amount, and including that amount in one or more totals in that statement. The amount at which an asset, a liability or equity is recognised in the statement of financial position is referred to as its 'carrying amount'. [CF 5.1].

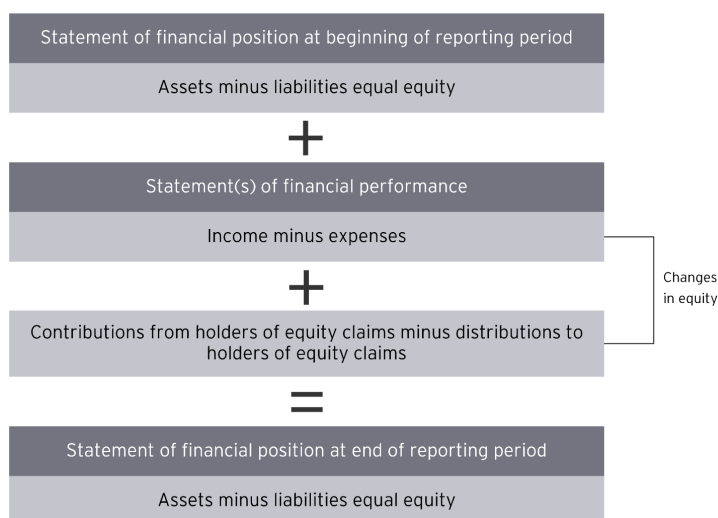

The statement of financial position and statement(s) of financial performance depict an entity's recognised assets, liabilities, equity, income and expenses in structured summaries that are designed to make financial information comparable and understandable. An important feature of the structures of those summaries is that the amounts recognised in a statement are included in the totals and, if applicable, subtotals that link the items recognised in the statement. [CF 5.2].

Recognition links the elements, the statement of financial position and the statement(s) of financial performance as follows:

- In the statement of financial position at the beginning and end of the reporting period, total assets minus total liabilities equal total equity.
And
- Recognised changes in equity during the reporting period comprise:
 - Income minus expenses recognised in the statement(s) of financial performance
Plus
 - Contributions from holders of equity claims, minus distributions to holders of equity claims. [CF 5.3].

This is illustrated diagrammatically in Figure 8-1 below.

Figure 8-1: How recognition links the elements of financial statements

The statements of financial position and performance are linked because the recognition of one item (or a change in its carrying amount) requires the recognition or derecognition of one or more other items (or changes in the carrying amount of one or more other items). This is the familiar concept of 'double-entry' and the *Framework* provides the following description:

- The recognition of income occurs at the same time as:
 - The initial recognition of an asset, or an increase in the carrying amount of an asset
Or
 - The derecognition of a liability, or a decrease in the carrying amount of a liability
- The recognition of expenses occurs at the same time as:
 - The initial recognition of a liability, or an increase in the carrying amount of a liability
Or
 - The derecognition of an asset, or a decrease in the carrying amount of an asset [CF 5.4]

The initial recognition of assets or liabilities arising from transactions or other events may result in the simultaneous recognition of both income and related expenses. For example, the sale of goods for cash results in the recognition of both income (from the recognition of one asset, being the cash) and an expense (from the derecognition of another asset, being the goods sold). The simultaneous recognition of income and related expenses is sometimes referred to as the matching of costs with income. Application of the concepts in the *Framework* leads to such matching when it arises from the recognition of changes in assets and liabilities. However, matching of costs with income is not an objective of the *Framework*. The *Framework* does not allow the recognition in the statement of financial position of items that do not meet the definition of an asset, a liability or equity. [CF 5.5].

8.2 Recognition criteria

Extract from the Conceptual Framework

5.6 Only items that meet the definition of an asset, a liability or equity are recognised in the statement of financial position. Similarly, only items that meet the definition of income or expenses are recognised in the statement(s) of financial performance. However, not all items that meet the definition of one of those elements are recognised.

[CF 5.6].

Not recognising an item that meets the definition of one of the elements makes the statement of financial position and the statement(s) of financial performance less complete and can exclude useful information from financial statements. On the other hand, in some circumstances, recognising some items that meet the definition of one of the elements would not provide useful information. An asset or liability is recognised only if recognition of that asset or liability and of any resulting income, expenses or changes in equity provides users of financial statements with information that is useful; that is, with:

- Relevant information about the asset or liability and about any resulting income, expenses or changes in equity (see section 8.2.1 below)
- And
- A faithful representation of the asset or liability and of any resulting income, expenses or changes in equity (see section 8.2.2 below) [CF 5.7]

Just as cost constrains other financial reporting decisions, it also constrains recognition decisions. There is a cost to recognising an asset or liability. Preparers of financial statements incur costs in obtaining a relevant measure of an asset or liability. Users of financial statements also incur costs in analysing and interpreting the information provided. An asset or liability is recognised if the benefits of the information provided to users of financial statements by recognition are likely to justify the costs of providing and using that information. In some cases, the costs of recognition may outweigh its benefits. [CF 5.8].

It is not possible to define precisely when recognition of an asset or liability will provide useful information to users of financial statements, at a cost that does not outweigh its benefits. What is useful to users depends on the item and the facts and circumstances. Consequently, judgement is required when deciding whether to recognise an item, and thus recognition requirements may need to vary between and within standards. [CF 5.9].

It is important when making decisions about recognition to consider the information that would be given if an asset or liability were not recognised. For example, if no asset is recognised when expenditure is incurred, an expense is recognised. Over time, recognising the expense may, in some cases, provide useful information, for example, information that enables users of financial statements to identify trends. [CF 5.10].

Even if an item meeting the definition of an asset or liability is not recognised, an entity may need to provide information about that item in the notes. It is important to consider how to make such information sufficiently visible to compensate for the item's absence from the structured summary provided by the statement of financial position and, if applicable, the statement(s) of financial performance. [CF 5.11].

8.2.1 Relevance

Information about assets, liabilities, equity, income and expenses is relevant to users of financial statements. However, recognition of a particular asset or liability and any resulting income, expenses or changes in equity may not always provide relevant information. That may be the case if, for example:

- It is uncertain whether an asset or liability exists (see section 8.2.1.A below)
- Or
- An asset or liability exists, but the probability of an inflow or outflow of economic benefits is low (see section 8.2.1.B below) [CF 5.12]

The presence of one or both of the factors described above does not lead automatically to a conclusion that the information provided by recognition lacks relevance. Moreover, factors other than these may also affect the conclusion. It may be a combination of factors and not any single factor that determines whether recognition provides relevant information. [CF 5.13].

8.2.1.A Existence uncertainty

Sometimes it is uncertain whether an asset or liability exists. In some cases, that uncertainty, possibly combined with a low probability of inflows or outflows of economic benefits and an exceptionally wide range of possible outcomes, may mean that the recognition of an asset or liability, necessarily measured at a single amount, would not provide relevant information. Whether or not the asset or liability is recognised, explanatory information about the uncertainties associated with it may need to be provided in the financial statements. [CF 5.14].

8.2.1.B Low probability of an inflow or outflow of economic benefits

An asset or liability can exist even if the probability of an inflow or outflow of economic benefits is low (see sections 7.2.2 and 7.3.2 above). [CF 5.15].

If the probability of an inflow or outflow of economic benefits is low, the most relevant information about the asset or liability may be information about the magnitude of the possible inflows or outflows, their possible timing and the factors affecting the probability of their occurrence. The typical location for such information is in the notes. [CF 5.16].

Even if the probability of an inflow or outflow of economic benefits is low, recognition of the asset or liability may provide relevant information beyond the information described above. Whether that is the case may depend on a variety of factors. For example:

- If an asset is acquired or a liability is incurred in an exchange transaction on market terms, its cost generally reflects the probability of an inflow or outflow of economic benefits. Thus, that cost may be relevant information, and is generally readily available. Furthermore, not recognising the asset or liability would result in the recognition of expenses or income at the time of the exchange, which might not be a faithful representation of the transaction (see section 8.2.2.B below).
- If an asset or liability arises from an event that is not an exchange transaction, recognition of the asset or liability typically results in recognition of income or expenses. If there is only a low probability that the asset or liability will result in an inflow or outflow of economic benefits, users of financial statements might not regard the recognition of the asset and income, or the liability and expenses, as providing relevant information. [CF 5.17].

8.2.2 Faithful representation

Recognition of a particular asset or liability is appropriate if it provides not only relevant information, but also a faithful representation of that asset or liability and of any resulting income, expenses or changes in equity. Whether a faithful representation can be provided may be affected by the level of measurement uncertainty associated with the asset or liability or by other factors. [CF 5.18].

8.2.2.A Measurement uncertainty

For an asset or liability to be recognised, it must be measured. In many cases, such measures must be estimated and are therefore subject to measurement uncertainty. As noted in section 5.1.2 above, the use of reasonable estimates is an essential part of the preparation of financial information and does not undermine the usefulness of the information if the estimates are clearly and accurately described and explained. Even a high level of measurement uncertainty does not necessarily prevent such an estimate from providing useful information. [CF 5.19].

In some cases, the level of uncertainty involved in estimating a measure of an asset or liability may be so high that it may be questionable whether the estimate would provide a sufficiently faithful representation of that asset or liability and of any resulting income, expenses or changes in equity. The level of measurement uncertainty may be so high if, for example, the only way of estimating that measure of the asset or liability is by using cash-flow-based measurement techniques and, in addition, one or more of the following circumstances exists:

- The range of possible outcomes is exceptionally wide and the probability of each outcome is exceptionally difficult to estimate.
- The measure is exceptionally sensitive to small changes in estimates of the probability of different outcomes, for example if the probability of future cash inflows or outflows occurring is exceptionally low, but the magnitude of those cash inflows or outflows will be exceptionally high if they occur.

Or

- Measuring the asset or liability requires exceptionally difficult or exceptionally subjective allocations of cash flows that do not relate solely to the asset or liability being measured. [CF 5.20].

In some of these cases, the most useful information may be the measure that relies on the highly uncertain estimate, accompanied by a description of the estimate and an explanation of the uncertainties that affect it. This is especially likely to be the case if that measure is the most relevant measure of the asset or liability. In other cases, if that information would not provide a sufficiently faithful representation of the asset or liability and of any resulting income, expenses or changes in equity, the most useful information may be a different measure (accompanied by any necessary descriptions and explanations) that is slightly less relevant but is subject to lower measurement uncertainty. [CF 5.21].

In limited circumstances, all relevant measures of an asset or liability that are available (or can be obtained) may be subject to such high measurement uncertainty that none would provide useful information about the asset or liability (and any resulting income, expenses or changes in equity), even if the measure were accompanied by a description of the estimates made in producing it and an explanation of the uncertainties that affect those estimates. In those limited circumstances, the asset or liability would not be recognised. [CF 5.22].

Whether or not an asset or liability is recognised, a faithful representation of the asset or liability may need to include explanatory information about the uncertainties associated with the asset or liability's existence or measurement, or with its outcome, that is, the amount or timing of any inflow or outflow of economic benefits that will ultimately result from it (measurement uncertainty is discussed in section 9.3.2 below). [CF 5.23].

8.2.2.B Other factors

Faithful representation of a recognised asset, liability, equity, income or expense involves not only recognition of that item, but also its measurement as well as presentation and disclosure of information about it (measurement is discussed in section 9 below; presentation and disclosure is discussed in section 10 below). [CF 5.24].

Accordingly, when assessing whether the recognition can provide a faithful representation of an asset or liability, it is necessary to consider not merely its description and measurement in the statement of financial position, but also:

- The depiction of resulting income, expenses and changes in equity. For example, if an entity acquires an asset in exchange for consideration, not recognising the asset would result in recognising expenses and would reduce the entity's profit and equity. In some cases, for example, if the entity does not consume the asset immediately, that result could provide a misleading representation that the entity's financial position has deteriorated.
- Whether related assets and liabilities are recognised. If they are not recognised, recognition may create a recognition inconsistency (accounting mismatch). That may not provide an understandable or faithful representation of the overall effect of the transaction or other event giving rise to the asset or liability, even if explanatory information is provided in the notes.

And

- Presentation and disclosure of information about the asset or liability, and resulting income, expenses or changes in equity. A complete depiction includes all information necessary for a user of financial statements to understand the economic phenomenon depicted, including all necessary descriptions and explanations. Hence, presentation and disclosure of related information can enable a recognised amount to form part of a faithful representation of an asset, a liability, equity, income or expenses. [CF 5.25].

8.3 Derecognition

Extract from the Conceptual Framework

- 5.26 Derecognition is the removal of all or part of a recognised asset or liability from an entity's statement of financial position. Derecognition normally occurs when that item no longer meets the definition of an asset or of a liability:
- (a) for an asset, derecognition normally occurs when the entity loses control of all or part of the recognised asset; and
 - (b) for a liability, derecognition normally occurs when the entity no longer has a present obligation for all or part of the recognised liability.

[CF 5.26].

Accounting requirements for derecognition aim to represent faithfully both:

- Any assets and liabilities retained after the transaction or other event that led to the derecognition (including any asset or liability acquired, incurred or created as part of the transaction or other event) And
- The change in the entity's assets and liabilities as a result of that transaction or other event [CF 5.27]

These aims are normally achieved by:

- Derecognising any assets or liabilities that have expired or have been consumed, collected, fulfilled or transferred, and recognising any resulting income and expenses (transferred component).
 - Continuing to recognise the assets or liabilities retained (retained component), if any. That retained component becomes a unit of account separate from the transferred component. Accordingly, no income or expenses are recognised on the retained component as a result of the derecognition of the transferred component, unless the derecognition results in a change in the measurement requirements applicable to the retained component.
- And
- Applying one or more of the following procedures, if that is necessary to achieve one or both of those aims:
 - Presenting any retained component separately in the statement of financial position.
 - Presenting separately in the statement(s) of financial performance any income and expenses recognised as a result of the derecognition of the transferred component.
- Or
- Providing explanatory information. [CF 5.28].

In some cases, an entity might appear to transfer an asset or liability, but that asset or liability might nevertheless remain an asset or liability of the entity. For example, as discussed in section 7.2.3 above:

- If an entity has apparently transferred an asset but retains exposure to significant positive or negative variations in the amount of economic benefits that may be produced by the asset, this sometimes indicates that the entity might continue to control that asset.
- Or
- If an entity has transferred an asset to another party that holds the asset as an agent for the entity, the transferor still controls the asset. [CF 5.29].

In these cases, derecognition of that asset or liability is not appropriate because it would not achieve a faithful representation of either the retained elements or the change in assets or liabilities. [CF 5.27, CF 5.30].

When an entity no longer has a transferred component, derecognition of the transferred component faithfully represents that fact. However, in some of those cases, derecognition may not faithfully represent how much a transaction or other event changed the entity's assets or liabilities, even when supported by appropriate presentation and disclosure. In those cases, derecognition of the transferred component might imply that the entity's financial position has changed more significantly than it has. This might occur, for example:

- If an entity has transferred an asset and, at the same time, entered into another transaction that results in a present right or present obligation to reacquire the asset. Such present rights or present obligations may arise from, for example, a forward contract, a written put option, or a purchased call option.
- Or
- If an entity has retained exposure to significant positive or negative variations in the amount of economic benefits that may be produced by a transferred component that the entity no longer controls. [CF 5.31].

If derecognition is not sufficient to achieve a faithful representation of the retained elements and the change in assets or liabilities (even when supported by appropriate presentation and disclosure) those two aims might sometimes be achieved by continuing to recognise the transferred component. This would have the following consequences:

- No income or expenses are recognised on either the retained component or the transferred component as a result of the transaction or other event.
- The proceeds received (or paid) upon transfer of the asset (or liability) are treated as a loan received (or given).

And

- Separate presentation of the transferred component in the statement of financial position, or provision of explanatory information, is needed to depict the fact that the entity no longer has any rights or obligations arising from the transferred component. Similarly, it may be necessary to provide information about income or expenses arising from the transferred component after the transfer.

[CF 5.32].

One case in which questions about derecognition arise is when a contract is modified in a way that reduces or eliminates existing rights or obligations. In deciding how to account for contract modifications, it is necessary to consider which unit of account provides users of financial statements with the most useful information about the assets and liabilities retained after the modification, and about how the modification changed the entity's assets and liabilities:

- If a contract modification only eliminates existing rights or obligations, the discussion of derecognition above is considered in deciding whether to derecognise those rights or obligations.
- If a contract modification only adds new rights or obligations, it is necessary to decide whether to treat the added rights or obligations as a separate asset or liability, or as part of the same unit of account as the existing rights and obligations (see section 7.1.1 above).

And

- If a contract modification both eliminates existing rights or obligations and adds new rights or obligations, it is necessary to consider both the separate and the combined effect of those modifications. In some such cases, the contract has been modified to such an extent that, in substance, the modification replaces the old asset or liability with a new asset or liability. In cases of such extensive modification, the entity may need to derecognise the original asset or liability, and recognise the new asset or liability. [CF 5.33].

9 Chapter 6: Measurement

As discussed in section 8 above, elements recognised in financial statements are quantified in monetary terms. This requires the selection of a measurement basis, which is defined in the *Framework* as an identified feature (for example, historical cost, fair value or fulfilment value) of the item being measured. Applying a measurement basis to an asset or liability creates a measure for that asset or liability and for related income and expenses. [CF 6.1].

The *Framework* does not provide detailed guidance on when a particular measurement basis would be suitable. Rather, it describes various measurement bases, the information they provide and the factors to consider in their selection (discussed further in section 9.1 below). [CF BC6.1]. This approach reflects the belief of the Board that in different circumstances:

- Different measurement bases may provide information relevant to users of financial statements
- And
- A particular measurement basis may be:
 - Easier to understand and implement than another
 - More verifiable, less prone to error or subject to a lower level of measurement uncertainty than another
- Or
- Less costly to implement than another [CF BC6.10]

Consideration of the qualitative characteristics of useful financial information and of the cost constraint is likely to result in the selection of different measurement bases for different assets, liabilities, income and expenses. [CF 6.2].

A standard may need to describe how to implement the measurement basis selected in that standard. That description could include:

- Specifying techniques that may or must be used to estimate a measure applying a particular measurement basis
- Specifying a simplified measurement approach that is likely to provide information similar to that provided by a preferred measurement basis
- Or
- Explaining how to modify a measurement basis, for example, by excluding from the fulfilment value of a liability the effect of the possibility that the entity may fail to fulfil that liability (own credit risk) [CF 6.3]

The contents of Chapter 6 of the *Framework* are discussed in this section as follows:

- Measurement bases (such as historical cost and current value) - discussed in section 9.1 below
- Information provided by different measurement bases - discussed in section 9.2 below
- Factors to consider in selecting measurement bases - discussed in section 9.3 below
- Measurement of equity - discussed in section 9.4 below
- Cash-flow-based measurement techniques - discussed in section 9.5 below

9.1 Measurement bases

9.1.1 Historical cost

Historical cost measures provide monetary information about assets, liabilities and related income and expenses, using information derived, at least in part, from the price of the transaction or other event that gave rise to them. Unlike current value, historical cost does not reflect changes in values, except to the extent that those changes relate to impairment of an asset or a liability becoming onerous. [CF 6.4].

The historical cost of an asset when it is acquired or created is the value of the costs incurred in acquiring or creating the asset, comprising the consideration paid to acquire or create the asset plus transaction costs. The historical cost of a liability when it is incurred or taken on is the value of the consideration received to incur or take on the liability minus transaction costs. [CF 6.5].

When an asset is acquired or created, or a liability is incurred or taken on, as a result of an event that is not a transaction on market terms, it may not be possible to identify a cost, or the cost may not provide relevant information about the asset or liability. In some such cases, a current value of the asset or liability is used as a deemed cost on initial recognition and that deemed cost is then used as a starting point for subsequent measurement at historical cost (see section 9.3.4 below). [CF 6.6].

The historical cost of an asset is updated over time to depict, if applicable:

- The consumption of part or all of the economic resource that constitutes the asset (depreciation or amortisation)
 - Payments received that extinguish part or all of the asset
 - The effect of events that cause part or all of the historical cost of the asset to be no longer recoverable (impairment)
- And
- Accrual of interest to reflect any financing component of the asset [CF 6.7]

The historical cost of a liability is updated over time to depict, if applicable:

- Fulfilment of part or all of the liability, for example, by making payments that extinguish part or all of the liability or by satisfying an obligation to deliver goods.
 - The effect of events that increase the value of the obligation to transfer the economic resources needed to fulfil the liability to such an extent that the liability becomes onerous. A liability is onerous if the historical cost is no longer sufficient to depict the obligation to fulfil the liability.
- And
- Accrual of interest to reflect any financing component of the liability. [CF 6.8].

One way to apply a historical cost measurement basis to financial assets and financial liabilities is to measure them at amortised cost. The amortised cost of a financial asset or financial liability reflects estimates of future cash flows, discounted at a rate determined at initial recognition. For variable rate instruments, the discount rate is updated to reflect changes in the variable rate. The amortised cost of a financial asset or financial liability is updated over time to depict subsequent changes, such as the accrual of interest, the impairment of a financial asset and receipts or payments. [CF 6.9].

9.1.2 Current value

Current value measures provide monetary information about assets, liabilities and related income and expenses, using information updated to reflect conditions at the measurement date. Because of the updating, current values of assets and liabilities reflect changes, since the previous measurement date, in estimates of cash flows and other factors reflected in those current values. Unlike historical cost, the current value of an asset or liability is not derived, even in part, from the price of the transaction or other event that gave rise to the asset or liability. [CF 6.10].

Current value measurement bases include:

- Fair value (discussed in section 9.1.2.A below)
 - Value in use for assets and fulfilment value for liabilities (discussed in section 9.1.2.B below)
- And
- Current cost (discussed in section 9.1.2.C below) [CF 6.11]

9.1.2.A Fair value

Extract from the Conceptual Framework

6.12 Fair value is the price that would be received to sell an asset, or paid to transfer a liability, in an orderly transaction between market participants at the measurement date.

[CF 6.12].

Fair value reflects the perspective of market participants; that is, participants in a market to which the entity has access. The asset or liability is measured using the same assumptions that market participants would use when pricing the asset or liability if those market participants act in their economic best interest. [CF 6.13].

In some cases, fair value can be determined directly by observing prices in an active market. In other cases, it is determined indirectly using measurement techniques, for example, cash-flow-based measurement techniques (discussed in section 9.5 below), reflecting all the following factors:

- (a) Estimates of future cash flows
- (b) Possible variations in the estimated amount or timing of future cash flows for the asset or liability being measured, caused by the uncertainty inherent in the cash flows
- (c) The time value of money
- (d) The price for bearing the uncertainty inherent in the cash flows (a risk premium or risk discount). The price for bearing that uncertainty depends on the extent of that uncertainty. It also reflects the fact that investors would generally pay less for an asset (and generally require more for taking on a liability) that has uncertain cash flows than for an asset (or liability) whose cash flows are certain.

And

- (e) Other factors, for example, liquidity, if market participants would take those factors into account in the circumstances [CF 6.14]

The factors mentioned in (b) and (d) above include the possibility that a counterparty may fail to fulfil its liability to the entity (credit risk), or that the entity may fail to fulfil its liability (own credit risk). [CF 6.15].

Because fair value is not derived, even in part, from the price of the transaction or other event that gave rise to the asset or liability, fair value is not increased by the transaction costs incurred when acquiring the asset and is not decreased by the transaction costs incurred when the liability is incurred or taken on. In addition, fair value does not reflect the transaction costs that would be incurred on the ultimate disposal of the asset or on transferring or settling the liability. [CF 6.16].

9.1.2.B Value in use and fulfilment value

Value in use is the present value of the cash flows, or other economic benefits, that an entity expects to derive from the use of an asset and from its ultimate disposal. Fulfilment value is the present value of the cash, or other economic resources, that an entity expects to be obliged to transfer as it fulfils a liability. Those amounts of cash or other economic resources include not only the amounts to be transferred to the liability counterparty, but also the amounts that the entity expects to be obliged to transfer to other parties to enable it to fulfil the liability. [CF 6.17]. Value in use and fulfilment value cannot be observed directly and are determined using cash-flow-based measurement techniques (see section 9.5 below). [CF 6.20].

Because value in use and fulfilment value are based on future cash flows, they do not include transaction costs incurred on acquiring an asset or taking on a liability. However, value in use and fulfilment value include the present value of any transaction costs an entity expects to incur on the ultimate disposal of the asset or on fulfilling the liability. [CF 6.18].

Value in use and fulfilment value reflect entity-specific assumptions rather than assumptions by market participants. Nonetheless, they do reflect the factors set out in (a)-(e) in section 9.1.2.A above. In practice, there may sometimes be little difference between the assumptions that market participants would use and those that an entity itself uses. [CF 6.19, CF 6.20].

9.1.2.C Current cost

The current cost of an asset is the cost of an equivalent asset at the measurement date, comprising the consideration that would be paid at the measurement date plus the transaction costs that would be incurred at that date. The current cost of a liability is the consideration that would be received for an equivalent liability at the measurement date minus the transaction costs that would be incurred at that date. Current cost, like historical cost, is an entry value: it reflects prices in the market in which the entity would acquire the asset or would incur the liability. Hence, it is different from fair value, value in use and fulfilment value, which are exit values. However, unlike historical cost, current cost reflects conditions at the measurement date. [CF 6.21].

In some cases, current cost cannot be determined directly by observing prices in an active market and must be determined indirectly by other means. For example, if prices are available only for new assets, the current cost of a used asset might need to be estimated by adjusting the current price of a new asset to reflect the current age and condition of the asset held by the entity. [CF 6.22].

9.2 Information provided by different measurement bases

When selecting a measurement basis, it is important to consider the nature of the information that the measurement basis will produce in both the statement of financial position and the statement(s) of financial performance. The *Framework* summarises that information in a table which is reproduced in Figure 9-1 below. [CF 6.23]. This is followed by some further discussion in sections 9.2.1 and 9.2.2 below.

Figure 9-1: Summary of information provided by particular measurement bases

Assets

Statement of financial position				
	Historical cost	Fair value (market-participant assumptions)	Value in use (entity-specific assumptions) ^(a)	Current cost
Carrying amount	Historical cost (including transaction costs), to the extent unconsumed or uncollected, and recoverable. (Includes interest accrued on any financing component.)	Price that would be received to sell the asset (without deducting transaction costs on disposal).	Present value of future cash flows from the use of the asset and from its ultimate disposal (after deducting present value of transaction costs on disposal).	Current cost (including transaction costs), to the extent unconsumed or uncollected, and recoverable.
Initial recognition^(b)	-	Difference between consideration paid and fair value of the asset acquired. ^(c) Transaction costs on acquiring the asset.	Difference between consideration paid and value in use of the asset acquired. Transaction costs on acquiring the asset.	-
Sale or consumption of the asset^{(d), (e)}	Expenses equal to historical cost of the asset sold or consumed. Income received. (Could be presented gross or net.) Expenses for transaction costs on selling the asset.	Expenses equal to fair value of the asset sold or consumed. Income received. (Could be presented gross or net.) Expenses for transaction costs on selling the asset.	Expenses equal to value in use of the asset sold or consumed. Income received. (Could be presented gross or net.)	Expenses equal to current cost of the asset sold or consumed. Income received. (Could be presented gross or net.) Expenses for transaction costs on selling the asset.

Statement(s) of financial performance				
Event	Historical cost	Fair value (market-participant assumptions)	Value in use (entity-specific assumptions) ^(a)	Current cost
Interest income	Interest income, at historical rates, updated if the asset bears variable interest.	Reflected in income and expenses from changes in fair value. (Could be identified separately.)	Reflected in income and expenses from changes in value in use. (Could be identified separately.)	Interest income, at current rates.
Impairment	Expenses arising because historical cost is no longer recoverable.	Reflected in income and expenses from changes in fair value. (Could be identified separately.)	Reflected in income and expenses from changes in value in use. (Could be identified separately.)	Expenses arising because current cost is no longer recoverable.
Value changes	Not recognised, except to reflect an impairment. For financial assets, income and expenses from changes in estimated cash flows.	Reflected in income and expenses from changes in fair value.	Reflected in income and expenses from changes in value in use.	Income and expenses reflecting the effect of changes in prices (holding gains and holding losses).

- (a) This column summarises the information provided if value in use is used as a measurement basis. However, as noted in section 9.3.3.B below, value in use may not be a practical measurement basis for regular remeasurements.
- (b) Income or expenses may arise on the initial recognition of an asset not acquired on market terms.
- (c) Income or expenses may arise if the market in which an asset is acquired is different from the market that is the source of the prices used when measuring the fair value of the asset.
- (d) Consumption of the asset is typically reported through cost of sales, depreciation or amortisation.
- (e) Income received is often equal to the consideration received but will depend on the measurement basis used for any related liability.

Liabilities

Statement of financial position				
	Historical cost	Fair value (market-participant assumptions)	Fulfilment value (entity-specific assumptions)	Current cost
Carrying amount	Consideration received (net of transaction costs) for taking on the unfulfilled part of the liability, increased by excess of estimated cash outflows over consideration received. (Includes interest accrued on any financing component.)	Price that would be paid to transfer the unfulfilled part of the liability (not including transaction costs that would be incurred on transfer).	Present value of future cash flows that will arise in fulfilling the unfulfilled part of the liability (including present value of transaction costs to be incurred in fulfilment or transfer).	Consideration (net of transaction costs) that would be currently received for taking on the unfulfilled part of the liability, increased by excess of estimated cash outflows over that consideration.
Initial recognition^(a)	-	Difference between consideration received and the fair value of the liability. ^(b) Transaction costs on incurring or taking on the liability.	Difference between consideration received and the fulfilment value of the liability. Transaction costs on incurring or taking on the liability.	-
Fulfilment of the liability	Income equal to historical cost of the liability fulfilled (reflects historical consideration). Expenses for costs incurred in fulfilling the liability. (Could be presented net or gross.)	Income equal to fair value of the liability fulfilled. Expenses for costs incurred in fulfilling the liability. (Could be presented net or gross. If gross, historical consideration could be presented separately.)	Income equal to fulfilment value of the liability fulfilled. Expenses for costs incurred in fulfilling the liability. (Could be presented net or gross. If gross, historical consideration could be presented separately.)	Income equal to current cost of the liability fulfilled (reflects current consideration). Expenses for costs incurred in fulfilling the liability. (Could be presented net or gross. If gross, historical consideration could be presented separately.)

Statement(s) of financial performance				
Event	Historical cost	Fair value (market-participant assumptions)	Fulfilment value (entity-specific assumptions)	Current cost
Transfer of the liability	Income equal to historical cost of the liability transferred (reflects historical consideration). Expenses for costs paid (including transaction costs) to transfer the liability. (Could be presented net or gross.)	Income equal to fair value of the liability transferred. Expenses for costs paid (including transaction costs) to transfer the liability. (Could be presented net or gross.)	Income equal to fulfilment value of the liability transferred. Expenses for costs paid (including transaction costs) to transfer the liability. (Could be presented net or gross.)	Income equal to current cost of the liability transferred (reflects current consideration). Expenses for costs paid (including transaction costs) to transfer the liability. (Could be presented net or gross.)
Interest expenses	Interest expenses, at historical rates, updated if the liability bears variable interest.	Reflected in income and expenses from changes in fair value. (Could be identified separately.)	Reflected in income and expenses from changes in fulfilment value. (Could be identified separately.)	Interest expenses, at current rates.
Effect of events that cause a liability to become onerous	Expenses equal to the excess of the estimated cash outflows over the historical cost of the liability, or a subsequent change in that excess.	Reflected in income and expenses from changes in fair value. (Could be identified separately.)	Reflected in income and expenses from changes in fulfilment value. (Could be identified separately.)	Expenses equal to the excess of the estimated cash outflows over the current cost of the liability, or a subsequent change in that excess.
Value changes	Not recognised except to the extent that the liability is onerous. For financial liabilities, income and expenses from changes in estimated cash flows.	Reflected in income and expenses from changes in fair value.	Reflected in income and expenses from changes in fulfilment value.	Income and expenses reflecting the effect of changes in prices (holding gains and holding losses).

(a) Income or expenses may arise on the initial recognition of a liability incurred or taken on not on market terms.

(b) Income or expenses may arise if the market in which a liability is incurred or taken on is different from the market that is the source of the prices used when measuring the fair value of the liability.

9.2.1 Historical cost

Information provided by measuring an asset or liability at historical cost may be relevant to users of financial statements, because historical cost uses information derived, at least in part, from the price of the transaction or other event that gave rise to the asset or liability. [CF 6.24].

Normally, if an entity acquired an asset in a recent transaction on market terms, the entity expects that the asset will provide sufficient economic benefits that the entity will at least recover the cost of the asset. Similarly, if a liability was incurred or taken on as a result of a recent transaction on market terms, the entity expects that the value of the obligation to transfer economic resources to fulfil the liability will normally be no more than the value of the consideration received minus transaction costs. Hence, measuring an asset or liability at historical cost in such cases provides relevant information about both the asset or liability and the price of the transaction that gave rise to that asset or liability. [CF 6.25].

Because historical cost is reduced to reflect consumption of an asset and its impairment, the amount expected to be recovered from an asset measured at historical cost is at least as great as its carrying amount. Similarly, because the historical cost of a liability is increased when it becomes onerous, the value of the obligation to transfer the economic resources needed to fulfil the liability is no more than the carrying amount of the liability. [CF 6.26].

If an asset other than a financial asset is measured at historical cost, consumption or sale of the asset, or of part of the asset, gives rise to an expense measured at the historical cost of the asset, or of part of the asset, consumed or sold. [CF 6.27].

The expense arising from the sale of an asset is recognised at the same time as the consideration for that sale is recognised as income. The difference between the income and the expense is the margin resulting from the sale. Expenses arising from consumption of an asset can be compared to related income to provide information about margins. [CF 6.28].

Similarly, if a liability other than a financial liability was incurred or taken on in exchange for consideration and is measured at historical cost, the fulfilment of all or part of the liability gives rise to income measured at the value of the consideration received for the part fulfilled. The difference between that income and the expenses incurred in fulfilling the liability is the margin resulting from the fulfilment. [CF 6.29].

Information about the cost of assets sold or consumed, including goods and services consumed immediately (see section 7.2.1 above), and about the consideration received, may have predictive value. That information can be used as an input in predicting future margins from the future sale of goods (including goods not currently held by the entity) and services and hence to assess the entity's prospects for future net cash inflows. To assess an entity's prospects for future cash flows, users of financial statements often focus on the entity's prospects for generating future margins over many periods, not just on its prospects for generating margins from goods already held. Income and expenses measured at historical cost may also have confirmatory value because they may provide feedback to users of financial statements about their previous predictions of cash flows or of margins. Information about the cost of assets sold or consumed may also help in an assessment of how efficiently and effectively the entity's management has discharged its responsibilities to use the entity's economic resources. [CF 6.30].

For similar reasons, information about interest earned on assets, and interest incurred on liabilities, measured at amortised cost may have predictive and confirmatory value. [CF 6.31].

9.2.2 Current value

9.2.2.A Fair value

Information provided by measuring assets and liabilities at fair value may have predictive value because fair value reflects market participants' current expectations about the amount, timing and uncertainty of future cash flows. These expectations are priced in a manner that reflects the current risk preferences of market participants. That information may also have confirmatory value by providing feedback about previous expectations. [CF 6.32].

Income and expenses reflecting market participants' current expectations may have some predictive value, because such income and expenses can be used as an input in predicting future income and expenses. Such income and expenses may also help in an assessment of how efficiently and effectively the entity's management has discharged its responsibilities to use the entity's economic resources. [CF 6.33].

A change in the fair value of an asset or liability can result from various factors set out in (a)-(e) in section 9.1.2.A above. When those factors have different characteristics, identifying separately income and expenses that result from those factors can provide useful information to users of financial statements (see section 10.2.3 below). [CF 6.34].

If an entity acquired an asset in one market and determines fair value using prices in a different market (the market in which the entity would sell the asset), any difference between the prices in those two markets is recognised as income when that fair value is first determined. [CF 6.35].

Sale of an asset or transfer of a liability would normally be for consideration of an amount similar to its fair value, if the transaction were to occur in the market that was the source for the prices used when measuring that fair value. In those cases, if the asset or liability is measured at fair value, the net income or net expenses arising at the time of the sale or transfer would usually be small, unless the effect of transaction costs is significant. [CF 6.36].

9.2.2.B Value in use and fulfilment value

Value in use provides information about the present value of the estimated cash flows from the use of an asset and from its ultimate disposal. This information may have predictive value because it can be used in assessing the prospects for future net cash inflows. [CF 6.37].

Fulfilment value provides information about the present value of the estimated cash flows needed to fulfil a liability. Hence, fulfilment value may have predictive value, particularly if the liability will be fulfilled, rather than transferred or settled by negotiation. [CF 6.38].

Updated estimates of value in use or fulfilment value, combined with information about estimates of the amount, timing and uncertainty of future cash flows, may also have confirmatory value because they provide feedback about previous estimates of value in use or fulfilment value. [CF 6.39].

9.2.2.C Current cost

Information about assets and liabilities measured at current cost may be relevant because current cost reflects the cost at which an equivalent asset could be acquired or created at the measurement date or the consideration that would be received for incurring or taking on an equivalent liability. [CF 6.40].

Like historical cost, current cost provides information about the cost of an asset consumed or about income from the fulfilment of liabilities. That information can be used to derive current margins and can be used as an input in predicting future margins. Unlike historical cost, current cost reflects prices prevailing at the time of consumption or fulfilment. When price changes are significant, margins based on current cost may be more useful for predicting future margins than margins based on historical cost. [CF 6.41].

To report the current cost of consumption (or current income from fulfilment), it is necessary to split the change in the carrying amount in the reporting period into the current cost of consumption (or current income from fulfilment), and the effect of changes in prices. The effect of a change in prices is sometimes referred to as a 'holding gain' or a 'holding loss'. [CF 6.42].

9.3 Factors to consider in selecting measurement bases

In selecting a measurement basis it is necessary to consider not just the nature of the information that it will produce (discussed in section 9.2 above), but also other factors (including the qualitative characteristics discussed in section 5 above). [CF 6.43]. These other factors set out in the *Framework* are discussed in this section and comprise:

- Relevance (see section 9.3.1 below)
 - Faithful representation (see section 9.3.2 below)
 - Enhancing characteristics and the cost constraint (see section 9.3.3 below)
- These discussions focus on the factors to be considered in selecting a measurement basis for recognised assets and recognised liabilities. Some of those discussions may also apply in selecting a measurement basis for information provided in the notes, for recognised or unrecognised items. [CF 6.47].
- Factors specific to initial measurement (see section 9.3.4 below)
- And
- The use of more than one measurement basis (see section 9.3.5 below)

In most cases, no single factor will determine which measurement basis should be selected. The relative importance of each factor will depend on facts and circumstances. [CF 6.44].

The information provided by a measurement basis must be useful to users of financial statements. To achieve this, the information must be relevant and it must faithfully represent what it purports to represent. In addition, the information provided should be, as far as possible, comparable, verifiable, timely and understandable. [CF 2.4, CF 6.45].

As noted in section 5.1.3 above, the *Framework* states that the most efficient and effective process for applying the fundamental qualitative characteristics would usually be to identify the most relevant information about an economic phenomenon. If that information is not available or cannot be provided in a way that faithfully represents the economic phenomenon, the next most relevant type of information is considered. The role played in the selection of a measurement basis by the fundamental qualitative characteristics is discussed in sections 9.3.1 and 9.3.2 below. That played by the enhancing characteristics and the cost constraint is discussed in section 9.3.3 below. [CF 6.46].

Additional factors to consider in selecting a measurement basis on initial recognition are discussed in section 9.3.4 below. If the initial measurement basis is inconsistent with the subsequent measurement basis, income and expenses might be recognised at the time of the first subsequent measurement solely because of the change in measurement basis. Recognising such income and expenses might appear to depict a transaction or other event when, in fact, no such transaction or event has occurred. Hence, the choice of measurement basis for an asset or liability, and for the related income and expenses, is determined by considering both initial measurement and subsequent measurement. [CF 6.48, CF 6.77].

9.3.1 Relevance

The relevance of information provided by a measurement basis for an asset or liability and for the related income and expenses is affected by:

- The characteristics of the asset or liability (see section 9.3.1.A below)
- And
- How that asset or liability contributes to future cash flows (see section 9.3.1.B below) [CF 6.49]

9.3.1.A Characteristics of the asset or liability

The relevance of information provided by a measurement basis depends partly on the characteristics of the asset or liability, in particular, on the variability of cash flows and on whether the value of the asset or liability is sensitive to market factors or other risks. [CF 6.50].

If the value of an asset or liability is sensitive to market factors or other risks, its historical cost might differ significantly from its current value. Consequently, historical cost may not provide relevant information if information about changes in value is important to users of financial statements. For example, amortised cost cannot provide relevant information about a financial asset or financial liability that is a derivative. [CF 6.51].

Furthermore, if historical cost is used, changes in value are reported not when that value changes, but when an event such as disposal, impairment or fulfilment occurs. This could be incorrectly interpreted as implying that all the income and expenses recognised at the time of that event arose then, rather than over the periods during which the asset or liability was held. Moreover, because measurement at historical cost does not provide timely information about changes in value, income and expenses reported on that basis may lack predictive value and confirmatory value by not depicting the full effect of the entity's exposure to risk arising from holding the asset or liability during the reporting period. [CF 6.52].

Changes in the fair value of an asset or liability reflect changes in expectations of market participants and changes in their risk preferences. Depending on the characteristics of the asset or liability being measured and on the nature of the entity's business activities, information reflecting those changes may not always provide predictive value or confirmatory value to users of financial statements. This may be the case when the entity's business activities do not involve selling the asset or transferring the liability, for example, if the entity holds assets solely for use or solely for collecting contractual cash flows or if the entity is to fulfil liabilities itself. [CF 6.53].

9.3.1.B Contribution to future cash flows

As noted in section 4.2.1 above, some economic resources produce cash flows directly; in other cases, economic resources are used in combination to produce cash flows indirectly. How economic resources are used, and hence how assets and liabilities produce cash flows, depends in part on the nature of the business activities conducted by the entity. [CF 6.54].

When a business activity of an entity involves the use of several economic resources that produce cash flows indirectly, by being used in combination to produce and market goods or services to customers, historical cost or current cost is likely to provide relevant information about that activity. For example, property, plant and equipment is typically used in combination with an entity's other economic resources. Similarly, inventory typically cannot be sold to a customer, except by making extensive use of the entity's other economic resources (for example, in production and marketing activities). The manner in which measuring such assets at historical cost or current cost can provide relevant information that can be used to derive margins achieved during the period is discussed in sections 9.2.1 and 9.2.2 above. [CF 6.55].

For assets and liabilities that produce cash flows directly, such as assets that can be sold independently and without a significant economic penalty (for example, without significant business disruption), the measurement basis that provides the most relevant information is likely to be a current value that incorporates current estimates of the amount, timing and uncertainty of the future cash flows. [CF 6.56].

When a business activity of an entity involves managing financial assets and financial liabilities with the objective of collecting contractual cash flows, amortised cost may provide relevant information that can be used to derive the margin between the interest earned on the assets and the interest incurred on the liabilities. However, in assessing whether amortised cost will provide useful information, it is also necessary to consider the characteristics of the financial asset or financial liability. Amortised cost is unlikely to provide relevant information about cash flows that depend on factors other than principal and interest. [CF 6.57].

9.3.2 Faithful representation

When assets and liabilities are related in some way, using different measurement bases for those assets and liabilities can create a measurement inconsistency (accounting mismatch). If financial statements contain measurement inconsistencies, those financial statements may not faithfully represent some aspects of the entity's financial position and financial performance. Consequently, in some circumstances, using the same measurement basis for related assets and liabilities may provide users of financial statements with information that is more useful than the information that would result from using different measurement bases. This may be particularly likely when the cash flows from one asset or liability are directly linked to the cash flows from another asset or liability. [CF 6.58].

As noted in section 5.1.2 above, although a perfectly faithful representation is free from error, this does not mean that measures must be perfectly accurate in all respects. [CF 6.59].

When a measure cannot be determined directly by observing prices in an active market and must instead be estimated, measurement uncertainty arises. The level of measurement uncertainty associated with a particular measurement basis may affect whether information provided by that measurement basis provides a faithful representation of an entity's financial position and financial performance. A high level of measurement uncertainty does not necessarily prevent the use of a measurement basis that provides relevant information. However, in some cases the level of measurement uncertainty is so high that information provided by a measurement basis might not provide a sufficiently faithful representation (see section 5.1.3 above). In such cases, it is appropriate to consider selecting a different measurement basis that would also result in relevant information. [CF 6.60].

Measurement uncertainty is different from both outcome uncertainty and existence uncertainty:

- Outcome uncertainty arises when there is uncertainty about the amount or timing of any inflow or outflow of economic benefits that will result from an asset or liability.
- Existence uncertainty arises when it is uncertain whether an asset or a liability exists (see section 8.2.1.A above). [CF 6.61].

The presence of outcome uncertainty or existence uncertainty may sometimes contribute to measurement uncertainty. However, outcome uncertainty or existence uncertainty does not necessarily result in measurement uncertainty. For example, if the fair value of an asset can be determined directly by observing prices in an active market, no measurement uncertainty is associated with the measurement of that fair value, even if it is uncertain how much cash the asset will ultimately produce and hence there is outcome uncertainty. [CF 6.62].

9.3.3 Enhancing characteristics and the cost constraint

The enhancing qualitative characteristics of comparability, understandability and verifiability, and the cost constraint, have implications for the selection of a measurement basis (discussed in section 5.2 above). The enhancing qualitative characteristic of timeliness has no specific implications for measurement. [CF 6.63].

Just as cost constrains other financial reporting decisions, it also constrains the selection of a measurement basis. Hence, in selecting a measurement basis, it is important to consider whether the benefits of the information provided to users of financial statements by that measurement basis are likely to justify the costs of providing and using that information. [CF 6.64].

Consistently using the same measurement bases for the same items, either from period to period within a reporting entity or in a single period across entities, can help make financial statements more comparable. [CF 6.65].

A change in measurement basis can make financial statements less understandable. However, a change may be justified if other factors outweigh the reduction in understandability, for example, if the change results in more relevant information. If a change is made, users of financial statements may need explanatory information to enable them to understand the effect of that change. [CF 6.66].

Understandability depends partly on how many different measurement bases are used and on whether they change over time. In general, if more measurement bases are used in a set of financial statements, the resulting information becomes more complex and, hence, less understandable and the totals or subtotals in the statement of financial position and the statement(s) of financial performance become less informative. However, it could be appropriate to use more measurement bases if that is necessary to provide useful information. [CF 6.67].

Verifiability is enhanced by using measurement bases that result in measures that can be independently corroborated either directly, for example, by observing prices, or indirectly, for example, by checking inputs to a model. If a measure cannot be verified, users of financial statements may need explanatory information to enable them to understand how the measure was determined. In some such cases, it may be necessary to specify the use of a different measurement basis. [CF 6.68].

9.3.3.A Historical cost

In many situations, it is simpler, and hence less costly, to measure historical cost than it is to measure a current value. In addition, historical cost is generally well understood and, in many cases, verifiable. [CF 6.69].

However, estimating consumption and identifying and measuring impairment losses or onerous liabilities can be subjective. Hence, the historical cost of an asset or liability can sometimes be as difficult to measure or verify as a current value. [CF 6.70].

Using a historical cost measurement basis, identical assets acquired, or liabilities incurred, at different times can be reported in the financial statements at different amounts. This can reduce comparability, both from period to period for a reporting entity and in a single period across entities. [CF 6.71].

9.3.3.B Current value

Because fair value is determined from the perspective of market participants, not from an entity-specific perspective, and is independent of when the asset was acquired or the liability was incurred, identical assets or liabilities measured at fair value will, in principle, be measured at the same amount by entities that have access to the same markets. This can enhance comparability both from period to period for a reporting entity and in a single period across entities. In contrast, because value in use and fulfilment value reflect an entity-specific perspective, those measures could differ for identical assets or liabilities in different entities. Those differences may reduce comparability, particularly if the assets or liabilities contribute to cash flows in a similar manner. [CF 6.72].

If the fair value of an asset or liability can be determined directly by observing prices in an active market, the process of fair value measurement is low-cost, simple and easy to understand; and the fair value can be verified through direct observation. [CF 6.73].

Valuation techniques, sometimes including the use of cash-flow-based measurement techniques, may be needed to estimate fair value when it cannot be observed directly in an active market and are generally needed when determining value in use and fulfilment value. Depending on the techniques used:

- Estimating inputs to the valuation and applying the valuation technique may be costly and complex. And
- The inputs into the process may be subjective and it may be difficult to verify both the inputs and the validity of the process itself. Consequently, the measures of identical assets or liabilities may differ. That would reduce comparability. [CF 6.74].

In many cases, value in use cannot be determined meaningfully for an individual asset used in combination with other assets. Instead, the value in use is determined for a group of assets and the result may then need to be allocated to individual assets. This process can be subjective and arbitrary. In addition, estimates of value in use for an asset may inadvertently reflect the effect of synergies with other assets in the group. Hence, determining the value in use of an asset used in combination with other assets can be a costly process and its complexity and subjectivity reduces verifiability. For these reasons, value in use may not be a practical measurement basis for regular remeasurements of such assets. However, it may be useful for occasional remeasurements of assets, for example, when it is used in an impairment test to determine whether historical cost is fully recoverable. [CF 6.75].

Using a current cost measurement basis, identical assets acquired or liabilities incurred at different times are reported in the financial statements at the same amount. This can enhance comparability, both from period to period for a reporting entity and in a single period across entities. However, determining current cost can be complex, subjective and costly. For example, as noted in section 9.1.2.C above, it may be necessary to estimate the current cost of an asset by adjusting the current price of a new asset to reflect the current age and condition of the asset held by the entity. In addition, because of changes in technology and changes in business practices, many assets would not be replaced with identical assets. Thus, a further subjective adjustment to the current price of a new asset would be required in order to estimate the current cost of an asset equivalent to the existing asset. Also, splitting changes in current cost carrying amounts between the current cost of consumption and the effect of changes in prices (see section 9.2.2.C above) may be complex and require arbitrary assumptions. Because of these difficulties, current cost measures may lack verifiability and understandability. [CF 6.76].

9.3.4 Factors specific to initial measurement

At initial recognition, the cost of an asset acquired, or of a liability incurred, as a result of an event that is a transaction on market terms is normally similar to its fair value at that date, unless transaction costs are significant. Nevertheless, even if those two amounts are similar, it is necessary to describe what measurement basis is used at initial recognition. If historical cost will be used subsequently, that measurement basis is also normally appropriate at initial recognition. Similarly, if a current value will be used subsequently, it is also normally appropriate at initial recognition. Using the same measurement basis for initial recognition and subsequent measurement avoids recognising income or expenses at the time of the first subsequent measurement solely because of a change in measurement basis (see section 9.3 above). [CF 6.78].

When an entity acquires an asset, or incurs a liability, in exchange for transferring another asset or liability as a result of a transaction on market terms, the initial measure of the asset acquired, or the liability incurred, determines whether any income or expenses arise from the transaction. When an asset or liability is measured at cost, no income or expenses arise at initial recognition, unless income or expenses arise from the derecognition of the transferred asset or liability, or unless the asset is impaired or the liability is onerous. [CF 6.79].

Assets may be acquired, or liabilities may be incurred, as a result of an event that is not a transaction on market terms. For example:

- The transaction price may be affected by relationships between the parties, or by financial distress or other duress of one of the parties.
 - An asset may be granted to the entity free of charge by a government or donated to the entity by another party.
 - A liability may be imposed by legislation or regulation.
- Or
- A liability to pay compensation or a penalty may arise from an act of wrongdoing. [CF 6.80].

In such cases, measuring the asset acquired, or the liability incurred, at its historical cost may not provide a faithful representation of the entity's assets and liabilities and of any income or expenses arising from the transaction or other event. Hence, it may be appropriate to measure the asset acquired, or the liability incurred, at deemed cost, as noted in section 9.1.1 above. Any difference between that deemed cost and any consideration given or received would be recognised as income or expenses at initial recognition. [CF 6.81].

When assets are acquired, or liabilities incurred, as a result of an event that is not a transaction on market terms, all relevant aspects of the transaction or other event need to be identified and considered. For example, it may be necessary to recognise other assets, other liabilities, contributions from holders of equity claims or distributions to holders of equity claims to represent faithfully the substance of the effect of the transaction or other event on the entity's financial position (see section 7.1.3 above) and any related effect on the entity's financial performance. [CF 6.82].

9.3.5 More than one measurement basis

Sometimes, consideration of the factors described in section 9 above may lead to the conclusion that more than one measurement basis is needed for an asset or liability and for related income and expenses in order to provide relevant information that faithfully represents both the entity's financial position and its financial performance. [CF 6.83].

In most cases, the most understandable way to provide that information is:

- To use a single measurement basis both for the asset or liability in the statement of financial position and for related income and expenses in the statement(s) of financial performance
And
- To provide in the notes additional information applying a different measurement basis [CF 6.84]

However, in some cases, information is more relevant, or results in a more faithful representation of both the entity's financial position and its financial performance, through the use of:

- A current value measurement basis for the asset or liability in the statement of financial position
And
- A different measurement basis for the related income and expenses in the statement of profit or loss - as distinct from the statement(s) of financial performance (see section 10.2.3 below)

In selecting those measurement bases, it is necessary to consider the factors discussed in sections 9.3-9.3.4 above. [CF 6.85].

In such cases, the total income or total expenses arising in the period from the change in the current value of the asset or liability is separated and classified (see section 10.2.3 below) so that:

- The statement of profit or loss includes the income or expenses measured applying the measurement basis selected for that statement
And
- Other comprehensive income includes all the remaining income or expenses. As a result, the accumulated other comprehensive income related to that asset or liability equals the difference between:
 - The carrying amount of the asset or liability in the statement of financial position
And
 - The carrying amount that would have been determined applying the measurement basis selected for the statement of profit or loss [CF 6.86]

9.4 Measurement of equity

Extract from the Conceptual Framework

6.87 The total carrying amount of equity (total equity) is not measured directly. It equals the total of the carrying amounts of all recognised assets less the total of the carrying amounts of all recognised liabilities.

[CF 6.87].

Because general purpose financial statements are not designed to show an entity's value, the total carrying amount of equity will not generally equal:

- The aggregate market value of equity claims on the entity
- The amount that could be raised by selling the entity as a whole on a going concern basis
Or
- The amount that could be raised by selling all of the entity's assets and settling all of its liabilities [CF 6.88]

Although total equity is not measured directly, it may be appropriate to measure directly the carrying amount of some individual classes of equity and some components of equity (see section 7.4 above). Nevertheless, because total equity is measured as a residual, at least one class of equity cannot be measured directly. Similarly, at least one component of equity cannot be measured directly. [CF 6.89].

Moreover, some initial recognition of equity will be a consequence of the initial recognition of an asset. Measurement on initial recognition is discussed in section 9.3.4 above.

The total carrying amount of an individual class of equity or component of equity is normally positive, but can be negative in some circumstances. Similarly, total equity is generally positive, but it can be negative, depending on which assets and liabilities are recognised and on how they are measured. [CF 6.90].

9.5 Cash-flow-based measurement techniques

When a measure cannot be observed directly, one way to estimate the measure is by using cash-flow-based measurement techniques. Such techniques are not measurement bases. They are techniques used in applying a measurement basis. Hence, when using such a technique, it is necessary to identify which measurement basis is used and the extent to which the technique reflects the factors applicable to that measurement basis. For example, if the measurement basis is fair value, the applicable factors are those described in section 9.1.2.A above. [CF 6.91].

Cash-flow-based measurement techniques can be used in applying a modified measurement basis, for example, fulfilment value modified to exclude the effect of the possibility that the entity may fail to fulfil a liability (own credit risk). Modifying measurement bases may sometimes result in information that is more relevant to the users of financial statements or that may be less costly to produce or to understand. However, modified measurement bases may also be more difficult for users of financial statements to understand. [CF 6.92].

Outcome uncertainty (see section 9.3.2 above) arises from uncertainties about the amount or timing of future cash flows. Those uncertainties are important characteristics of assets and liabilities. When measuring an asset or liability by reference to estimates of uncertain future cash flows, one factor to consider is possible variations in the estimated amount or timing of those cash flows (see (b) in section 9.1.2.A above). Those variations are considered in selecting a single amount from within the range of possible cash flows. The amount selected is itself sometimes the amount of a possible outcome, but this is not always the case. The amount that provides the most relevant information is usually one from within the central part of the range (a central estimate). Different central estimates provide different information. For example:

- The expected value (the probability-weighted average, also known as the statistical mean) reflects the entire range of outcomes and gives more weight to the outcomes that are more likely. The expected value is not intended to predict the ultimate inflow or outflow of cash or other economic benefits arising from that asset or liability.
 - The maximum amount that is more likely than not to occur (similar to the statistical median) indicates that the probability of a subsequent loss is no more than 50% and that the probability of a subsequent gain is no more than 50%.
- And
- The most likely outcome (the statistical mode) is the single most likely ultimate inflow or outflow arising from an asset or liability. [CF 6.93].

A central estimate depends on estimates of future cash flows and possible variations in their amounts or timing. It does not capture the price for bearing the uncertainty that the ultimate outcome may differ from that central estimate (that is, the factor noted in (d) in section 9.1.2.A above). [CF 6.94].

As no central estimate gives complete information about the range of possible outcomes, users may need information about the range of possible outcomes. [CF 6.95].

10 Chapter 7: Presentation and disclosure

Financial statements are viewed in the *Framework* as a communication tool wherein an entity presents and discloses information about its assets, liabilities, equity, income and expenses. [CF 7.1].

As discussed in section 8.1 above:

- Recognised assets, liabilities and equity are depicted in an entity's statement of financial position (discussed in sections 10.2.1 and 10.2.2 below).
- And
- Income and expenses are depicted in an entity's statement(s) of financial performance (discussed in section 10.2.3 below).
- These are structured summaries that are designed to make financial information comparable and understandable. An important feature of the structures of those summaries is that the amounts recognised in a statement are included in the totals and, if applicable, subtotals that link the items recognised in the statement. [CF 5.2].

Typically, the statement of financial position and the statement(s) of financial performance provide summarised information and more detailed information is provided in the notes. [CF 7.22].

Effective communication of information in financial statements makes that information more relevant and contributes to a faithful representation of an entity's assets, liabilities, equity, income and expenses. It also enhances the understandability and comparability of information in financial statements. Effective communication of information in financial statements requires:

- Focusing on presentation and disclosure objectives and principles rather than focusing on rules (discussed in section 10.1 below)
- Classifying information in a manner that groups similar items and separates dissimilar items (discussed in section 10.2 below)
- And
- Aggregating information in such a way that it is not obscured either by unnecessary detail or by excessive aggregation (discussed in section 10.3 below) [CF 7.2]

Just as cost constrains other financial reporting decisions, it also constrains decisions about presentation and disclosure. Hence, in making decisions about presentation and disclosure, it is important to consider whether the benefits provided to users of financial statements by presenting or disclosing particular information are likely to justify the costs of providing and using that information. [CF 7.3].

10.1 Presentation and disclosure objectives and principles

Extract from the Conceptual Framework

- 7.4 To facilitate effective communication of information in financial statements, when developing presentation and disclosure requirements in Standards a balance is needed between:
- (a) giving entities the flexibility to provide relevant information that faithfully represents the entity's assets, liabilities, equity, income and expenses; and
 - (b) requiring information that is comparable, both from period to period for a reporting entity and in a single reporting period across entities.

[CF 7.4].

Including presentation and disclosure objectives in standards supports effective communication in financial statements because such objectives help entities to identify useful information and to decide how to communicate that information in the most effective manner. [CF 7.5].

Effective communication in financial statements is also supported by considering the following principles:

- Entity-specific information is more useful than standardised descriptions, sometimes referred to as 'boilerplate'.
- And
- Duplication of information in different parts of the financial statements is usually unnecessary and can make financial statements less understandable. [CF 7.6].

10.2 Classification

Classification is the sorting of assets, liabilities, equity, income or expenses on the basis of shared characteristics for presentation and disclosure purposes. Such characteristics include, but are not limited to, the nature of the item, its role (or function) within the business activities conducted by the entity, and how it is measured. *[CF 7.7].*

Classifying dissimilar assets, liabilities, equity, income or expenses together can obscure relevant information, reduce understandability and comparability and may not provide a faithful representation of what it purports to represent. *[CF 7.8].*

10.2.1 Classification of assets and liabilities

Classification is applied to the unit of account selected for an asset or liability (see section 7.1.1 above). However, it may sometimes be appropriate to separate an asset or liability into components that have different characteristics and to classify those components separately. That would be appropriate when classifying those components separately would enhance the usefulness of the resulting financial information. For example, it could be appropriate to separate an asset or liability into current and non-current components and to classify those components separately. *[CF 7.9].*

10.2.1.A Offsetting

Offsetting occurs when an entity recognises and measures both an asset and liability as separate units of account, but groups them into a single net amount in the statement of financial position. Offsetting classifies dissimilar items together and therefore is generally not appropriate. *[CF 7.10].*

Offsetting assets and liabilities differs from treating a set of rights and obligations as a single unit of account (see section 7.1.1 above). *[CF 7.11].*

10.2.2 Classification of equity

To provide useful information, it may be necessary to classify equity claims separately if those equity claims have different characteristics (equity is discussed in section 7.4 above). *[CF 7.12].*

Similarly, to provide useful information, it may be necessary to classify components of equity separately if some of those components are subject to particular legal, regulatory or other requirements. For example, in some jurisdictions, an entity is permitted to make distributions to holders of equity claims only if the entity has sufficient reserves specified as distributable. Separate presentation or disclosure of those reserves may provide useful information. *[CF 7.13].*

10.2.3 Classification of income and expenses

Classification is applied to:

- Income and expenses resulting from the unit of account selected for an asset or liability
- Or
- Components of such income and expenses if those components have different characteristics and are identified separately. For example, a change in the current value of an asset can include the effects of value changes and the accrual of interest (see Figure 9-1 at section 9.2 above). It would be appropriate to classify those components separately if doing so would enhance the usefulness of the resulting financial information. *[CF 7.14].*

Recognised changes in equity during the reporting period comprise:

- Income minus expenses recognised in the statement(s) of financial performance
- And
- Contributions from, minus distributions to, holders of equity claims *[CF 5.3]*

A particularly important facet of classification is determining whether items of financial performance should be considered part of profit and loss or as other comprehensive income.

10.2.3.A Profit or loss and other comprehensive income

Income and expenses are classified and included either:

- In the statement of profit or loss
- Or
- Outside the statement of profit or loss, in other comprehensive income [CF 7.15]

The *Framework* does not explicitly define other comprehensive income. In 2024, the IASB published IFRS 18. That standard does contain a definition of other comprehensive income, being: 'Items of income and expense (including reclassification adjustments) that are recognised outside profit or loss as required or permitted by other IFRS Accounting Standards.' [IFRS 18 Appendix A].

The statement of profit or loss is the primary source of information about an entity's financial performance for the reporting period. That statement contains a total for profit or loss that provides a highly summarised depiction of the entity's financial performance for the period. Many users of financial statements incorporate that total in their analysis either as a starting point for that analysis or as the main indicator of the entity's financial performance for the period. Nevertheless, understanding an entity's financial performance for the period requires an analysis of all recognised income and expenses, including income and expenses included in other comprehensive income, as well as an analysis of other information included in the financial statements. [CF 7.16].

Because the statement of profit or loss is the primary source of information about an entity's financial performance for the period, all income and expenses are, in principle, included in that statement. Indeed, the Board observes that its intention in establishing this principle was to emphasise that the statement of profit or loss is the default location for income and expenses. [CF 7.17, CF BC7.24].

However, in developing standards, the Board may decide in exceptional circumstances that income or expenses arising from a change in the current value of an asset or liability are to be included in other comprehensive income when doing so would result in the statement of profit or loss providing more relevant information, or providing a more faithful representation of the entity's financial performance for that period. [CF 7.17].

Income and expenses that arise on a historical cost measurement basis (see Figure 9-1 at section 9.2 above) are included in the statement of profit or loss. That is also the case when income and expenses of that type are separately identified as a component of a change in the current value of an asset or liability. For example, if a financial asset is measured at current value and if interest income is identified separately from other changes in value, that interest income is included in the statement of profit or loss. [CF 7.18]. This use of more than one measurement basis is discussed in section 9.3.5 above.

In the view of the Board, if the statement of profit or loss is the primary source of information about financial performance for a period, the cumulative amounts included in that statement over time need to be as complete as possible. As a consequence, income and expenses can only be excluded permanently from the statement of profit or loss if there is a compelling reason to do so in any particular case. [CF BC7.29]. In principle, therefore, income and expenses included in other comprehensive income in one period are reclassified from other comprehensive income into the statement of profit or loss in a future period when doing so results in the statement of profit or loss providing more relevant information, or providing a more faithful representation of the entity's financial performance for that future period.

However, if, for example, there is no clear basis for identifying the period in which reclassification would have that result, or the amount that should be reclassified, the Board may, in developing standards, decide that income and expenses included in other comprehensive income are not to be subsequently reclassified. [CF 7.19].

Whilst the *Framework* itself does not set out a list of items which are to be reported in other comprehensive income, IFRS 18 does so in its application guidance as follows.

'The components of other comprehensive income include:

- (a) changes in revaluation surplus (see IAS 16 *Property, Plant and Equipment* and IAS 38);
- (b) remeasurements of defined benefit plans (see IAS 19 *Employee Benefits*);
- (c) gains and losses arising from translating the financial statements of a foreign operation (see IAS 21);
- (d) gains and losses from investments in equity instruments designated at fair value through other comprehensive income in accordance with paragraph 5.7.5 of IFRS 9 *Financial Instruments*;
- (e) gains and losses on financial assets measured at fair value through other comprehensive income in accordance with paragraph 4.1.2A of IFRS 9;

- (f) the effective portion of gains and losses on hedging instruments in a cash flow hedge and the gains and losses on hedging instruments that hedge investments in equity instruments designated at fair value through other comprehensive income in accordance with paragraph 5.7.5 of IFRS 9 (see chapter 6 of IFRS 9);
- (g) for particular liabilities designated as at fair value through profit or loss, the amount of the change in fair value that is attributable to changes in the liability's credit risk (see paragraph 5.7.7 of IFRS 9);
- (h) changes in the value of the time value of options when separating the intrinsic value and time value of an option contract and designating as the hedging instrument only the changes in the intrinsic value (see chapter 6 of IFRS 9);
- (i) changes in the value of the forward elements of forward contracts when separating the forward element and spot element of a forward contract and designating as the hedging instrument only the changes in the spot element, and changes in the value of the foreign currency basis spread of a financial instrument when excluding it from the designation of that financial instrument as the hedging instrument (see chapter 6 of IFRS 9);
- (j) insurance finance income and expenses from contracts issued within the scope of IFRS 17 *Insurance Contracts* excluded from profit or loss when total insurance finance income or expenses is disaggregated to include in profit or loss an amount determined by a systematic allocation applying paragraph 88(b) of IFRS 17, or by an amount that eliminates accounting mismatches with the finance income or expenses arising on the underlying items, applying paragraph 89(b) of IFRS 17; and
- (k) finance income and expenses from reinsurance contracts held excluded from profit or loss when total reinsurance finance income or expenses is disaggregated to include in profit or loss an amount determined by a systematic allocation, applying paragraph 88(b) of IFRS 17.' [IFRS 18.B87].

It is interesting to note that the Board chose to use the word 'include' when introducing this list of items, rather than (for example) the word 'comprise', which suggests that it should not, perhaps, be considered a complete list. A more likely explanation may be that it avoids the necessity of amending that paragraph should a future project introduce another item to be reported in other comprehensive income.

10.3 Aggregation

Aggregation is the adding together of assets, liabilities, equity, income or expenses that have shared characteristics and are included in the same classification. [CF 7.20].

Aggregation makes information more useful by summarising a large volume of detail. However, aggregation conceals some of that detail. Hence, a balance needs to be found so that relevant information is not obscured either by a large amount of insignificant detail or by excessive aggregation. [CF 7.21].

Different levels of aggregation may be needed in different parts of the financial statements. For example, typically, the statement of financial position and the statement(s) of financial performance provide summarised information and more detailed information is provided in the notes. [CF 7.22].

11 Chapter 8: Concepts of capital and capital maintenance

The concept of capital maintenance is concerned with how an entity defines the capital that it seeks to maintain. It is a prerequisite for distinguishing between an entity's return *on* capital (that is, profit) and its return *of* capital. In general terms, an entity has maintained its capital if it has as much capital at the end of the period as it had at the beginning of the period. Any amount over and above that required to maintain the capital at the beginning of the period is profit. [CF 8.4, CF 8.6].

The *Framework* identifies two broad concepts of capital maintenance:

- Financial capital maintenance (see section 11.1 below)
- And
- Physical capital maintenance (see section 11.2 below)

The principal difference between the two concepts of capital maintenance is the treatment of the effects of changes in the prices of assets and liabilities of the entity. [CF 8.6]. The selection of the appropriate concept of capital by an entity should be based on the needs of the users of its financial statements. [CF 8.2].

The concept of capital maintenance chosen by an entity will determine the accounting model used in the preparation of its financial statements. Most entities adopt a financial concept of capital. It is explained that different accounting models exhibit different degrees of relevance and reliability, and it is for management to seek a balance between relevance and reliability (see section 5 above for a discussion of the qualitative characteristics of useful financial information). [CF 8.9]. This use in Chapter 8 of the *Framework* of the term 'reliability' seems to be a drafting error - the term was used in the 1989 *Framework* but was replaced in the 2010 *Framework* with the term 'faithful representation'. As the text concerned has been carried forward unchanged from the 1989 *Framework* to the current one, the failure to update this reference seems to us to be an oversight. The *Framework* notes that the IASB does not prescribe a particular model other than in exceptional circumstances, such as in a hyperinflationary economy (see Chapter 17). This intention will, however, be reviewed in the light of world developments. [CF 8.1, CF 8.9].

The *Framework* notes that the revaluation or restatement of assets and liabilities gives rise to increases or decreases in equity that meet the definition of income and expenses, but - under certain concepts of capital maintenance - are included in equity as capital maintenance adjustments or revaluation reserves. [CF 8.10].

11.1 Financial capital maintenance

Under a financial concept of capital, such as invested money or invested purchasing power, capital is synonymous with the net assets or equity of the entity. Under this concept a profit is earned only if the financial (or money) amount of the net assets at the end of the period exceeds the financial (or money) amount of net assets at the beginning of the period, after excluding any distributions to, and contributions from, owners during the period. [CF 8.1, CF 8.3(a)].

Financial capital maintenance can be measured in either nominal monetary units or units of constant purchasing power. [CF 8.3(a)]. The financial capital maintenance concept does not require a particular measurement basis to be used. Rather, the basis selected depends upon the type of financial capital that the entity is seeking to maintain. [CF 8.5].

Where capital is defined in terms of nominal monetary units, profit represents the increase in nominal money capital over the period. This has the implication that increases in the prices of assets held over the period, conventionally referred to as holding gains, are conceptually profits. They may not be recognised as such, however, until the assets are disposed of in an exchange transaction. [CF 8.7].

When the concept of financial capital maintenance is defined in terms of constant purchasing power units, profit represents the increase in invested purchasing power over the period. Thus, only that part of the increase in the prices of assets that exceeds the increase in the general level of prices is regarded as profit. The rest of the increase is treated as a capital maintenance adjustment and, hence, as part of equity. [CF 8.7].

11.2 Physical capital maintenance

Under this concept a profit is earned only if the physical productive capacity (or operating capability) of the entity (or the resources or funds needed to achieve that capacity) at the end of the period exceeds the physical productive capacity at the beginning of the period, after excluding any distributions to, and contributions from, owners during the period. [CF 8.3(b)]. The physical capital maintenance concept requires the current cost basis of measurement to be adopted. [CF 8.5].

Because capital is defined in terms of the physical productive capacity, profit represents the increase in that capital over the period. Price changes affecting the assets and liabilities of the entity are changes in the measurement of the physical productive capacity of the entity, which are therefore treated as capital maintenance adjustments within equity and not as profit. [CF 8.8].

12 Management commentary

Over a number of years, a number of individual countries have issued regulations or guidance requiring or encouraging the preparation of narrative 'management commentary' to accompany the financial statements.

12.1 The IASB's practice statement

In December 2010 the IASB published its first guidance on management commentary - *Management Commentary - A Framework for Presentation* - as a non-binding 'IFRS Practice Statement'. The introduction to the Practice Statement clarifies that it is neither an IFRS nor part of the *Framework*. However, it has been prepared on the basis that management commentary meets the definition of other financial reporting in the *Preface to International Financial Reporting Standards*, and is therefore within the scope of the *Framework*. Consequently, the Statement should be read 'in the context of' the *Framework*. [MC.IN2, MC.IN4].

Management commentary is described as a narrative report that relates to financial statements that have been prepared in accordance with IFRSs. Management commentary provides users with historical explanations of the amounts presented in the financial statements, specifically the entity's financial position, financial performance and cash flows. It also provides commentary on an entity's prospects and other information not presented in the financial statements. Management commentary also serves as a basis for understanding management's objectives and its strategies for achieving those objectives. [MC Appendix]. For many entities, management commentary is already an important element of their communication with the capital markets, supplementing as well as complementing the financial statements. [MC.IN3].

The Practice Statement is intended to set out a broad framework for the preparation of management commentaries, to be applied by management of individual reporting entities to their own specific circumstances. [MC.IN5]. The statement indicates that management commentary should be consistent with the following principles:

- To provide management's view of the entity's performance, position and progress
- And
- To supplement and complement information presented in the financial statements [MC.12]

Management commentary should include information that is forward-looking and has the qualitative characteristics referred to in the *Framework*. [MC.13].

The IASB also envisages that any management commentary will include the following elements:

- The nature of the business
- Management's objectives and strategies for meeting those objectives
- The entity's most significant resources, risks and relationships
- The results of operations and prospects
- And
- The critical performance measures and indicators that management uses to evaluate the entity's performance against stated objectives [MC.24]

12.2 Possible future changes to the practice statement

At the time of writing, the Board is pursuing a project to update the practice statement; an exposure draft was published in May 2021 with comments requested by 23 November 2021.⁸ The matter was discussed at the Board meeting in June 2024, where it was decided to finalise a revised statement 'by making targeted refinements' to the proposals set out in the exposure draft. At the time of writing, the IASB website states: 'In refining its proposals, the IASB will collaborate with the International Sustainability Standards Board (ISSB). With the project already at an advanced stage and the IASB's proposals broadly supported, the IASB expects to issue the revised Practice Statement in the first half of 2025.'⁹

⁸ Practice Statement Exposure Draft ED/2021/6 - *Management Commentary*, IASB, May 2021.

⁹ IASB website September 2024.

Appendix A - Defined terms

Extract from IFRS standards - Definitions		
aggregation	The adding together of assets, liabilities, equity, income or expenses that have shared characteristics and are included in the same classification.	CF.7.20
asset	A present economic resource controlled by the entity as a result of past events.	CF.4.3
carrying amount	The amount at which an asset, a liability or equity is recognised in the statement of financial position.	CF.5.1
classification	The sorting of assets, liabilities, equity, income or expenses on the basis of shared characteristics for presentation and disclosure purposes.	CF.7.7
combined financial statements	Financial statements of a reporting entity that comprises two or more entities that are not all linked by a parent-subsidiary relationship.	CF.3.12
consolidated financial statements	Financial statements of a reporting entity that comprises both the parent and its subsidiaries.	CF.3.11
control of an economic resource	The present ability to direct the use of the economic resource and obtain the economic benefits that may flow from it.	CF.4.20
derecognition	The removal of all or part of a recognised asset or liability from an entity's statement of financial position.	CF.5.26
economic resource	A right that has the potential to produce economic benefits.	CF.4.4
enhancing qualitative characteristic	A qualitative characteristic that makes useful information more useful. The enhancing qualitative characteristics are comparability, verifiability, timeliness and understandability.	CF.2.4, CF.2.23
equity	The residual interest in the assets of the entity after deducting all its liabilities.	CF.4.63
equity claim	A claim on the residual interest in the assets of the entity after deducting all its liabilities.	CF.4.64
executory contract	A contract, or a portion of a contract, that is equally unperformed-neither party has fulfilled any of its obligations, or both parties have partially fulfilled their obligations to an equal extent.	CF.4.56
existence uncertainty	Uncertainty about whether an asset or liability exists.	CF.4.13, CF.4.35
expenses	Decreases in assets, or increases in liabilities, that result in decreases in equity, other than those relating to distributions to holders of equity claims.	CF.4.69
fundamental qualitative characteristic	A qualitative characteristic that financial information must possess to be useful to the primary users of general purpose financial reports. The fundamental qualitative characteristics are relevance and faithful representation.	CF.2.4, CF.2.5
general purpose financial report	A report that provides financial information about the reporting entity's economic resources, claims against the entity and changes in those economic resources and claims that is useful to primary users in making decisions relating to providing resources to the entity.	CF.1.2, CF.1.12
general purpose financial statements	A particular form of general purpose financial reports that provide information about the reporting entity's assets, liabilities, equity, income and expenses.	CF.3.2

income	Increases in assets, or decreases in liabilities, that result in increases in equity, other than those relating to contributions from holders of equity claims.	CF.4.68
liability	A present obligation of the entity to transfer an economic resource as a result of past events.	CF.4.26
material information	Information is material if omitting, misstating, or obscuring it could reasonably be expected to influence decisions that the primary users of general purpose financial reports make on the basis of those reports, which provide financial information about a specific reporting entity.	CF.2.11
measure	The result of applying a measurement basis to an asset or liability and related income and expenses.	CF.6.1
measurement basis	An identified feature—for example, historical cost, fair value or fulfilment value—of an item being measured.	CF.6.1
measurement uncertainty	Uncertainty that arises when monetary amounts in financial reports cannot be observed directly and must instead be estimated.	CF.2.19
offsetting	Grouping an asset and liability that are recognised and measured as separate units of account into a single net amount in the statement of financial position.	CF.7.10

Overview

This chapter deals with the requirements of IAS 1 *Presentation of Financial Statements* and IAS 8 *Accounting Policies, Changes in Accounting Estimates and Errors*.

These two standards contain the main requirements of IFRS accounting standards regarding the form, content and structure of financial statements and the accounting policies to be applied in their preparation.

IAS 1 requires the presentation of a statement of financial position, statement of profit or loss and other comprehensive income, statement of changes in equity and statement of cash flows, along with notes. It sets out the requirements of each, with the exception of the statement of cash flows which is the subject of a separate standard (see Chapter 36). IAS 1 also deals with certain general matters such as the requirement for a 'fair presentation' and the requirement to present comparatives.

IAS 8 deals with accounting policies in a general and conceptual way; other individual standards set out specific accounting requirements for the areas with which they deal. IAS 8 also addresses the difference between accounting policies and accounting estimates, as well as explaining how errors should be corrected.

What you need to know

- IAS 1 deals with:
 - The components of financial statements
 - Fair presentation
 - Fundamental accounting concepts
 - Disclosure of accounting policies
 - And
 - The structure and content of financial statements
- IAS 8 applies to selecting and applying accounting policies and accounting for changes in accounting policies, changes in accounting estimates and corrections of prior period errors.

1 Introduction

There is no single IFRS accounting standard dealing with the form, content and structure of financial statements and the accounting policies to be applied in their preparation. The subject of just what financial statements are, their purpose, contents and presentation is addressed principally by the following standards.

IAS 1 is the main standard dealing with the overall requirements for the presentation of financial statements, including their purpose, form, content and structure. IAS 8 deals with the requirements for the selection and application of accounting policies. It also deals with the accounting and disclosure requirements for changes in accounting policies, changes in estimates and corrections of errors. IAS 7 *Statement of Cash Flows* deals with the presentation of the statement of cash flows and related disclosures. IFRS 5 *Non-current Assets Held for Sale and Discontinued Operations* deals with the classification and presentation of non-current assets held for sale in the statement of financial position, and the presentation of the results of discontinued operations; it also sets out the measurement requirements for such items. This chapter deals with the requirements of IAS 1 and IAS 8. Chapter 36 discusses the requirements of IAS 7, Chapter 5 discusses the requirements of IFRS 5.

1.1 Objective and scope of IAS 1

IAS 1 deals with the components of financial statements, fair presentation, fundamental accounting concepts, disclosure of accounting policies, and the structure and content of financial statements.

IAS 1 applies to 'general purpose financial statements' (financial statements), that is those intended to meet the needs of users who are not in a position to require an entity to prepare reports tailored to meet their particular information needs, and it should be applied to all such financial statements prepared in accordance with IFRS accounting standards. [IAS 1.2, IAS 1.7]. The meaning of 'users' of financial statements is expanded upon in IAS 1 as it is related to the concept of materiality; this is discussed in section 4.1.5 below. Although International Financial Reporting Standards is a self-explanatory phrase, both IAS 1 and IAS 8 define it as:

"Standards and Interpretations issued by the International Accounting Standards Board (IASB). They comprise:

"(a) International Financial Reporting Standards;

"(b) International Accounting Standards;

"(c) IFRIC Interpretations; and

"(d) SIC Interpretations.¹" [IAS 1.7, IAS 8.5]

An important point is that implementation guidance for standards issued by the IASB does not form part of those standards, and therefore does not contain requirements for financial statements. [IAS 8.9].

Accordingly, the often voluminous implementation guidance accompanying standards is not, strictly speaking, part of 'IFRS'.

How we see it

Whilst the implementation guidance accompanying individual standards is not part of IFRS, we would generally expect entities to follow such guidance when it is relevant to their circumstances.

The standard applies equally to all entities including those that present consolidated financial statements, those that present separate financial statements and those that present individual financial statements (discussed in Chapter 9). IAS 1 does not apply to the structure and content of condensed interim financial statements prepared in accordance with IAS 34 *Interim Financial Reporting* (discussed in Chapter 37), although its general principles, as discussed in section 4.1 below, do apply to such interims. [IAS 1.4].

The objective of the standard is to prescribe the basis for the presentation of general purpose financial statements, and by doing so, to ensure comparability both with the entity's financial statements of previous periods and with the financial statements of other entities. The standard sets out overall requirements for the presentation of financial statements, guidelines for their structure and minimum requirements for their content. The recognition, measurement and disclosure of specific transactions and other events are dealt with in other standards and in interpretations. [IAS 1.1, IAS 1.3].

1 "Definition of IFRSs amended after the name changes introduced by the revised Constitution of the IFRS Foundation in 2010."

IAS 1 is primarily directed at profit-oriented entities (including public sector business entities), and this is reflected both in the terminology it uses and in its requirements. It acknowledges that entities with not-for-profit activities in the private sector, public sector or government may apply the standard and that such entities may need to amend the descriptions used for particular line items in the financial statements and for the financial statements themselves. [IAS 1.5]. Furthermore, IAS 1 is a general standard that does not address issues specific to particular industries. It does observe, though, that entities without equity (such as some mutual funds) or whose share capital is not equity (such as some co-operative entities) may need to adapt the presentation of members' or unit holders' interests. [IAS 1.6].

1.2 Objective and scope of IAS 8

IAS 8 applies to selecting and applying accounting policies, and accounting for changes in accounting policies, changes in accounting estimates and corrections of prior period errors. [IAS 8.3]. Its objective is to prescribe the criteria for selecting and changing accounting policies, together with the accounting treatment and disclosure of changes in accounting policies, changes in accounting estimates and corrections of errors. The intention is to enhance the relevance and reliability of an entity's financial statements and the comparability of those financial statements over time and with the financial statements of other entities. [IAS 8.1].

Two particular issues which one might expect to be dealt with regarding the above are discussed in other standards and cross referred to by IAS 8:

- Disclosure requirements for accounting policies, except those for changes in accounting policies, are dealt with in IAS 1. [IAS 8.2].
And
- Accounting and disclosure requirements regarding the tax effects of corrections of prior period errors and of retrospective adjustments made to apply changes in accounting policies are dealt with in IAS 12 *Income Taxes* (discussed in Chapter 29). [IAS 8.4].

2 The purpose and composition of financial statements

What financial statements are and what they are for are important basic questions for any corpus of accounting literature and answering them is one of the main purposes of IAS 1.

2.1 The purpose of financial statements

IAS 1 describes financial statements as a structured representation of the financial position and financial performance of an entity. It states that the objective of financial statements is to provide information about the financial position, financial performance and cash flows of an entity that is useful to a wide range of users in making economic decisions. A focus on assisting decision making by the users of financial statements is seeking (at least in part) a predictive quality. This is reflected by some requirements of accounting standards. For example: the disclosure of discontinued operations (discussed in Chapter 5); the use of profit from continuing operations as the 'control number' in calculating diluted earnings per share (discussed in Chapter 33); and also, the desire of some entities to present performance measures excluding what they see as unusual or infrequent items (discussed in section 3.2.6 below).

In addition to the focus on decision making, IAS 1 states that financial statements show the results of management's stewardship of the resources entrusted to it. [IAS 1.9]. This is closely connected to decision making, as an analysis of management's current stewardship would provide predictive information about how management may perform that role in the future.

To meet this objective for financial statements, IAS 1 requires that they provide information about an entity's:

- (a) Assets
- (b) Liabilities
- (c) Equity
- (d) Income and expenses, including gains and losses
- (e) Contributions by owners and distributions to owners in their capacity as owners (owners being defined as holders of instruments classified as equity) [IAS 1.7]

And

- (f) Cash flows

The standard observes that this information, along with other information in the notes, assists users of financial statements in predicting the entity's future cash flows and, in particular, their timing and certainty. [IAS 1.9].

2.2 Frequency of reporting and period covered

IAS 1 requires that a complete set of financial statements (including comparative information, see section 2.4 below) be presented 'at least annually'. Whilst this drafting is not precise, it does not seem to mean that financial statements must never be more than a year apart. This is because the standard mentions that the end of an entity's reporting period may change, and that the annual financial statements are therefore presented for a period longer or shorter than one year. When this is the case, IAS 1 requires disclosure of, in addition to the period covered by the financial statements:

- (a) The reason for using a longer or shorter period

And

- (b) The fact that amounts presented in the financial statements are not entirely comparable [IAS 1.36]

Normally financial statements are consistently prepared covering a one-year period. Some entities, particularly in the retail sector, traditionally present financial statements for a 52-week period. IAS 1 does not preclude this practice. [IAS 1.37].

2.3 The components of a complete set of financial statements

A complete set of financial statements under IAS 1 comprises the following, each of which should be presented with equal prominence: [IAS 1.10, IAS 1.10A, IAS 1.11]

- (a) A statement of financial position as at the end of the period
- (b) A statement of profit or loss and other comprehensive income for the period to be presented either as:
 - (i) One single statement of comprehensive income with a section for profit and loss followed immediately by a section for other comprehensive income
 - Or
 - (ii) A separate statement of profit or loss and statement of comprehensive income. In this case, the former must be presented immediately before the latter.
- (c) A statement of changes in equity for the period
- (d) A statement of cash flows for the period
- (e) Notes, comprising material accounting policy information and other explanatory information
- (f) Comparative information in respect of the preceding period
- And
- (g) A statement of financial position as at the beginning of the preceding period when:
 - (i) An accounting policy has been applied retrospectively
 - Or
 - (ii) A retrospective restatement has been made
 - Or
 - (iii) Items have been reclassified

The titles of the statements need not be those used in the standard (shown above).

The standard explains that notes contain information in addition to that presented in the statements above and provide narrative descriptions or disaggregation of items presented in those statements and information about items that do not qualify for recognition in those statements. [IAS 1.7].

In addition to information about the reporting period, IAS 1 also requires information about the preceding period. Comparative information is discussed in section 2.4 below.

Financial statements are usually published as part of a larger annual report, with the accompanying discussions and analyses often being more voluminous than the financial statements themselves. IAS 1 acknowledges this but makes clear that such reports and statements (including financial reviews, environmental reports and value added statements) presented outside financial statements are outside the scope of IFRS accounting standards. [IAS 1.14].

Although the standard acknowledges that this type of information is not within the scope of IFRS accounting standards, IAS 1 devotes two paragraphs to discussing what this information may comprise, observing that:

- A financial review by management may describe and explain the main features of the entity's financial performance and financial position and the principal uncertainties it faces and that it may include a review of:
 - The main factors and influences determining financial performance, including changes in the environment in which the entity operates, the entity's response to those changes and their effect, and the entity's policy for investment to maintain and enhance financial performance, including its dividend policy.
 - The entity's sources of funding and its targeted ratio of liabilities to equity (IAS 1 itself requires certain disclosures about capital. These are discussed in section 5.4 below).
- And
- The entity's resources not recognised in the statement of financial position in accordance with IFRS accounting standards. [IAS 1.13].
- Reports and statements such as environmental reports and value added statements may be presented, particularly in industries in which environmental factors are significant and when employees are regarded as an important user group. [IAS 1.14].

The IASB has published a practice statement on management commentary. The practice statement is a broad, non-binding framework for the presentation of narrative reporting to accompany financial statements prepared in accordance with IFRS accounting standards.

Although management commentaries add helpful and relevant information beyond what is included in the financial statements, IFRS accounting standards require the financial statements to provide a fair presentation of the financial position, financial performance and cash flows of a reporting entity on a stand-alone basis.

The Board continues to consider wider aspects of corporate reporting and has added to its agenda a project to revise and update the practice statement (see section 6.1.1 below).

2.4 Comparative information

2.4.1 General requirements

IAS 1 requires, except when IFRS accounting standards permit or require otherwise, comparative information to be disclosed in respect of the previous period for all amounts reported in the current period's financial statements. [IAS 1.38]. If any information is voluntarily presented, there will by definition be no standard or interpretation providing a dispensation from comparatives. Accordingly, comparative information is necessary for any voluntarily presented current period disclosure.

The above requirement for two sets of statements and notes represents the minimum which is required in all circumstances. [IAS 1.38A].

An entity may present comparative information in addition to the minimum comparative financial statements required by IFRS, as long as that information is prepared in accordance with IFRS accounting standards. This comparative information may consist of one or more primary statements, but need not comprise a complete set of financial statements. When this is the case, IAS 1 requires an entity to present related note information for those additional statements. [IAS 1.38C].

For example, an entity may present a third statement of profit or loss and other comprehensive income (thereby presenting the current period, the preceding period and one additional comparative period). In such circumstances, IAS 1 does not require a third statement of financial position, a third statement of cash flows or a third statement of changes in equity (that is, an additional comparative financial statement). The entity is required to present, in the notes to the financial statements, the comparative information related to that additional statement of profit or loss and other comprehensive income. [IAS 1.38D].

However, further comparative information is required by IAS 1 in certain circumstances. Whenever an entity:

- (a) Applies an accounting policy retrospectively
Or
- (b) Makes a retrospective restatement
Or
- (c) Reclassifies items in its financial statements (see section 2.4.2 below)

An additional statement of financial position is required as at the beginning of the preceding period if the change has a material effect on that additional statement. [IAS 1.40A]. The standard describes this as an 'additional' statement because the minimum requirement is for one comparative statement of financial position. Should an entity already have a policy of presenting two comparative statements this requirement would not necessarily require a fourth statement. Only if the second comparative statement is not essentially the same as one drawn-up 'as at the beginning of the preceding period', would a financial position as at the beginning of the preceding period be required. As such restatements are considered, by the IASB, narrow, specific and limited, no notes are required for this additional statement of financial position. [IAS 1.40C, IAS 1.BC32C].

Comparative information is also required for narrative and descriptive information when it is relevant to an understanding of the current period's financial statements. [IAS 1.38]. The standard gives an example of the current year relevance of the previous year's narratives; a legal dispute, the outcome of which was uncertain at the previous period and is yet to be resolved (the disclosure of contingent liabilities is discussed in Chapter 27). It observes that users benefit from information that the uncertainty existed at the end of the previous period, and about the steps that have been taken during the period to resolve the uncertainty. [IAS 1.38B].

Another example would be any narrative describing a separately disclosed material item (see section 3.2.6 below). IAS 1 requires the disclosure of the nature and amount of such items. [IAS 1.97]. Often a simple caption or line item label will be sufficient to convey the 'nature' of material items. Sometimes, though, a more extensive description in the notes may be needed to do this. In that case, the same information is likely to be relevant the following year.

2.4.2 Reclassification

It is important to note that 'reclassifies', as that word is used by IAS 1 in the context of comparative information, is not referring to a 'reclassification adjustment'. 'Reclassification adjustment' is a term defined by IAS 1 which describes the recognition of items in profit or loss which were previously recognised in other comprehensive income (often referred to as 'recycling'). IAS 1 applies this definition when setting out the required presentation and disclosure of such items (see section 3.2.4.B below).

As noted in section 1.1 above, one of the objectives of IAS 1 is to ensure the comparability of financial statements with previous periods. The standard notes that enhancing the inter-period comparability of information assists users in making economic decisions, especially by allowing the assessment of trends in financial information for predictive purposes. [IAS 1.43]. Requiring the presentation of comparatives allows such a comparison to be made within one set of financial statements. For a comparison to be meaningful, the amounts for prior periods need to be reclassified whenever the presentation or classification of items in the financial statements is amended. When this is the case, disclosure is required of the nature, amount and reasons for the reclassification (including as at the beginning of the preceding period). [IAS 1.41].

The standard acknowledges, though, that in some circumstances it is impracticable to reclassify comparative information for a particular prior period to achieve comparability with the current period. For these purposes, reclassification is impracticable when it cannot be done after making every reasonable effort to do so. [IAS 1.7]. An example given by the standard is that data may not have been collected in the prior period(s) in a way that allows reclassification, and it may not be practicable to recreate the information. [IAS 1.43]. When it proves impracticable to reclassify comparative data, IAS 1 requires disclosure of the reason for this and also the nature of the adjustments that would have been made if the amounts had been reclassified. [IAS 1.42].

As well as reclassification to reflect current period classifications as required by IAS 1, a change to comparatives as they were originally reported could be necessary:

- (a) Following a change in accounting policy (discussed in section 4.4 below)
 - (b) To correct an error discovered in previous financial statements (discussed in section 4.6 below)
- Or
- (c) In relation to discontinued operations (discussed in Chapter 5)

2.5 Identification of the financial statements and accompanying information

2.5.1 Identification of financial statements

It is commonly the case that financial statements will form only part of a larger annual report, regulatory filing or other document. As IFRS accounting standards only apply to financial statements, it is important that the financial statements are clearly identified so that users of the report can distinguish information that is prepared using IFRS accounting standards from other information that may be useful but is not the subject of those requirements. [IAS 1.49, IAS 1.50].

This requirement will be particularly important in those instances in which standards allow for disclosure of information required by IFRS accounting standards outside the financial statements.

As well as requiring that the financial statements be clearly distinguished, IAS 1 also requires that each financial statement and the notes be identified clearly. Furthermore, the following is required to be displayed prominently, and repeated when that is necessary for the information presented to be understandable:

- (a) The name of the reporting entity or other means of identification, and any change in that information from the end of the preceding period
 - (b) Whether the financial statements are of an individual entity or a group of entities
 - (c) The date of the end of the reporting period or the period covered by the set of financial statements or the notes (presumably whichever is appropriate to that component of the financial statements)
 - (d) The presentation currency, as defined in IAS 21 *The Effects of Changes in Foreign Exchange Rates* (discussed in Chapter 16)
- And

- (e) The level of rounding used in presenting amounts in the financial statements [IAS 1.51]

These requirements are met by the use of appropriate headings for pages, statements, notes, and columns etc. The standard notes that judgement is required in determining the best way of presenting such information. For example, when the financial statements are presented electronically, separate pages are not always used and therefore headings for pages cannot be relied on for presentation of the above; instead those items may need to be presented in a different manner to ensure that the information included in the financial statements can be understood. [IAS 1.52]. IAS 1 considers that financial statements are often made more understandable by presenting information in thousands or millions of units of the presentation currency. It considers this acceptable as long as the level of rounding in presentation is disclosed and material information is not omitted. [IAS 1.53].

2.5.2 Statement of compliance with IFRS

As well as identifying which particular part of any larger document constitutes the financial statements, IAS 1 also requires that financial statements complying with IFRS accounting standards make an explicit and unreserved statement of such compliance in the notes. [IAS 1.16]. As this statement itself is required for full compliance, its absence would render the whole financial statements non-compliant, even if there was otherwise full compliance. The standard goes on to say that “an entity shall not describe financial statements as complying with IFRSs unless they comply with all the requirements of IFRSs.” [IAS 1.16].

How we see it

The note containing the statement of compliance is also usually where entities provide any other compliance statement required by local regulation. For example, entities required to comply with IFRS accounting standards as adopted for use in the EU would typically state compliance with that requirement alongside the statement of compliance with IFRS accounting standards themselves (assuming, of course, that the financial statements were in full compliance with both).

3 The structure of financial statements

As noted in section 2.3 above, a complete set of financial statements under IAS 1 comprises the following, each of which should be presented with equal prominence: [IAS 1.10, IAS 1.10A, IAS 1.11]

- (a) A statement of financial position as at the end of the period
- (b) A statement of profit or loss and other comprehensive income for the period to be presented either as:
 - (i) One single statement of comprehensive income with a section for profit and loss followed immediately by a section for other comprehensive income
 - Or
 - (ii) A separate statement of profit or loss and statement of comprehensive income. In this case, the former must be presented immediately before the latter.
- (c) A statement of changes in equity for the period
- (d) A statement of cash flows for the period
- (e) Notes, comprising material accounting policy information and other explanatory information
- (f) Comparative information in respect of the preceding period
- And
- (g) A statement of financial position as at the beginning of the preceding period in certain circumstances (see section 2.4 above) [IAS 1.10, IAS 1.10A]

The standard adopts a generally permissive stance, by setting out minimum levels of required items to be shown in each statement (sometimes specifically on the face of the statement, and sometimes either on the face or in the notes) whilst allowing great flexibility of order and layout. The standard notes that sometimes it uses the term 'disclosure' in a broad sense, encompassing items 'presented in the financial statements'. It observes that other IFRS accounting standards also require disclosures and that, unless specified to the contrary, they may be made 'in the financial statements'. [IAS 1.48]. This begs the question: if not 'in the financial statements' then where else could they be made? We suspect this stems from, or is reflective of, an ambiguous use of similar words and phrases. In the introductory paragraphs to structure and content, 'financial statements' appears to be restricted to the 'primary' statements (statement of financial position, statement of profit or loss and other comprehensive income, statement of changes in equity and statement of cash flows). This is because a complete set of financial statements also includes notes.

How we see it

For the purposes of specifying where a particular required disclosure must be made, we consider the term 'in the financial statements' is intended to mean anywhere within the 'complete set of financial statements' - in other words the primary statements or notes.

IAS 1 observes that cash flow information provides users of financial statements with a basis to assess the ability of the entity to generate cash and cash equivalents and the needs of the entity to utilise those cash flows. Requirements for the presentation of the statement of cash flows and related disclosures are set out in IAS 7. [IAS 1.111]. Statements of cash flows are discussed in Chapter 36; each of the other primary statements listed above is discussed in the following sections.

3.1 The statement of financial position

3.1.1 The distinction between current/non-current assets and liabilities

In most situations, IAS 1 requires statements of financial position to distinguish current assets and liabilities from non-current ones. [IAS 1.60]. There is an exception relating to presentation based on liquidity, discussed below, and the treatment of non-current assets held for sale is discussed in Chapter 5. The standard uses the term 'non-current' to include tangible, intangible and financial assets of a long-term nature. It does not prohibit the use of alternative descriptions as long as the meaning is clear. [IAS 1.67].

The standard explains the requirement to present current and non-current items separately by observing that when an entity supplies goods or services within a clearly identifiable operating cycle, separate classification of current and non-current assets and liabilities on the face of the statement of financial position will provide useful information by distinguishing the net assets that are continuously circulating as working capital from those used in long-term operations. Furthermore, the analysis will also highlight assets that are expected to be realised within the current operating cycle, and liabilities that are due for settlement within the same period. [IAS 1.62]. The distinction between current and non-current items

therefore depends on the length of the entity's operating cycle. The standard states that the operating cycle of an entity is the time between the acquisition of assets for processing and their realisation in cash or cash equivalents. However, when the entity's normal operating cycle is not clearly identifiable, it is assumed to be twelve months. [IAS 1.68, IAS 1.70]. The standard does not provide any guidance on how to determine if an entity's operating cycle is 'clearly identifiable'. In some businesses, the time involved in producing goods or providing services varies significantly from one customer project to another. In such cases, it may be difficult to determine what the normal operating cycle is. In the end, management must consider all facts and circumstances and judgement to determine whether it is appropriate to consider that the operating cycle is clearly identifiable, or whether the twelve months default is to be used.

Once assets have been classified as non-current they should not normally be reclassified as current assets until they meet the criteria to be classified as held for sale in accordance with IFRS 5 (see Chapter 5). However, an entity which routinely sells items of property plant and equipment previously held for rental should transfer such items to inventory when they cease to be rented and become held for sale. [IAS 16.68A]. Assets of a class that an entity would normally regard as non-current that are acquired exclusively with a view to resale also should not be classified as current unless they meet the criteria in IFRS 5. [IFRS 5.3].

The basic requirement of the standard is that current and non-current assets, and current and non-current liabilities, should be presented as separate classifications on the face of the statement of financial position. [IAS 1.60]. The standard defines current assets and current liabilities (discussed in sections 3.1.3 and 3.1.4 below), with the non-current category being the residual. [IAS 1.66, IAS 1.69]. Illustration 3-2 in section 3.1.7 below provides an example of a statement of financial position presenting this classification.

An exception to this requirement is when a presentation based on liquidity provides information that is reliable and is more relevant. When that exception applies, all assets and liabilities are required to be presented broadly in order of liquidity. [IAS 1.60]. The reason given by the standard for this exception is that some entities (such as financial institutions) do not supply goods or services within a clearly identifiable operating cycle, and for these entities a presentation of assets and liabilities in increasing or decreasing order of liquidity provides information that is reliable and more relevant than a current/non-current presentation. [IAS 1.63].

The standard also makes clear that an entity is permitted to present some of its assets and liabilities using a current/non-current classification and others in order of liquidity when this provides information that is reliable and more relevant. It goes on to observe that the need for a mixed basis of presentation might arise when an entity has diverse operations. [IAS 1.64].

Whichever method of presentation is adopted, IAS 1 requires disclosure of the amount expected to be recovered or settled after more than twelve months for each asset and liability line item that combines amounts expected to be recovered or settled:

(a) No more than twelve months after the reporting period

And

(b) More than twelve months after the reporting period [IAS 1.61]

The standard explains this requirement by noting that information about expected dates of realisation of assets and liabilities is useful in assessing the liquidity and solvency of an entity. In this vein, IAS 1 asserts that IFRS 7 *Financial Instruments: Disclosures* requires disclosure of the maturity dates of financial assets (including trade and other receivables) and financial liabilities (including trade and other payables). This assertion in IAS 1 is not strictly correct, as IFRS 7 only requires a maturity analysis for financial liabilities (see Chapter 50). Similarly, IAS 1 views information on the expected date of recovery and settlement of non-monetary assets and liabilities such as inventories and provisions as also useful, whether assets and liabilities are classified as current or as non-current. An example of this given by the standard is that an entity should disclose the amount of inventories that are expected to be recovered more than twelve months after the reporting period. [IAS 1.65].

3.1.2 Non-current assets and disposal groups held for sale or distribution

The general requirement to classify items as current or non-current (or present them broadly in order of liquidity) is overlaid with further requirements by IFRS 5 regarding non-current assets and disposal groups held for sale or distribution (discussed in Chapter 5). The aim of IFRS 5 is that entities should present and disclose information that enables users of the financial statements to evaluate the financial effects of disposals of non-current assets (or disposal groups). [IFRS 5.30].

3.1.3 Current assets

IAS 1 requires an asset to be classified as current when it satisfies any of the following criteria, with all other assets classified as non-current. The criteria are: [IAS 1.66]

Extract from IAS 1

- 66** An entity shall classify an asset as current when:
- (a) it expects to realise the asset, or intends to sell or consume it, in its normal operating cycle;
 - (b) it holds the asset primarily for the purpose of trading;
 - (c) it expects to realise the asset within twelve months after the reporting period; or
 - (d) the asset is cash or a cash equivalent (as defined in IAS 7) unless the asset is restricted from being exchanged or used to settle a liability for at least twelve months after the reporting period.
- An entity shall classify all other assets as non-current.

As an exception to this, deferred tax assets are never allowed to be classified as current. [IAS 1.56].

Current assets include assets (such as inventories and trade receivables) that are sold, consumed or realised as part of the normal operating cycle even when they are not expected to be realised within twelve months after the reporting period. Current assets also include assets held primarily for the purpose of being traded, for example, some financial assets that meet the definition of held for trading in IFRS 9 *Financial Instruments* and the current portion of non-current financial assets. [IAS 1.68].

3.1.4 Current liabilities

In January 2020 the IASB issued *Classification of Liabilities as Current or Non-current - Amendments to IAS 1*, amending aspects of the existing classification principle for classifying liabilities as current or non-current. Specifically, the Board made amendments to reconcile apparent contradictions between the former wording which referred to an 'unconditional right' in paragraph 69 and 'expects' and 'discretion' in paragraph 74. [IAS 1.BC48A]. Concerns were raised about the impact of the amendments in certain scenarios and subsequently, further amendments were proposed, resulting in additional amendments issued in October 2022. [IAS 1.BC48EA]. The amendments took effect for periods beginning on or after 1 January 2024. [IAS 1.139U].

IAS 1 requires a liability to be classified as current when it satisfies any of the following criteria, with all other liabilities classified as non-current. The criteria for classifying a liability as current are:

- (a) It is expected to be settled in the entity's normal operating cycle (discussed in section 3.1.1 above)
 - (b) It is held primarily for the purpose of trading
 - (c) It is due to be settled within twelve months after the end of the reporting period
- Or
- (d) The entity does not have the right at the end of the reporting period to defer settlement of the liability for at least twelve months after the reporting period. [IAS 1.69].

Notwithstanding the foregoing, deferred tax liabilities are never allowed to be classified as current. [IAS 1.56].

The standard clarifies that a right to defer settlement of a liability for at least twelve months must have substance and must exist at the end of the reporting period. [IAS 1.72A]. Often, an entity's right to defer settlement of a loan liability for at least twelve months after the reporting period is subject to the entity complying with certain conditions in the loan arrangements. Those conditions are described as covenants. For the purposes of applying the classification criteria in paragraph 69(d), such covenants affect whether the right exists at the end of the reporting period, if the entity is required to comply with the covenant *on or before* the end of the reporting period. This is the case, even if compliance with the covenant is assessed after the reporting period. If, however, a covenant is only required to be complied with *after* the reporting period end, such a covenant is ignored for classification purposes. [IAS 1.72B].

The question arises as to whether the guidance in paragraph 72B can be extended to liabilities other than liabilities arising from loan arrangements; the standard provides no definition of loan arrangements.

How we see it

Despite the lack of a definition of loan arrangements in the standard, we believe that loan arrangements are generally considered to have particular characteristics: they constitute a contract between a borrower and a lender and that contract identifies the parties and outlines the key terms - for example, the amount borrowed, the term, the interest rate and the repayment dates.

The guidance in paragraph 72B is only framed in terms of loan arrangements and therefore other liabilities not constituting loan arrangements would need to be assessed, according to their individual facts and circumstances, to see if there is a basis for concluding that there is a right to defer settlement for at least twelve months after the reporting period end. [IAS 1.69(d)].

The standard further explains that liabilities would be non-current if an entity has the right, at the end of the reporting period, to roll over an obligation for at least twelve months after the period end under an existing loan facility, even if it would otherwise be due within a shorter period, i.e., if it were due to be settled within 12 months after the end of the reporting period. However, if no such right exists at the end of the reporting period, the entity does not consider the potential to refinance the obligation and consequently classifies the obligation as current. [IAS 1.73].

How we see it

A rollover right may exist in conjunction with a future covenant, such that the latter is to be tested before the right to roll over may be exercised. In such a case, we believe the covenant must be assessed under paragraph 72B, separately from the rollover right assessed under paragraph 73. Thus, the loan is classified as non-current, unless there are other circumstances unrelated to the covenant that impact the classification assessment.

A liability will also be classified as current when an entity breaches a covenant of a long-term loan arrangement on or before the period end, with the effect that the liability becomes payable on demand. This is the case even if the lender agreed, after the period end and before the authorisation of the financial statements for issue, not to demand payment as a consequence of the breach (although the post period end agreement would be disclosed). The meaning of the term 'authorised for issue' is discussed in Chapter 34. The standard explains that the liability should be classified as current because, at the period end, the entity does not have the right to defer its settlement for at least twelve months after that date. [IAS 1.74, IAS 1.76]. However, the liability would be classified as non-current if the lender agreed by the period end to provide a period of grace ending at least twelve months after the reporting period, within which the entity can rectify the breach and during which the lender cannot demand immediate repayment. [IAS 1.75].

It is important to note that management intention does not play a role in the classification of liabilities. Thus a liability meeting the criteria in paragraph 69 for classification as non-current will still be classified as non-current even if management intends or expects the entity to settle the liability within twelve months after the reporting period, or even if the liability is settled between the end of the reporting period and the date the financial statements are authorised for issue. Despite ignoring management intention with regards to classification, it is not ignored for disclosure purposes. It may still be necessary to disclose information relating to the timing of the settlement in order for users of the financial statements to understand the impact of the liability on the entity's financial position. [IAS 1.75A]. The requirement to ignore management intent in respect of classification may represent a change in practice for some entities, as previous practice may have taken into account management's expectations and the discretion afforded to management. For the avoidance of doubt, the standard clarifies situations in which certain events affecting liabilities classified as current are disclosed as non-adjusting post balance sheet events:

- Refinancing on a long-term basis
 - Rectification of a breach of a long-term loan arrangement
 - Granting by the lender of a period of grace to rectify a breach of a long-term loan arrangement
- And one situation in which a liability classified as non-current is disclosed as a non-adjusting post balance sheet event:
- Settlement of a liability classified as non-current [IAS 1.76]

As discussed above, if an entity has loan arrangements with covenants and those covenants are only required to be complied with after the reporting period end, the resulting classification of the liabilities will be non-current. Whether or not the company can influence or control the circumstances surrounding compliance with the future covenants is not relevant for the assessment. For such liabilities, an entity is required to disclose in the notes information which enables users to understand the risk that the liabilities may become repayable within twelve months after the reporting period. Specifically, the entity must disclose information about the covenants, including:

- The nature of the covenants
- When the entity is required to comply with the covenants
- The carrying amount of the liabilities related to the covenants
- Facts and circumstances, if any, which indicate that the entity may have difficulty complying with the covenants. [IAS 1.76ZA]

With regard to the last bullet above, factors an entity may wish to consider are:

- Whether it has acted to avoid or mitigate a potential breach, either during or after the reporting period
- Whether it would have complied with a covenant, had that covenant been tested based on circumstances at the end of the reporting period. [IAS 1.76ZA]

The above disclosure requirements only apply to entities that present current and non-current liabilities as separate classifications in their statements of financial position. Nonetheless, entities presenting liabilities in order of liquidity may still disclose similar information about liabilities with covenants, when applying the requirements in IFRS 7 regarding exposure to liquidity risk. [IAS 1.BC48ED].

Respondents to the draft amendments raised concerns about the volume of detailed information which entities might need to disclose, which may obscure material information about covenants. The Board made four observations in response to these concerns:

- An entity would assess what information about the covenants is material and therefore would not disclose immaterial information
- An entity requiring guidance on materiality judgements could refer to the guidance on assessing materiality of information about covenants contained in IFRS Practice Statement 2 Making Materiality Judgements
- An entity would consider both the consequences and the likelihood of a breach when assessing if information is material
- If there is only a remote likelihood of a breach occurring, such information is immaterial, irrespective of the consequences of the breach. [IAS 1.BC48EE]

The standard also sets out the meaning of the 'settlement' of a liability. In the context of IAS 1, settlement refers to a transfer to the counterparty that results in the extinguishment of the liability. The transfer could be of cash, other economic resources or, in certain circumstances, the entity's own equity instruments. [IAS 1.76A]. The amendments clarify the meaning of the term for two reasons. Firstly, the Board concluded that rolling over an existing liability does not constitute settlement, as there is no transfer of economic resources. Secondly, it noted that certain liabilities are settled by economic resources other than cash, of which an example would be a performance obligation under IFRS 15 *Revenue from Contracts with Customers*. The Board considered that it would be helpful to clarify the meaning of settlement, incorporating these two aspects. [IAS 1.BC48F].

Settlement by way of own equity instruments is an example of non-cash settlement that impacts the classification of a liability. A single situation is outlined in which the terms of a liability, relating to an option held by the counterparty to trigger settlement by way of own equity instruments, do not affect its classification: if the liability could be settled, at the option of the counterparty, by transfer of the entity's own equity instruments and if that option is separately classified as an equity instrument, in that case only, the option is ignored for classification purposes. [IAS 1.76B].

Were it not for this exception, any instrument with an option held by the counterparty to settle in own equity instruments would automatically have to be classified as current, as there would be no right to defer settlement for at least 12 months after the reporting period end. This exception existed in the standard prior to the amendments but in practice some applied it to all convertible instruments containing a conversion option, regardless of whether that option was classified as equity or as a liability. The standard now clarifies that the exception is limited to instruments where the option is classified as an equity instrument. Under the amended requirements, the transfer of equity instruments constitutes a settlement event for any obligation to transfer equity instruments classified as a liability.

The requirement may change practice for certain entities because, as noted above, it had been perceived by some to be applicable to all convertible instruments.

3.1.4.A Practical Illustrations of the requirements

Some common scenarios involving debt covenants are discussed in the following Illustration.

Illustration 3-1: Determining whether liabilities should be presented as current or non-current

Scenario 1

An entity has a long-term loan arrangement containing a debt covenant. The specific requirements in the debt covenant must be met as at 31 December every year. The loan is due in more than 12 months. The entity breaches the debt covenant at or before the period end. As a result, the loan becomes payable on demand.

Scenario 2

Same as scenario 1, but the lender agreed not to demand repayment as a consequence of the breach. This agreement from the lender is obtained:

- (a) At or before the period end and is for a period of more than 12 months after the period end
- (b) At or before the period end and is for a period of less than 12 months after the period end
- (c) After the period end but before the financial statements are authorised for issue.

Scenario 3

An entity has a long-term loan arrangement containing a debt covenant. The specific requirements in the debt covenant must be met quarterly. The loan is due in more than 12 months. At the period end, the debt covenants are met. However, circumstances change unexpectedly and the entity breaches the debt covenant after the period end but before the financial statements are authorised for issue.

As discussed in Chapter 50, IFRS 7 requires the following disclosures for any loans payable recognised at the reporting date:

- Details of any defaults during the period of principal, interest, sinking fund, or redemption terms
- The carrying amount of the loans payable in default at the reporting date
- And
- Whether the default was remedied, or the terms of the loans payable were renegotiated, before the financial statements were authorised for issue

If, during the period, there were breaches of loan agreement terms other than those described above, the same information should be disclosed if those breaches permitted the lender to demand accelerated repayment (unless the breaches were remedied, or the terms of the loan were renegotiated, on or before the reporting date). [IFRS 7.18, IFRS 7.19]. As noted in section 5.5 and 5.6 below, IAS 1 requires certain disclosures of refinancing and rectification of loan agreement breaches which happen after the end of the reporting period and before the accounts are authorised for issue. Other disclosures, such as those relating to non-adjusting events after the reporting period, may be relevant in particular scenarios.

The table below sets out whether debt is to be presented as current or non-current and whether the disclosures in IAS 1.76 are required. Note that additional disclosures [IAS 1.76ZA] are only required for liabilities arising from loan arrangements classified as non-current, when the entity's right to defer settlement of those liabilities is subject to it complying with covenants within twelve months after the reporting period.

	Scenario 1	Scenario 2(a)	Scenario 2(b)	Scenario 2(c)	Scenario 3
At the period end, does the entity have a right to defer the settlement of the liability for at least 12 months?	no	yes	no	no	yes
Classification of the liability	current	non-current	current	current	non-current
Are the above IFRS 7 disclosures required?	yes	no	yes	yes	no
Are the disclosures in IAS 1.76 required?	no	no	no	yes	no
Are the disclosures in IAS 1.76ZA required?	no ²	yes	no ²	no ²	yes

² The disclosures in paragraph 76ZA are not required, as the loan is classified as current; these disclosures are only required if the loan is classified as non-current.

3.1.5 Information required on the face of the statement of financial position

IAS 1 does not contain a prescriptive format or order for the statement of financial position. [IAS 1.57]. Rather, it contains two mechanisms which require certain information to be shown on the face of the statement. First, it contains a list of specific items for which this is required, on the basis that they are sufficiently different in nature or function to warrant separate presentation. [IAS 1.54, IAS 1.57]. Second, it stipulates that additional line items (including the disaggregation of those items specifically required), headings and subtotals should be presented on the face of the statement of financial position when such presentation is relevant to an understanding of the entity's financial position. [IAS 1.55]. The judgement as to whether additional items should be presented separately is based on an assessment of:

- (a) The nature and liquidity of assets
- (b) The function of assets within the entity
- And
- (c) The amounts, nature and timing of liabilities [IAS 1.58]

How we see it

Determining whether additional items need to be presented in reference to nature, liquidity and function of assets and amounts, nature and timing of liabilities is a highly judgemental decision for entities to make when preparing a statement of financial position and allows a wide variety of possible presentations.

IAS 1 indicates that the use of different measurement bases for different classes of assets suggests that their nature or function differs and, therefore, that they should be presented as separate line items. For example, different classes of property, plant and equipment can be carried at cost or revalued amounts in accordance with IAS 16 *Property, Plant and Equipment*. [IAS 1.59].

The face of the statement of financial position should include line items that present the following amounts: [IAS 1.54]

- (a) Property, plant and equipment
- (b) Investment property
- (c) Intangible assets
- (d) Financial assets (excluding amounts shown under (f), (i) and (j))
- (e) Groups of contracts within the scope of IFRS 17 *Insurance Contracts* that are assets arising from each of:
 - (i) Insurance contracts
 - And
 - (ii) Reinsurance contracts
- (f) Investments accounted for using the equity method
- (g) Biological assets
- (h) Inventories
- (i) Trade and other receivables
- (j) Cash and cash equivalents
- (k) The total of assets classified as held for sale and assets included in disposal groups classified as held for sale in accordance with IFRS 5
- (l) Trade and other payables
- (m) Provisions
- (n) Groups of contracts within the scope of IFRS 17 that are liabilities arising from each of:
 - (i) Insurance contracts
 - And
 - (ii) Reinsurance contracts
- (o) Financial liabilities (excluding amounts shown under (l) and (m))
- (p) Liabilities and assets for current tax, as defined in IAS 12
- (q) Deferred tax liabilities and deferred tax assets, as defined in IAS 12
- (r) Liabilities included in disposal groups classified as held for sale in accordance with IFRS 5
- (s) Non-controlling interests, presented within equity

And

- (t) Issued capital and reserves attributable to owners of the parent

The standard notes that items above represent a list of items that are sufficiently different in nature or function to warrant separate presentation on the face of the statement of financial position. In addition:

- (a) Line items should be included when the size, nature or function of an item or aggregation of similar items is such that separate presentation is relevant to an understanding of the entity's financial position.

And

- (b) The descriptions used and the ordering of items or aggregation of similar items may be amended according to the nature of the entity and its transactions, to provide information that is relevant to an understanding of the entity's financial position. For example, a financial institution may amend the above descriptions to provide information that is relevant to the operations of a financial institution.

[IAS 1.57].

As noted above, when relevant to an understanding of financial position, additional line items and subtotals should be presented. Regarding subtotals, IAS 1 requires that they should:

- (a) Be comprised of line items made up of amounts recognised and measured in accordance with IFRS
- (b) Be presented and labelled in a manner that makes the line items that constitute the subtotal clear and understandable
- (c) Be consistent from period to period (see section 4.1.4 below)

And

- (d) Not be displayed with more prominence than the subtotals and totals required in IFRS accounting standards for the statement of financial position [IAS 1.55A, IAS 1.BC38G]

The distinction between trade and financial liabilities in certain supply chain financing arrangements is discussed in Chapter 48.

3.1.6 Information required either on the face of the statement of financial position or in the notes

IAS 1 requires further sub-classifications of the line items shown on the face of the statement of financial position to be presented either on the face of the statement or in the notes. The requirements for these further sub-classifications are approached by the standard in a similar manner to those for line items on the face of the statement of financial position. There is a list of examples of items required (see below) and also a more general requirement that the sub-classifications should be made in a manner appropriate to the entity's operations. [IAS 1.77]. The standard notes that the detail provided in sub-classifications depends on the requirements of IFRS accounting standards (as numerous disclosures are required by other standards) and on the size, nature and function of the amounts involved. [IAS 1.78].

Aside of the specific requirements, deciding what level of detailed disclosure is necessary is clearly a judgemental exercise. As is the case for items on the face of the statement of financial position, IAS 1 requires that the judgement as to whether additional items should be presented separately should be based on an assessment of:

- (a) The nature and liquidity of assets
- (b) The function of assets within the entity

And

- (c) The amounts, nature and timing of liabilities [IAS 1.58, IAS 1.78]

The disclosures will also vary for each item, examples given by the standard are: [IAS 1.78]

Extract from IAS 1

- 78 The detail provided in subclassifications depends on the requirements of IFRSs and on the size, nature and function of the amounts involved. An entity also uses the factors set out in paragraph 58 to decide the basis of subclassification. The disclosures vary for each item, for example:
- (a) items of property, plant and equipment are disaggregated into classes in accordance with IAS 16;
 - (b) receivables are disaggregated into amounts receivable from trade customers, receivables from related parties, prepayments and other amounts;
 - (c) inventories are disaggregated, in accordance with IAS 2 *Inventories*, into classifications such as merchandise, production supplies, materials, work in progress and finished goods;
 - (d) provisions are disaggregated into provisions for employee benefits and other items; and
 - (e) equity capital and reserves are disaggregated into various classes, such as paid-in capital, share premium and reserves.

IAS 1 specifically requires the following information regarding equity and share capital to be shown either on the face of the statement of financial position or in the notes:

- (a) For each class of share capital:
 - (i) The number of shares authorised
 - (ii) The number of shares issued and fully paid, and issued but not fully paid
 - (iii) Par value per share, or that the shares have no par value
 - (iv) A reconciliation of the number of shares outstanding at the beginning and at the end of the period
 - (v) The rights, preferences and restrictions attaching to that class including restrictions on the distribution of dividends and the repayment of capital
 - (vi) Shares in the entity held by the entity or by its subsidiaries or associates

And

 - (vii) Shares reserved for issue under options and contracts for the sale of shares, including the terms and amounts
- And
- (b) A description of the nature and purpose of each reserve within equity [IAS 1.79]

An entity without share capital (such as a partnership or trust) should disclose information equivalent to that required by (a) above, showing changes during the period in each category of equity interest, and the rights, preferences and restrictions attaching to each category of equity interest. [IAS 1.80].

IAS 32 *Financial Instruments: Presentation* allows two specific classes of liabilities to be reported as equity. These are:

- Puttable financial instruments
- And
- Instruments that impose on the entity an obligation to deliver to another party a *pro rata* share of the net assets of the entity only on liquidation

Both terms are defined and discussed at length in IAS 32 (see Chapter 43).

If an entity reclassifies one of these items between financial liabilities and equity, IAS 1 requires disclosure of:

- The amount reclassified into and out of each category (financial liabilities or equity)
- And
- The timing and reason for that reclassification [IAS 1.80A]

3.1.7 Illustrative statements of financial position

The implementation guidance accompanying IAS 1 provides an illustration of a statement of financial position presented to distinguish current and non-current items. It makes clear that other formats may be equally appropriate, as long as the distinction is clear. [IAS 1.IG3]. As discussed in Chapter 5, IFRS 5 provides further guidance relating to the presentation of non-current assets and disposal groups held for sale.

[IAS 1.IG Part I].

3.2 The statement of comprehensive income and the statement of profit or loss

3.2.1 Profit and loss and comprehensive income

The IASB regards all changes in net assets (other than the introduction and return of capital) and not just more traditional realised profits, as 'performance' in its widest sense. Accordingly, IAS 1 requires a performance statement showing such changes and calls it a statement of comprehensive income.

Total comprehensive income is defined by IAS 1 as the change in equity during a period resulting from transactions and other events, other than those changes resulting from transactions with owners in their capacity as owners. It comprises all components of 'profit or loss' and of 'other comprehensive income'. These two terms are defined as follows:

- Profit or loss is the total of income less expenses, excluding the components of other comprehensive income.
And
- Other comprehensive income comprises items of income and expense (including reclassification adjustments) that are not recognised in profit or loss as required or permitted by other IFRS accounting standards. [IAS 1.7].

What this means is that profit and loss is the default category - all comprehensive income is part of profit and loss unless a provision of IFRS accounting standards requires or permits it to be 'other' comprehensive income. [IAS 1.88].

The use of a variety of terminology is recognised by IAS 1 which notes the following: "Although this Standard uses the terms 'other comprehensive income', 'profit or loss' and 'total comprehensive income', an entity may use other terms to describe the totals as long as the meaning is clear. For example, an entity may use the term 'net income' to describe profit or loss." [IAS 1.8].

IAS 1 sets out the following items which are included in other comprehensive income: [IAS 1.7]

Extract from IAS 1

7

...

The components of other comprehensive income include:

- (a) changes in revaluation surplus (see IAS 16 *Property, Plant and Equipment* and IAS 38 *Intangible Assets*);
- (b) remeasurements of defined benefit plans (see IAS 19 *Employee Benefits*);
- (c) gains and losses arising from translating the financial statements of a foreign operation (see IAS 21 *The Effects of Changes in Foreign Exchange Rates*);
- (d) gains and losses from investments in equity instruments designated at fair value through other comprehensive income in accordance with paragraph 5.7.5 of IFRS 9 *Financial Instruments*;
- (da) gains and losses on financial assets measured at fair value through other comprehensive income in accordance with paragraph 4.1.2A of IFRS 9.
- (e) the effective portion of gains and losses on hedging instruments in a cash flow hedge and the gains and losses on hedging instruments that hedge investments in equity instruments measured at fair value through other comprehensive income in accordance with paragraph 5.7.5 of IFRS 9 (see Chapter 6 of IFRS 9);
- (f) for particular liabilities designated as at fair value through profit or loss, the amount of the change in fair value that is attributable to changes in the liability's credit risk (see paragraph 5.7.7 of IFRS 9);
- (g) changes in the value of the time value of options when separating the intrinsic value and time value of an option contract and designating as the hedging instrument only the changes in the intrinsic value (see Chapter 6 of IFRS 9);
- (h) changes in the value of the forward elements of forward contracts when separating the forward element and spot element of a forward contract and designating as the hedging instrument only the changes in the spot element, and changes in the value of the foreign currency basis spread of a financial instrument when excluding it from the designation of that financial instrument as the hedging instrument (see Chapter 6 of IFRS 9);

- (i) insurance finance income and expenses from contracts issued within the scope of IFRS 17 *Insurance Contracts* excluded from profit or loss when total insurance finance income or expenses is disaggregated to include in profit or loss an amount determined by a systematic allocation applying paragraph 88(b) of IFRS 17, or by an amount that eliminates accounting mismatches with the finance income or expenses arising on the underlying items, applying paragraph 89(b) of IFRS 17; and
 - (j) finance income and expenses from reinsurance contracts held excluded from profit or loss when total reinsurance finance income or expenses is disaggregated to include in profit or loss an amount determined by a systematic allocation applying paragraph 88(b) of IFRS 17.
- ...

IAS requires that all items of income and expense be presented either:

- (a) In a single statement of profit or loss and other comprehensive income (with a separate section for each in the order stated)
Or
- (b) In two separate statements:
 - (i) A statement of profit or loss
And
 - (ii) A statement of comprehensive income beginning with profit and loss and containing components of other comprehensive income [IAS 1.10A]

If the approach in (b) is followed, the statement of profit or loss must be displayed immediately before the statement of comprehensive income. [IAS 1.10A]. If the statement of profit or loss is presented separately, the profit or loss section should not be presented in the statement presenting comprehensive income. [IAS 1.81A]. In other words, the standard clarifies, perhaps unnecessarily, that there is no need to repeat the full information in the statement of profit or loss, when separate statements are presented.

In addition to this choice, IAS 1 permits different titles to be used for these statements. [IAS 1.10].

Many entities continue to present a separate statement of profit or loss (often titled 'income statement'), and this section is structured in these terms. However, the requirements are the same whether total comprehensive income is presented in one or two statements.

IAS 1 adopts an essentially permissive approach to the format of the statement of profit or loss and statement of comprehensive income. It observes that, because the effects of an entity's various activities, transactions and other events differ in frequency, potential for gain or loss and predictability, disclosing the components of financial performance assists users in understanding the financial performance achieved and in making projections of future performance. [IAS 1.86]. In other words, some analysis of the make-up of net profit and other comprehensive income is needed, but a wide variety of presentations would all be acceptable.

IAS 1 requires certain specific items to appear on the face of the statement(s) and then supplements this with a more general requirement that:

- Additional line items be presented (including the disaggregation of those specifically required) on the face of the statement(s)
And
- The descriptions used and the ordering of items be amended

When this is relevant to an understanding of the entity's financial performance. [IAS 1.85, IAS 1.86].

The standard explains that additional line items should be included, and the descriptions used and the ordering of items amended when this is necessary to explain the elements of financial performance. Factors to be considered would include materiality and the nature and function of the items of income and expense. A financial institution, for example, may amend the descriptions to provide information relevant to the operations of a financial institution. [IAS 1.86].

When additional subtotals are presented, line items should be given that reconcile those subtotals with the subtotals or totals required in IFRS accounting standards. [IAS 1.85B].

When such additional subtotals are presented, they should:

- (a) Be comprised of line items made up of amounts recognised and measured in accordance with IFRS accounting standards
 - (b) Be presented and labelled in a manner that makes the line items that constitute the subtotal clear and understandable
 - (c) Be consistent from period to period (see section 4.1.4 below)
- And
- (d) Not be displayed with more prominence than the subtotals and totals required in IFRS accounting standards for the statement(s) presenting profit or loss and other comprehensive income [IAS 1.85A]

3.2.2 Information required on the face of the statement of profit or loss

As is the case for the statement of financial position, IAS 1 sets out certain items which must appear on the face of the statement of profit or loss and other required disclosures which may be made either on the face or in the notes.

The face of the statement of profit or loss should include, in addition to items required by other IFRS accounting standards, line items that present the following amounts (although as noted above, the order and description of the items should be amended as necessary): [IAS 1.82]

- (a) Revenue, presenting separately:
 - (i) Interest revenue calculated using the effective interest method

And

 - (ii) Insurance revenue under IFRS 17
 - (b) Gains and losses from the derecognition of financial assets measured at amortised cost
 - (c) Insurance service expenses from contracts issued in accordance with of IFRS 17
 - (d) Income or expenses from reinsurance contracts held in accordance with of IFRS 17
 - (e) Finance costs
 - (f) Impairment losses (including reversals of impairment losses or impairment gains) determined under IFRS 9
 - (g) Insurance finance income or expenses from contracts issued in accordance with of IFRS 17
 - (h) Finance income or expenses from reinsurance contracts held in accordance with of IFRS 17
 - (i) Share of the profit or loss of associates and joint ventures accounted for using the equity method
 - (j) Any difference between fair value and the previous carrying amount at the date of reclassification when a financial asset is reclassified out of the amortised cost category to be measured at fair value through profit or loss
 - (k) Any accumulated gain or loss previously recognised in other comprehensive income that is reclassified to profit or loss when a financial asset is reclassified out of the fair value through other comprehensive income category so that it is measured at fair value through profit or loss
 - (l) Tax expense
 - (m) A single amount comprising the total of:
 - (i) The post-tax profit or loss of discontinued operations

And

 - (ii) The post-tax gain or loss recognised on the measurement to fair value less costs to sell or on the disposal of the assets or disposal group(s) constituting the discontinued operation [IFRS 5.33(a)(ii)]
 - (n) Profit or loss [IAS 1.81A]
- And
- (o) The following as allocations of profit or loss for the period:
 - (i) Profit or loss attributable to non-controlling interests

And

 - (ii) Profit or loss attributable to owners of the parent [IAS 1.81B]

It should be noted that (with the exception of (m) above) this provision of the standard does not require a single line item for each of the above. Indeed, in some circumstances a single line item may not be possible.

As discussed in section 3.2.3 below, an analysis of expenses is required based either on their nature or their function. IAS 1 encourages, but does not require, this to be shown on the face of the statement of profit or loss. [IAS 1.99, IAS 1.100]. The specific items listed above essentially identify the results of transactions by their nature (that is to say, not by their function in the business). Accordingly, those entities categorising expenses by function and also following the 'encouragement' to display this on the face of the statement could be required to present one or more of the above in more than one place within the statement. This may be particularly relevant to entities choosing to differentiate between 'operating' items and other items in the statement of profit or loss (which is a quite common practice and one acknowledged by the IASB - discussed in section 3.2.2.A below) as some items in the list above may contain the results of transactions from operating and non-operating activities. By way of example, items (f) and (j) above could encompass both operating and non-operating items.

In practice judgement will be required when applying these provisions of the standard along with the more general requirements on: additional line items and subtotals, and the ordering and description of line items, discussed in section 3.2.1 above.

The implementation guidance accompanying the standard provides an illustrative example of a statement of profit or loss (see Illustration 3-4 in section 3.2.3.A below).

3.2.2.A Operating profit

The current IAS 1 has omitted the requirement in the 1997 version to disclose the results of operating activities as a line item on the face of the statement of profit or loss. The reason given for this in the Basis for Conclusions to the standard because 'Operating activities' are not defined in the standard, and the Board decided not to require disclosure of an undefined item. [IAS 1.BC55].

The Basis for Conclusions for IAS 1 explains that: [IAS 1.BC56]

Extract from IAS 1

BC56 The Board recognises that an entity may elect to disclose the results of operating activities, or a similar line item, even though this term is not defined. In such cases, the Board notes that the entity should ensure that the amount disclosed is representative of activities that would normally be regarded as 'operating'. In the Board's view, it would be misleading and would impair the comparability of financial statements if items of an operating nature were excluded from the results of operating activities, even if that had been industry practice. For example, it would be inappropriate to exclude items clearly related to operations (such as inventory write-downs and restructuring and relocation expenses) because they occur irregularly or infrequently or are unusual in amount. Similarly, it would be inappropriate to exclude items on the grounds that they do not involve cash flows, such as depreciation and amortisation expenses.

IAS 1 requires the face of the statement of profit or loss to show the share of the profit or loss of associates and joint ventures accounted for using the equity method.

How we see it

For entities presenting a measure of operating profit, as noted in section 3.2.2 above, in our view it is acceptable for them to determine which investments accounted for using the equity method form part of its operating activities and include their results in that measure, with the results of non-operating investments excluded from it.

3.2.3 Classification of expenses recognised in profit or loss by nature or function

IAS 1 states that components of financial performance may differ in terms of frequency, potential for gain or loss and predictability, and requires that expenses should be sub-classified to highlight this. [IAS 1.101]. To achieve this, the standard requires the presentation of an analysis of expenses (but only those recognised in profit or loss) using a classification based on either their nature or their function within the entity, whichever provides information that is reliable and more relevant. [IAS 1.99]. It is because each method of presentation has merit for different types of entities, that the standard requires management to make this selection. [IAS 1.105]. As noted in section 3.2.2 above, IAS 1 encourages, but does not require the chosen analysis to be shown on the face of the statement of profit or loss. [IAS 1.100]. This means that entities are permitted to disclose the classification on the face on a mixed basis, as long as the required classification is provided in the notes. Indeed, the IASB itself produces an example of such a statement of profit or loss in an illustrative example to IAS 7. [IAS 7.IE.A].

The standard also notes that the choice between the function of expense method and the nature of expense method will depend on historical and industry factors and the nature of the entity. Both methods provide an indication of those costs that might vary, directly or indirectly, with the level of sales or production of the entity. However, because information on the nature of expenses is useful in predicting future cash flows, additional disclosure is required when the function of expense classification is used (see section 3.2.3.B below). [IAS 1.105].

3.2.3.A Analysis of expenses by nature

For some entities, this 'reliable and more relevant information' may be achieved by aggregating expenses for display in profit or loss according to their nature (for example, depreciation, purchases of materials, transport costs, employee benefits and advertising costs), and not reallocating them among various functions within the entity. IAS 1 observes that this method may be simple to apply because no allocations of expenses to functional classifications are necessary. The standard illustrates a classification using the nature of expense method as follows: [IAS 1.102]

Illustration 3-3: Example of classification of expenses by nature

Revenue		x
Other income		x
Changes in inventories of finished goods and work in progress	x	
Raw materials and consumables used	x	
Employee benefits expense	x	
Depreciation and amortisation expense	x	
Other expenses	x	
Total expenses		(x)
Profit before tax		x

The implementation guidance accompanying the standard provides a further example of a statement of profit or loss analysing expenses by nature. Whilst very similar to the above, it is expanded to show further captions as follows: [IAS 1.IG Part I]

Illustration 3-4: Illustrative statement of profit or loss with expenses classified by nature

XYZ Group - Statement of profit or loss for the year ended 31 December 20X2

(in thousands of currency units)

	20X2	20X1
Revenue	390,000	355,000
Other income	20,667	11,300
Changes in inventories of finished goods and work in progress	(115,100)	(107,900)
Work performed by the entity and capitalised	16,000	15,000
Raw material and consumables used	(96,000)	(92,000)
Employee benefits expense	(45,000)	(43,000)
Depreciation and amortisation expense	(19,000)	(17,000)
Impairment of property, plant and equipment	(4,000)	-
Other expenses	(6,000)	(5,500)
Finance costs	(15,000)	(18,000)
Share of profit of associates	35,100	30,100
Profit before tax	161,667	128,000
Income tax expense	(40,417)	(32,000)
Profit for the year from continuing operations	121,250	96,000
Loss for the year from discontinued operations	-	(30,500)
Profit for the year	121,250	65,500

Profit attributable to:		
Owners of the parent	97,000	52,400
Non-controlling interests	24,250	13,100
	<u>121,250</u>	<u>65,500</u>
Earnings per share (currency unit)		
Basic and diluted	0.46	0.30

A footnote to the illustrative examples explains that 'share of profits of associates' means share of the profit attributable to the owners of the associates and hence is after tax and non-controlling interests in the associates.

Illustration 3-4 above is an example of presenting comprehensive income in two statements. Illustration 3-6 in section 3.2.4.A below illustrates the presentation of comprehensive income in a single statement. An entity using the approach above would need to give a second statement presenting items of other comprehensive income - this would simply be the bottom portion of Illustration 3-6 in section 3.2.4.A below, starting with 'Profit for the year' and omitting earnings per share and the analysis of profit between owners and non-controlling interests. This is illustrated in Illustration 3-8 in section 3.2.4.C below.

3.2.3.B Analysis of expenses by function

For some entities, 'reliable and more relevant information' may be achieved by aggregating expenses for display purposes according to their function for example, as part of cost of sales, the costs of distribution or administrative activities. Under this method, IAS 1 requires as a minimum, disclosure of cost of sales separately from other expenses. The standard observes that this method can provide more relevant information to users than the classification of expenses by nature, but that allocating costs to functions may require arbitrary allocations and involve considerable judgement. An example of classification using the function of expense method given by the standard is set out below. [IAS 1.103].

Illustration 3-5: Example of classification of expenses by function

Revenue	x
Cost of sales	(x)
Gross profit	x
Other income	x
Distribution costs	(x)
Administrative expenses	(x)
Other expenses	(x)
Profit before tax	<u>x</u>

Entities classifying expenses by function are required by IAS 1 to disclose additional information on the nature of expenses. The standard highlights that this requirement also applies to depreciation and amortisation expense and employee benefits expense, [IAS 1.104], which seems redundant considering that the disclosure of these items (broken down into their components) is specifically required by IAS 16, IAS 19 and IAS 38 *Intangible Assets*.

The standard gives another illustration of expenses classified by function in the profit and loss section of the single statement of comprehensive income - see Illustration 3-6 in section 3.2.4.A below.

3.2.4 The statement of comprehensive income

3.2.4.A The face of the statement of comprehensive income

Whether presented as a separate statement or as a section of a combined statement (see section 3.2.1 above), the face of the statement of comprehensive income should set out the items below. The items in (b) and, separately, the items in (c) should be presented in two groups, one including items which may subsequently be reclassified into profit or loss and another including items which will not: [IAS 1.7, IAS 1.81A, IAS 1.82A, IAS 1.91]

- (a) Profit or loss (if two statements are presented this will be a single line item)
- (b) Each item of comprehensive income, classified by nature, which include:
 - (i) Changes in revaluation surplus relating to property, plant and equipment and intangible assets
 - (ii) Remeasurements on defined benefit plans in accordance with IAS 19
 - (iii) Gains and losses arising from translating the financial statements of a foreign operation
 - (iv) Gains and losses from investments in equity instruments designated at fair value through other comprehensive income
 - (v) Gains and losses on financial assets measured at fair value through other comprehensive income
 - (vi) The effective portion of gains and losses on hedging instruments in a cash flow hedge and the gains and losses on hedging instruments that hedge investments in equity instruments measured at fair value through other comprehensive income
 - (vii) For particular liabilities designated as at fair value through profit and loss, fair value changes attributable to changes in the liability's credit risk
 - (viii) Changes in the value of the time value of options when separating the intrinsic value and time value of an option contract and designating as the hedging instrument only the changes in the intrinsic value
 - (ix) Changes in the value of the forward elements of forward contracts when separating the forward element and spot element of a forward contract and designating as the hedging instrument only the changes in the spot element, and changes in the value of the foreign currency basis spread of a financial instrument when excluding it from the designation of that financial instrument as the hedging instrument. These, together with the changes in the time value of options in (viii) above, are commonly referred to as the 'costs of hedging' (see Chapter 49).
 - (x) Insurance finance income and expenses related to insurance or reinsurance contracts which is excluded from profit or loss in certain circumstances in accordance with IFRS 17
 - (xi) The aggregate amount of tax relating to components of comprehensive income, unless the components are shown individually net of tax (see section 3.2.4.C below). Tax should be allocated between the two groups mentioned above
- (c) Share of the items of other comprehensive income of associates and joint ventures accounted for using the equity method
- (d) Reclassification adjustments, unless the components of comprehensive income are shown after any related reclassification adjustments (see section 3.2.4.B below) [IAS 1.94]
And
- (e) Total comprehensive income

In a separate statement of other comprehensive income IAS 1 also requires an analysis of total comprehensive income for the period between that attributable to:

- (a) Non-controlling interests,
And
- (b) Owners of the parent [IAS 1.81B]

In a combined statement of total comprehensive income, the equivalent analysis of profit and loss would also be required as would earnings per share disclosures (discussed in Chapter 33). When two separate statements are presented, these would appear on the statement of profit or loss. [IAS 33.67A].

IAS 1 provides an illustration of both the 'one statement' and 'two statement' approach in its implementation guidance. An illustration of a single statement of comprehensive income is given in Illustration 3-6 below. [IAS 1, IG Part I]. An illustration of a separate statement of profit or loss is given in Illustration 3-4 in section 3.2.3.A above and an illustrative separate statement of other comprehensive income is given in Illustration 3-8 in section 3.2.4.C below.

Illustration 3-6: Presentation of comprehensive income in one statement and the classification of expenses by function

XYZ Group - Statement of profit or loss and other comprehensive income for the year ended 31 December 20X2

(in thousands of currency units)

	20X2	20X1
Revenue	390,000	355,000
Cost of sales	(245,000)	(230,000)
Gross profit	145,000	125,000
Other income	20,667	11,300
Distribution costs	(9,000)	(8,700)
Administrative expenses	(20,000)	(21,000)
Other expenses	(2,100)	(1,200)
Finance costs	(8,000)	(7,500)
Share of profit of associates ⁽¹⁾	35,100	30,100
Profit before tax	161,667	128,000
Income tax expense	(40,417)	(32,000)
Profit for the year from continuing operations	121,250	96,000
Loss for the year from discontinued operations	-	(30,500)
PROFIT FOR THE YEAR	121,250	65,500
Other comprehensive income:		
Items that will not be reclassified to profit or loss:		
Gains on property revaluation	933	3,367
Investments in equity instruments	(24,000)	26,667
Remeasurements of defined benefit pension plans	(667)	1,333
Share of other comprehensive income of associates ⁽²⁾	400	(700)
Income tax relating to items that will not be reclassified ⁽³⁾	5,834	(7,667)
	(17,500)	23,000
Items that may be reclassified subsequently to profit or loss:		
Exchange differences on translating foreign operations ⁽⁴⁾	5,334	10,667
Cash flow hedges ⁽⁴⁾	(667)	(4,000)
Income tax relating to items that may be reclassified ⁽³⁾	(1,167)	(1,667)
	3,500	5,000
Other comprehensive income for the year, net of tax	(14,000)	28,000
TOTAL COMPREHENSIVE INCOME FOR THE YEAR	107,250	93,500

Profit attributable to:

Owners of the parent	97,000	52,400
Non-controlling interests	24,250	13,100
	<u>121,250</u>	<u>65,500</u>

Total comprehensive income attributable to:

Owners of the parent	85,800	74,800
Non-controlling interests	21,450	18,700
	<u>107,250</u>	<u>93,500</u>

Earnings per share (in currency units):

Basic and diluted	0.46	0.30
-------------------	------	------

Alternatively, items of other comprehensive income could be presented in the statement of profit or loss and other comprehensive income net of tax.

	20X2	20X1
Other comprehensive income for the year, after tax:		
Items that will not be reclassified to profit or loss:		
Gains on property revaluation	600	2,700
Investments in equity instruments	(18,000)	20,000
Remeasurements of defined benefit pension plans	(500)	1,000
Share of other comprehensive income of associates	400	(700)
	<u>(17,500)</u>	<u>23,000</u>
Items that may be reclassified subsequently to profit or loss:		
Exchange differences on translating foreign operations	4,000	8,000
Cash flow hedges	(500)	(3,000)
	<u>3,500</u>	<u>5,000</u>
Other comprehensive income for the year, net of tax⁽³⁾	<u>(14,000)</u>	<u>28,000</u>

(1) This means the share of associates' profit attributable to owners of the associates, i.e., it is after tax and non-controlling interests in the associates.

(2) This means the share of associates' other comprehensive income attributable to owners of the associates, i.e., it is after tax and non-controlling interests in the associates. In this example, the other comprehensive income of associates consists only of items that will not be subsequently reclassified to profit or loss. Entities whose associates' other comprehensive income includes items that may be subsequently reclassified to profit or loss are required to present that amount in a separate line.

(3) The income tax relating to each item of other comprehensive income is disclosed in the notes.

(4) This illustrates the aggregated presentation, with disclosure of the current year gain or loss and reclassification adjustment presented in the notes. Alternatively, a gross presentation can be used.

The illustrative examples in the standard all use the option, which is discussed in section 3.2.4.B below, to present components of other comprehensive income net of related reclassification adjustments. The disclosure of those reclassification adjustments in a note is reproduced in Illustration 3-7 below.

3.2.4.B Reclassification adjustments

'Reclassification adjustments' are items recognised in profit or loss which were previously recognised in other comprehensive income (commonly referred to as 'recycling') and IAS 1 requires their disclosure. [IAS 1.7, IAS 1.92, IAS 1.93, IAS 1.95]. Examples include adjustments arising in relation to the disposal of a foreign operation and hedged forecast transactions affecting profit or loss.

The standard allows a choice of how reclassification adjustments are presented. They may either be presented 'gross' on the face of the statement, or alternatively shown in the notes. In the latter case, components of comprehensive income on the face of the statement are shown net of any related reclassification adjustments. [IAS 1.94].

IAS 1 illustrates this requirement as follows: [IAS 1.IG Part I]

Illustration 3-7: Note disclosure of components of other comprehensive income

XYZ GROUP

Disclosure of components of other comprehensive income⁽¹⁾

Notes - Year ended 31 December 20X2

(in thousands of currency units)

	20X2	20X1
Other comprehensive income		
Exchange differences on translating foreign operations ⁽²⁾	5,334	10,667
Investments in equity instruments	(24,000)	26,667
Cash flow hedges:		
Gains (losses) arising during the year	(4,667)	(4,000)
Less:		
Reclassification adjustments for gains (losses) included in profit or loss	<u>4,000</u>	<u>-</u>
	(667)	(4,000)
Gains on property revaluation	933	3,367
Remeasurements of defined benefit pension plans	(667)	1,333
Share of other comprehensive income of associates	<u>400</u>	<u>(700)</u>
Other comprehensive income	(18,667)	37,334
Income tax relating to components of other comprehensive income ⁽³⁾	<u>4,667</u>	<u>(9,334)</u>
Other comprehensive income for the year	<u>(14,000)</u>	<u>28,000</u>

(1) When an entity chooses an aggregated presentation in the statement of comprehensive income, the amounts for reclassification adjustments and current year gain or loss are presented in the notes.

(2) There was no disposal of a foreign operation. Therefore, there is no reclassification adjustment for the years presented.

(3) The income tax relating to each component of other comprehensive income is disclosed in the notes.

Some IFRS accounting standards require that gains and losses recognised in other comprehensive income cannot be 'recycled' to profit and loss, and hence will not give rise to reclassification adjustments. IAS 1 gives the following examples:

- (a) Revaluation surpluses for revalued property, plant and equipment, and intangible assets
- (b) Remeasurements on defined benefit plans
- And
- (c) Amounts that are removed from the cash flow hedge reserve or a separate component of equity and included directly in the initial cost or other carrying amount of an asset or a liability in accordance with IFRS 9 in respect of a cash flow hedge or the accounting for the time value of an option (or the forward element of a forward contract or the foreign currency basis spread of a financial instrument). These amounts are directly transferred to assets or liabilities.

The standard observes that whilst items in (a) are not reclassified to profit or loss they may be transferred to retained earnings as the assets concerned are used or derecognised. [IAS 1.96]. This is illustrated in Illustration 3-9 below.

3.2.4.C Tax on items of other comprehensive income

IAS 1 requires disclosure of the amount of income tax relating to each item of other comprehensive income, including reclassification adjustments, either on the face of the statement or in the notes. [IAS 1.90]. This may be done by presenting the items of other comprehensive income either:

(a) Net of related tax effects

Or

(b) Before related tax effects with one amount shown for the aggregate amount of income tax relating to those items

If the alternative at (b) is selected, the tax should be allocated between the items that might be reclassified subsequently to profit and loss and those that will not. [IAS 1.91].

The reference to reclassification adjustments here and in the definition of other comprehensive income (see section 3.2.1 above) seems to suggest that such adjustments are themselves 'components' of other comprehensive income. That would mean that the standard requires disclosure of tax related to reclassification adjustments. The implementation guidance, however, suggests this is not required because the note to Illustration 3-8 below, showing the presentation in (b) above, allocates tax only to items of comprehensive income themselves net of related reclassification adjustments.

IAS 1 provides an illustration of both approaches in its implementation guidance.

The statement of comprehensive income and related note analysing tax are illustrated in Illustration 3-8 below (the related separate statement of profit or loss is shown in Illustration 3-4 in section 3.2.3.A above). [IAS 1.IG Part I].

Illustration 3-8: Statement of comprehensive income illustrating the presentation of comprehensive income in two statements with note disclosure of the tax effects relating to components of other comprehensive income

XYZ Group - Statement of profit or loss and other comprehensive income for the year ended 31 December 20X2

(in thousands of currency units)	20X2	20X1
Profit for the year	121,250	65,500
Other comprehensive income:		
Items that will not be reclassified to profit or loss:		
Gains on property revaluation	933	3,367
Remeasurements of defined benefit pension plans	(667)	1,333
Share of other comprehensive income of associates ⁽¹⁾	400	(700)
Income tax relating to items that will not be reclassified ⁽²⁾	(166)	(1,000)
	<u>500</u>	<u>3,000</u>
Items that may be reclassified subsequently to profit or loss:		
Exchange differences on translating foreign operations	5,334	10,667
Investments in equity instruments	(24,000)	26,667
Cash flow hedges	(667)	(4,000)
Income tax relating to items that may be reclassified ⁽²⁾	4,833	(8,334)
	<u>(14,500)</u>	<u>25,000</u>
Other comprehensive income for the year, net of tax	<u>(14,000)</u>	<u>28,000</u>
TOTAL COMPREHENSIVE INCOME FOR THE YEAR	<u>107,250</u>	<u>93,500</u>
Total comprehensive income attributable to:		
Owners of the parent	85,800	74,800
Non-controlling interests	21,450	18,700
	<u>107,250</u>	<u>93,500</u>

Disclosure of tax effects relating to each component of other comprehensive income

Notes	20X2			20X1		
	Before-tax amount	Tax (expense) benefit	Net-of-tax amount	Before-tax amount	Tax (expense) benefit	Net-of-tax amount
Exchange differences on translating foreign operations	5,334	(1,334)	4,000	10,667	(2,667)	8,000
Investments in equity instruments	(24,000)	6,000	(18,000)	26,667	(6,667)	20,000
Cash flow hedges	(667)	167	(500)	(4,000)	1,000	(3,000)
Gains on property revaluation	933	(333)	600	3,367	(667)	2,700
Remeasurements of defined benefit pension plans	(667)	167	(500)	1,333	(333)	1,000
Share of other comprehensive income of associates	400	-	400	(700)	-	(700)
Other comprehensive income	<u>(18,667)</u>	<u>4,667</u>	<u>(14,000)</u>	<u>37,334</u>	<u>(9,334)</u>	<u>28,000</u>

(1) This means the share of associates' other comprehensive income attributable to owners of the associates, i.e., it is after tax and non-controlling interests in the associates. In this example, the other comprehensive income of associates consists only of items that will not be subsequently reclassified to profit or loss. Entities whose associates' other comprehensive income includes items that may be subsequently reclassified to profit or loss are required to present that amount in a separate line.

(2) The income tax relating to each item of other comprehensive income is disclosed in the notes.

3.2.5 Discontinued operations

As discussed in Chapter 5, IFRS 5 requires the presentation of a single amount on the face of the statement of profit or loss relating to discontinued operations, with further analysis either on the face of the statement or in the notes.

3.2.6 Material and 'extraordinary' items

3.2.6.A Material items

IAS 1 requires that when items of income or expense (a term covering both profit and loss, and other comprehensive income) are material, their nature and amount should be disclosed separately. [IAS 1.97]. Materiality is discussed in section 4.1.5 below. The standard goes on to suggest: [IAS 1.98]

Extract from IAS 1

- 98 Circumstances that would give rise to the separate disclosure of items of income and expense include:
- (a) write-downs of inventories to net realisable value or of property, plant and equipment to recoverable amount, as well as reversals of such write-downs;
 - (b) restructurings of the activities of an entity and reversals of any provisions for the costs of restructuring;
 - (c) disposals of items of property, plant and equipment;
 - (d) disposals of investments;
 - (e) discontinued operations;
 - (f) litigation settlements; and
 - (g) other reversals of provisions.

This information may be given on the face of the statement of profit or loss, on the face of the statement of comprehensive income or in the notes. In line with the permissive approach taken to the format of the performance statements discussed above, the level of prominence given to such items is left to the judgement of the entity concerned. However, regarding (e) above, IFRS 5 requires certain information to be presented on the face of the statement of profit or loss (see Chapter 5).

3.2.6.B Ordinary activities and 'extraordinary' items

IAS 1 states that: *[IAS 1.87]*

Extract from IAS 1

- 87 An entity shall not present any items of income or expense as extraordinary items, in the statement(s) presenting profit or loss and other comprehensive income or in the notes.

This derives from the fact that earlier versions of the standard required a distinction to be made between ordinary activities (and the results of them) and extraordinary items. *[IAS 1.87]*.

The Basis for Conclusions for IAS 1 explains that the removal of this distinction, and the prohibition on the presentation of extraordinary items, was made to avoid arbitrary segregation of an entity's performance. *[IAS 1.BC64]*.

3.3 The statement of changes in equity

IAS 1 requires the presentation of a statement of changes in equity showing: *[IAS 1.106]*

- (a) Total comprehensive income for the period (comprising profit and loss and other comprehensive income - see section 3.2.1 above) showing separately the total amounts attributable to owner of the parent and to non-controlling interests
- (b) For each component of equity, the effects of retrospective application or retrospective restatement recognised in accordance with IAS 8 (discussed in sections 4.4 and 4.6 below)
And
- (c) For each component of equity, a reconciliation between the carrying amount at the beginning and the end of the period, separately disclosing changes resulting from:
 - (i) Profit or loss
 - (ii) Other comprehensive income
And
 - (iii) Transactions with owners in their capacity as owners, showing separately contributions by and distributions to owners and changes in ownership interests in subsidiaries that do not result in a loss of control

The reconciliation in (c)(ii) above must show each item of other comprehensive income, although that detail may be shown in the notes. *[IAS 1.106A]*.

The amounts of dividends shown as distributions to owners and the amounts of dividends per share should be shown either on the face of the statement or in the notes. *[IAS 1.107]*.

It can be seen that (a) above is effectively a sub-total of all the items required by (c)(i) and (c)(ii).

For these purposes, 'components' of equity include each class of contributed equity, the accumulated balance of each class of other comprehensive income and retained earnings. [IAS 1.108].

This analysis reflects the focus of the IASB on the statement of financial position - whereby any changes in net assets (aside of those arising from transactions with owners) are gains and losses, regarded as performance. In this vein, IAS 1 observes that changes in an entity's equity between two reporting dates reflect the increase or decrease in its net assets during the period. Except for changes resulting from transactions with owners acting in their capacity as owners (such as equity contributions, reacquisitions of the entity's own equity instruments and dividends) and transaction costs directly related to such transactions, the overall change in equity during a period represents the total amount of income and expenses, including gains and losses, generated by the entity's activities during that period. [IAS 1.109]. After taking account of total gains and losses and owner transactions in this way, any other changes in equity will result from the restatement of prior periods. Point (b) above reflects this.

IAS 8 requires retrospective adjustments to effect changes in accounting policies, to the extent practicable, except when the transitional provisions in another IFRS accounting standard require otherwise. IAS 8 also requires that restatements to correct errors are made retrospectively, to the extent practicable. These are discussed in section 4 below. IAS 1 observes that retrospective adjustments and retrospective restatements "are not changes in equity but they are adjustments to the opening balance of retained earnings, except when an IFRS accounting standard requires retrospective adjustment of another component of equity." Point (b) above therefore requires disclosure in the statement of changes in equity of the total adjustment to each component of equity resulting, separately, from changes in accounting policies and from corrections of errors. These adjustments should be disclosed for each prior period and the beginning of the period. [IAS 1.110].

The illustrative statement from the implementation guidance accompanying IAS 1 is set out in Illustration 3-9 below and is a continuation of Illustration 3-8 in section 3.2.4.C above. [IAS 1.IG Part I].

Illustration 3-9: Statement of changes in equity

XYZ Group - Statement of changes in equity for the year ended 31 December 20X2									
(in thousands of currency units)									
	Share capital	Retained earnings	Translation of foreign operations	Investments in equity instruments	Cash flow hedge	Re-valuation surplus	Total	Non-controlling interest	Total equity
Balance at 1 January 20X1	600,000	118,100	(4,000)	1,600	2,000	-	717,700	29,800	747,500
Changes in accounting policy	-	400	-	-	-	-	400	100	500
Restated balance	600,000	118,500	(4,000)	1,600	2,000	-	718,100	29,900	748,000
Changes in equity for 20X1									
Dividends	-	(10,000)	-	-	-	-	(10,000)	-	(10,000)
Total comprehensive income for the year ⁽¹⁾	-	53,200	6,400	16,000	(2,400)	1,600	74,800	18,700	93,500
Balance at 31 December 20X1	600,000	161,700	2,400	17,600	(400)	1,600	782,900	48,600	831,500
Changes in equity for 20X2	Share capital	Retained earnings	Translation of foreign operations	Investments in equity instruments	Cash flow hedge	Re-valuation surplus	Total	Non-controlling interest	Total equity
Issue of share capital	50,000	-	-	-	-	-	50,000	-	50,000
Dividends	-	(15,000)	-	-	-	-	(15,000)	-	(15,000)
Total comprehensive income for the year ⁽²⁾	-	96,600	3,200	(14,400)	(400)	800	85,800	21,450	107,250
Transfer to retained earnings	-	200	-	-	-	(200)	-	-	-
Balance at 31 December 20X2	650,000	243,500	5,600	3,200	(800)	2,200	903,700	70,050	973,750

- (1) The amount included in retained earnings for 20X1 of 53,200 represents profit attributable to owners of the parent of 52,400 plus remeasurements of defined benefit pension plans of 800 (1,333, less tax 333, less non-controlling interest 200). The amount included in the translation, investments in equity instruments and cash flow hedge reserves represent other comprehensive income for each component, net of tax and non-controlling interest, e.g., other comprehensive income related to investments in equity instruments for 20X2 of 16,000 is 26,667, less tax 6,667, less non-controlling interest 4,000. The amount included in the revaluation surplus of 1,600 represents the share of other comprehensive income of associates of (700) plus gains on property revaluation of 2,300 (3,367, less tax 667, less non-controlling interest 400). Other comprehensive income of associates relates solely to gains or losses on property revaluation.
- (2) The amount included in retained earnings of 20X2 of 96,600 represents profit attributable to owners of the parent of 97,000 less remeasurements of defined benefit pension plans of 400 (667, less tax 167, less non-controlling interest 100). The amount included in the translation, investments in equity instruments and cash flow hedge reserves represent other comprehensive income for each component, net of tax and non-controlling interest, e.g., other comprehensive income related to the translation of foreign operations for 20X2 of 3,200 is 5,334, less tax 1,334, less non-controlling interest 800. The amount included in the revaluation surplus of 800 represents the share of other comprehensive income of associates of 400 plus gains on property revaluation of 400 (933, less tax 333, less non-controlling interest 200). Other comprehensive income of associates relates solely to gains or losses on property revaluation.

3.3.1 Transfers between components of equity

IFRS accounting standards give no definition of retained earnings and provides limited guidance on how to distinguish components of equity in the statement of changes in equity and on how to reflect legal transfers between components in that statement.

In some instances, a company takes steps to effect a transfer of contributed equity, such as share premium, to another component of equity, such as retained earnings/accumulated losses. Provided that it has taken all necessary steps permitted or required under the relevant legal framework, it is permissible to reflect in the statement of changes in equity a reduction of the share premium component and a corresponding increase/reduction of the retained earnings/accumulated losses component. It may also be acceptable to reflect the transfer in a separate component. In either case, explanatory disclosures clarifying the policy choice must be considered.

How we see it

In the absence of a definition of retained earnings in IFRS accounting standards and given that there is no prohibition on transfers between reserves and retained earnings in IFRS, unless this is prohibited by local law or regulations, we consider that such a transfer is permitted. However, we acknowledge that in certain jurisdictions, such a transfer may be considered inappropriate and we believe that entities must have regard to the regulatory perspective in all relevant jurisdictions in which they operate, when developing an accounting policy under IAS 8.

3.4 The notes to the financial statements

IAS 1 requires the presentation of notes to the financial statements that:

- (a) Present information about the basis of preparation of the financial statements and the specific accounting policies used (see section 5.1 below)
 - (b) Disclose the information required by IFRS accounting standards that is not presented elsewhere in the financial statements
- And
- (c) Provide additional information that is not presented elsewhere in the financial statements, but is relevant to an understanding of any of them [IAS 1.112]

The notes should, as far as practicable, be presented in a systematic manner, determined in consideration of its effect on the understandability and comparability of the financial statements. Each item on the face of the primary statements should be cross-referenced to any related information in the notes. [IAS 1.113].

How we see it

There is, perhaps, a trade-off to be made between understandability and comparability, in that allowing entities to structure their notes to, for instance, reflect their business model or perceived importance may reduce the comparability between one entity and another.

The standard does not prescribe a specific order, but in the Basis for Conclusions the consistency dimension of comparability is highlighted, and it is clarified that the ordering of the notes generally is not expected to be changed frequently. [IAS 1.BC76D].

Examples given in the standard of the systematic ordering or grouping of the notes are as follows:

- (a) Giving prominence to the areas of its activities that the entity considers to be most relevant to an understanding of its financial performance and financial position, such as grouping together information about particular operating activities
- (b) Grouping together information about items measured similarly such as assets measured at fair value
Or
- (c) Following the order of the line items in the statement(s) of profit or loss and other comprehensive income and the statement of financial position, such as:
 - (i) A statement of compliance with IFRS accounting standards (see section 2.5.2 above)
 - (ii) Material accounting policy information (see section 5.1.1 below)
 - (iii) Supporting information for items presented on the face of the primary statements, in the order in which each statement and each line item is presented
And
 - (iv) Other disclosures, including: contingent liabilities, unrecognised contractual commitments and non-financial disclosures such as financial risk management objectives and policies [IAS 1.114]

The standard also permits notes providing information about the basis of preparation of the financial statements and specific accounting policies being presented as a separate section of the financial statements. [IAS 1.116].

4 Accounting policies

The selection and application of accounting policies is crucial for the preparation of financial statements. As a general premise, the whole purpose of accounting standards is to specify required accounting policies, presentation and disclosure. However, judgement will always remain; many standards may allow choices to accommodate different views, and no body of accounting literature could hope to prescribe precise treatments for all possible situations.

In the broadest sense, accounting policies are discussed by both IAS 1 and IAS 8. Whilst, as its title suggests, IAS 8 deals explicitly with accounting policies, IAS 1 deals with what one can describe as overarching or general principles.

4.1 General principles

IAS 1 deals with some general principles relating to accounting policies, with IAS 8 discussing the detail of selection and application of individual accounting policies and their disclosure.

The general principles discussed by IAS 1 can be described as follows:

- Fair presentation and compliance with accounting standards
- Going concern
- The accrual basis of accounting
- Consistency
- Materiality and aggregation
- Offsetting
- And
- Profit or loss for the period

These are discussed in sections 4.1.1 to 4.1.7 below.

4.1.1 Fair presentation

4.1.1.A Fair presentation and compliance with IFRS accounting standards

Consistent with its objective and statement of the purpose of financial statements, IAS 1 requires that financial statements present fairly the financial position, financial performance and cash flows of an entity. Fair presentation for these purposes requires the faithful representation of the effects of transactions, other events and conditions in accordance with the definitions and recognition criteria for assets, liabilities, income and expenses set out in the *Conceptual Framework* (discussed in Chapter 2).

The main premise of the standard is that application of IFRS accounting standards, with additional disclosure when necessary, is presumed to result in financial statements that achieve a fair presentation.

[IAS 1.15].

It is worth noting that IAS 1 specifies that circumstances may require additional disclosures (that is, over and above those specified in IFRS accounting standards). [IAS 1.15, IAS 1.31]. There is no general concept that disclosures, where material, could be avoided on the grounds of them being seriously prejudicial to the reporting entity.

As noted in section 1.1 above, an important point is that implementation guidance for standards issued by the IASB does not form part of those standards (unless they are explicitly 'scoped-in'), and therefore does not contain requirements for financial statements. [IAS 8.9]. In contrast, any application guidance appended to a standard forms an integral part of that standard.

Accordingly, the often voluminous implementation guidance accompanying standards is not, strictly speaking, part of IFRS accounting standards. However, we would generally expect entities to follow such guidance. The presumption that application of IFRS accounting standards (with any necessary additional disclosure) results in a fair presentation is potentially rebuttable, as discussed in section 4.1.1.B below.

A fair presentation also requires an entity to:

- (a) Select and apply accounting policies in accordance with IAS 8, which also sets out a hierarchy of authoritative guidance that should be considered in the absence of an IFRS accounting standard that specifically applies to an item (see section 4.3 below)
- (b) Present information, including material accounting policy information, in a manner that provides relevant, reliable, comparable and understandable information
- And
- (c) Provide additional disclosures when compliance with the specific requirements in IFRS accounting standards is insufficient to enable users to understand the impact of particular transactions, other events and conditions on the entity's financial position and financial performance [IAS 1.17]

However, the standard makes clear that inappropriate accounting policies are not rectified either by disclosure of those accounting policies or by notes or explanatory material. [IAS 1.18]. As discussed in section 4.1.1.B below, it is possible that an extremely rare circumstance arises where departure from a provision of IFRS accounting standards is needed to achieve fair presentation. This is only allowed by IAS 1, if permitted by the relevant regulatory framework.

4.1.1.B The fair presentation override

The presumption that the application of IFRS accounting standards, with additional disclosure when necessary, results in financial statements that achieve a fair presentation is a rebuttable one, although the standard makes clear that in virtually all situations a fair presentation is achieved through compliance.

The standard observes that an item of information would conflict with the objective of financial statements when it does not represent faithfully the transactions, other events and conditions that it either purports to represent or could reasonably be expected to represent and, consequently, it would be likely to influence economic decisions made by users of financial statements. When assessing whether complying with a specific requirement in an IFRS accounting standard would be so misleading that it would conflict with the objective of financial statements, IAS 1 requires consideration of:

- (a) Why the objective of financial statements is not achieved in the particular circumstances
And
- (b) How the entity's circumstances differ from those of other entities that comply with the requirement. If other entities in similar circumstances comply with the requirement, there is a rebuttable presumption that the entity's compliance with the requirement would not be so misleading that it would conflict with the objective of financial statements. [IAS 1.24].

In the extremely rare circumstances in which management concludes that compliance with a requirement in an IFRS accounting standard would be so misleading that it would conflict with the objective of financial statements, IAS 1 requires departure from that requirement. However, this is only permitted if the "relevant regulatory framework requires, or otherwise does not prohibit, such a departure", which is discussed further below. [IAS 1.19].

When the relevant regulatory framework allows a departure, an entity should make it and also disclose:

- (a) That management has concluded that the financial statements present fairly the entity's financial position, financial performance and cash flows
- (b) That it has complied with applicable IFRS accounting standards, except that it has departed from a particular requirement to achieve a fair presentation
- (c) The title of the IFRS accounting standard from which the entity has departed, the nature of the departure, including:
 - (i) The treatment that the IFRS accounting standard would require
 - (ii) The reason why that treatment would be so misleading in the circumstances that it would conflict with the objective of financial statements set out in the *Conceptual Framework*
And
 - (iii) The treatment adopted
- (d) For each period presented, the financial impact of the departure on each item in the financial statements that would have been reported in complying with the requirement
And
- (e) When there has been a departure from a requirement of an IFRS accounting standard in a prior period, and that departure affects the amounts recognised in the financial statements for the current period, the disclosures set out in (c) and (d) above [IAS 1.20, IAS 1.21]

Regarding (e) above, the standard explains that the requirement could apply, for example, when an entity departed in a prior period from a requirement in an IFRS accounting standard for the measurement of assets or liabilities and that departure affects the measurement of changes in assets and liabilities recognised in the current period's financial statements. [IAS 1.22].

When the relevant regulatory framework does not allow a departure from IFRS accounting standards, IAS 1 accepts that, notwithstanding the failure to achieve fair presentation, that it should not be made. Although intended to occur only in extremely rare circumstances, this is a very important provision of the standard as it allows a 'relevant regulatory framework' to override the requirement of IFRS accounting standards to achieve a fair presentation. In that light, it is perhaps surprising that there is no definition or discussion in the standard of what a relevant regulatory framework is.

When a departure otherwise required by IAS 1 is not allowed by the relevant regulatory framework, the standard requires that the perceived misleading aspects of compliance are reduced, to the maximum extent possible, by the disclosure of:

- (a) The title of the IFRS accounting standard in question, the nature of the requirement, and the reason why management has concluded that complying with that requirement is so misleading in the circumstances that it conflicts with the objective of financial statements set out in the *Conceptual Framework*
And
- (b) For each period presented, the adjustments to each item in the financial statements that management has concluded would be necessary to achieve a fair presentation [IAS 1.23]

How we see it

In our view, it will be extremely rare that a departure from a requirement is required to achieve a fair presentation and equally rare that in such a circumstance the departure is not permitted by the relevant regulatory framework. As such, the compromise outlined above, although limited in its effectiveness, is unlikely to be frequently used.

4.1.2 Going concern

4.1.2.A Assessment of going concern

When preparing financial statements, IAS 1 requires management to make an assessment of an entity's ability to continue as a going concern. This term is not defined, but its meaning is implicit in the requirement of the standard that financial statements should be prepared on a going concern basis unless management either intends to liquidate the entity or to cease trading, or has no realistic alternative but to do so. The standard requires that when management is aware, in making its assessment, of material uncertainties related to events or conditions that may cast significant doubt upon the entity's ability to continue as a going concern, those uncertainties should be disclosed. Beyond requiring disclosure of the uncertainties, the standard does not specify more precisely what information should be disclosed. The IFRS IC recommended, in January 2013, that the IASB make a narrow-scope amendment to IAS 1 that would address when these disclosures should be made and what information should be disclosed. Although the IASB acknowledged that more prescriptive requirements would lead to useful information for investors and creditors, it also had the expectation that such requirements may result in 'boilerplate' disclosures that would obscure relevant disclosures about going concern and thus would contribute to disclosure overload. It also observed that this is a topic that is better handled through local regulation or audit guidance.³ In January 2021, the IFRS Foundation (as distinct from the Board) released a document, prepared for educational purposes, highlighting the requirements in IFRS accounting standards that are relevant to an entity's assessment of its ability to continue as a going concern and the respective disclosures.⁴ The document does not change, remove, or add to, the requirements in IFRS accounting standards. Rather the intention is to remind preparers of the IFRS accounting standards requirements for going concern assessments and the disclosure of material uncertainties and significant judgements.

How we see it

Although the educational document does not introduce any new requirements, it may help preparers to apply the existing requirements in IFRS accounting standards. More specifically, in light of the economic uncertainty caused by recent geopolitical developments, the educational document represents a helpful reminder about challenging assessments that management may need to make and key disclosures that may apply to many entities under the current circumstances.

In assessing whether the going concern assumption is appropriate, the standard requires that all available information about the future, which is at least, but is not limited to, twelve months from the end of the reporting period should be taken into account. The degree of consideration required will depend on the facts in each case. When an entity has a history of profitable operations and ready access to financial resources, a conclusion that the going concern basis of accounting is appropriate may be reached without detailed analysis. In other cases, management may need to consider a wide range of factors relating to current and expected profitability, debt repayment schedules and potential sources of replacement financing before it can satisfy itself that the going concern basis is appropriate. [IAS 1.26].

³ [IFRIC Update](#), January 2013, available on the IFRS Foundation's website.

⁴ [Going concern-a focus on disclosure](#), IASB, January 2021. Available on the IFRS Foundation's website.

4.1.2.B Basis other than going concern

IAS 1 requires that if an entity is not a going concern, the financial statements must be prepared on a basis other than going concern, but does not specify what that alternate basis may be. [IAS 1.25]. As a result of this lack of guidance in IFRS accounting standards as to what might constitute an alternate basis of accounting, informal practices have developed in different jurisdictions. A common method is to prepare accounts under a 'liquidation' or 'break-up' basis; however, as these are not defined terms in IFRS accounting standards, there is not necessarily a common understanding of what such a basis may entail.

The objective of using a basis other than going concern is primarily to assist users of those financial statements to assess the amount of cash or other assets that might reasonably be available for distribution once liquidation is complete. Significant judgement will be required to determine appropriate accounting policies under a basis other than going concern, based on individual facts and circumstances.

IFRS accounting standards are written from the perspective that an entity is a going concern. Thus, in the case of a non-going concern entity, the recognition and measurement requirements of IFRS accounting standards must be assessed to determine whether they provide relevant information that faithfully represents the non-going concern circumstances. If they do so, accounts prepared on that basis could be compliant with IFRS accounting standards; if they do not, an entity may apply accounting policies other than those applicable to entities that are going concerns and may apply the hierarchy in IAS 8 to consider the most recent pronouncements of other standard setters who use a similar conceptual framework, other accounting literature and accepted industry practices, subject to any applicable jurisdictional requirements. [IAS 8.12]. Financial statements prepared on the latter basis could also be compliant with IFRS accounting standards.

When financial statements are not prepared on a going concern basis, that fact should be disclosed, together with the basis on which the financial statements are prepared and the reason why the entity is not regarded as a going concern. [IAS 1.25]. Disclosures relevant to an understanding of non-going concern basis financial statements should be included; in particular, any recognition, measurement and presentation policies developed specifically for a non-going concern basis must be disclosed and the relevance of them must be explained. [IAS 1.17(c)].

In an agenda decision of June 2021, the IFRS IC confirmed that if an entity is no longer a going concern, but has not yet issued financial statements for previous periods in which it was a going concern, that entity cannot prepare its financial statements on a going concern basis, including for those prior periods that have not yet been authorised for issue.⁵ A second question asked if an entity should restate comparative information to reflect the basis of accounting used in preparing the current period's financial statements, if it had previously issued financial statements for the comparative period on a going concern basis. The IFRS IC noted no diversity in the application of IFRS accounting standards in respect of this question and therefore considered that there was no evidence that this matter had widespread effect.

How we see it

A change from a going concern to a non-going concern basis is a change in circumstances in which the financial statements are prepared and thus, the new basis is applied prospectively.

4.1.3 The accrual basis of accounting

IAS 1 requires that financial statements be prepared, except for cash flow information, using the accrual basis of accounting. [IAS 1.27]. No definition of this is given by the standard, but an explanation is presented that: "When the accrual basis of accounting is used, items are recognised as assets, liabilities, equity, income and expenses (the elements of financial statements) when they satisfy the definitions and recognition criteria for those elements in the *Conceptual Framework*." [IAS 1.28].

The *Conceptual Framework* explains the accruals basis as follows: [CF 1.17]

Extract from the Conceptual Framework for Financial Reporting

- 1.17 Accrual accounting depicts the effects of transactions and other events and circumstances on a reporting entity's economic resources and claims in the periods in which those effects occur, even if the resulting cash receipts and payments occur in a different period. This is important because information about a reporting entity's economic resources and claims and changes in its economic resources and claims during a period provides a better basis for assessing the entity's past and future performance than information solely about cash receipts and payments during that period.

The requirements of the *Conceptual Framework* are discussed in more detail in Chapter 2.

⁵ [IFRIC Update](#), June 2021, available on the IFRS Foundation's website.

4.1.4 Consistency

As noted in sections 1.1 and 1.2 above, one of the objectives of both IAS 1 and IAS 8 is to ensure the comparability of financial statements with those of previous periods. To this end, each standard addresses the principle of consistency.

IAS 1 requires that the 'presentation and classification' of items in the financial statements be retained from one period to the next unless:

- (a) It is apparent, following a significant change in the nature of the entity's operations or a review of its financial statements, that another presentation or classification would be more appropriate having regard to the criteria for the selection and application of accounting policies in IAS 8 (see section 4.3 below)

Or

- (b) An IFRS accounting standard requires a change in presentation [IAS 1.45]

The standard amplifies this by explaining that a significant acquisition or disposal, or a review of the presentation of the financial statements, might suggest that the financial statements need to be presented differently. An entity should change the presentation of its financial statements only if the changed presentation provides information that is reliable and is more relevant to users of the financial statements and the revised structure is likely to continue, so that comparability is not impaired. When making such changes in presentation, an entity will need to reclassify its comparative information as discussed in section 2.4 above. [IAS 1.46].

IAS 8 addresses consistency of accounting policies and observes that users of financial statements need to be able to compare the financial statements of an entity over time to identify trends in its financial position, financial performance and cash flows. For this reason, the same accounting policies need to be applied within each period and from one period to the next unless a change in accounting policy meets certain criteria (changes in accounting policy are discussed in section 4.4 below). [IAS 8.15]. Accordingly, the standard requires that accounting policies be selected and applied consistently for similar transactions, other events and conditions, unless an IFRS accounting standard specifically requires or permits categorisation of items for which different policies may be appropriate. If an IFRS accounting standard requires or permits such categorisation, an appropriate accounting policy should be selected and applied consistently to each category. [IAS 8.13].

4.1.5 Materiality and aggregation

Financial statements result from processing large numbers of transactions or other events that are aggregated into classes according to their nature or function. The final stage in the process of aggregation and classification is the presentation of condensed and classified data, which form line items in the financial statements, or in the notes. [IAS 1.30]. The extent of aggregation versus detailed analysis is clearly a matter of judgement, with either extreme eroding the usefulness of the information.

IAS 1 resolves this issue with the concept of materiality, by requiring:

- Each material class of similar items to be presented separately in the financial statements
- And
- Items of a dissimilar nature or function to be presented separately unless they are immaterial [IAS 1.29]

The standard also states when applying IAS 1 and other IFRS accounting standards an entity should decide, taking into consideration all relevant facts and circumstances, how it aggregates information in the financial statements, which include the notes. In particular, the understandability of financial statements should not be reduced by obscuring material information with immaterial information or by aggregating material items that have different natures or functions. [IAS 1.30A].

Materiality is defined in IAS 1 and IAS 8 (by cross reference to IAS 1) as follows: [IAS 1.7, IAS 8.5]

"Information is material if omitting, misstating or obscuring it could reasonably be expected to influence decisions that the primary users of general purpose financial statements make on the basis of those financial statements, which provide financial information about a specific reporting entity."

The terms 'primary users' and 'users' are intended to be synonyms and are used interchangeably in IAS 1. [IAS 1.BC13Q].

The standard goes on to observe that materiality depends on the nature or magnitude of information, or both. An entity assesses whether information, either individually or in combination with other information, is material in the context of its financial statements taken as a whole.

Information is considered to be obscured if it is communicated in a way that would have a similar effect for primary users of financial statements to omitting or misstating that information. The following are given as examples of circumstances that may result in material information being obscured: [IAS 1.7]

- (a) Information regarding a material item, transaction or other event is disclosed in the financial statements but the language used is vague or unclear
 - (b) Information regarding a material item, transaction or other event is scattered throughout the financial statements
 - (c) Dissimilar items, transactions or other events are inappropriately aggregated
 - (d) Similar items, transactions or other events are inappropriately disaggregated
- And
- (e) The understandability of the financial statements is reduced as a result of material information being hidden by immaterial information to the extent that a primary user is unable to determine what information is material

At a general level, applying the concept of materiality means that a specific disclosure required by an IFRS accounting standard to be given in the financial statements (including the notes) need not be provided if the information resulting from that disclosure is not material. This is the case even if the IFRS accounting standard contains a list of specific requirements or describes them as minimum requirements. On the other hand, the provision of additional disclosures should be considered when compliance with the specific requirements in IFRS accounting standards is insufficient to enable users of financial statements to understand the impact of particular transactions, other events and conditions on the entity's financial position and financial performance. [IAS 1.31].

IAS 1 goes on to observe that assessing whether information could reasonably be expected to influence economic decisions made by the primary users of a specific reporting entity's general purpose financial statements requires an entity to consider the characteristics of those users along with its own circumstances. For these purposes primary users of general purpose financial statements:

- Are existing and potential investors, lenders and other creditors that cannot require reporting entities to provide information directly to them and must rely on general purpose financial statements for much of the financial information they need
- And
- Have a reasonable knowledge of business and economic activities and review and analyse the information diligently

It is noted in the standard, though, that at times even well-informed and diligent users may need to seek the aid of an adviser to understand information about complex economic phenomena. [IAS 1.7].

Regarding the presentation of financial statements, IAS 1 requires that if a line item is not individually material, it should be aggregated with other items either on the face of those statements or in the notes. The standard also states that an item that is not sufficiently material to warrant separate presentation on the face of those statements may nevertheless be sufficiently material for it to be presented separately in the notes. [IAS 1.30].

4.1.6 Offset

IAS 1 considers it important that assets and liabilities, and income and expenses, are reported separately. This is because offsetting in the statement of profit or loss or statement of comprehensive income or the statement of financial position, except when offsetting reflects the substance of the transaction or other event, detracts from the ability of users both to understand the transactions, other events and conditions that have occurred and to assess the entity's future cash flows. It clarifies, though, that measuring assets net of valuation allowances - for example, obsolescence allowances on inventories and doubtful debts allowances on receivables - is not offsetting. [IAS 1.33].

Accordingly, IAS 1 requires that assets and liabilities, and income and expenses, should not be offset unless required or permitted by an IFRS accounting standard. [IAS 1.32].

Just what constitutes offsetting, particularly given the rider noted above of 'reflecting the substance of the transaction', is not always obvious. IAS 1 expands on its meaning as follows. It notes that:

- (a) IFRS 15 defines revenue from contracts with customers and requires it to be measured at the amount of consideration to which the entity expects to be entitled in exchange for transferring promised goods or services, taking into account the amount of any trade discounts and volume rebates allowed by the entity - in other words a notional 'gross' revenue and a discount should not be shown separately. Revenue from contracts with customers is discussed in Chapter 28.
- (b) Entities can undertake, in the course of their ordinary activities, other transactions that do not generate revenue but are incidental to the main revenue-generating activities. The results of such transactions should be presented, when this presentation reflects the substance of the transaction or other event, by netting any income with related expenses arising on the same transaction. For example:
 - (i) Gains and losses on the disposal of non-current assets, including investments and operating assets, should be reported by deducting from the proceeds on disposal the carrying amount of the asset and related selling expenses.
And
 - (ii) Expenditure related to a provision that is recognised in accordance with IAS 37 *Provisions, Contingent Liabilities and Contingent Assets* and reimbursed under a contractual arrangement with a third party (for example, a supplier's warranty agreement) may be netted against the related reimbursement. [IAS 1.34].
And
- (c) Gains and losses arising from a group of similar transactions should be reported on a net basis, for example, foreign exchange gains and losses or gains and losses arising on financial instruments held for trading. However, such gains and losses should be reported separately if they are material. [IAS 1.35].

4.1.7 Profit or loss for the period

The final provision of IAS 1 which we term a general principle is a very important one. It is that, unless an IFRS accounting standard requires or permits otherwise, all items of income and expense recognised in a period should be included in profit or loss. [IAS 1.88]. This is the case whether one combined statement of comprehensive income is presented or whether a separate statement of profit or loss is presented (discussed in section 3.2.1 above).

Income and expense are not defined by the standard, but they are defined by the *Conceptual Framework* as follows:

- (a) Income is increases in assets, or decreases in liabilities, that result in increases in equity, other than those relating to contributions from holders of equity claims.
And
- (b) Expenses are decreases in assets, or increases in liabilities, that result in decreases in equity, other than those relating to distributions to holders of equity claims. [CF 4.68, CF 4.49].

These definitions clearly suggest that the terms do not have what many would consider their natural meaning, as they encompass all gains and losses (for example, capital appreciation in a non-current asset like property). There is a somewhat awkward compromise with various gains and losses either required or permitted to bypass profit or loss and be reported instead in 'other comprehensive income'. Importantly, as discussed in section 3.2.1 above, profit and loss, and other comprehensive income may each be reported as a separate statement.

IAS 1 notes that some IFRS accounting standards specify circumstances when an entity recognises particular items outside profit or loss, including the effect of changes in accounting policies and error corrections (discussed in sections 4.4 and 4.6 below). [IAS 1.89]. Other IFRS accounting standards deal with items that may meet the *Conceptual Framework's* definitions of income or expense but are usually excluded from profit or loss. Examples given by IAS 1 are shown in section 3.2.4.A above.

4.1.8 Practice Statement 2 - Making Materiality Judgements

In September 2017 the IASB published Practice Statement 2 - *Making Materiality Judgements* (Statement 2). This is a non-mandatory statement and does not form part of IFRS accounting standards; its application is not, therefore, required to state compliance with IFRS accounting standards. [PS 2.2].

Notwithstanding the above, preparers of financial statements may wish to consider the practice statement and an overview of it is given below.

Statement 2 addresses three main areas:

- The general characteristics of materiality
 - A four-step process that may be applied in making materiality judgements when preparing financial statements (the 'materiality process')
- And
- Guidance on how to make materiality judgements in relation to the following:
 - Disclosure of information about accounting policies
 - Prior period information
 - Errors
 - Information about covenants
- And
- Interim reporting

There is also a discussion of the interaction between the materiality and local laws and regulations. Local laws and regulations may specify additional requirements that can affect the information included in the financial statements. IFRS accounting standards permit the disclosure of such additional information in order to meet local legal or regulatory requirements, although not material from an IFRS accounting standard perspective, as long as it does not obscure information that is material (see section 4.1.5 above).

[PS 2.28, IAS 1.30A, IAS 1.BC13L, IAS 1.BC30F].

4.1.8.A General characteristics of materiality

The Practice Statement explores materiality by considering the following characteristics:

- *Definition of material*
The objective of financial statements is to provide financial information about the reporting entity that is useful to primary users. An entity identifies the information necessary to meet the objective by making appropriate materiality judgements. The definition of material is discussed in section 4.1.5 above. [PS 2.5, PS 2.6, PS 2.7].
- *Materiality judgements are pervasive*
Materiality judgements are pervasive to the preparation of financial statements. Entities make materiality judgements in decisions about recognition and measurement as well as presentation and disclosure. Requirements in IFRS accounting standards only need to be applied if their effect is material to the complete set of financial statements. However, it is inappropriate to make, or leave uncorrected, immaterial departures from IFRS accounting standards to achieve a particular presentation. The Practice Statement reiterates that, as discussed in section 4.1.5 above, an entity does not need to provide a disclosure specified by IFRS accounting standards if the information resulting from that disclosure is not material, even if IFRS accounting standards contain a list of specific disclosure requirements or describes them as minimum requirements. [PS 2.8, PS 2.9, PS 2.10].
- *Judgement*
Materiality judgements require consideration of both the entity's circumstances (and how they have changed compared to prior periods) and how the information responds to the information needs of its primary users. [PS 2.11, PS 2.12].
- *Primary users and their information needs*
When making materiality judgements, an entity needs to take into account how information could reasonably be expected to influence the primary users of its financial statements and what decisions they make on the basis of the financial statements. Primary users are existing and potential investors, existing and potential lenders and existing and potential other creditors. They are expected to have a reasonable knowledge of business and economic activities and to review and analyse the information included in the financial statements diligently. Since financial statements cannot provide all the information that primary users need, entities aim to meet the common information needs of their primary users and not, therefore, needs that are unique to particular users or to niche groups. [PS 2.13-23].
- *Impact of publicly-available information*
Financial statements must be capable of standing alone. Therefore, entities make the materiality assessment regardless of whether information is publicly available from another source. [PS 2.24, PS 2.25, PS 2.26].

4.1.8.B Making materiality judgements

The Practice Statement sets out a four-step process to help preparers making materiality judgements. This process describes how an entity may assess whether information is material for the purposes of recognition, measurement, presentation and disclosure.

The materiality process considers potential omissions and misstatements as well as unnecessary inclusion of immaterial information. In all cases, an entity focuses on how the information could reasonably be expected to influence the decisions of users of financial statements. [PS 2.29-32].

The steps are as follows:

- *Step 1 - Identify*
Identify information about transactions, other events and conditions that has the potential to be material considering the requirements of IFRS accounting standards and the entity's knowledge of its primary users' common information needs. [PS 2.35-39].
- *Step 2 - Assess*
Determine whether the information identified in Step 1 is material considering quantitative (size of the impact of the information against measures of the financial statements) and qualitative (characteristics of the information making it more likely to influence decisions of the primary users) factors in the context of the financial statements as a whole. [PS 2.40-55].
- *Step 3 - Organise*
Organise material information within the draft financial statements in a way that communicates the information clearly and concisely (for example, by emphasising material matters, tailoring information to the entity's own circumstances, highlighting relationships between different pieces of information). [PS 2.56-59].
- *Step 4 - Review*
Review the draft financial statements to determine whether all material information has been identified and consider the information provided from a wider perspective and in aggregate, on the basis of the complete set of financial statements. [PS 2.60-65].

4.1.8.C Specific topics

The Practice Statement provides guidance on how to make materiality judgements in the following specific circumstances:

- *Prior period information*
Entities are required to provide prior period information if it is relevant to understand the current period financial statements, regardless of whether it was included in the prior period financial statements (discussed in section 2.4 above). This might lead an entity to include prior period information that was not previously provided (if necessary to understand the current period financial statements) or to summarise prior period information, retaining only the information necessary to understand the current period financial statements. [PS 2.66-71].
- *Errors*
An entity assesses the materiality of an error (omissions or misstatements or both) on an individual and collective basis and corrects all material errors, as well as any immaterial financial reporting errors made intentionally to achieve a particular presentation of its financial statements (discussed in section 4.6 below). When assessing whether cumulative errors (that is, errors that have accumulated over several periods) have become material an entity considers whether its circumstances have changed or further accumulation of a current period error has occurred. Cumulative errors must be corrected if they have become material to the current-period financial statements. [PS 2.72-80].
- *Loan covenants*
When assessing whether information about a covenant in a loan agreement is material, an entity considers the impact of a potential covenant breach on the financial statements and the likelihood of the covenant breach occurring. [PS 2.81, PS 2.82, PS 2.83].
- *Materiality judgements for interim reporting*
An entity considers the same materiality factors for the interim report as in its annual assessment. However, it takes into consideration that the time period and the purpose of interim financial statements (that is, to provide an update on the latest complete set of annual financial statements) differ from those of the annual financial statements. Interim financial statements are discussed in Chapter 37. [PS 2.84-88].
- *Information about accounting policies* In assessing whether accounting policy information is material to its financial statements, an entity considers whether users of the entity's financial statements would need that information to understand other material information in the financial statements. An entity makes this assessment in the same way it assesses other information: by considering qualitative and quantitative factors (step 2 in section 4.1.8.B above). [PS 2.88A-88G].

4.2 The definition of, and distinction between, accounting policies and accounting estimates

IAS 8 defines accounting policies as: “the specific principles, bases, conventions, rules and practices applied by an entity in preparing and presenting financial statements.” [IAS 8.5].

An accounting policy may require items in financial statements to be measured in a way that involves measurement uncertainty; that is, the accounting policy may require such items to be measured at monetary amounts that cannot be observed directly and must instead be estimated. In such a case, an entity is required to develop an accounting estimate to achieve the objective set out by the accounting policy. Developing accounting estimates involves the use of judgements or assumptions based on the latest available, reliable information. [IAS 8.32].

The standard defines an accounting estimate as follows: [IAS 8.5]

Extract from IAS 8

5 The following terms are used in this Standard with the meanings specified:

...

Accounting estimates are monetary amounts in financial statements that are subject to measurement uncertainty.

...

IAS 8 clarifies that the term ‘estimate’ in IFRS accounting standards sometimes refers to an estimate that is not an accounting estimate as defined by IAS 8. For example, it sometimes refers to an input used in developing accounting estimates. [IAS 8.32B]. Two examples illustrating the application of the definition of accounting estimates are reproduced as Illustrations 4-1 and 4-2 in section 4.5 below.

IAS 8 uses the phrase ‘measurement techniques and inputs’ which it states are used to develop an accounting estimate. Measurement techniques include estimation techniques (for example, techniques used to measure a loss allowance for expected credit losses applying IFRS 9) and valuation techniques (for example, techniques used to measure the fair value of an asset or liability applying IFRS 13 *Fair Value Measurement*). [IAS 8.32A].

The standard also notes that corrections of errors should be distinguished from changes in accounting estimates. Accounting estimates by their nature are approximations that may need changing as additional information becomes known. For example, the gain or loss recognised on the outcome of a contingency is not the correction of an error. [IAS 8.48].

The distinction between an accounting policy and an accounting estimate is particularly important because a very different treatment is required when there are changes in accounting policies or accounting estimates (discussed in sections 4.4 and 4.5 below). When it is difficult to distinguish a change in an accounting policy from a change in an accounting estimate, IAS 8 requires the change to be treated as a change in an accounting estimate. [IAS 8.35].

How we see it

The 2021 amendments introduce greater clarity as to the definition of accounting estimates, particularly in terms of the differentiation between accounting estimates and accounting policies. We believe they represent helpful guidance for entities in determining whether changes are to be treated as changes in estimates, changes in policies, or errors.

4.3 The selection and application of accounting policies

Entities complying with IFRS accounting standards (which is a defined term, discussed in section 1.1 above) do not have a free hand in selecting accounting policies; indeed the very purpose of a body of accounting literature is to confine such choices.

IFRS accounting standards set out accounting policies that the IASB has concluded result in financial statements containing relevant and reliable information about the transactions, other events and conditions to which they apply. [IAS 8.8].

To this end, the starting point in IAS 8 is that when an IFRS accounting standard specifically applies to a transaction, other event or condition, the accounting policy or policies applied to that item should be determined by applying the IFRS accounting standard and considering any relevant implementation guidance issued by the IASB for the IFRS accounting standard. [IAS 8.7]. This draws out the distinction that IFRS accounting standards must be applied whereas implementation guidance (which, as discussed in section 1.1 above, does not form part of IFRS accounting standards) must be considered. As noted earlier, though, we would generally expect entities to follow such guidance.

Those policies need not be applied when the effect of applying them is immaterial. However, it is inappropriate to make, or leave uncorrected, immaterial departures from IFRS accounting standards to achieve a particular presentation of an entity's financial position, financial performance or cash flows (see section 4.6 below). [IAS 8.8]. The concept of materiality is discussed in section 4.1.5 above.

There will be circumstances where a particular event, transaction or other condition is not specifically addressed by IFRS accounting standards. When this is the case, IAS 8 sets out a hierarchy of guidance to be considered in the selection of an accounting policy.

The primary requirement of the standard is that management should use its judgement in developing and applying an accounting policy that results in information that is relevant and reliable. These concepts are further explained in the extract below: [IAS 8.10].

Extract from IAS 8

- 10 In the absence of an IFRS that specifically applies to a transaction, other event or condition, management shall use its judgement in developing and applying an accounting policy that results in information that is:**
- (a) relevant to the economic decision-making needs of users; and**
 - (b) reliable, in that the financial statements:**
 - (i) represent faithfully the financial position, financial performance and cash flows of the entity;**
 - (ii) reflect the economic substance of transactions, other events and conditions, and not merely the legal form;**
 - (iii) are neutral, ie free from bias;**
 - (iv) are prudent; and**
 - (v) are complete in all material respects.**

Prudence and neutrality are not defined or otherwise discussed by IAS 8. They are, however, discussed in the IASB's *Conceptual Framework* as follows (see Chapter 2 for a discussion of the *Conceptual Framework* and specifically Chapter 2 for a discussion regarding faithful representation).

A neutral depiction is one without bias in the selection or presentation of financial information. A neutral depiction is not slanted, weighted, emphasised, de-emphasised or otherwise manipulated to increase the probability that financial information will be received favourably or unfavourably by users. That is not to imply that neutral information has no purpose or no influence on behaviour. On the contrary, relevant financial information is, by definition, capable of making a difference in users' decisions. [CF 2.15].

The *Conceptual Framework* has a discussion of the word 'prudence', the exercise of which is considered by the Board to support neutrality. The IASB considers prudence to be the exercise of caution when making judgements under conditions of uncertainty. This is said to mean that:

- Assets and income are not overstated and liabilities and expenses are not understated
But also that
- The exercise of prudence does not allow for the understatement of assets or income or the overstatement of liabilities or expenses. Such misstatements can lead to the overstatement or understatement of income or expenses in future periods. [CF 2.16].

The standard gives guidance regarding the primary requirement for exercising judgement in developing and applying an accounting policy. This guidance is divided into two categories - certain things which management is required to consider, and others which it 'may' consider, as follows.

In making its judgement, management *shall* refer to, and consider the applicability of, the following sources in descending order:

- (a) The requirements and guidance in IFRS accounting standards dealing with similar and related issues
And
- (b) The definitions, recognition criteria and measurement concepts for assets, liabilities, income and expenses in the *Conceptual Framework* [IAS 8.11]

In making this judgement, management *may* also consider:

- The most recent pronouncements of other standard-setting bodies that use a similar conceptual framework to develop accounting standards
- Other accounting literature
And
- Accepted industry practices, to the extent that these do not conflict with the sources in (a) and (b) above [IAS 8.12]

How we see it

If an entity considers pronouncements of other standard-setting bodies in making its judgement in developing and applying an accounting policy, it must consider all the contents of the pronouncements that are relevant to the issue. In other words, it cannot adopt a selective or 'cherry-picking' approach.

In an agenda decision of March 2011, the IFRS IC noted the following: "The Committee observed that when management develops an accounting policy through analogy to an IFRS dealing with similar and related matters, it needs to use its judgement in applying all aspects of the IFRS that are applicable to the particular issue." The IFRS IC concluded that the issue of developing accounting policies by analogy requires no further clarification, so did not add the matter to its agenda.

4.4 Changes in accounting policies

4.4.1 Basic principles

As discussed in section 4.1.4 above, consistency of accounting policies and presentation is a basic principle in both IAS 1 and IAS 8. Accordingly, IAS 8 only permits a change in accounting policies if the change:

- (a) Is required by an IFRS accounting standard
Or
- (b) Results in the financial statements providing reliable and more relevant information about the effects of transactions, other events or conditions on the entity's financial position, financial performance or cash flows [IAS 8.14]

IAS 8 addresses changes of accounting policy arising from three sources:

- (a) The initial application (including early application) of an IFRS accounting standard containing specific transitional provisions
- (b) The initial application of an IFRS accounting standard which does not contain specific transitional provisions
And
- (c) Voluntary changes in accounting policy

Policy changes under (a) should be accounted for in accordance with the specific transitional provisions of that IFRS accounting standard.

A change of accounting policy under (b) or (c) should be applied retrospectively, that is applied to transactions, other events and conditions as if it had always been applied. [IAS 8.5, IAS 8.19, IAS 8.20]. The standard explains that retrospective application requires adjustment of the opening balance of each affected component of equity for the earliest prior period presented and the other comparative amounts disclosed for each prior period presented, as if the new accounting policy had always been applied. [IAS 8.22]. The standard observes that the amount of the resulting adjustment relating to periods before those presented in the financial statements (which is made to the opening balance of each affected component of equity of the earliest prior period presented) will usually be made to retained earnings. However, it goes on to note that the adjustment may be made to another component of equity (for example, to comply with an IFRS accounting standard). IAS 8 also makes clear that any other information about prior periods, such as historical summaries of financial data, should be also adjusted. [IAS 8.26].

In its March 2019 meeting, the IFRS IC acknowledged that circumstances exist where an entity might determine that it needs to change an accounting policy as a result of an agenda decision issued by the IFRS IC. Articles 8.5 and 8.6 of the *Due Process Handbook* were subsequently updated in August 2020; they acknowledge that explanatory material may provide additional insights that may change an entity's understanding of the principles and requirements of the standards. They explain that as explanatory material derives its authority from the standards themselves, an entity is required to reflect the explanatory material in an agenda decision, as it is thereby applying the standard itself. It follows from the above that as the authority for an agenda decision is derived from the standards themselves, any resulting change in accounting policy falls to be required by an IFRS accounting standard, rather than being a voluntary change. [IAS 8.14].

The discussion also addressed the timing of such a change in accounting policy, stating the following: "The Board expects that an entity would be entitled to sufficient time to make that determination and implement any change (for example, an entity may need to obtain new information or adapt its systems to implement a change)." ⁶ The appropriate time period for implementation may vary from entity to entity. The *Due Process Handbook* explains this as follows: "Determining how much time is sufficient to make an accounting policy change is a matter of judgement that depends on an entity's particular facts and circumstances." ⁷

Frequently it will be straightforward to apply a change in accounting policy retrospectively. However, the standard accepts that sometimes it may be impractical to do so. Accordingly, retrospective application of a change in accounting policy is not required to the extent that it is impracticable to determine either the period-specific effects or the cumulative effect of the change. [IAS 8.23]. This is discussed further in section 4.7 below. As noted in section 4.3 above, in the absence of a specifically applicable IFRS accounting standard an entity may apply an accounting policy from the most recent pronouncements of another standard-setting body that use a similar conceptual framework. The standard makes clear that a change in accounting policy reflecting a change in such a pronouncement is a voluntary change in accounting policy which should be accounted for and disclosed as such. [IAS 8.21]. The standard also clarifies that a change in measurement basis is a change in an accounting policy, and not a change in an accounting estimate. However, when it is difficult to distinguish a change in an accounting policy from a change in an accounting estimate, the standard requires it to be treated as a change in an accounting estimate, as discussed in section 4.5 below. [IAS 8.35].

The standard explains that the following are not changes in accounting policy:

- The application of an accounting policy for transactions, other events or conditions that differ in substance from those previously occurring
- And
- The application of a new accounting policy for transactions, other events or conditions that did not occur previously or were immaterial [IAS 8.16]

4.4.2 The revaluation exception

As an exception to the principle, the standard requires that a change to a policy of revaluing intangible assets or property plant and equipment, in accordance with IAS 38 and IAS 16 respectively, is not to be accounted for under IAS 8 as a change in accounting policy. Rather, such a change should be dealt with as a revaluation in accordance with the relevant standards (discussed in Chapters 18 and Chapter 19). [IAS 8.17, IAS 8.18]. What this means is that it is not permissible to restate prior periods for the carrying value and depreciation charge of the assets concerned.

4.5 Changes in accounting estimates

The making of estimates is a fundamental feature of financial reporting. An accounting policy may require items to be measured in a way that involves measurement uncertainty; in other words, it may require items to be measured at monetary amounts that cannot directly be observed and must instead be estimated. If this is the case, the entity must develop an accounting estimate which achieves the objective set out in the accounting policy. Developing estimates involves the use of judgements or assumptions based on the latest available, reliable information. [IAS 8.32]. IAS 8 notes that the use of reasonable estimates is an essential part of the preparation of financial statements and it does not undermine their reliability. [IAS 8.33].

⁶ [IFRIC Update](#), March 2019, available on the IFRS Foundation's website.

⁷ IFRS Foundation *Due Process Handbook*, August 2020, para. 8.6.

Examples of estimates given by the standard are:

- Loss allowances for expected credit losses
 - The net realisable value of inventory
 - The fair value of assets or liabilities
 - The depreciation expense for property, plant and machinery
- And
- Provisions for warranty obligations [IAS 8.32]

There are many other examples, some of the more subjective relating to share-based payments and post-retirement benefits.

The standard observes that measurement techniques and inputs used to develop an accounting estimate encompass both estimation techniques (for example, techniques used to measure a loss allowance) and valuation techniques (for example, techniques used to measure the fair value of an asset or liability). [IAS 8.32A]. It also notes that the term 'estimate' is used elsewhere in IFRS accounting standards to refer to an input used in developing an accounting estimate, rather than referring to the accounting estimate itself. [IAS 8.32B].

Accounting estimates may need to change if changes occur in the circumstances on which they are based or as a result of new information, new developments or more experience. The standard observes that, by its nature, a change in an accounting estimate does not relate to prior periods and is not the correction of an error. [IAS 8.34]. Furthermore, the effects on an accounting estimate of a change in an input or a change in a measurement technique are changes in accounting estimates unless they result from the correction of prior period errors. [IAS 8.34A].

IAS 8 requires that changes in estimate be accounted for prospectively; defined as recognising the effect of the change in the accounting estimate in the current and future periods affected by the change. [IAS 8.5, IAS 8.36]. The standard goes on to explain that this will mean (as appropriate):

- Adjusting the carrying amount of an asset, liability or item of equity in the statement of financial position in the period of change
- And
- Recognising the change by including it in profit and loss in:
 - The period of change, if it affects that period only (for example, a change in a loss allowance for expected credit losses)
- Or
- The period of change and future periods, if it affects both (for example, a change in estimated useful life of a depreciable asset or the expected pattern of consumption of the economic benefits embodied in it) [IAS 8.36, IAS 8.37, IAS 8.38]

The implementation guidance to IAS 8 presents two examples illustrating the application of the definition of accounting estimates; these are reproduced as Illustrations 4-1 and 4-2 below.

Illustration 4-1: Applying the definition of accounting estimates - Fair value of an investment property

Fact pattern

Entity A owns an investment property that it accounts for by applying the fair value model in IAS 40 *Investment Property*. Since it acquired the investment property, Entity A has been measuring the investment property's fair value using a valuation technique consistent with the income approach described in IFRS 13.

However, because of changes in market conditions since the previous reporting period, Entity A changes the valuation technique it uses to a valuation technique consistent with the market approach described in IFRS 13. Entity A has concluded that the resulting measurement is more representative of the investment property's fair value in the circumstances existing at the end of the current reporting period and, therefore, that IFRS 13 permits such a change. Entity A has also concluded that the change in the valuation technique is not a correction of a prior period error.

Applying the definition of accounting estimates

The fair value of the investment property is an accounting estimate because:

- (a) The fair value of the investment property is a monetary amount in the financial statements that is subject to measurement uncertainty. Fair value reflects the price that would be received or paid in a hypothetical sale or purchase transaction between market participants- accordingly, it cannot be observed directly and must instead be estimated.
- (b) The fair value of the investment property is an output of a measurement technique (a valuation technique) used in applying the accounting policy (fair value model).
- (c) In developing its estimate of the fair value of the investment property, Entity A uses judgements and assumptions, for example, in:
 - Selecting the measurement technique - selecting the valuation technique that is appropriate in the circumstances
 And
 - Applying the measurement technique - developing the inputs that market participants would use in applying the valuation technique, such as information generated by market transactions involving comparable assets

In this fact pattern, the change in the valuation technique is a change in the measurement technique applied to estimate the fair value of the investment property. The effect of this change is a change in an accounting estimate because the accounting policy - to measure the investment property at fair value - has not changed.

Illustration 4-2: Applying the definition of accounting estimates - Fair value of a cash-settled share-based payment liability

Fact pattern

On 1 January 20X2, Entity A grants 100 share appreciation rights (SARs) to each of its employees, provided the employee remains in the entity's employment for the next three years. The SARs entitle the employees to a future cash payment based on the increase in the entity's share price over the three-year vesting period starting on 1 January 20X2.

Applying IFRS 2 *Share-based Payment*, Entity A accounts for the grant of the SARs as cash-settled share-based payment transactions - in doing so it recognises a liability for the SARs and measures that liability at its fair value (as defined by IFRS 2). Entity A applies the Black-Scholes-Merton formula (an option pricing model) to measure the fair value of the liability for the SARs at 1 January 20X2 and at the end of the reporting period.

At 31 December 20X3, because of changes in market conditions since the end of the previous reporting period, Entity A changes its estimate of the expected volatility of the share price - an input to the option pricing model - in estimating the fair value of the liability for the SARs at that date. Entity A has concluded that the change in that input is not a correction of a prior period error.

Applying the definition of accounting estimates

The fair value of the liability is an accounting estimate because:

- (a) The fair value of the liability is a monetary amount in the financial statements that is subject to measurement uncertainty. That fair value is the amount for which the liability could be settled in a hypothetical transaction - accordingly, it cannot be observed directly and must instead be estimated.

- (b) The fair value of the liability is an output of a measurement technique (option pricing model) used in applying the accounting policy (measuring a liability for a cash-settled share-based payment at fair value).
- (c) To estimate the fair value of the liability, Entity A uses judgements and assumptions, for example, in:
 - Selecting the measurement technique-selecting the option pricing model
 And
 - Applying the measurement technique-developing the inputs that market participants would use in applying that option pricing model, such as the expected volatility of the share price and dividends expected on the shares

In this fact pattern, the change in the expected volatility of the share price is a change in an input used to measure the fair value of the liability for the SARs at 31 December 20X3. The effect of this change is a change in accounting estimate because the accounting policy-to measure the liability at fair value - has not changed.

4.6 Correction of errors

As with all things, financial reporting is not immune to error and sometimes financial statements can be published which, whether by accident or design, contain errors. IAS 8 defines prior period errors as omissions from, and misstatements in, an entity's financial statements for one or more prior periods (including the effects of mathematical mistakes, mistakes in applying accounting policies, oversights or misinterpretations of facts, and fraud) arising from a failure to use, or misuse of, reliable information that:

- (a) Was available when financial statements for those periods were authorised for issue
- And
- (b) Could reasonably be expected to have been obtained and taken into account in the preparation and presentation of those financial statements [IAS 8.5]

Errors can arise in respect of the recognition, measurement, presentation or disclosure of elements of financial statements. IAS 8 states that financial statements do not comply with IFRS accounting standards if they contain errors that are:

- (a) Material
- Or
- (b) Immaterial but are made intentionally to achieve a particular presentation of an entity's financial position, financial performance or cash flows [IAS 8.41]

The concept in (b) is a little curious. As discussed in section 4.1.5 above, an error is material if it could influence the economic decisions of users taken on the basis of the financial statements. It would be rare to find a scenario where an entity would deliberately seek to misstate its financial statements to achieve a particular presentation of its financial position, performance or cash flows but only in such a way that did not influence the decisions of users. IAS 8 notes that potential current period errors detected before the financial statements are authorised for issue should be corrected in those financial statements. This requirement is phrased so as to apply to all potential errors, not just material ones. [IAS 8.41]. The standard notes that corrections of errors are distinguished from changes in accounting estimates. Accounting estimates by their nature are approximations that may need revision as additional information becomes known. For example, the gain or loss recognised on the outcome of a contingency is not the correction of an error. [IAS 8.48].

When it is discovered that material prior period errors have occurred, IAS 8 requires that they be corrected in the first set of financial statements prepared after their discovery. [IAS 8.42]. The correction should be excluded from profit or loss for the period in which the error is discovered. Rather, any information presented about prior periods (including any historical summaries of financial data) should be restated as far back as practicable. [IAS 8.46]. This should be done by:

- (a) Restating the comparative amounts for the prior period(s) presented in which the error occurred
- Or
- (b) If the error occurred before the earliest prior period presented, restating the opening balances of assets, liabilities and equity for the earliest prior period presented [IAS 8.42]

This process is described by the standard as retrospective restatement, which it also defines as correcting the recognition, measurement and disclosure of amounts of elements of financial statements as if a prior period error had never occurred. [IAS 8.5].

The implementation guidance accompanying the standard provides an example of the retrospective restatement of errors as follows: [IAS 8.IG1]

Illustration 4-3: Retrospective restatement of errors

During 20X2, Beta Co discovered that some products that had been sold during 20X1 were incorrectly included in inventory at 31 December 20X1 at CU6,500.

Beta's accounting records for 20X2 show sales of CU104,000, cost of goods sold of CU86,500 (including CU6,500 for the error in opening inventory), and income taxes of CU5,250.

In 20X1, Beta reported:

	CU
Sales	73,500
Cost of goods sold	(53,500)
Profit before income taxes	20,000
Income taxes	(6,000)
Profit	14,000

The 20X2 opening retained earnings was CU20,000 and closing retained earnings was CU34,000.

Beta's income tax rate was 30% for 20X2 and 20X1. It had no other income or expenses.

Beta had CU5,000 of share capital throughout, and no other components of equity except for retained earnings. Its shares are not publicly traded and it does not disclose earnings per share.

Beta Co

Extract from the statement of comprehensive income

	20X2	(restated) 20X1
	CU	CU
Sales	104,000	73,500
Cost of goods sold	(80,000)	(60,000)
Profit before income taxes	24,000	13,500
Income taxes	(7,200)	(4,050)
Profit	16,800	9,450

Beta Co

Statement of Changes in Equity

	Share capital	Retained earnings	Total
	CU	CU	CU
Balance at 31 December 20X0	5,000	20,000	25,000
Profit for the year ended 31 December 20X1 as restated	-	9,450	9,450
Balance at 31 December 20X1	5,000	29,450	34,450
Profit for the year ended 31 December 20X2	-	16,800	16,800
Balance at 31 December 20X2	5,000	46,250	51,250

Extracts from the Notes

- Some products that had been sold in 20X1 were incorrectly included in inventory at 31 December 20X1 at CU6,500. The financial statements of 20X1 have been restated to correct this error. The effect of the restatement on those financial statements is summarised below. There is no effect in 20X2.

	Effect on 20X1
	CU
(Increase) in cost of goods sold	(6,500)
Decrease in income tax expense	1,950
(Decrease) in profit	(4,550)
(Decrease) in inventory	(6,500)
Decrease in income tax payable	1,950
(Decrease) in equity	(4,550)

As is the case for the retrospective application of a change in accounting policy, retrospective restatement for the correction of prior period material errors is not required to the extent that it is impracticable to determine either the period-specific effects or the cumulative effect of the error. [IAS 8.43]. This is discussed further in section 4.7 below.

4.7 Impracticability of restatement

As noted in sections 4.4 and 4.6 above, IAS 8 does not require the restatement of prior periods following a change in accounting policy or the correction of material errors if such a restatement is impracticable. The standard devotes a considerable amount of guidance to discussing what 'impracticable' means for these purposes.

The standard states that applying a requirement is impracticable when an entity cannot apply it after making every reasonable effort to do so. It goes on to note that, for a particular prior period, it is impracticable to apply a change in an accounting policy retrospectively or to make a retrospective restatement to correct an error if:

- (a) The effects of the retrospective application or retrospective restatement are not determinable
 - (b) The retrospective application or retrospective restatement requires assumptions about what management's intent would have been in that period
- Or
- (c) The retrospective application or retrospective restatement requires significant estimates of amounts and it is impossible to distinguish objectively information about those estimates that:
 - (i) Provides evidence of circumstances that existed on the date(s) as at which those amounts are to be recognised, measured or disclosed
 - And
 - (ii) Would have been available when the financial statements for that prior period were authorised for issue from other information [IAS 8.5]

An example of a scenario covered by (a) above given by the standard is that in some circumstances it may be impracticable to adjust comparative information for one or more prior periods to achieve comparability with the current period because data may not have been collected in the prior period(s) in a way that allows either retrospective application of a new accounting policy (or its prospective application to prior periods) or retrospective restatement to correct a prior period error, and it may be impracticable to recreate the information. [IAS 8.50].

IAS 8 observes that it is frequently necessary to make estimates in applying an accounting policy and that estimation is inherently subjective, and that estimates may be developed after the reporting period. Developing estimates is potentially more difficult when retrospectively applying an accounting policy or making a retrospective restatement to correct a prior period error, because of the longer period of time that might have passed since the affected transaction, other event or condition occurred.

However, the objective of estimates related to prior periods remains the same as for estimates made in the current period, namely, for the estimate to reflect the circumstances that existed when the transaction, other event or condition occurred. [IAS 8.51]. Hindsight should not be used when applying a new accounting policy to, or correcting amounts for, a prior period, either in making assumptions about what management's intentions would have been in a prior period or estimating the amounts recognised, measured or disclosed in a prior period. For example, if an entity corrects a prior period error in calculating its liability for employees' accumulated sick leave in accordance with IAS 19, it would disregard information about an unusually severe influenza season during the next period that became available after the financial statements for the prior period were authorised for issue. However, the fact that significant estimates are frequently required when amending comparative information presented for prior periods does not prevent reliable adjustment or correction of the comparative information. [IAS 8.53].

Therefore, retrospectively applying a new accounting policy or correcting a prior period error requires distinguishing information that: (a) provides evidence of circumstances that existed on the date(s) as at which the transaction, other event or condition occurred; and (b) would have been available when the financial statements for that prior period were authorised for issue, from other information.

The standard states that for some types of estimates (for example, a fair value measurement that uses significant unobservable inputs), it is impracticable to distinguish these types of information. When retrospective application or retrospective restatement would require making a significant estimate for which it is impossible to distinguish these two types of information, it is impracticable to apply the new accounting policy or correct the prior period error retrospectively. [IAS 8.52].

IAS 8 addresses the impracticability of restatement separately (although similarly) for changes in accounting policy and the correction of material errors.

4.7.1 Impracticability of restatement for a change in accounting policy

When retrospective application of a change in accounting policy is required, the change in policy should be applied retrospectively except to the extent that it is impracticable to determine either the period-specific effects or the cumulative effect of the change. [IAS 8.23]. When an entity applies a new accounting policy retrospectively, the standard requires it to be applied to comparative information for prior periods as far back as is practicable. Retrospective application to a prior period is not practicable for these purposes unless it is practicable to determine the cumulative effect on the amounts in both the opening and closing statement of financial position for that period. [IAS 8.26].

When it is impracticable to determine the period-specific effects of changing an accounting policy on comparative information for one or more prior periods presented:

- The new accounting policy should be applied to the carrying amounts of assets and liabilities as at the beginning of the earliest period for which retrospective application is practicable.
- And
- A corresponding adjustment to the opening balance of each affected component of equity for that period should be made.

The standard notes that this may be the current period. [IAS 8.24].

When it is impracticable to determine the cumulative effect, at the beginning of the current period, of applying a new accounting policy to all prior periods, the standard requires an adjustment to the comparative information to apply the new accounting policy prospectively from the earliest date practicable. [IAS 8.25]. Prospective application is defined by the standard as applying the new accounting policy to transactions, other events and conditions occurring after the date as at which the policy is changed. [IAS 8.5]. This means that the portion of the cumulative adjustment to assets, liabilities and equity arising before that date is disregarded. Changing an accounting policy is permitted by IAS 8 even if it is impracticable to apply the policy prospectively for any prior period. [IAS 8.27].

4.7.2 Impracticability of restatement for a material error

IAS 8 requires that a prior period error should be corrected by retrospective restatement except to the extent that it is impracticable to determine either the period-specific effects or the cumulative effect of the error. [IAS 8.43].

When it is impracticable to determine the period-specific effects of an error on comparative information for one or more prior periods presented, the opening balances of assets, liabilities and equity should be restated for the earliest period for which retrospective restatement is practicable (which the standard notes may be the current period). [IAS 8.44].

When it is impracticable to determine the cumulative effect, at the beginning of the current period, of an error on all prior periods, the comparative information should be restated to correct the error prospectively from the earliest date practicable. [IAS 8.45]. The standard explains that this will mean disregarding the portion of the cumulative restatement of assets, liabilities and equity arising before that date. [IAS 8.47].

5 Disclosure requirements

5.1 Disclosures relating to accounting policies

5.1.1 Disclosure of accounting policies

Material accounting policy information is information which, when considered together with other information included in an entity's financial statements, can reasonably be expected to influence decisions that the primary users of general purpose financial statements make on the basis of those financial statements. [IAS 1.117]. Immaterial accounting policy information must not obscure material information, but there is no outright prohibition on the presentation of immaterial accounting policy information. [IAS 1.117D]. The related requirements of other standards are not affected by a conclusion that accounting policy information is immaterial. [IAS 1.117E].

The standard presents a number of observations about materiality as it relates to accounting policy information which can be summarised as follows:

- Information is more useful if it focuses on how an entity has applied the requirements of IFRS accounting standards to its own circumstances (that is, it is entity-specific) rather than if it is standardised information, or information that only duplicates or summarises the requirements of IFRS accounting standards. [IAS 1.117C].
- Information about immaterial matters is itself immaterial. Accounting policy information may nevertheless be material because of the nature of the related transactions, other events or conditions, even if the amounts are immaterial. [IAS 1.117A].
- Not all accounting policy information relating to material transactions, other events or conditions is itself material. [IAS 1.117A].
- Accounting policy information is expected to be material if users of an entity's financial statements would need it to understand other material information in the financial statements. The standard presents examples of when it is likely that such information should be disclosed; that is when the information relates to material transactions, other events or conditions and: [IAS 1.117B]
 - The entity changed its accounting policy during the period and this change resulted in a material change to the information in the financial statements.
 - The entity chose the accounting policy from one or more options permitted by IFRS accounting standards, for example if the entity chose to measure investment property at historical cost rather than fair value.
 - The accounting policy was developed in accordance with IAS 8 in the absence of an IFRS accounting standard that specifically applies (see section 4.3 above).
 - The accounting policy relates to an area for which an entity is required to make significant judgements or assumptions in applying an accounting policy, and the entity discloses those judgements or assumptions as required by IAS 1 (see section 5.1.1.A below).
 - The accounting required for them is complex and users of the entity's financial statements would otherwise not understand those material transactions, other events or conditions. For example, if an entity applies more than one IFRS accounting standard to a class of material transactions.

How we see it

The requirement to disclose 'material accounting policy information' in IAS 1 requires the application of judgement. The use of boilerplate disclosures for accounting policy information has been observed in practice. Entities can enhance the usefulness of their financial statements by making accounting policy information more entity-specific and reducing the disclosure of immaterial and standardised disclosures.

5.1.1.A Judgements made in applying accounting policies

The process of applying an entity's accounting policies requires various judgements, apart from those involving estimations, that can significantly affect the amounts recognised in the financial statements. For example, judgements are required in determining:

- (a) When substantially all the significant risks and rewards of ownership of financial assets and, for lessors, assets subject to leases are transferred to other entities
- (b) Whether, in substance, particular sales of goods are financing arrangements and therefore do not give rise to revenue
- And
- (c) Whether the contractual terms of a financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding [IAS 1.123]

IAS 1 requires disclosure, along with material accounting policy information or other notes, of the judgements (apart from those involving estimations, see section 5.2.1 below) management has made in the process of applying the entity's accounting policies that have the most significant effect on the amounts recognised in the financial statements. [IAS 1.122].

Some of these disclosures are required by other standards. For example:

- IFRS 12 *Disclosure of Interests in Other Entities*, requires disclosure of the judgements made in determining if control is present.
- IAS 40 requires disclosure of the criteria developed by the entity to distinguish investment property from owner-occupied property and from property held for sale in the ordinary course of business, when classification of the property is difficult. [IAS 1.124].
- IFRS 15 requires disclosures of the judgements made in applying the standard that significantly affect the determination of the amount and timing of revenue from contracts with customers. [IFRS 15.123].

5.1.2 Disclosure of changes in accounting policies

IAS 8 distinguishes between accounting policy changes made pursuant to the initial application of an IFRS and voluntary changes in accounting policy (discussed in section 4.4 above). It sets out different disclosure requirements for each, as set out in sections 5.1.2.A and 5.1.2.B below. Also, if an IFRS accounting standard is in issue but is not yet effective and has not been applied, certain disclosures of its likely impact are required. These are set out in section 5.1.2.C below.

5.1.2.A Accounting policy changes pursuant to the initial application of an IFRS accounting standard

When initial application of an IFRS accounting standard has an effect on the current period or any prior period, would have such an effect except that it is impracticable to determine the amount of the adjustment, or might have an effect on future periods, an entity should disclose:

- (a) The title of the IFRS accounting standard
- (b) When applicable, that the change in accounting policy is made in accordance with its transitional provisions
- (c) The nature of the change in accounting policy
- (d) When applicable, a description of the transitional provisions
- (e) When applicable, the transitional provisions that might have an effect on future periods
- (f) For the current period and each prior period presented, to the extent practicable, the amount of the adjustment:
 - (i) For each financial statement line item affected
 - And
 - (ii) If IAS 33 *Earnings per Share* applies to the entity, for basic and diluted earnings per share
- (g) The amount of the adjustment relating to periods before those presented, to the extent practicable
- And
- (h) If retrospective application required by IAS 8 is impracticable for a particular prior period, or for periods before those presented, the circumstances that led to the existence of that condition and a description of how and from when the change in accounting policy has been applied

Impracticability of restatement is discussed in section 4.7 above. Financial statements of subsequent periods need not repeat these disclosures. [IAS 8.28].

5.1.2.B Voluntary changes in accounting policy

When a voluntary change in accounting policy has an effect on the current period or any prior period, would have an effect on that period except that it is impracticable to determine the amount of the adjustment, or might have an effect on future periods, an entity should disclose:

- (a) The nature of the change in accounting policy
- (b) The reasons why applying the new accounting policy provides reliable and more relevant information
- (c) For the current period and each prior period presented, to the extent practicable, the amount of the adjustment:
 - (i) For each financial statement line item affected
And
 - (ii) If IAS 33 applies to the entity, for basic and diluted earnings per share
- (d) The amount of the adjustment relating to periods before those presented, to the extent practicable
And
- (e) If retrospective application is impracticable for a particular prior period, or for periods before those presented, the circumstances that led to the existence of that condition and a description of how and from when the change in accounting policy has been applied

Impracticability of restatement is discussed in section 4.7 above. Financial statements of subsequent periods need not repeat these disclosures. [IAS 8.29].

5.1.2.C Future impact of a new IFRS accounting standard

When an entity has not applied a new IFRS accounting standard that has been issued but is not yet effective, it should disclose:

- (a) That fact
And
- (b) Known or reasonably estimable information relevant to assessing the possible impact that application of the new IFRS accounting standard will have on the financial statements in the period of initial application [IAS 8.30]

In producing the above disclosure, the standard requires that an entity should consider disclosing:

- (a) The title of the new IFRS accounting standard
- (b) The nature of the impending change or changes in accounting policy
- (c) The date by which application of the IFRS accounting standard is required
- (d) The date as at which it plans to apply the IFRS accounting standard initially
And
- (e) Either:
 - (i) A discussion of the impact that initial application of the IFRS accounting standard is expected to have on the entity's financial statements
Or
 - (ii) If that impact is not known or reasonably estimable, a statement to that effect [IAS 8.31]

5.2 Disclosure of estimation uncertainty and changes in estimates

5.2.1 Sources of estimation uncertainty

Determining the carrying amounts of some assets and liabilities requires estimation of the effects of uncertain future events on those assets and liabilities at the end of the reporting period. Examples given by IAS 1 are that (in the absence of fair values in an active market for identical items used to measure them) the following assets and liabilities require future-oriented estimates to measure them:

- The recoverable amount of classes of property, plant and equipment
- The effect of technological obsolescence on inventories
- Provisions subject to the future outcome of litigation in progress
And

- Long-term employee benefit liabilities such as pension obligations

These estimates involve assumptions about such items as the risk adjustment to cash flows or discount rates used, future changes in salaries and future changes in prices affecting other costs. [IAS 1.126].

In light of this, IAS 1 requires disclosure of information about the assumptions concerning the future, and other major sources of estimation uncertainty at the end of the reporting period, that have a significant risk of resulting in a material adjustment to the carrying amounts of assets and liabilities within the next financial year. In respect of those assets and liabilities, the notes must include details of:

(a) Their nature

And

(b) Their carrying amount as at the end of the reporting period [IAS 1.125]

IAS 1 goes on to observe that these assumptions and other sources of estimation uncertainty relate to the estimates that require management's most difficult, subjective or complex judgements. As the number of variables and assumptions affecting the possible future resolution of the uncertainties increases, those judgements become more subjective and complex, and the potential for a consequential material adjustment to the carrying amounts of assets and liabilities normally increases accordingly. [IAS 1.127].

The disclosures are required to be presented in a manner that helps users of financial statements to understand the judgements management makes about the future and about other key sources of estimation uncertainty. The nature and extent of the information provided will vary according to the nature of the assumption and other circumstances. Examples given by the standard of the types of disclosures to be made are:

(a) The nature of the assumption or other estimation uncertainty

(b) The sensitivity of carrying amounts to the methods, assumptions and estimates underlying their calculation, including the reasons for the sensitivity

(c) The expected resolution of an uncertainty and the range of reasonably possible outcomes within the next financial year in respect of the carrying amounts of the assets and liabilities affected

And

(d) An explanation of changes made to past assumptions concerning those assets and liabilities, if the uncertainty remains unresolved [IAS 1.129]

The disclosure of some of these key assumptions is required by other standards. IAS 1 notes the following examples:

- IAS 37 requires disclosure, in specified circumstances, of major assumptions concerning future events affecting classes of provisions.

And

- IFRS 13 requires disclosure of significant assumptions (including the valuation technique(s) and inputs) used when measuring the fair values of assets and liabilities (not just financial ones) that are carried at fair value. [IAS 1.133].

Other examples would include:

- IAS 19 requires disclosure of actuarial assumptions.

- IFRS 2 requires disclosure, in certain circumstances, of: the option pricing model used, and the method used and the assumptions made to incorporate the effects of early exercise.

And

- IAS 36 *Impairment of Assets* requires disclosure, in certain circumstances, of each key assumption on which management has based its cash flow projections.

These assumptions and other sources of estimation uncertainty are not required to be disclosed for assets and liabilities with a significant risk that their carrying amounts might change materially within the next financial year if, at the end of the reporting period, they are measured at fair value based on a quoted price in an active market for an identical asset or liability. [IAS 1.128].

Also, it is not necessary to disclose budget information or forecasts in making the disclosures. [IAS 1.130].

Furthermore, the disclosures of particular judgements management made in the process of applying the entity's accounting policies (discussed in section 5.1.1.A above) do not relate to the disclosures of sources of estimation uncertainty. [IAS 1.132].

When it is impracticable to disclose the extent of the possible effects of an assumption or another source of estimation uncertainty at the end of the reporting period, the entity should disclose that it is reasonably possible, based on existing knowledge, that outcomes within the next financial year that are different from assumptions could require a material adjustment to the carrying amount of the asset or liability affected. In all cases, the entity should disclose the nature and carrying amount of the specific asset or liability (or class of assets or liabilities) affected by the assumption. [IAS 1.131].

These requirements of IAS 1 represent potentially highly onerous disclosures. The extensive judgements required in deciding the level of detail to be given has resulted in a wide variety of disclosure in practice. The Basis for Conclusions to the standard reveals that the Board was aware that the requirement could potentially require quite extensive disclosures and explains its attempt to limit this as follows: "IAS 1 limits the scope of the disclosures to items that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year. The longer the future period to which the disclosures relate, the greater the range of items that would qualify for disclosure, and the less specific are the disclosures that could be made about particular assets or liabilities. A period longer than the next financial year might obscure the most relevant information with other disclosures." [IAS 1.BC84]. Careful judgement will be required to provide useful and compliant information without reducing the understandability of the financial statement by obscuring material information with immaterial information.

5.2.2 Changes in accounting estimates

IAS 8 requires disclosure of the nature and amount of a change in an accounting estimate that has an effect in the current period or is expected to have an effect in future periods, except for the disclosure of the effect on future periods when it is impracticable to estimate that effect. [IAS 8.39]. If the amount of the effect in future periods is not disclosed because estimating it is impracticable, that fact should be disclosed. [IAS 8.40].

5.3 Disclosure of prior period errors

When correction has been made for a material prior period error, IAS 8 requires disclosure of the following:

- (a) The nature of the prior period error
- (b) For each prior period presented, to the extent practicable, the amount of the correction:
 - (i) For each financial statement line item affected
And
 - (ii) If IAS 33 applies to the entity, for basic and diluted earnings per share
- (c) The amount of the correction at the beginning of the earliest prior period presented
And
- (d) If retrospective restatement is impracticable for a particular prior period, the circumstances that led to the existence of that condition and a description of how and from when the error has been corrected

In relation to retrospective adjustments and restatements, IAS 1 explains that they are not changes in equity, but simply adjustments to the opening balance of retained earnings or to another component of equity, if that is required by a specific IFRS accounting standard. IAS 1 builds on the disclosure requirements of IAS 8 by requiring that the effects of retrospective application or retrospective restatement are included for each component of equity affected - in other words, adjustments from changes in accounting policies and those arising from the correction of errors should be disclosed separately. [IAS 1.106(b), IAS 1.110].

Financial statements of subsequent periods need not repeat these disclosures. [IAS 8.49]. Illustration 4-1 in section 4.5 above illustrates these disclosure requirements.

5.4 Disclosures about capital

5.4.1 General capital disclosures

The IASB believes that the level of an entity's capital and how it manages it are important factors for users to consider in assessing the risk profile of an entity and its ability to withstand unexpected adverse events. Furthermore, the level of capital might also affect the entity's ability to pay dividends. [IAS 1.BC86]. For these reasons, IAS 1 requires disclosure of information that enables users of financial statements to evaluate an entity's objectives, policies and processes for managing capital. [IAS 1.134].

To achieve this, IAS 1 requires disclosure of the following, which should be based on the information provided internally to the entity's key management personnel: [IAS 1.135]

- (a) Qualitative information about its objectives, policies and processes for managing capital, including:
 - (i) A description of what it manages as capital
 - (ii) When an entity is subject to externally imposed capital requirements, the nature of those requirements and how those requirements are incorporated into the management of capital
And
 - (iii) How it is meeting its objectives for managing capital
- (b) Summary quantitative data about what it manages as capital
Some entities regard some financial liabilities (for example, some forms of subordinated debt) as part of capital. Other entities regard capital as excluding some components of equity (for example, components arising from cash flow hedges)
- (c) Any changes in (a) and (b) from the previous period
- (d) Whether during the period it complied with any externally imposed capital requirements to which it is subject
And
- (e) When the entity has not complied with such externally imposed capital requirements, the consequences of such non-compliance

IAS 1 observes that capital may be managed in a number of ways and be subject to a number of different capital requirements. For example, a conglomerate may include entities that undertake insurance activities and banking activities, and those entities may also operate in several jurisdictions. When an aggregate disclosure of capital requirements and how capital is managed would not provide useful information or distorts a financial statement user's understanding of an entity's capital resources, the standard requires disclosure of separate information for each capital requirement to which the entity is subject. [IAS 1.136].

Illustrations 5-1 and 5-2 below are based on the illustrative examples of capital disclosures contained in the implementation guidance accompanying IAS 1. [IAS 1.IG10, IAS 1.IG11].

Illustration 5-1: Illustrative capital disclosures: An entity that is not a regulated financial institution

The following example illustrates the application of the requirements discussed above for an entity that is not a financial institution and is not subject to an externally imposed capital requirement. In this example, the entity monitors capital using a debt-to-adjusted capital ratio. Other entities may use different methods to monitor capital. The example is also relatively simple. An entity should decide, in the light of its circumstances, how much detail to provide.

Facts

Group A manufactures and sells cars. It includes a finance subsidiary that provides finance to customers, primarily in the form of leases. Group A is not subject to any externally imposed capital requirements.

Example disclosure

The Group's objectives when managing capital are:

- To safeguard the entity's ability to continue as a going concern, so that it can continue to provide returns for shareholders and benefits for other stakeholders
And
- To provide an adequate return to shareholders by pricing products and services commensurately with the level of risk

The Group sets the amount of capital in proportion to risk. The Group manages the capital structure and makes adjustments to it in the light of changes in economic conditions and the risk characteristics of the underlying assets. In order to maintain or adjust the capital structure, the Group may adjust the amount of dividends paid to shareholders, return capital to shareholders, issue new shares, or sell assets to reduce debt.

Consistently with others in the industry, the Group monitors capital on the basis of the debt-to-adjusted capital ratio. This ratio is calculated as net debt ÷ adjusted capital. Net debt is calculated as total debt (as shown in the statement of financial position) less cash and cash equivalents. Adjusted capital comprises all components of equity (i.e., share capital, share premium, non-controlling interests, retained earnings, and revaluation surplus) other than amounts accumulated in equity relating to cash flow hedges, and includes some forms of subordinated debt.

During 20X2, the Group's strategy, which was unchanged from 20X1, was to maintain the debt-to-adjusted capital ratio at the lower end of the range 6:1 to 7:1, in order to secure access to finance at a reasonable cost by maintaining a BB credit rating. The debt-to-adjusted capital ratios at 31 December 20X2 and at 31 December 20X1 were as follows:

	20X2	20X1
	CU million	CU million
Total debt	1,000	1,100
Less: cash and cash equivalents	(90)	(150)
Net debt	910	950
Total equity	110	105
Add: subordinated debt instruments	38	38
Less: amounts accumulated in equity relating to cash flow hedges	(10)	(5)
Adjusted capital	138	138
Debt-to-adjusted capital ratio	6.6	6.9

The decrease in the debt-to-adjusted capital ratio during 20X2 resulted primarily from the reduction in net debt that occurred on the sale of subsidiary Z. As a result of this reduction in net debt, improved profitability and lower levels of managed receivables, the dividend payment was increased to CU2.8 million for 20X2 (from CU2.5 million for 20X1).

Illustration 5-2: Illustrative capital disclosures: An entity that has not complied with externally imposed capital requirements

The following example illustrates the application of the requirement to disclose when an entity has not complied with externally imposed capital requirements during the period. Other disclosures would be provided to comply with the other requirements relating to capital.

Facts

Entity A provides financial services to its customers and is subject to capital requirements imposed by Regulator B. During the year ended 31 December 20X2, Entity A did not comply with the capital requirements imposed by Regulator B. In its financial statements for the year ended 31 December 20X2, Entity A provides the following disclosure relating to its non-compliance.

Example disclosure

Entity A filed its quarterly regulatory capital return for 30 September 20X2 on 20 October 20X2. At that date, Entity A's regulatory capital was below the capital requirement imposed by Regulator B by CU1 million. As a result, Entity A was required to submit a plan to the regulator indicating how it would increase its regulatory capital to the amount required. Entity A submitted a plan that entailed selling part of its unquoted equities portfolio with a carrying amount of CU11.5 million in the fourth quarter of 20X2. In the fourth quarter of 20X2, Entity A sold its fixed interest investment portfolio for CU12.6 million and met its regulatory capital requirement.

5.4.2 Puttable financial instruments classified as equity

IAS 32 allows certain liabilities called 'puttable financial instruments' to be classified as equity. 'Puttable financial instrument' is a term defined and discussed at length in IAS 32 (see Chapter 43). The IASB observes that "Financial instruments classified as equity usually do not include any obligation for the entity to deliver a financial asset to another party. Therefore, the Board concluded that additional disclosures are needed in these circumstances." [IAS 1.BC100B].

The required disclosure for puttable financial instruments classified as equity instruments is as follows:

- (a) Summary quantitative data about the amount classified as equity
- (b) Its objectives, policies and processes for managing its obligation to repurchase or redeem the instruments when required to do so by the instrument holders, including any changes from the previous period
- (c) The expected cash outflow on redemption or repurchase of that class of financial instruments
And
- (d) Information about how the expected cash outflow on redemption or repurchase was determined [IAS 1.136A]

5.5 Disclosures about non-current liabilities arising from loan arrangements with covenants

IAS 1 requires the disclosure of information about non-current liabilities arising from loan arrangements with covenants, that enables users of the financial statements to understand the risk that those liabilities could become repayable within twelve months of the reporting period (see section 3.1.4 above).

Specifically, an entity must disclose:

- Information about the covenants, including the nature of the covenants and when the entity is required to comply with them
- The carrying amount of the liabilities related to the covenants
- Facts and circumstances, if any, which indicate that the entity may have difficulty complying with the covenants. [IAS 1.76ZA]

When assessing which facts and circumstances may need to be disclosed, factors an entity may wish to consider are:

- Whether it has acted to avoid or mitigate a potential breach, either during or after the reporting period
- Whether it would have complied with a covenant, had that covenant been tested based on circumstances at the end of the reporting period.

5.6 Other disclosures

IAS 1 also requires disclosure:

- (a) In the notes of: [IAS 1.137]
 - (i) The amount of dividends proposed or declared before the financial statements were authorised for issue but not recognised as a distribution to owners during the period, and the related amount per share
And
 - (ii) The amount of any cumulative preference dividends not recognised
- (b) In accordance with IAS 10 *Events after the Reporting Period*, the following non-adjusting events, if they occur between the end of the reporting period and the date the financial statements are authorised for issue (see Chapter 34): [IAS 1.76]
 - (i) Refinancing on a long-term basis of a liability classified as current
 - (ii) Rectification of a breach of a long-term loan arrangement classified as current
 - (iii) The granting by the lender of a period of grace to rectify a breach of a long-term loan arrangement classified as current
And
 - (iv) Settlement of a liability classified as non-current.
- (c) The following, if not disclosed elsewhere in information published with the financial statements: [IAS 1.138]
 - (i) The domicile and legal form of the entity, its country of incorporation and the address of its registered office (or principal place of business, if different from the registered office)
 - (ii) A description of the nature of the entity's operations and its principal activities
 - (iii) The name of the parent and the ultimate parent of the group
And
 - (iv) If it is a limited life entity, information regarding the length of its life

6 Future developments

The IASB is pursuing a number of matters which relate to the subjects discussed in this chapter.

The Board groups its projects into four categories: standard-setting, maintenance, research and application questions. We discuss below the current projects relevant to this chapter under these headings.⁸

6.1 Standard-setting projects

6.1.1 Management commentary

In November 2017, the Board added a project to its agenda to revise and update IFRS Practice Statement 1 - *Management Commentary* - issued in 2010 (see section 2.3 above). In undertaking the project, the Board decided to consider how broader financial reporting could complement and support financial statements prepared using IFRS accounting standards. To support the Board's work on updating the Practice Statement, the Board established the Management Commentary Consultative Group. The revised Practice Statement was issued in June 2025.⁹

6.1.2 IFRS 18 *Presentation and Disclosure in Financial Statements*

IFRS 18 *Presentation and Disclosure in Financial Statements* (IFRS 18), a new IFRS accounting standard, was published in April 2024. It addresses presentation and disclosure in financial statements and replaces IAS 1. While much of IAS 1 is carried forward to the new standard with only limited wording changes, IFRS 18 introduces several new requirements:

- Classification of all income and expense in the statement of profit or loss into five categories, three of which are new
- Presentation of two new mandatory subtotals
- Mandatory disclosures about a sub-set of alternative performance measures ('management-defined performance measures' or 'MPMs') in a single note to the financial statements
- Enhanced guidance on the aggregation, location and labelling of information in the primary financial statements and the notes
- Some requirements currently included within IAS 1 have been moved (mostly unchanged) to IAS 8 and, to a much lesser extent, to IFRS 7. IFRS 18, once effective, also makes narrow scope amendments to other IFRS accounting standards including:
 - IAS 7
 - IAS 33
 - IAS 34

The new requirements are expected to impact how most, if not all, reporting entities communicate financial statement information, both in the primary financial statements and in the notes and are discussed in detail in Chapter 4 of this publication.

6.1.3 IFRS 19 *Subsidiaries without Public Accountability: Disclosures*

In May 2024, the IASB issued IFRS 19 *Subsidiaries without Public Accountability: Disclosures*, which allows eligible entities to elect to apply the reduced disclosure requirements of IFRS 19, while still applying the recognition, measurement and presentation requirements in other IFRS accounting standards. The application of the standard is optional for eligible entities and is effective for reporting periods beginning on or after 1 January 2027. See Chapter 4 for further details on the requirements of IFRS 19.

Overview

IFRS 18

This chapter discusses the new requirements of IFRS 18 *Presentation and Disclosure in Financial Statements*, an IFRS® Accounting Standard, addressing presentation and disclosure in financial statements, applicable for periods beginning on or after 1 January 2027. IFRS 18, once effective, will replace IAS 1 *Presentation of Financial Statements*.

While much of IAS 1 will be carried forward to the new standard with only limited wording changes, IFRS 18 introduces several new requirements that are expected to impact the presentation and disclosure of most, if not all, entities. These new requirements include:

- Requirements to classify all income and expenses included in the statement of profit or loss into one of five categories (three being new) and to present two new mandatory subtotals (see section 3 below).
- Required disclosures about certain non-GAAP measures ('management-defined performance measures' or 'MPMs'), in a single note to the financial statements (see section 4 below).
- Enhanced guidance on the aggregation and disaggregation of information across all the primary financial statements and the notes (see section 2 below).

To implement these requirements, it is expected that entities will need to make changes to their data collection processes, information systems and their financial statement close process. In some cases, the requirements are also expected to trigger revisiting of remuneration policies and debt covenants that are currently linked to IAS 1 profit or loss metrics, which will require negotiations with relevant stakeholders. [IFRS 18.BC415]. It is likely that identifying MPMs, and providing the required disclosure, will necessitate more collaboration between an entity's financial reporting, legal and investor relations teams (among others) than is currently the norm. These measures will now generally be subject to audit and increased regulatory scrutiny.

The focus of this chapter is on the new requirements. The requirements carried forward from IAS 1 substantially unchanged will only be addressed if necessary to explain the context of the new requirements.¹

IFRS 18, once effective, will also make narrow scope, but widely applicable, consequential amendments to other standards including:

- IAS 7 *Statement of Cash Flows* (see section 5.1 below), which will both:
 - Require the use of 'operating profit or loss' as the mandatory starting point for entities using the indirect method
 - Largely remove the current optionality for classifying cash flows from interest and dividends
- IAS 8 *Accounting Policies, Changes in Accounting Estimates and Errors*² (see section 5.2 below), which will contain some requirements currently included within IAS 1
- IAS 33 *Earnings per Share* (see section 5.3 below), which will:
 - Restrict the types of additional earnings per share measures that entities are permitted to disclose
- IAS 34 *Interim Financial Statements* (see section 5.4 below), which will:
 - Require the same MPM-related disclosures in interim financial statements as required in annual financial statements

IFRS 18 and the consequential amendments to other IFRS accounting standards, which must be adopted at the same time, are effective for periods beginning on or after 1 January 2027 and apply fully retrospectively. The transitional provisions specifically require a reconciliation between the presentation of the statement of profit or loss under IAS 1 and IFRS 18 for certain comparative periods and also set out requirements for the interim financial statements in the first year of adoption. Earlier application is permitted and will need to be disclosed (see section 6 below).

¹ For guidance on IAS 1, see Chapter 3.

² The consequential amendments, once effective, changes the title of IAS 8 to '*Basis of Preparation of Financial Statements*' to better reflect the amended content of IAS 8.

How we see it

While there might appear to be ample time before the effective date of IFRS 18, entities are strongly encouraged to determine the impact of the new requirements. Management needs to plan ahead as the transition process could require considerable time and involve a combination of resources.

Although the impact of the new requirements might vary between entities, IFRS 18 is expected to impact all entities, across all industries and to affect other areas of the financial statements, not just the statement of profit or loss.

The views expressed in this chapter represent EY's perspectives as of September 2025. As the focus of this edition continues to be on the new requirements of IFRS 18, we have added frequently asked questions, covering a range of issues relating to all aspects of those new requirements. Additional issues may be identified as we continue to analyse the application of IFRS 18 and the related consequential amendments to other IFRS accounting standards, and our views may evolve during that process.

IFRS 19

Section 8 below summarises the overarching concept of IFRS 19 *Subsidiaries without Public Accountability: Disclosures*, which allows eligible entities to elect to provide reduced disclosures when they apply the recognition, measurement and presentation requirements in other IFRS accounting standards.

The application of the standard is optional for eligible entities. IFRS 19 is applicable for periods beginning on or after 1 January 2027.

What you need to know

IFRS 18

- IFRS 18 replaces IAS 1 and responds to investor demand for better information about an entity's financial performance.
- IFRS 18 sets out general and specific requirements for the presentation of financial statements and for disclosures in the notes.
- The new requirements of the standard include:
 - Required totals, subtotals and new categories for all income and expenses included in the statement of profit or loss
 - Disclosure of management-defined performance measures (MPMs)
 - Enhanced guidance on the grouping (aggregation and disaggregation), description (labelling) and location of information
- Limited, but widely applicable, amendments have been made to other IFRS accounting standards, most notably IAS 7, IAS 33 and IAS 34.
- Some requirements previously included in IAS 1 have been moved to IAS 8, and that standard has been renamed.
- IFRS 18, and the consequential amendments to other standards, are effective for reporting periods beginning on or after 1 January 2027, with earlier application permitted.
- Retrospective application is required in both annual and interim financial statements along with specified reconciliations for certain comparative periods.
- Although the impact of the new requirements may vary between entities, IFRS 18 is expected to impact all entities, across all industries.

IFRS 19

- IFRS 19 enables eligible entities, that elect to apply the standard, to provide reduced disclosures compared to the requirements in other IFRS accounting standards.
- Eligible entities are subsidiaries without public accountability, whose parent prepares consolidated financial statements available for public use that comply with IFRS accounting standards.
- Entities that elect IFRS 19 are still required to apply the recognition, measurement and presentation requirements of other IFRS accounting standards.
- IFRS 19 is effective for reporting periods beginning on or after 1 January 2027, with earlier application permitted.

1 Introduction - IFRS 18

In April 2024, the International Accounting Standards Board (the IASB or the Board) published a new IFRS accounting standard on presentation and disclosure in financial statements. IFRS 18 marks the culmination of the IASB's Primary Financial Statements project, running since 2014, whose objective was to improve communication in financial statements.

Once effective, the new standard replaces IAS 1 and some requirements currently included within IAS 1 are moved to IAS 8 (which was also renamed *Basis of Preparation of Financial Statements* - see section 5.2 below) and to a much lesser extent, IFRS 7 *Financial Instruments: Disclosures*. Narrow scope consequential amendments have been made to other IFRS accounting standards including:

- IAS 7 (see section 5.1 below)
- IAS 33 (see section 5.3 below)
- IAS 34 (see section 5.4 below)

IFRS 18 and the consequential amendments to other IFRS accounting standards are effective for periods beginning on or after 1 January 2027; earlier application is permitted and will need to be disclosed (see section 6 below).

While IFRS 18 represents a major overhaul of the requirements relating to the presentation and disclosure of information in financial statements, many of the existing requirements in IAS 1 are carried forward substantially unchanged. This is because the IASB has chosen to focus on targeted improvements designed to address the three key concerns expressed by users of financial statements (hereafter 'users'), being:

[IFRS 18.BC3]

- 1) Subtotals in the statement of profit or loss are not sufficiently comparable across reporting entities
- 2) The transparency and understandability of non-GAAP measures needs to be improved
And
- 3) The aggregation and disaggregation requirements had not been consistently understood or applied, leading to the omission of information that users need and the obscuring of material information

Key new requirements in IFRS 18 intended to address these concerns include:

- Mandatory subtotals and categories of income and expense in the statement of profit or loss, as well as new requirements for the disclosure of operating expenses (see section 3 below)
- Disclosures about management-defined performance measures (or MPMs) in the financial statements (see section 4 below)
- Enhanced requirements for the aggregation, disaggregation and location of information presented in the primary financial statements and disclosed in the notes, as well as guidance on providing informative labels (see section 2 below)

While many of the requirements in IAS 1 are carried over to IFRS 18 substantially unchanged, the language and the format of the standard have been updated. For example, in line with the general structure of more recent IFRS accounting standards, both the definitions and the application guidance have been moved out of the main body of the standard to appendices.

This chapter deals with the key new requirements in IFRS 18 and key consequential amendments in other IFRS accounting standards that could impact the financial statements for most reporting entities.

How we see it

The adoption of the new standard provides an opportunity for entities reporting under IFRS accounting standards to revisit their communication strategy in the financial statements in general and especially for financial performance. We expect that the new requirements will improve both comparability and transparency of financial statements prepared in accordance with IFRS accounting standards.

To implement IFRS 18, it is likely that entities will need to update their financial statement close process and make changes to their information systems. Management needs to plan ahead as the transition process could require considerable time.

It is likely that identifying management-defined performance measures, and providing the required disclosure, will necessitate significantly more collaboration between the entity's financial reporting, legal and investor relations teams, among others, than is currently the norm in practice.

1.1 Objective and scope

The objective of IFRS 18 is the same as for its predecessor: to help ensure that general purpose financial statements (hereafter ‘financial statements’) provide users with relevant information that faithfully represents the reporting entity’s assets, liabilities, equity, income and expenses. The standard must be applied by all entities that prepare financial statements in accordance with IFRS accounting standards.

[IFRS 18.1, IFRS 18.2].

IFRS 18 sets out general requirements for financial statements and general principles for aggregation and disaggregation (see section 2.2 below). It includes specific requirements for the presentation of information in the statement(s) of financial performance, the statement of financial position and the statement of changes in equity as well as for the disclosure of information in the notes to financial statements (see section 2.1 below). [IFRS 18.3]. IFRS 18 also includes requirements for the descriptions (or labels) of line items presented in the financial statements or items disclosed in the notes (see section 2.3 below).

Furthermore, IFRS 18 introduces requirements to classify all income and expenses, included in the statement of profit or loss, into categories and to present certain mandatory subtotals (see section 3 below). IFRS 18 also requires disclosures about certain non-GAAP measures (‘management-defined performance measures’ or ‘MPMs’) to be included in a single note to the financial statements (see section 4 below).

The standard clarifies that “Other IFRS Accounting Standards set out the recognition, measurement, presentation and disclosure requirements for specific transactions and other events”. [IFRS 18.4].

The presentation and disclosure requirements for information in the statement of cash flows are still contained in IAS 7. However, IFRS 18 is now explicit that the general requirements for financial statements, the principles of aggregation and disaggregation and some requirements relating to disclosures in the notes in IFRS 18 also apply to the statement of cash flows (see section 2 below). [IFRS 18.3]. Furthermore, as explained in section 5.1 below, some narrow scope amendments have been made to IAS 7.

The requirements in IFRS 18 apply to consolidated and separate financial statements, but they are not generally applicable to the presentation and disclosure of information in condensed interim financial statements prepared in accordance with IAS 34 (discussed in section 5.4 below). However, the principles of aggregation and disaggregation (see section 2.2 below), as well as the requirements relating to MPMs, (see section 4 below) do apply to such interim condensed financial statements. [IFRS 18.5]. The impact on interim financial reporting during the year of adoption is discussed in section 6.1 below.

1.2 New terms, definitions, and labels

Some of the terms in IFRS 18 differ from those in IAS 1. For example, IFRS 18 refers to a ‘statement of financial performance’, whereas IAS 1 refers to a ‘statement of profit or loss and other comprehensive income’. [IFRS 18.10(a)].

The standard uses the term ‘statement of profit or loss’ to refer both to the profit or loss section of a single performance statement and to a separate statement of profit or loss. [IFRS 18.13(a)]. In a similar way, the standard uses the term ‘statement presenting comprehensive income’ to refer both to the other comprehensive income section in a single performance statement and a separate statement presenting comprehensive income. [IFRS 18.13(b)].

IFRS 18 introduces the concept of ‘primary financial statements’, encompassing:

- The statement of financial performance
- The statement of financial position
- The statement of changes in equity
- And
- The statement of cash flows

A complete set of financial statements, therefore, comprises the primary financial statements and the notes. [IFRS 18.10, IFRS 18.11].

A key change in the use of language in the standard is reflected in its title, which refers both to ‘presentation’ and ‘disclosure’. The standard now differentiates between ‘presentation’ and ‘disclosure’ (see section 2 below) and explains that “an entity presents information in the primary financial statements and discloses information in the notes”. This is in contrast to IAS 1, which mostly used the terms interchangeably. [IFRS 18.15].

Following the establishment of the International Sustainability Standards Board (ISSB), the IASB has introduced a new term of reference for the body of standards, to distinguish them from IFRS Sustainability Disclosure Standards, issued by its sister board. The standards are to be referred to as 'IFRS Accounting Standards' rather than 'International Financial Reporting Standards, IFRS, IFRSs or IFRS Standards'. [IFRS 18 Appendix A].

Extract from IFRS 18

Appendix A

Defined terms

IFRS Accounting Standards	Accounting standards issued by the International Accounting Standards Board. They comprise: (a) International Financial Reporting Standards; (b) International Accounting Standards; (c) IFRIC Interpretations; and (d) SIC Interpretations. IFRS Accounting Standards were previously known as International Financial Reporting Standards, IFRS, IFRSs and IFRS Standards.
----------------------------------	---

Consequential amendments have been made to references to IFRS, IFRSs or IFRS Standards in some, but not all, other IFRS Accounting Standards to reflect this change. [IFRS 18.BC425].

IAS 8 requires an explicit and unreserved statement of compliance with 'IFRS Accounting Standards' in the notes. [IAS 8.6B].

How we see it

The *IFRS Foundation Trade Mark Guidelines*³ state that the set of Accounting Standards issued by the IASB must be referred to as 'IFRS Accounting Standards' and that 'IFRS' or 'IFRSs' cannot be used. Once IFRS 18 is effective, entities are required to refer to the set of standards and interpretations issued by the IASB as IFRS Accounting Standards.

In the meantime, entities ought to consider referring to 'IFRS Accounting Standards' when making the compliance statement in accordance with IAS 1.16 in order to explicitly differentiate between the information disclosed under IFRS Accounting Standards and IFRS Sustainability Disclosure Standards.

We acknowledge that local regulators could require otherwise, in which case, the local requirements must be complied with.

In either case, the reference to the accounting framework must be the same in both the financial statements and the auditor's opinion.

1.3 The identification of financial statements

Like IAS 1, IFRS 18 requires an entity to "clearly identify the financial statements and distinguish them from other information in the same published document". [IFRS 18.25]. The related application guidance has been updated to allow for the differing requirements of financial statements provided electronically, now stating that if "an entity provides the financial statements electronically, an entity considers other ways to meet the requirements - for example, by appropriate digital tagging of information provided in the financial statements". [IFRS 18.B10].

³ [IFRS Foundation® Trade Mark Guidelines](#). Available on the IFRS Foundation's website.

2 Roles, aggregation and labelling – IFRS 18

The IASB sets out the objective of financial statements, as follows: [IFRS 18.9]

Extract from IFRS 18

Objective of financial statements

- 9 The objective of financial statements is to provide financial information about a reporting entity's assets, liabilities, equity, income and expenses that is useful to users of financial statements in assessing the prospects for future net cash inflows to the entity and in assessing management's stewardship of the entity's economic resources.

To achieve the objective of financial statements, the primary financial statements and the notes have distinct and complementary roles in providing financial information to users. For such information to be useful, it needs to be appropriately aggregated and labelled, without obscuring material information.

IFRS 18 defines the roles of the financial statements and provides additional guidance (compared to that previously included in IAS 1) to assist entities in determining how best to present and label summarised (or aggregated) information in the primary financial statements and disclose material detailed (or disaggregated) information in the notes. All three aspects are discussed in more detail in the sub-sections below.

IFRS 18 differentiates between 'presenting' information in the primary financial statements and 'disclosing' it in the notes and introduces a principle for determining the location of information based on identified 'roles' of the primary financial statements and the notes (see section 2.1 below).

The Board stated that the materiality requirements apply equally to all requirements to present or disclose information. Information is either material (and, therefore, contributes to the objective of financial statements) or it is not material (and, therefore, is not required). As such, the materiality requirements set out whether information is required to be provided by an entity, not where in the financial statements to include that information. [IFRS 18.BC53].

IFRS 18 requires an entity to aggregate and disaggregate information with reference to similar and dissimilar characteristics while keeping in mind the roles of the primary financial statements and the notes (see section 2.2 below).

To represent an item faithfully, IFRS 18 requires an entity to provide all the descriptions and explanations necessary for a user to understand the item. It also includes guidance on determining informative labels in order to provide useful information (see section 2.3 below). For example, the use of the term "other" is generally *not* considered to provide useful information.

2.1 The roles of the primary financial statements and the notes

The Board observed that users pay more attention to information presented in the primary financial statements and use it more often compared to information disclosed in the notes. [IFRS 18.BC45]. Therefore, in order to meet the objective of financial statements, an entity 'presents' summarised (or aggregated) information in the primary financial statements and 'discloses' more detailed (or disaggregated) information in the notes. That said, an entity is only required to present or disclose material information,⁴ as IFRS accounting standards do not apply to immaterial items. [IFRS 18.15].

The distinct and complementary roles of the primary financial statements and the notes are as follows: [IFRS 18.16, IFRS 18.17]

⁴ Refer to IFRS 18.19 and IFRS 18.B1-B5.

Extract from IFRS 18

- 16** The role of the primary financial statements is to provide structured summaries of a reporting entity's recognised assets, liabilities, equity, income, expenses and cash flows, that are useful to users of financial statements for:
- (a) obtaining an understandable overview of the entity's recognised assets, liabilities, equity, income, expenses and cash flows;
 - (b) making comparisons between entities, and between reporting periods for the same entity; and
 - (c) identifying items or areas about which users of financial statements may wish to seek additional information in the notes.
- 17** The role of the notes is to provide material information necessary:
- (a) to enable users of financial statements to understand the line items presented in the primary financial statements (see paragraph B6); and
 - (b) to supplement the primary financial statements with additional information to achieve the objective of financial statements (see paragraph B7).

Since the primary financial statements serve as a useful structured summary, they are more prominent than information disclosed in the notes. However, this does not mean the information disclosed in the notes is secondary to, or less important than, information presented in the primary financial statements. The notes have a different role from the primary financial statements both in digital⁵ and paper-based reporting. Understanding those respective roles helps an entity determine where to provide particular information in the financial statements. [IFRS 18.BC49].

This difference in roles between the primary financial statements and the notes means that there will also be a difference in the extent of the information required in the notes compared to that in the primary financial statements. Specifically: [IFRS 18.18]

- (a) In order to serve as a structured summary, the primary financial statements will, by design, provide more summarised, or aggregated, information than that provided in the notes
And
- (b) In order to provide material information, the notes will need to contain more detailed and disaggregated information about the entity's assets, liabilities, equity, income, expenses and cash flows than information in the primary financial statements

2.1.1 Information presented in the primary financial statements

An entity needs to assess what material information to present in its primary financial statements to meet their role of providing a useful structured summary. [IFRS 18.21].

IFRS 18 distinguishes between: [IFRS 18.41]

- **An 'item'**
An item is an asset, liability, equity instrument or reserve, income, expense or cash flow or any aggregation or disaggregation of such assets, liabilities, equity, income, expenses or cash flows
And
- **A 'line item'**
A line item is an item that is presented separately in the primary financial statements

All material information cannot be presented in (or on the face of) the primary financial statements as too many line items would clutter the primary financial statements, thereby making it difficult for users to obtain an understandable overview of the entity's assets, liabilities, equity, income, expenses and cash flows. An entity is required to consider its specific facts and circumstances to determine what information will provide an understandable overview to users, while avoiding clutter. [IFRS 18.BC54].

All the aspects of the role of the primary financial statements, set out in IFRS 18.16 (see section 2.1 above), help an entity to determine whether or not to present an item as a line item in its primary financial statements in order to contribute to a useful structured summary. This is shown in the following Illustration based on an example included in the *Basis for Conclusion* to IFRS 18: [IFRS 18.BC55]

⁵ Refer to IFRS 18.BC62-BC63.

Illustration 2-1: Determining whether or not to present a line item based on the aspects of the role of the primary financial statements

Assume an entity undertakes a major restructuring during the reporting period and concludes that information about that restructuring is material.

In determining whether to present a line item for 'restructuring expenses' in the statement of profit or loss, the entity needs to consider whether such a line item contributes to a 'useful structured summary' by helping users to:

(a) Obtain an understandable overview of the entity's expenses for the period

Separate presentation of the restructuring expenses could help users understand an increase in total operating expenses for the current period.

(b) Make comparisons between entities or between reporting periods

Separately presenting the restructuring expenses, since they lack persistence, could make other line items more comparable to the amounts presented by this entity in prior periods as well as to amounts presented by other entities, thereby aiding trend analysis by users.

Or

(c) Identify items or areas about which users might wish to seek additional information in the notes

When the notes include additional information about restructuring expenses, presenting these expenses separately on the face of the primary financial statements (and including a cross-reference to the related note) could draw users' attention to that additional information.

Some IFRS accounting standards contain specific requirements for presentation in the primary financial statements. The Board noted that, in some cases, an entity will need to assess whether applying these requirements will result in a useful structured summary. However, the Board concluded that certain requirements will always be necessary for the primary financial statements to provide useful structured summaries. For example, the requirements to classify income and expenses into categories and present the totals and subtotals specified in IFRS 18 in the statement of profit or loss (see section 3 below).

[IFRS 18.BC56].

The standard, therefore, lists the specific requirements, as follows: [IFRS 18.22]

Extract from IFRS 18

- 22 To provide a useful structured summary in a primary financial statement, an entity shall comply with specific requirements that determine the structure of the statement. The specific requirements are:**
- (a) for the statement of profit or loss-the requirements in paragraphs 47, 69, 76 and 78;**
 - (b) for the statement presenting comprehensive income-the requirements in paragraphs 86-88;**
 - (c) for the statement of financial position-the requirements in paragraphs 96 and 104;**
 - (d) for the statement of changes in equity-the requirements in paragraph 107; and**
 - (e) for the statement of cash flows-the requirements in paragraph 10 of IAS 7.**

Section 3 below addresses the new requirements IFRS 18, in (a) above, for the structure of the statement of profit or loss.

The requirements in (b)-(e) of the extract above have been brought over from IAS 1 mostly unchanged, aside from certain narrow-scope amendments, including:

- Replacing the term 'reliable and more relevant' with 'a useful structured summary' when referring to presentation of the statement of financial position based on the order of liquidity [IFRS 18.96]
- Including 'goodwill' in the list of line items to be presented in the statement of financial position (previously IAS 1.54) [IFRS 18.103(d)]

These changes are not further discussed in this chapter. For guidance on the requirements currently included in IAS 1, see Chapter 3.

2.1.1.A Required line items

Extract from IFRS 18

- 103 An entity shall present in the statement of financial position line items for:
- (a) property, plant and equipment;
 - (b) investment property;
 - (c) intangible assets;
 - (d) goodwill;
 - (e) financial assets (excluding amounts shown under (g), (j) and (k));
 - (f) portfolios of contracts within the scope of IFRS 17 that are assets, disaggregated as required by paragraph 78 of IFRS 17;
 - (g) investments accounted for using the equity method;
 - (h) biological assets within the scope of IAS 41 *Agriculture*;
 - (i) inventories;
 - (j) trade and other receivables;
 - (k) cash and cash equivalents;
 - (l) the total of assets classified as held for sale and assets included in disposal groups classified as held for sale in accordance with IFRS 5;
 - (m) trade and other payables;
 - (n) provisions;
 - (o) financial liabilities (excluding amounts shown under (m) and (n));
 - (p) portfolios of contracts within the scope of IFRS 17 that are liabilities, disaggregated as required by paragraph 78 of IFRS 17;
 - (q) liabilities and assets for current tax, as defined in IAS 12;
 - (r) deferred tax liabilities and deferred tax assets, as defined in IAS 12; and
 - (s) liabilities included in disposal groups classified as held for sale in accordance with IFRS 5.

[IFRS 18.103].

Some IFRS accounting standards, including IFRS 18, require specific line items to be presented separately in the primary financial statements (e.g., IFRS 18.75 - see section 3.4 below - and IFRS 18.103 in the extract above). The Board concluded that an entity is not required to present such line items in one of the primary financial statements, if those line items are not necessary for that statement to provide a useful structured summary. This applies even where an IFRS accounting standard describes the presentation of the line item as a minimum requirement. [IFRS 18.23, IFRS 18.B8, IFRS 18.BC57].

The outcome of these changes is that, despite the requirement for specified line items, IFRS 18 has effectively introduced a two-step approach to determining which of these line items to present:

Step 1: Assess which required line items are material

Step 2: Assess whether presentation of the material required line items is necessary to present a useful structured summary

However, if an entity concludes it does not need to present a line item specifically required by IFRS accounting standards separately in the primary financial statements, it still needs to disclose that item in the notes, unless it is immaterial. For example, if an entity concludes that presenting 'impairment losses' determined under IFRS 9 *Financial Instruments* is not necessary to provide a useful structured summary of the entity's income and expenses, the entity is still required to disclose those losses in the notes, unless that information is immaterial. [IFRS 18.B8, IFRS 18.BC58].

How we see it

The interaction between the line item required by IFRS accounting standards, materiality guidance and the useful structured summary concept involves some nuances that might not always be easy to reflect in practice.

Thus, determining whether to present or disclose information in, or to exclude information from, the financial statements will, in some cases, involve difficult judgements.

2.1.1.B Additional line items and additional subtotals

The standard specifies that an entity presents additional subtotals and line items if they are necessary to provide a useful structured summary in the primary financial statements. [IFRS 18.B9, IFRS 18.BC59]. However, the standard restricts the type of additional line items or subtotals by including the following requirements: [IFRS 18.24]

Extract from IFRS 18

- 24** An entity shall present additional line items and subtotals if such presentations are necessary for a primary financial statement to provide a useful structured summary. When an entity presents additional line items or subtotals, those line items or subtotals shall (see paragraph B9):
- (a) comprise amounts recognised and measured in accordance with IFRS Accounting Standards;
 - (b) be compatible with the statement structure created by the requirements listed in paragraph 22;
 - (c) be consistent from period to period, in accordance with paragraph 30; and
 - (d) be displayed no more prominently than the totals and subtotals required by IFRS Accounting Standards.

While IAS 1⁶ included similar requirements for additional *subtotals*, IFRS 18 has extended the requirements to apply to additional line items presented in the primary financial statements. IFRS 18.24(a), therefore, requires both additional line items and additional subtotals to be made up of amounts recognised and measured “in accordance with IFRS Accounting Standards”. However, neither IFRS 18, nor the Basis for Conclusion to IFRS 18, further explain what is meant by “in accordance with IFRS Accounting Standards”.

⁶ Refer to IAS 1.55A and IAS 1.85A.

Frequently asked questions

Question 2-1: Is it acceptable to present separately realised and unrealised gains and losses on financial instruments at fair value through profit or loss?

In some industries, such as asset management, realised and unrealised gains and losses are an important metric. Moreover, regulatory requirements in certain jurisdictions and some national GAAPs require the presentation of realised and unrealised gains in particular circumstances. However, IFRS accounting standards do not define the terms 'realised' and 'unrealised', nor is there any specific guidance on how to calculate such amounts. In the absence of a definition or specific guidance, the question arises as to whether realised and unrealised gains are permitted to be disaggregated and presented separately in the statement of profit or loss, that is, whether such a line item would:

- (a) Meet the disaggregation criteria for line items in the statement of profit or loss to contribute to a useful structured summary [IFRS 18.41(c), IFRS 18.B78]

And

- (b) Constitute an amount "recognised and measured in accordance with IFRS Accounting Standards" [IFRS 18.24(a)]

(a) Disaggregation criteria

The IFRS 18 disaggregation requirements entail explicit consideration of the similar and dissimilar characteristics of income and expenses, and the standard is clear that a single dissimilar characteristic could be sufficient to make disaggregated information material. [IFRS 18.B22]. Whether a gain or loss is 'realised' or 'unrealised' constitutes a characteristic and while not specifically listed in IFRS 18.B78, this characteristic may provide material information to a reader about the degree of uncertainty associated with the gain or loss.

However, all material disaggregated information cannot be presented as line items in the primary financial statements and the standard requires an entity to use its judgement to determine if disaggregation into a separate line item is required for the statement of profit or loss to provide a useful structured summary. [IFRS 18.41(c), IFRS 18.B78]. The standard also requires an entity to disaggregate items in order to disclose material information in the notes. [IFRS 18.41(d), IFRS 18.B78]. Therefore, if an entity concludes that separate presentation of unrealised gains and losses does not meet the criteria to be presented as a line item, separate disclosure in the notes could still be required if the resulting information is material, even in cases where there is no specific disclosure requirement to do so.

(b) In accordance with IFRS accounting standards

It is clear that the total gains and losses for the current period on instruments held at fair value through profit or loss are recognised and measured in accordance with IFRS accounting standards; while there is no guidance on how to separate this total gain or loss into its 'realised' and 'unrealised' components, it is not explicitly or implicitly precluded. As noted above, IFRS 18 does not explain what is meant by "in accordance with IFRS Accounting Standards", but it follows that an accounting policy appropriately developed under IAS 8 is by definition in accordance with IAS 8. Therefore, it is in accordance with IFRS accounting standards, which may suggest that separate presentation of 'realised' and 'unrealised' gains or losses does not conflict with IFRS 18.24(a).

In that case, since IFRS accounting standards do not provide specific guidance on how to determine the unrealised portion of a gain or loss, an entity would need to develop an accounting policy under IAS 8 to determine the current period unrealised gain or loss if it believes that such disaggregated information is material, either for the purpose of presentation or disclosure. In developing such a policy, entities must consider the requirements in other standards dealing with similar and related issues, for instance, the requirement to disclose the amount of current period fair value gains and losses attributable to the change in unrealised gains or losses for fair value measurements categorised (as a whole) within Level 3 of the fair value hierarchy, in paragraph 93(f) of IFRS 13 *Fair Value Measurement*.

How we see it

Since IFRS accounting standards, including IFRS 18, do not provide specific guidance on whether separate presentation of 'realised' and 'unrealised' components of gains or losses may be appropriate, different practices may develop. It is important to consider the regulatory requirements in the different jurisdictions in which the entity operates, as there may be specific requirements to be followed. For instance, in certain industries in certain jurisdictions, local regulation requires separate presentation of the 'realised' and 'unrealised' components.

Furthermore, we believe that judgement must be applied to determine whether the separate presentation of realised and unrealised gains and losses contributes to a useful structured summary. If it does, the entity must:

- Label the line item accurately
- And
- Disclose its accounting policy for determining which gains and losses are realised and unrealised, to clarify the basis of the presentation.

The requirement in IFRS 18.24(b) above, not previously included in IAS 1, limits the inclusion of additional line items and additional subtotals in the primary financial statements to those that fit the specified structure of that particular primary financial statement, as set out in IFRS 18.22 (see section 2.1.1 above). For example, a subtotal representing 'gross profit net of income taxes' mixes the operating and income tax categories, and would, therefore, conflict with the requirement. The requirement in IFRS 18.24(c) above indicates that an entity's use of additional line items and additional subtotals must be retained from one reporting period to the next unless a change in presentation is warranted.

These requirements for additional subtotals and line items are meant to supplement the requirements for fair presentation previously included in IAS 1, that have now been moved to IAS 8 (see section 5.2 below). [IFRS 18.BC61].

2.1.2 Information disclosed in the notes

An entity is required to provide the information necessary for users to understand the line items presented on the face of the primary financial statements, and to include this information in the notes.

IFRS 18 provides the following examples of such information: [IFRS 18.B6]

- (a) Disaggregation of the line items presented in the primary financial statements
- (b) Descriptions of the characteristics of the line items presented in the primary financial statements
- And
- (c) Information about the methods, assumptions and judgements used in order to recognise, measure and present the items included in the primary financial statements

Similarly, an entity is required to supplement the primary financial statements by providing the additional information necessary to achieve the objective of financial statements. In other words: [IFRS 18.B7]

- (a) The information specifically required by an IFRS accounting standard
 - For example:
 - (i) Information about an entity's unrecognised contingent assets and contingent liabilities required by IAS 37 *Provisions, Contingent Liabilities and Contingent Assets*
 - And
 - (ii) Information about an entity's exposure to the various types of risks, such as credit risk, liquidity risk and market risk required by IFRS 7
 - And
 - (b) Additional information required for a user's understanding
- Like IAS 1, IFRS 18 requires an entity to consider whether additional information needs to be provided when the specific requirements in IFRS accounting standards are insufficient to enable users to understand the effect of transactions and other events and conditions on the entity's financial position and financial performance. [IFRS 18.20].

As explained in section 2.1.1.A above, IFRS 18 clarifies that an entity is not required to present a specific line item or make a disclosure required by an IFRS accounting standard if that information is not material. This is the case even if that IFRS accounting standard contains a list of specific requirements or describes them as minimum requirements. [IFRS 18.19].

2.1.3 Cross references between the primary financial statements and the notes

IFRS 18, like IAS 1, requires an entity to cross-reference each item in the primary financial statements to any related information in the notes. However, an amount disclosed in a note is often included in one or more line items in the primary financial statements. In such cases, IFRS 18 adds a requirement to disclose in that note the line item(s) in the primary financial statements in which the amounts are included.

[IFRS 18.114].

This signposting in both directions ensures that users understand how amounts disclosed in the notes relate to the line items presented in the primary financial statements. [IFRS 18.BC324].

How we see it

We believe that the new requirement to cross refer from the notes to the primary financial statements, when amounts disclosed in the notes are included in one or more lines in the primary financial statements, will improve the transparency of financial statements for users and make it easier for them to understand how amounts disclosed in the notes link to those presented in the primary financial statements.

2.2 Aggregation and disaggregation

Financial statements are the result of processing large numbers of transactions and other events. These transactions and other events give rise to assets, liabilities, equity, income, expenses and cash flows.

[IFRS 18.B16]. The effective reporting of these assets, liabilities, equity, income, expenses and cash flows (which result from large numbers of transactions and other events) necessarily requires aggregating some, or in fact most, of the individual amounts into items that are material to users before presenting and disclosing these amounts within the financial statements.

IFRS 18 requires an entity to aggregate and disaggregate information with reference to similar and dissimilar characteristics, while keeping in mind the roles of the primary financial statements and the notes. The application guidance sets out that items aggregated and presented as line items in the primary financial statements must have “at least one similar characteristic other than meeting the definition of assets, liabilities, equity, income, expenses, or cash flows.” [IFRS 18.B21]. However, since the role of the primary financial statements is to provide a useful structured summary, the line items in the primary financial statements will, by design, aggregate items that have sufficiently dissimilar characteristics, such that disaggregated information about the aggregated items is likely to be material and will, therefore, need to be disclosed in the notes (see section 2.1.2 above).

IFRS 18 defines aggregation, disaggregation and classification, as follows: [IFRS 18 Appendix A]

Extract from IFRS 18

Appendix A

Defined terms

aggregation	The adding together of assets, liabilities, equity, income, expenses or cash flows that share characteristics and are included in the same classification.
classification	The sorting of assets, liabilities, equity, income, expenses and cash flows based on shared characteristics.
disaggregation	The separation of an item into component parts that have characteristics that are not shared.

Aggregation and disaggregation of information requires an entity to avoid both:

- Omitting useful information by providing insufficient detail
- And
- Obscuring information by providing too much detail

To illustrate, on one hand, an entity's total assets, total liabilities, total equity, total income, total expenses and total cash flows obviously provides information about the entity's financial position, financial performance and cash flows, but this information is too aggregated to be useful on its own. On the other hand, disaggregated information about individual transactions or other events provides detailed information but can be so detailed that it obscures material information. Therefore, an entity needs to apply judgement to determine how much detail is necessary to provide useful information. [IFRS 18.BC73].

2.2.1 Principles of aggregation and disaggregation

Unless it overrides specific aggregation or disaggregation requirements in IFRS accounting standards, an entity is required to: [IFRS 18.41]

- (a) Classify and aggregate assets, liabilities, equity, income, expenses or cash flows into items based on shared characteristics
- (b) Disaggregate items based on dissimilar characteristics
- (c) Aggregate or disaggregate items into line items that are presented in the primary financial statements so that they provide useful structured summaries (see section 2.1 above)
- (d) Aggregate or disaggregate items in order to disclose material information in the notes (see section 2.2 above)
- And
- (e) Ensure that the aggregation and disaggregation of information in the financial statements do not obscure material information

Applying the principles above, an entity shall disaggregate items whenever the resulting information is material; and where the application of (c) above results in an entity not presenting material information in the primary financial statements, it shall disclose that material information in the notes. [IFRS 18.42].

To assist entities in applying the principles of aggregation and disaggregation, the Board decided to provide application guidance on: [IFRS 18.BC74]

- (a) The process involved in deciding whether to aggregate or disaggregate information (discussed below)
- (b) The basis of aggregation and disaggregation (including the characteristics of assets, liabilities, equity, income and expenses to consider in assessing whether items have dissimilar characteristics) (see section 2.2.2 below)

And

- (c) The description of items presented or disclosed (see section 2.3 below)

The Board replaced the requirements for aggregation and disaggregation in IAS 1, including a requirement for an entity to present separately each 'material class of similar items', with the principles of aggregation and disaggregation in IFRS 18. Entities are now required to aggregate and disaggregate items based both on their characteristics and the roles of the primary financial statements and the notes. That said, the Board expects that an entity would generally conclude that line items previously determined to be a 'material class of items' also contribute to the primary financial statements providing useful structured summaries. [IFRS 18.BC75].

The Board developed the principles of aggregation and disaggregation from the descriptions of 'classification' and 'aggregation' in the *Conceptual Framework for Financial Reporting* (Conceptual Framework). Those descriptions recognise shared characteristics as a condition for classifying and aggregating items. [IFRS 18.BC72].

How we see it

While IFRS 18 includes more guidance on aggregation and disaggregation, including the guidance on the principles of aggregation and disaggregation above, it remains a difficult balance to strike. Entity will need to apply judgement to determine how much detail is necessary to provide useful information, without obscuring material information.

To apply the requirements above, an entity is required to aggregate items based on their shared characteristics (i.e., aggregate items with similar characteristics) and disaggregate items based on characteristics that are not shared (i.e., disaggregate items with dissimilar characteristics). In order to do this, an entity must: [IFRS 18.B17]

- (a) Identify the assets, liabilities, equity, income, expenses and cash flows that arise from individual transactions or other events
- (b) Classify and aggregate the identified assets, liabilities, equity, income, expenses and cash flows into 'items' based on their shared characteristics so that the 'line items' presented in the primary financial statements and the 'items' disclosed in the notes have at least one similar characteristic, in addition to the shared characteristic of meeting the definition of assets, liabilities, equity, income, expenses, or cash flows [IFRS 18.B21]
- And
- (c) Disaggregate items based on dissimilar characteristics:
 - (i) In the primary financial statements, so that the primary financial statements provide useful structured summaries
 - And
 - (ii) In the notes, so that the notes disclose material information

The steps above can be applied in varying order when applying the principles of aggregation and disaggregation. [IFRS 18.B18].

2.2.2 Basis of aggregation and disaggregation

The Board concluded it was not feasible to create a specific disaggregation threshold (such as a mandatory quantitative threshold) that could apply to all entities. Any threshold might conflict with the definition of material information and the requirement for entities to include a qualitative assessment in their materiality judgements. [IFRS 18.BC76]. Therefore, the Board decided to require an entity to aggregate (and disaggregate) assets, liabilities, equity, income, expenses and cash flows from individual transactions and other events based on similar (and dissimilar) characteristics. IFRS 18 is explicit that this process will require an entity to use its judgement. [IFRS 18.B19]. While there is no quantitative threshold, there is a qualitative 'minimum' threshold, in that items that are aggregated and presented as line items in the primary financial statements must share at least one characteristic other than meeting the definition of assets, liabilities, equity, income, expenses or cash flows. [IFRS 18.B21].

The standard states that the more similar the characteristics of assets, liabilities, equity, income, expenses and cash flows are, the more likely it is that aggregating them will fulfil the role of the primary financial statements (i.e., to provide useful structured summaries) or the notes (i.e., to provide material information). Conversely, the more dissimilar the characteristics of assets, liabilities, equity, income, expenses and cash flows are, the more likely it is that disaggregating the items will fulfil the roles of the primary financial statements or the notes. [IFRS 18.B20].

Applying the principles of aggregation and disaggregation, an entity must disaggregate items with dissimilar characteristics when the disaggregated information is material. A single dissimilar characteristic could result in disaggregated information about an item being material. [IFRS 18.B22].

This is shown in the following Illustration based on the example included in the application guidance in IFRS 18: [IFRS 18.B23]

Illustration 2-2: Determining line items and disaggregation in the notes

An entity presents its financial assets, comprising equity investments and debt investments, separately from its non-financial assets in its statement of financial position. In addition to being dissimilar to non-financial assets, these financial assets have dissimilar characteristics when compared to each other because of their different measurement bases (i.e., some are measured at fair value through profit or loss and others at amortised cost).

Assume the entity determined that presenting separate line items for the financial assets based on those measurement bases provides a useful structured summary. This disaggregation results in:

- A line item for equity and debt investments measured at fair value through profit or loss
- And
- A line item for debt investments measured at amortised cost

However, while the equity and debt investments are both measured at fair value, these two types of investments are also dissimilar because equity investments expose the entity to different risks compared to debt investments. The entity would therefore need to assess whether further disaggregation of the financial assets measured at fair value through profit or loss (i.e., into equity investments and debt investments) is needed for the statement of financial position to provide a useful structured summary.

If the entity concludes this further disaggregation is not necessary to fulfil the role of the primary financial statements, it then needs to consider if the disaggregated information is material, and if so, must disclose that disaggregated information in the notes.

If the equity investments, in turn, have other dissimilar characteristics, the entity will need to further disaggregate those equity investments in the notes if the disaggregated information is material.

Frequently asked questions

Question 2-2: How are foreign exchange differences presented within the five categories in the statement of profit or loss?

IFRS 18's requirements on aggregation and disaggregation raise the question of whether it is appropriate to present foreign exchange differences in the same line item as the transaction which gave rise to those differences (e.g., including the foreign exchange differences on a trade payable for inventory within cost of sales line item). Similarly, the requirement to disaggregate items of dissimilar nature raises the question whether the characteristic of a foreign exchange difference is sufficiently dissimilar to warrant separate presentation in all cases.

This is a judgemental area, as the aggregation and disaggregation requirements need to be balanced against the requirement for the statement of profit or loss to present a useful structured summary (see section 2.1 above). The materiality guidance (see IFRS 18.B1-B5) and the requirements in IFRS accounting standards to present specific line items (see section 2.1.1.A above) also need to be considered.

Each entity must consider its own facts and circumstances in coming to an appropriate conclusion. Relevant industry practice could also be a factor.

Regardless of the ultimate presentation, entities with material foreign exchange differences will also need to disclose in the notes in which line item/s in the statement of profit or loss material amounts of foreign exchange differences have been included (see section 2.1.3 above). [IFRS 18.114, IAS 21.52].

2.2.2.A Examples of similar and dissimilar characteristics

The application guidance in IFRS 18 sets out characteristics an entity considers in making the judgements discussed in section 2.2.1 above. The following table provides examples of those characteristics.

[IFRS 18.B19, IFRS 18.B78, IFRS 18.B110].

Characteristics	Examples
Examples relating to <i>both</i> transactions and balances:	
Nature	Transactions: <ul style="list-style-type: none"> ▪ Depreciation of property, plant and equipment ▪ Staff costs Balances: <ul style="list-style-type: none"> ▪ Equity investments ▪ Debt investments
Function (or role) within the activities of the entity	<ul style="list-style-type: none"> ▪ Selling expenses ▪ Distribution expenses ▪ Administrative expenses ▪ Investment property
Measurement basis	<ul style="list-style-type: none"> ▪ Fair value through profit or loss ▪ Amortised cost
Measurement uncertainty, outcome uncertainty or other risks associated with the items	Measurement uncertainty: <ul style="list-style-type: none"> ▪ Estimates, e.g., recoverable amount under IAS 36 <i>Impairment of Assets</i>, lifetime expected credit losses under IFRS 9. Outcome uncertainty: <ul style="list-style-type: none"> ▪ Provision for a legal dispute ▪ Variable consideration
Geographical location or regulatory environment	<ul style="list-style-type: none"> ▪ Property, plant and equipment located in volatile jurisdictions ▪ Jurisdictional requirements for employee benefits
Tax effects	<ul style="list-style-type: none"> ▪ Where different tax rates apply to the items ▪ Where assets or liabilities have a different tax base

**Examples relating to income and expenses
(i.e., related only to transactions):**

Persistence	<ul style="list-style-type: none"> ▪ How frequently the item of income or expense occurs ▪ Whether the item is recurring or non-recurring
Timing of recognition	Income or expenses arising: <ul style="list-style-type: none"> ▪ On initial recognition of an item ▪ From a subsequent change in an estimate relating to the item

**Examples relating to assets, liabilities and items of equity
(i.e., related only to balances):**

Duration and timing of recovery or settlement	<ul style="list-style-type: none"> ▪ Whether the item is classified as current or non-current ▪ Whether the item's recovery or settlement forms part of the entity's operating cycle
Liquidity	<ul style="list-style-type: none"> ▪ Cash ▪ Receivables ▪ Long-term fixed deposits
Type	<ul style="list-style-type: none"> ▪ Type of good ▪ Type of service ▪ Type of customer
Restrictions on the use or transferability the item	<ul style="list-style-type: none"> ▪ Restricted cash ▪ Ring-fenced assets

The standard also lists 'size' as a characteristic for both transactions and balances, but it is not immediately clear if this is meant to refer to only quantitative materiality as neither the standard nor the Basis for Conclusion to the standard expands on this characteristic. The standard does, however, provide more guidance on aggregating immaterial items with material items, or with other immaterial items, and the related impact on labelling such an aggregated item (see section 2.3. below).

IFRS 18 explains that the assessment of whether to present additional line items in the statement of financial position is based on the entity's judgement and its assessment of the nature or function of the assets or liabilities. The examples of characteristics may assist an entity in identifying the relevant nature or function of the assets and liabilities. By requiring the use of nature and function to disaggregate assets and liabilities in the statement of financial position, IFRS 18 retains IAS 1's emphasis on presentation of line items based on the nature and function of assets and liabilities. This emphasis on nature and function in the statement of financial position also aligns with a similar emphasis in the statement of profit or loss.

[IFRS 18.B109, IFRS 18.BC315].

2.2.2.B Examples of items that have sufficiently dissimilar characteristics

The application guidance in IFRS 18 sets out examples of income, expenses, assets, liabilities and items of equity that might have sufficiently dissimilar characteristics that separate presentation in the statement of profit or loss or statement of financial position, or separate disclosure in the notes, will be necessary to provide material information. [IFRS 18.42, IFRS 18.B79, IFRS 18.B111].

Extract from IFRS 18

B79	Income and expenses that might have sufficiently dissimilar characteristics that presentation in the statement of profit or loss is necessary to provide a useful structured summary or disclosure in the notes is necessary to provide material information include: <ol style="list-style-type: none"> write-downs of inventories, as well as reversals of such write-downs; impairment losses for property, plant and equipment, as well as reversals of such impairment losses; income and expenses from restructurings of an entity's activities and reversals of any provisions for restructuring; income and expenses from disposals of property, plant and equipment; income and expenses from disposals of investments; income and expenses from litigation settlements; reversals of provisions; and non-recurring income and expenses not included in (a)-(g).
-----	---

- B111** Assets, liabilities and items of equity that might have sufficiently dissimilar characteristics that presentation in the statement of financial position is necessary to provide a useful structured summary or disclosure in the notes is necessary to provide material information include:
- (a) property, plant and equipment disaggregated into classes in accordance with IAS 16;
 - (b) receivables disaggregated into amounts receivable from trade customers, amounts receivable from related parties, prepayments and other amounts;
 - (c) inventories disaggregated, applying IAS 2, into items such as merchandise, production supplies, materials, work in progress and finished goods;
 - (d) trade payables disaggregated, applying IAS 7, to provide separately the amounts of those payables that are part of supplier finance arrangements;
 - (e) provisions disaggregated according to their nature, such as, provisions for employee benefits, decommissioning liabilities, or other items; and
 - (f) equity capital and reserves disaggregated into various classes, such as paid-in capital, share premium and reserves.

The application guidance is expected to help entities understand the principles of aggregation and disaggregation by illustrating them with some common examples. However, the transactions and balances listed in the extract will not be applicable to all, and they are, therefore, presented as examples rather than an exhaustive list.

2.2.3 Aggregation and disaggregation of operating expenses presented by function

The requirement to aggregate or disaggregate items in order to present line items that provide a useful structured summary in the primary financial statements, discussed in section 2.2 above, applies equally to the presentation of operating expenses by nature or by function (see section 3.4.2 below). The application guidance to IFRS 18 includes the following example in relation to an entity presenting its operating expenses by function. [IFRS 18.B85].

Extract from IFRS 18

Aggregation of operating expenses

- B85** To apply paragraph 78, an entity shall consider what level of aggregation for operating expenses provides the most useful structured summary. For example, an entity might have various administrative activities (such as human resources, information technology, legal and accounting). To provide a useful structured summary, the entity might aggregate operating expenses relating to those activities based on their shared characteristic—all are expenses for resources consumed in administrative activities. Accordingly the entity might present them in a line item labelled as ‘administrative expenses’. The entity might also have expenses for resources consumed in selling activities. These expenses have a dissimilar characteristic from the administrative expenses—selling expenses arise from resources consumed in selling activities and administrative expenses arise from resources consumed in administrative activities. These characteristics are sufficiently dissimilar that disaggregation—presentation in separate line items for selling expenses and administrative expenses—might be necessary to provide a useful structured summary of the entity’s expenses.

However, despite the example included in IFRS18.B85, selling and administrative expenses will not always need to be presented separately. An entity needs to apply the general aggregation and disaggregation requirements when deciding which line items to present in the statement of profit or loss and could, therefore, reach a different, equally valid conclusion, compared to that in the example.

For example, since selling and administrative expenses may share other characteristics, it might be necessary to aggregate these expenses into one line item in certain circumstances to present a useful structured summary. To achieve the latter, the aggregation of individually material items might be required to avoid cluttering the primary financial statements, provided that material information thus aggregated is disclosed in the notes.

In addition, the concept of the ‘useful structured summary’ takes a user perspective. [IFRS 18.16]. An entity must, therefore, apply judgement and might conclude that a user would not find separate line items important for making comparisons or understanding the overview of the results.

2.3 Description of items

IFRS 18 includes requirements for the description of line items presented in the primary financial statements and items disclosed in the notes. This is to ensure that the descriptions used by entities are complete. For example, some entities provide information about 'unusual' income or expense items without explaining why those items are considered to be 'unusual'. [IFRS 18.BC77].

To achieve a faithful representation, an entity needs to provide all the descriptions and explanations that are necessary for a user to understand the item. In some cases, an entity might need to include the meaning of the terms used by the entity in the descriptions and explanations and disclose information about how it has aggregated or disaggregated assets, liabilities, equity, income, expenses and cash flows. For example, if an entity described some items of income or expense as 'unusual', it would need to disclose its definition of 'unusual' items. [IFRS 18.BC78].

Therefore, the Board decided to require an entity to label and describe the items presented in the primary financial statements or disclosed in the notes in a way that faithfully represents the characteristics of those items. [IFRS 18.43].

Such items are often aggregations of individual items arising from transactions or other events. These aggregated items could be made up of individual items for which the information is material, individual items for which the information is immaterial, or a mix of both: [IFRS 18.B24]

(a) A material item is aggregated with other material items

Such an aggregation could be provided to summarise material information. However, the entity would then be required to disclose disaggregated information about each material item.

(b) A material item is aggregated with immaterial items

In this case, an entity would only need to provide disaggregated information about the material item if the immaterial information obscured the material information about that item.

(c) Immaterial items are aggregated with other immaterial items

An entity might provide such an aggregation of immaterial items in order to complete a list of items, or a subtotal. Since items are immaterial, no disaggregated information would be required, subject to the guidance on using the label 'other' discussed below.

2.3.1 Using the label 'other'

Currently, some entities present or disclose a large amount of 'other' income or expenses without explaining what those 'other' items include; this is a matter of concern for users. The Board noted that using the label 'other' for such an aggregation is usually unhelpful and, therefore, it developed the application guidance below to help entities determine a more informative label and provide more useful information. [IFRS 18.B25, IFRS 18.BC79].

Extract from IFRS 18

- B25** An entity shall label items presented or disclosed as 'other' only if it cannot find a more informative label. Examples of how an entity might find a more informative label are:
- (a) if an item for which information is material is aggregated with items for which information is not material, finding a label that describes the item for which information is material; and
 - (b) if items for which information is not material are aggregated:
 - (i) aggregating items that share similar characteristics and describing them in a way that faithfully represents the similar characteristics; or
 - (ii) aggregating items with other items that do not share similar characteristics and describing them in a way that faithfully represents the dissimilar characteristics of the items.

If an entity cannot find a more informative label than 'other': [IFRS 18.B26]

(a) For any aggregation

The entity needs to use a label which describes the aggregated item as precisely as possible (for example, 'other operating expenses' or 'other finance expenses').

(b) For an aggregation comprising only immaterial items

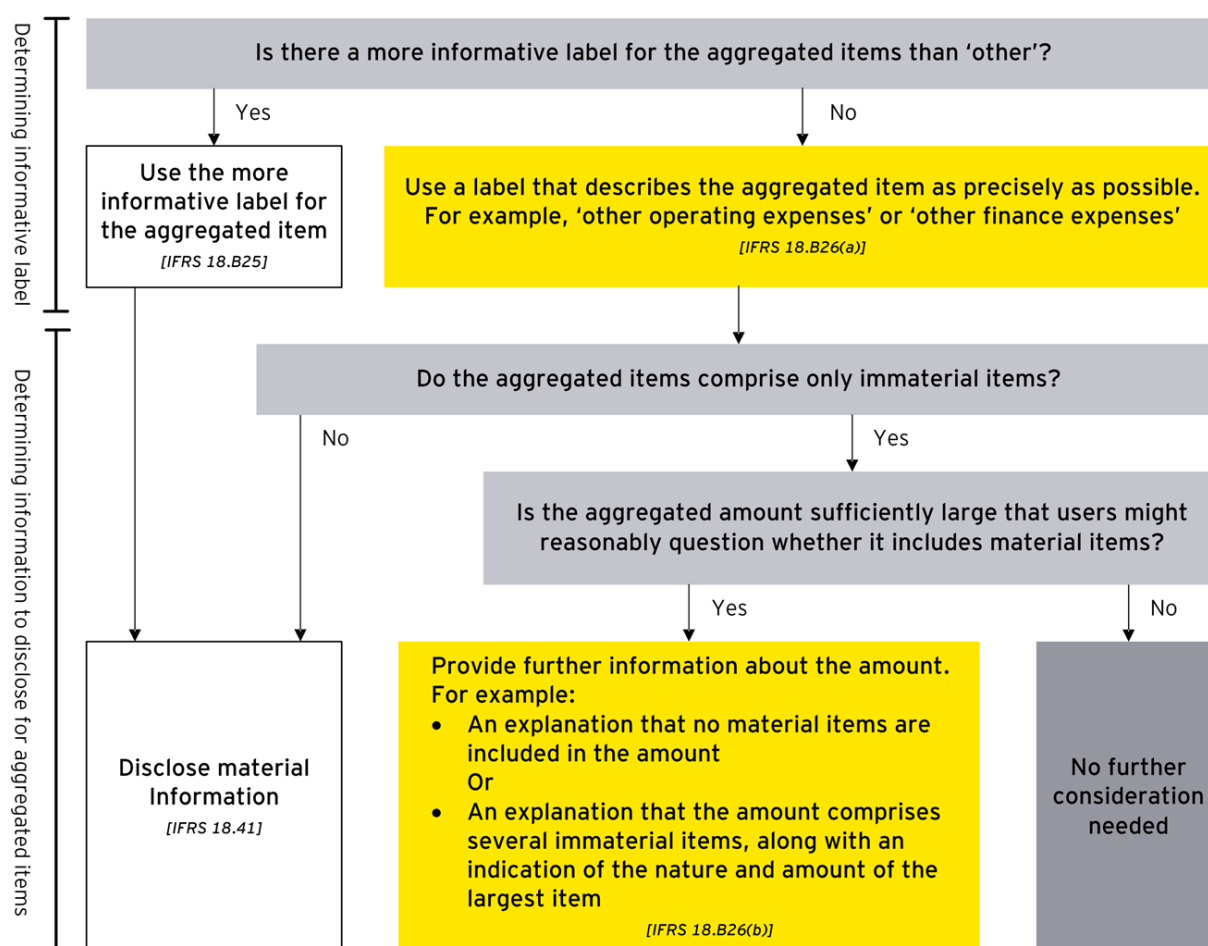

An entity could aggregate immaterial items despite them having dissimilar characteristics, resulting in an aggregated item that is cumulatively large despite comprising individually immaterial items. Where that is the case, the entity needs to consider whether the aggregated amount is large enough that users might reasonably question whether it includes material items. If so, the information needed to resolve that question is itself material information. [IFRS 18.BC80].

An entity in such a situation is required to disclose further information about the amount. Examples of such further information include:

- (i) An explanation that no items for which information would be material are included in the aggregated amount.
- (ii) An explanation that the aggregated amount comprises several items for which information would not be material, along with an indication of the nature and amount of the largest item.

The following diagram, based on Figure 7 in the Illustrative Examples to IFRS 18, sets out how an entity can navigate the requirements above: [IFRS 18.IE Figure 7]

Figure 2-1: Determining informative labels and information for aggregated items

3 Statement of financial performance – IFRS 18

IFRS 18 states that all items of income and expense in a reporting period must be included in the statement of profit or loss unless an IFRS accounting standard permits otherwise. [IFRS 18.46]. Diversity in reporting had developed under IAS 1 and made it difficult for users to understand the information presented in the statement of profit or loss and compare information between entities. Operating profit, one of the most frequently used measures of performance, has until now not been defined in IFRS accounting standards, which has resulted in entities applying different definitions to the same subtotal. In an effort to eliminate this diversity, the IASB developed new requirements for the structure of the statement of profit or loss, specifically with the goal of increasing the comparability and understandability of the information presented in that primary statement. [IFRS 18.BC81].

To achieve this goal, the standard has added three specified categories to the existing categories of income taxes and discontinued operations: [IFRS 18.47, IFRS 18.BC82, IFRS 18.BC83]

Extract from IFRS 18

- 47** An entity shall classify income and expenses included in the statement of profit or loss in one of five categories (see paragraph B29):
- (a) the operating category (see paragraph 52);
 - (b) the investing category (see paragraphs 53-58);
 - (c) the financing category (see paragraphs 59-66);
 - (d) the income taxes category (see paragraph 67); and
 - (e) the discontinued operations category (see paragraph 68).

To support the categories set out above, two additional subtotals are required, being: 1) 'operating profit or loss' and 2) 'profit or loss before financing and income tax', in addition to (total) profit or loss. The first subtotal is intended to give a relevant representation of an entity's operations, while the second is intended to allow users to analyse the performance of an entity before the effect of its financing decisions. The requirement to present these categories and subtotals ought to result in a more standardised statement of profit or loss. [IFRS 18.69, IFRS 18.BC84].

The IASB has developed the requirements based on the information needs of users, which vary in relation to each of the primary financial statements, resulting in different classification objectives for each. This means that while terminology might be the same across different primary statements (e.g., the statement of cash flows prepared under IAS 7), the purpose of those primary statements differs and, hence, there is no intended alignment between the categories. For example, 'investing activities', as defined in IAS 7, is intentionally different from the investing category in the statement of profit or loss, to reflect the different objectives of each of these primary statements. However, despite the lack of alignment, the Board concluded that using similar labels should not affect presentation of items as there is no requirement to label the categories in the statement of profit or loss, nor is an entity required to present a subtotal for each category. [IFRS 18.BC86, IFRS 18.BC87].

3.1 Overview of the new requirements

Sections 3.1.1 to 3.1.3 below provide a high-level summary of the new requirements and concepts relating to the classification and presentation of income and expenses in the statement of profit or loss. Each of these concepts is discussed in more detail in sections 3.2 to 3.4 below.

While it may be self-evident, it is worth noting that the classification requirements only apply to income and expenses included in profit or loss for the period, as a result of applying IFRS accounting standards and would, therefore, not apply to expenses that were capitalised to an asset, or are included in other comprehensive income for the year. That said, the classification requirements will apply to 'reclassification adjustments' which are items recognised in profit or loss which were previously recognised in other comprehensive income (commonly referred to as 'recycling').

3.1.1 Categories and subtotals

An example, based on a presentation by the IASB Staff,⁷ of a typical statement of profit or loss (for an entity *without* a specified main business activity - see section 3.1.2 below) is shown in Figure 3-1:

Figure 3-1: Presentation of the statement of profit or loss example

Statement of profit or loss*

Revenue	Operating
Cost of sales	
Gross profit	
Other operating income	
Selling expenses	
Research and development expenses	
General and administrative expenses	
Goodwill impairment loss	
Other operating expenses	
Operating profit	
Share of the profit from associates and joint ventures	Investing
Gains on disposals of associates and joint ventures	
Profit before financing and income tax	Financing
Interest expense on borrowings and lease liabilities	
Interest expense on pension liabilities	
Profit before income tax	Income taxes
Income tax expense	
Profit from continuing operations	Discontinued operations
Loss from discontinued operations	
Profit for the year	

* Applicable to an entity that does not have a specified main business activity of investing in assets and/or providing financing to customers.

New items

Required items

As illustrated above, IFRS 18 requires all entities to classify their income and expenses included in profit or loss into one of five specified categories:

(a) Investing

The investing category will typically include income and expenses arising from:

- Assets that generate a return individually and largely independently of other resources held by an entity, for example:
- Rental income from, and remeasurements of, investment property
- Interest income and fair value changes of financial assets
- Dividends and fair value changes of financial instrument investments
- Investments in associates, joint ventures and unconsolidated subsidiaries accounted for using the equity method
- Cash and cash equivalents

The requirements related to the investing category are discussed in more detail in section 3.2.1 below.

⁷ [IASB Staff Paper AP1](#), Project: *Primary Financial Statements*, Topic: *Introduction to IFRS 18 Presentation and Disclosure in Financial Statements*, Emerging Economies Group meeting, October 2023. Available on the IFRS Foundation's website.

(b) Financing

The financing category will typically include:

- All income and expenses from liabilities arising from transactions that involve only the raising of financing (for example, income and expenses from bank loans)
- Interest expense and the effects of interest rate changes recognised in profit or loss while applying IFRS accounting standards to other liabilities (for example, interest expenses recognised on a lease liability under IFRS 16 *Leases* or the unwinding of discounting on a long-term provision under IAS 37)

Note that, for the type of liabilities mentioned in the second bullet above, only interest income and expense and the effects of interest rate changes are classified in the financing category; all other changes, such as the re-measurement of a provision, are classified in the operating category.

The requirements for classifying income in the financing category are discussed in more detail in section 3.2.2 below.

(c) Operating

The operating category is a residual category and, therefore, it includes all items not required to be classified in one of the other categories. This was deliberately designed to ensure that all income and expenses arising from an entity's main business activities are included in the operating category.

The operating category will, therefore, typically include all income and expenses:

- Arising from an entity's main business activities
- Not classified in other categories, even if these income and expenses are volatile and unusual

The requirements applicable to this residual category are discussed in more detail in section 3.2.3 below.

(d) Income taxes

The income tax category includes tax expenses and tax income recognised in profit or loss applying IAS 12 *Income Taxes* and any related foreign exchange differences. This category is discussed in section 3.2.4 below.

(e) Discontinued operations

The discontinued operations category is made up of income and expenses from discontinued operations, applying IFRS 5 *Non-current Assets Held for Sale and Discontinued Operations*. This category is discussed in section 3.2.5 below.

How we see it

All entities will need to carefully reconsider the structure of their statement of profit or loss, in light of the new categories and subtotals required by IFRS 18. Classifying income and expenses into the relevant profit or loss categories might require the use of judgement. Although many entities already voluntarily present an operating profit or loss subtotal under IAS 1, the classification of income and expenses in this category might not be the same.

Entities also need to consider the broader impact of changing the structure of their statement of profit or loss if, for example, their current subtotals are inputs in determining management incentives, income tax or compliance with covenants.

The requirement to classify all income and expense into one of the five categories above can be difficult for items that might fit into more than one of these categories. Therefore, IFRS 18 provides guidance for classifying some specific types of income and expense.

The most common of these types is likely to be foreign exchange differences. The basic principle is that income and expenses from foreign exchange differences are classified in the same category as the income and expense that give rise to them, unless classifying them into those categories will cause undue cost and effort, in which case they must be classified in the operating category. The detailed requirements for classifying foreign exchange differences, as well the gain or loss on the net monetary position in a hyperinflationary economy, are discussed in section 3.2.7 below.

The standard also provides specific guidance for:

- Changes in classification and derecognition (see section 3.2.6 below)
 - Hybrid contracts accounted for under IFRS 9 (see section 3.2.2.D below)
- And
- Gains and losses on derivatives and designated hedging instruments (see section 3.2.8 below)

3.1.2 Requirements for specific entities

The Board identified that if certain entities applied the general requirements outlined above, they would classify income and expenses from their main business activities in categories other than the operating category.

Therefore, the standard introduces the concept of two 'specified main business activities' being:

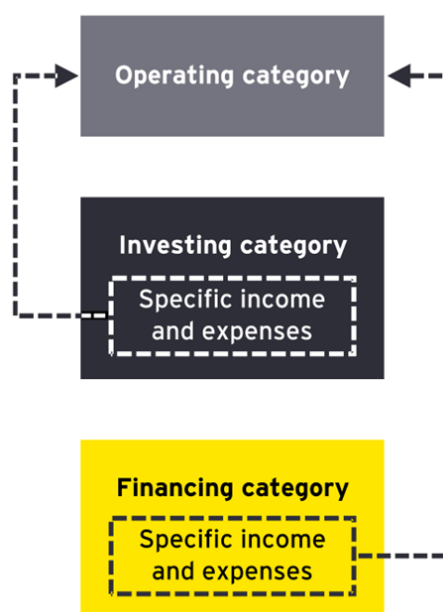

- Investing in particular types of assets (e.g., investment property companies)
- And

- Providing financing to customers (e.g., banks and other lending institutions)

As an exception to the general requirements, the standard requires entities with a 'specified main business activity' to classify *some* of their income and expenses in the operating category that would otherwise have been included in investing or financing.

This exception to the general requirements is depicted in the following figure:

Figure 3-2: Classification of income and expenses by entities with a specified main business activity

It is important to stress that these specific requirements only apply to particular income and expenses related to these specified main business activities and, therefore, even these entities will be required to apply the general requirements (which are discussed in section 3.2 below) when classifying the rest of their income and expenses.

An entity could have several main business activities, but in order to determine the appropriate set of classification requirements to apply under IFRS 18, an entity is only required to assess whether it has one (or both) of the two 'specified main business activities' mentioned above. Whether an entity has one, or both, of the specified main business activities is a matter of fact, rather than merely an assertion and may require judgement, based on evidence.

How we see it

The use of 'main' is an important part of the concept of 'specified main business activity' and it is not intended to include minor or ancillary activities. IFRS 18 only provides two examples of evidence indicating an entity has a specified main business activity (see section 3.3.1 below), both of which indicate that it is a reasonably high hurdle to conclude that a particular business activity is a specified 'main' business activity.

IFRS 18 also includes certain exclusions to the financing category that applies to issuers of:

- Insurance contracts in the scope of IFRS 17 *Insurance Contracts*
- And/or
- Investment contracts with participation features in the scope of IFRS 9

Entities with a specified main business activity are discussed in more detail in section 3.3.1 below, the requirements for such entities are discussed in sections 3.3.2 to 3.3.4 below, and the guidance for entities that issue insurance contracts and investment contracts with participation features in the scope of IFRS 9 is discussed in section 3.3.5 and section 3.3.6, respectively, below.

In addition, there are detailed requirements for hybrid contracts held by entities with a main business activity of providing financing to customers. These are discussed in section 3.3.3.B below.

3.1.3 Items to be presented in the statement of profit or loss

Like IAS 1, IFRS 18 specifies line items to be presented in the statement of profit or loss, though those line items are no longer described as 'minimum' line items. In addition, IFRS 18 provides guidance to determine when additional line items are required and situations in which the specified line items may not be required. IFRS 18 also introduces new requirements relating to the presentation of expenses classified in the operating category. Operating expenses are still presented either by "function" or by "nature", but additional disclosure requirements have been added for entities choosing to present these items by function. These new requirements are discussed in section 3.4 below.

3.2 General requirements for classification

This section discusses the general requirements for the classification of income and expenses included in the statement of profit or loss, applicable to all entities applying IFRS 18.

Entities with a specified main business activity (see section 3.3.1 below) should also refer to section 3.3 below for the specific requirements applicable to *some* of their income and expenses. There are also specific requirements for entities that issue 1) insurance contracts, and 2) investment contracts with participation features in the scope of IFRS 9, as discussed in sections 3.3.5 and 3.3.6, respectively, below.

3.2.1 Investing

Many users analyse returns from an entity's investments separately from its operations. Thus, the introduction of an investing category enables those users to identify returns which are not part of the entity's main business activities. Investments in debt or equity instruments normally generate returns which are specific to that investment, i.e., an individual return, which is largely independent of the entity's other resources. [IFRS 18.BC105].

There is no requirement to insert a heading for the 'investing category' and the standard permits an entity to present additional subtotals (see section 2.1.1.B above) within that category, if this contributes to a useful structured summary. [IFRS 18.BC120].

How we see it

We believe that the ability to present additional subtotals within the investing category will enable many entities to communicate information which reflects the relevance of different investments to their business and thus contribute to providing a useful structured summary.

The investing category will include specified income and expenses from the following investments:
[IFRS 18.53, IFRS 18.BC103]

Extract from IFRS 18

- | | |
|-----------|--|
| 53 | <p>Except as required by paragraphs 55-58 for an entity that has a specified main business activity, an entity shall classify in the investing category income and expenses specified in paragraph 54 from:</p> <ul style="list-style-type: none"> (a) investments in associates, joint ventures and unconsolidated subsidiaries (see paragraphs B43-B44); (b) cash and cash equivalents; and (c) other assets if they generate a return individually and largely independently of the entity's other resources (see paragraphs B45-B49). |
|-----------|--|

The specified income and expenses arising from the investments listed above, which are required to be classified as investing, are as follows: [IFRS 18.54, IFRS 18.BC106]

- Income generated by those assets, e.g., interest revenue from debt investments, dividend income from equity instruments and rental income from investment properties.
- Income and expenses that arise from the initial and subsequent measurement of the assets, including on derecognition of the asset e.g., impairment losses and reversals and remeasurements of investment properties.
- Incremental expenses directly attributable to the acquisition and disposal of the assets, e.g., transaction costs and costs to sell the assets - see section 3.2.1.B below.

It is worth noting that income and expenses other than those listed above arising from these assets are required to be included in the operating category. IFRS 18.53 is clear that only the 'specified' income and expenses listed in IFRS 18.54 are to be classified in the investing category.

The standard provides examples of what is meant by assets which generate a return individually and largely independently of the entity's other resources and the types of income and expense which could arise:

[IFRS 18.B46, IFRS 18.B47]

- Debt or equity instruments, generating interest income or dividends
- Investment properties, generating rental income, depreciation, impairment losses and reversals, fair value gains and losses and income and expenses from derecognition or classification and measurement as held for sale
- Receivables for rent generated by those investment properties

To further clarify, the standard provides examples of assets that are typically used in combination to produce or supply goods or services, and which, therefore, do *not* generate returns individually or largely independently of the entity's other resources. Such assets include but are not limited to: [IFRS 18.B48]

- Property, plant and equipment
- Assets such as receivables, which arise from the production or supply of goods and services and for which the income and expenses are classified in the operating category
- Loans to customers, when the entity provides financing to customers

Explanatory examples are given of the types of income and expenses that could arise from the above assets, and which would *not* be classified in the investing category: [IFRS 18.B49]

- Revenue for goods and services produced or supplied using a combination of assets
- Interest income
- Depreciation and amortisation
- Impairment losses and reversals thereof
- Income and expenses from the derecognition of the asset
- Income and expenses from an asset's classification and measurement as held for sale (see section 3.2.6 below)
- Income and expenses arising on a business combination that includes assets, which will give rise to income and expenses that will be classified in the operating category, such as:
- Gain on a bargain purchase
- Remeasurements of contingent consideration

Business combinations represent the underlying assets acquired and liabilities assumed and, thus, the returns from a business combination (for example, the gain on a bargain purchase) are not individual or largely independent of the entity's other resources. [IFRS 18.BC144].

Frequently asked questions

Question 3-1: How is rental income from property, plant and equipment held on an operating lease classified in profit or loss by a lessor?

Applying IFRS 16, a lessor might classify a lease of property, plant and equipment as an operating lease and recognise rental income from that lease in profit or loss (e.g., the lessor leases out a warehouse, previously used in its own operations). In classifying such lease income, an entity has to consider whether an item of property, plant and equipment can generate returns individually and largely independently of the entity's other resources. [IFRS 18.B45].

While IFRS 18.B48 lists property, plant and equipment as an example of an asset used in combination to produce or supply goods or services and which, therefore, does not generate independent returns, this is based on the assumption that the property, plant and equipment is used in an entity's own operations, rather than being leased out to a third party. [IFRS 18.B48]. Despite the example in IFRS 18.B48, it is also possible that a lessor might lease out an individual item and not use it in its own operations. In that situation, the asset could give rise to returns individually and largely independently. Since the operating lease income represents income generated by the asset, this income will be classified in the investing category in such circumstances. [IFRS 18.53(c), IFRS 18.54(a)].

A different classification could apply to entities with a specified main business activity, see Question 3-18 in section 3.3.2.B below.

Question 3-2: How is finance income on the net investment in a finance lease classified in profit or loss?

A lessor with an asset held under an IFRS 16 finance lease will recognise finance income on the net investment in the lease in profit or loss.

A net investment asset does not generate returns in conjunction with other resources of the entity, as the returns stem from the single asset only. Therefore, the net investment asset meets the criterion of generating a return individually and largely independently of the entity's other resources. [IFRS 18.B45]. Since the finance income represents income that arises from the subsequent measurement of the net investment in the lease, the finance income is classified in the investing category. [IFRS 18.53(c), IFRS 18.54(b)].

A different classification could apply to entities with a specified main business activity, see Question 3-19 in section 3.3.2.B below.

Question 3-3: How are expenses related to holding investment property classified in profit or loss?

As noted above, the standard only requires specific expenses occurring in defined circumstances to be classified in the investing category. [IFRS 18.54(b), IFRS 18.54(c)]. Therefore, other expenses that arise from holding the investment - for example, maintenance expenses or rates and taxes levied on an investment property - will be classified in the operating category since this type of expenditure does not fall within the categories of expenditure required to be classified in the investing category.

3.2.1.A Equity method investees

All entities, irrespective of whether they invest in equity accounted investments as a main business activity or not, are required to classify their share of profit or loss and other income and expenses (e.g., an impairment loss) arising from an equity accounted investment in associates, joint ventures or unconsolidated subsidiaries in the investing category. [IFRS 18.53(a), IFRS 18.55(a), IFRS 18.BC110].

This requirement reflects the fact that, for both an entity that invests in such assets as a main business activity and one that does not, the entity does not control the activities of its associates and joint ventures. Many users analyse equity method accounted income and expenses separately, therefore, classifying them in the operating category would disrupt analyses of both operating margin and the investments themselves. The intention is to provide a consistent starting point for analyses of such income and expenses by classifying all such income and expenses in the investing category, which better aligns with how users are known to approach those analyses, according to the Board. [IFRS 18.BC111, IFRS 18.BC114, IFRS 18.BC115, IFRS 18.BC121].

The Board noted that this approach reflects the fact that returns of equity accounted investments are not closely related to an entity's main business activities and are instead generated individually and largely independently of its other resources. This is consistent with the principle for classification in the investing category and simplifies the structure of the statement of profit or loss. [IFRS 18.BC119].

As the standard does not specify the location of the equity accounted investments line item within the investing category, it will be possible for entities to present this as the first line after operating profit subtotal and insert an additional subtotal for operating profit and income and expenses from equity accounted investments. Equally, an entity might decide to disaggregate its income and expenses from equity accounted investments into more than one line item within the investing category, based on investments with similar or dissimilar characteristics (see section 2.2.2 above). If an entity followed the latter route, it might present an additional subtotal (see Question 3-4 below). [IFRS 18.BC120].

How we see it

The requirement to classify income and expenses from equity accounted investments in the investing category will represent a change for those entities who currently classify income and expenses from such investments above operating profit. However, such entities will be able to present an additional subtotal (within the investing category) for operating profit and income and expenses from investments from equity accounted investments, if such a presentation contributes to providing a useful structured summary of the performance of the entity.

In their separate financial statements, some parent entities account for their investments in subsidiaries using the equity method, as permitted by IAS 27 *Separate Financial Statements*. As explained above, such entities are also required to classify income and expenses from those equity accounted investments in the investing category. This approach is consistent with the Board's approach for equity accounted investments relating to associates and joint ventures, and reflects the fact that users typically analyse such investments separately. [IFRS 18.BC129].

Income and expenses from investments in associates, joint ventures and unconsolidated subsidiaries that are not accounted for using the equity method are also classified in the investing category, unless those entities have a main business activity of investing in such assets, as discussed in section 3.3.2.A below. [IFRS 18.53(a)].

Frequently asked questions

Question 3-4: Can an entity present an additional subtotal for the income of only some equity accounted investments within the investing category?

See the response to Question 3-27 in section 3.3.5.A below.

Question 3-5: Can an entity present gains or losses on disposal of an equity accounted investment in the same line item as the share of profit or loss from an equity accounted investment?

Some IFRS accounting standards, including IFRS 18, specify certain line items to be presented separately in the statement of profit or loss. Share of the profit or loss of associates and joint ventures accounted for using the equity method is such a specified line item (see section 3.4 below). However, the standard is clear that these specified line items are not required if they are not necessary to provide a useful structured summary.

An entity will need to apply judgement in determining the level of aggregation that is appropriate, based on a consideration of its specific facts and circumstances, including a consideration of the characteristics of the gain or loss on disposal. Characteristics such as persistence, function or size could be relevant in this regard. An example of the aggregation of the two line items is shown in the first illustrative example of a statement of profit or loss included in IFRS 18. [IFRS 18.IE7].

How we see it

We believe that, depending on the assessment of facts and circumstances, aggregation can be acceptable, provided that it contributes to a useful structured summary. Equally, it is acceptable to present these as separate line items if this results in a more useful structured summary, as illustrated in Figure 3-1 above.

3.2.1.B Classification of incremental acquisition and disposal expenses

Incremental expenses directly attributable to the acquisition and disposal of investments (specified in IFRS 18.53 - see section 3.2.1 above) are required to be classified in the investing category. The aim of this requirement is to achieve a more consistent classification of such costs. [IFRS 18.54(c), IFRS 18.BC106(c)]. Without this requirement, costs such as directly attributable transaction costs, which are recognised as an expense immediately, would have been classified in the operating category under the general requirements of IFRS 18. [IFRS 18.BC107].

Such incremental costs, directly attributable to acquisition and disposal, are typically easily identifiable external costs, therefore, the requirement is expected to lead to consistent classification and, as such, more useful information for users. Note that not *all* expenses relating to the acquisition of investments are classified in the investing category. If they were, this might involve complex and arbitrary allocations of expenses such as employee costs. Similarly, not *all* incremental expenses are classified in the investing category, but only those directly attributable to the acquisition. Thus, ongoing expenses related to the investment, such as investment management fees paid to a third party, are excluded from the investing category and classified in the operating category (see Question 3-3 in section 3.2.1 above). The Board's chosen approach avoids the more complex allocations of costs across categories. [IFRS 18.BC108, IFRS 18.BC109].

How we see it

Currently, there is mixed practice for the classification of incremental expenses related to the acquisition and disposal of investments. The requirement to classify such expenses in the investing category will lead to a change in practice for those entities that currently classify such expenses above the operating profit line.

Frequently asked questions

Question 3-6: How are transaction costs incurred in acquiring investments in other entities classified in profit or loss?

Entities that acquire investments in subsidiaries, associates, joint ventures or other equity investments typically incur transaction costs relating to these acquisitions.

Transaction costs relating to such acquisitions are either capitalised or expensed, depending on the nature of the transaction. For example, under IFRS 3 *Business Combinations*, transaction costs relating to the acquisition of a subsidiary are expensed in the statement of profit or loss, whereas under IAS 28 *Investments in Associates and Joint Ventures*, transaction costs relating to the acquisition of an associate or joint venture are capitalised as part of the equity accounted cost of that investment rather than being recognised in the statement of profit or loss.

For those expenses recognised in profit or loss, IFRS 18 specifies that incremental expenses directly attributable to the acquisition of assets for which the income is included in the investing category are also classified in the investing category, while the costs to acquire assets which generate income classified in the operating category are also classified in the operating category. [IFRS 18.54(c)].

The following Illustration addresses the classification of such incremental acquisition costs recognised in the statement of profit or loss.

Illustration 3-1: Classification of incremental acquisition costs

Entity P is a parent company that only prepares consolidated financial statements. It does not have a specified main business activity. In the year ended 31 December 20X0, it acquires:

- (a) A subsidiary, which constitutes a business combination accounted for in accordance with IFRS 3, incurring associated transaction costs of CU5m
- And
- (b) An equity investment, without control, joint control or significant influence, accounted for at fair value through profit or loss in accordance with IFRS 9, incurring transaction costs of CU200,000

Applying IFRS 18, the entity determines that at least some of the assets acquired in the business combination do not generate a return individually and largely independently of the entity's other resources. Consequently, the transaction costs arising from the acquisition of the subsidiary are required to be classified in the operating category. [IFRS 18.B49(f)].

The entity determines that the equity investment acquired generates a return, in the form of dividends, individually and largely independently of the entity's other resources. The entity will, therefore, classify any future dividends received in the investing category and, consequently, also classifies the transaction costs arising from the acquisition of the investment in the investing category. [IFRS 18.54(c), IFRS 18.B46(a), IFRS 18.B47(b)].

A different classification could apply to entities with a specified main business activity, see Question 3-21 in section 3.3.2.B below.

3.2.1.C Cash and cash equivalents

To make the structure of the statement of profit or loss easier to understand, and because cash and cash equivalents are assets which generate returns individually and largely independently of an entity's other resources, income and expenses from cash and cash equivalents are classified in the investing category.

[IFRS 18.53(b), IFRS 18.BC135].

There are limited exceptions to this requirement for entities with a main business activity of investing in financial assets or providing financing to customers and these are discussed in section 3.3.4 below.

The requirement means that for entities that do not have a main business activity of investing in financial assets or providing financing to customers, there is no correlation between the purpose for which the cash is held or the manner of receipt and the classification within profit or loss.

Frequently asked questions

Question 3-7: How is interest income on cash and cash equivalents that is received as an advanced payment from a customer classified in profit or loss?

If an entity receives cash advances from a customer under a revenue contract with a significant financing component, any interest earned on those cash advances is still classified in the investing category.

[IFRS 18.53(b), IFRS 18.54(a)]. The entity is not permitted to classify the interest income earned on the cash as part of its operating profit.

A different classification could apply to entities with a specified main business activity, see Question 3-26 in section 3.3.4 below.

3.2.1.D Profit or loss before financing and income tax subtotal

The 'profit or loss before financing and income tax' subtotal is introduced as a mandatory subtotal by IFRS 18 and comprises operating profit or loss and all income and expenses classified in the investing category. [IFRS 18.71]. There are limited exceptions to this requirement for entities with a main business activity of providing financing to customers as discussed in section 3.3.3.A below. The role of this subtotal is to facilitate an analysis of an entity's performance, independently of how it is financed and to improve comparability between entities. [IFRS 18.BC148].

Note that even if the profit or loss before financing and income tax subtotal is the same as the operating profit subtotal, both must still be presented; the main reason for this is to facilitate digital reporting.

[IFRS 18.BC152].

3.2.2 Financing

In order to determine what income and expenses to classify in the financing category, IFRS 18 requires an entity to differentiate between two types of liabilities: [IFRS 18.59]

Extract from IFRS 18

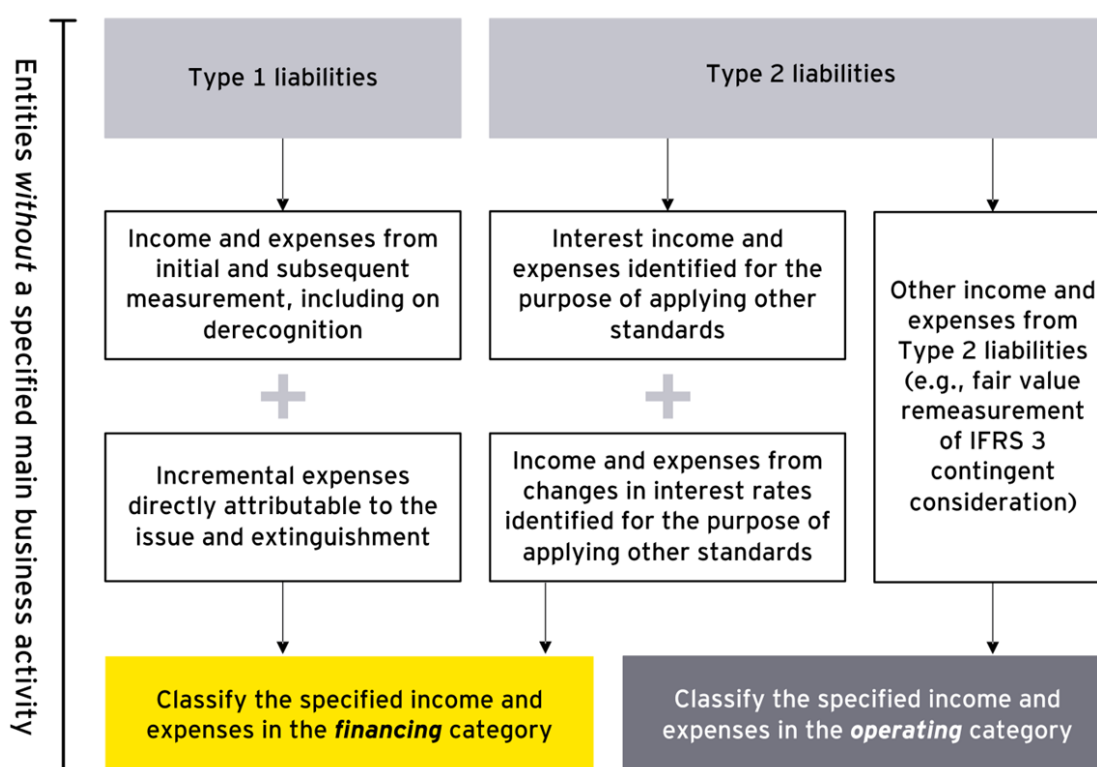

- 59 To determine what income and expenses to classify in the financing category, an entity shall distinguish between:
- (a) liabilities that arise from transactions that involve only the raising of finance (see paragraphs B50-B51); and
 - (b) liabilities other than those described in (a) - that is, liabilities that arise from transactions that do not involve only the raising of finance (see paragraph B53).

To distinguish between the two types, we have labelled them and will use these labels throughout this chapter:

- 1) **Type 1:** Liabilities that arise from transactions that involve only the raising of finance (see section 3.2.2.A below)
- And
- 2) **Type 2:** All other liabilities (i.e., liabilities other than those in 1) above see section 3.2.2.B below)

The following diagram summarises the requirements for Type 1 and Type 2 liabilities: [IFRS 18.60, IFRS 18.61]

Figure 3-3: Classification of income and expense in the financing category

There are specific requirements relating to income and expenses from hybrid contracts, accounted for under IFRS 9, containing a host that is a liability, [IFRS 18.62], and gains on losses on derivatives and designated hedging instruments, [IFRS 18.63], which are dealt with in section 3.2.2.D and section 3.2.8 respectively below.

3.2.2.A Type 1 liabilities

IFRS 18 describes liabilities that arise from transactions that involve only the raising of finance (i.e., Type 1 liabilities), as follows: [IFRS 18.B50]

Extract from IFRS 18

- B50 Paragraph 59(a) requires an entity to identify liabilities that arise from transactions that involve only the raising of finance. In such transactions, an entity:
- receives finance in the form of cash, or an extinguishment of a financial liability, or receipt of the entity's own equity instruments; and
 - at a later date, will return in exchange cash or its own equity instruments.

The standard also provides a non-exhaustive list of examples of Type 1 liabilities: [IFRS 18.B51]

- A debt instrument that will be settled in cash, such as debentures, loans, notes, corporate bonds and mortgages
- A liability under a supplier finance arrangement when the payable is derecognised
- A bond settled through delivery of the entity's own shares
- An obligation for an entity to purchase its own equity instruments

Income and expenses arising from the initial recognition and subsequent measurement, including derecognition, of Type 1 liabilities are required to be classified in the financing category. For example: [IFRS 18.B52]

- Interest expense on a debt instrument issued
- Fair value gains and losses on a liability designated at fair value through profit or loss
- Dividends on issued shares classified as liabilities
- Remeasurements recognised on the extinguishment of a debt instrument

Incremental expenses *directly* attributable to the issue and extinguishment of such liabilities, for example transaction costs, are also required to be classified in the financing category. [IFRS 18.60(b), IFRS 18.BC161]. This will provide consistency in classification; without this requirement, transaction costs on a financial liability at amortised cost would have been capitalised and subsequently amortised to the financing category. Conversely, transaction costs on liabilities at fair value through profit or loss would have been expensed immediately and classified in the operating category, as they are not part of the initial measurement of the liability, nor are they an interest expense and, therefore, would not qualify for classification in the financing category. [IFRS 18.BC162]. This approach is in line with the approach to classifying similar expenses from assets in the investing category and, as these costs are typically external, they are expected to be readily identifiable. [IFRS 18.BC163].

3.2.2.B Type 2 liabilities

Definition of Type 2 liabilities

Type 2 liabilities are by definition all liabilities that are *not* Type 1 liabilities. In other words, Type 2 liabilities do *not* result from transactions in which an entity only: [IFRS 18.59(b), IFRS 18.B50]

- Receives:
 - Financing in the form of cash, or the extinguishment of a financial liability
 - Or
 - The entity's own equity instruments
- And
- Will in exchange need to return, at a later date:
 - Cash
 - Or
 - The entity's own equity instruments

The standard provides the following examples of Type 2 liabilities along with an explanation of why each is not a Type 1 liability: [IFRS 18.B53, IFRS 18.BC159(b)]

- Payables for goods and services with extended payment terms
(The entity receives goods or services, not only financing)
- Contract liabilities
(The entity will return goods and services, not cash or its own equity instruments at a later date)
- Lease liabilities
(The entity receives a right-of-use asset, not only financing)
- Defined benefit liabilities
(The entity receives employee services, not financing)
- Decommissioning provisions
(The entity receives an asset, not financing)
- Provisions for litigation
(The entity does not receive financing)

The above list is not exhaustive and other types of liabilities, for example liabilities arising from non-traditional financing arrangements may also fall into this group. Examples of such arrangements could include commodity loans and certain cryptocurrency loans, as these arrangements could qualify as Type 2 liabilities if they involve the receipt of assets rather than just the raising of finance.

Classification of income and expenses from Type 2 liabilities

The classification requirements for Type 2 liabilities reflect the Board's broader approach to classification; some users consider certain types of income and expenses on other specified liabilities to be similar in nature to income and expenses from financing activities. [IFRS 18.BC154, IFRS 18.BC155]. For Type 2 liabilities, interest income and expenses, including any income and expenses arising from changes in interest rates, recognised in profit or loss, will be classified in the financing category if they arise as a result of applying other IFRS accounting standards. [IFRS 18.61, IFRS 18.BC164]. The latter part of this requirement is important, as not all IFRS accounting standards require an entity to disaggregate income and expenses arising from changes in the carrying amount into separate amounts for interest income and expenses and other types of income and expenses. An example of this is the changes in the fair value arising from a share-based payment transaction accounted for under IFRS 2 *Share-based Payments*. Under that standard, there is no requirement to identify an interest element separately from the other fair value movements. Consequently, the interest element inherent in the fair value movement is not split out and classified within the financing category; rather, the whole fair value movement is classified within the operating category under IFRS 18. [IFRS 18.BC167, IFRS 18.BC168].

The standard provides the following examples of the types of interest income and expenses, including from changes in interest rates, on Type 2 liabilities that will be classified in the financing category: [IFRS 18.B54]

- Interest expenses on trade payables recognised under IFRS 9
- Interest expenses recognised on contract liabilities with a significant financing component, under IFRS 15 *Revenue from Contracts with Customers*
- Interest expenses on lease liabilities recognised under IFRS 16
- Net interest expense (or income) on a net defined benefit liability (or asset) recognised under IAS 19 *Employee Benefits*
- Unwinding of a discount on a provision recognised under IAS 37

Taking a long-term provision, recognised under IAS 37, as an example, an entity could recognise three types of changes to the provision: [IFRS 18.BC165]

- 1) Periodic unwinding of the discount
- 2) Effects of changes in the discount rate
- 3) Effects of changes in the best estimate of the expenditure required to settle the liability

Only the first two would be classified in the financing category, because they are financing in nature, while the third would need to be classified in the operating category. [IFRS 18.BC166].

How we see it

Under IAS 1, practice is somewhat mixed with respect to presentation of the different types of changes in provisions. Thus, the prescriptiveness of IFRS 18 will assist comparability between entities.

For the avoidance of doubt, the standard also outlines income and expenses that are not *interest* income or expenses arising as a result of applying IFRS accounting standards and that will therefore be classified in the operating category, for example: [IFRS 18.B55]

- Expenses recognised for the consumption of purchased goods or services
- Current and past service costs from an IAS 19 defined benefit plan
- And
- Fair value remeasurements of a contingent consideration liability recognised applying IFRS 3

3.2.2.C Classification of loan commitment fees

Fees could be paid by a borrower to obtain a term loan, a line of credit, or a revolving debt arrangement and these fees are either included in the effective interest rate of the resulting loan or expensed over the commitment period depending on whether:

- It is probable (more likely than not) at inception that the loan commitment will be utilised in whole or in part
- And
- Once utilised, the loan commitment expires (that is, if the loan is repaid no further amount can be drawn)

Under the IFRS 18 model, the classification of loan commitment fees paid, in the statement of profit or loss of the borrower, needs to reflect the underlying accounting, i.e., the classification will depend on whether a liability is recognised or not.⁸ Unless the resulting expense is part of a specified expense that the entity must classify in the financing category, it will be included in the operating category. [IFRS 18.50, IFRS 18.62].

⁸ See Chapter 46.

The following Illustration is based on a discussion of commitment fees in a IASB staff paper,⁹ while developing the standard, addressing issues for categories in the statement of profit or loss.

Illustration 3-2: Classifying loan commitment fees paid by the borrower

An entity enters into a 5-year CU100m credit agreement, repayable in cash, and pays a loan commitment fee of CU1m at inception. Assume Entity A does not have a specified main business activity.

For the purposes of illustration, the credit agreement is one of the following:

1. A fixed term loan, with a set repayment schedule that the entity draws down in full on day one, resulting in the recognition of a liability.
2. A loan commitment for a fixed term loan. At inception it is probable that Entity A will draw down CU60m of the facility, which will result in the recognition of a liability upon the partial draw down, and leave the rest unused.
3. A loan commitment for a fixed term loan. At inception it is **not** probable that Entity A will draw down any portion of the loan.
4. A revolving credit facility (i.e., Entity A can draw down and repay the funds numerous times during the life of the facility).

The accounting and classification for the items above will be as follows:

	Likelihood of draw down	Underlying accounting	Classification in statement of profit or loss
1	In full on day 1	Commitment fee forms part of the IFRS 9 effective interest rate on the resulting liability and is recognised as part of the interest expense over the loan term.	Financing
2	Probable that 60% will be drawn down	Commitment fee is apportioned pro-rata to the CU600,000 of the loan likely to be drawn down - and forms part of effective interest rate on the resulting liability.	Financing
		Remaining apportionment of the commitment fee is expensed straight line over the commitment period.	Operating
3	Not probable that loan will be drawn down	Loan commitment fee is expensed straight line over the commitment period.	Operating
4	Loan will be drawn and repaid many times (revolving credit facility)	Loan commitment fee is expensed straight line over the commitment period as it does not relate to a specific borrowing.	Operating

For the scenarios above where the commitment fee is included in the effective interest rate on the resulting loan under IFRS 9, the commitment fee (or the *pro-rata* portion of the fee) will form part of the interest expense and, therefore, is classified in the financing category since the interest expense on both Type 1 and Type 2 liabilities is classified in financing by an entity without a specified main business activity.

In contrast, where the commitment fee is *not* included in the effective interest rate, the fee (or *pro-rata* portion of the fee) will be included in the operating category since such a fee represents neither:

- Income and expenses that arise from initial and subsequent measurement, or incremental expenses directly attributable to the issue of a Type 1 liability
- Nor
- The interest income and expense on a Type 2 liability identified while applying another IFRS accounting standard

⁹ Appendix A to [IASB Agenda paper 21E](#), *Issues for categories in the statement of profit or loss*, March 2023, available on the IFRS Foundation's website.

3.2.2.D Hybrid contracts containing a host liability

Some contracts in the scope of IFRS 9 are hybrid contracts containing a liability and an embedded derivative, for example, a bank loan with a prepayment option. [IFRS 18.BC169]. Classification of income and expenses of a hybrid contract with a host liability will depend on whether the embedded derivative is separated from the host contract. [IFRS 18.B56].

Host and embedded derivative are separated

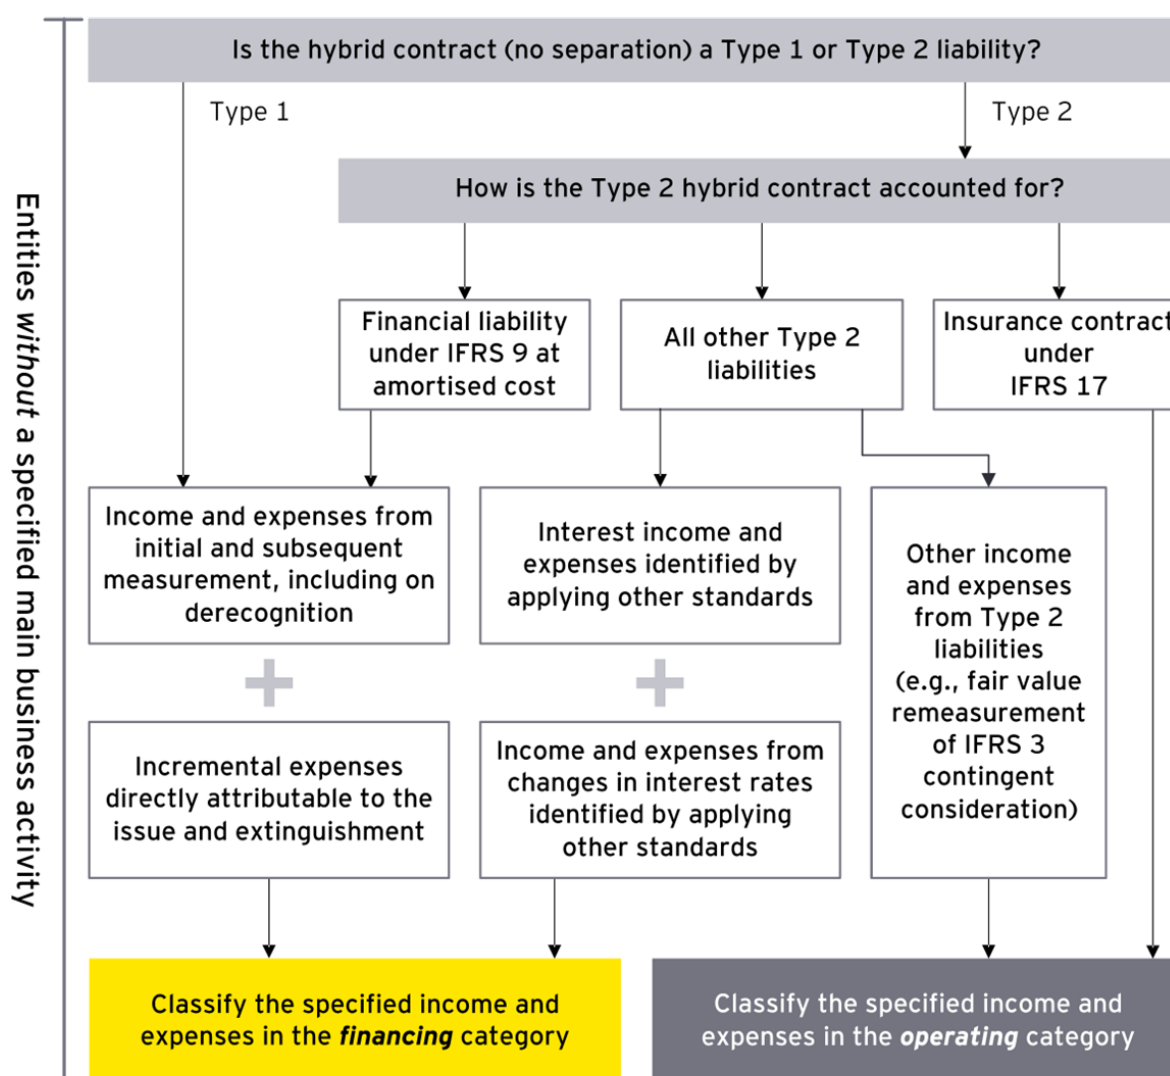

If separated, income and expenses arising from the host liability will be classified in accordance with the same requirements as for classifying a similar liability that is not a host in a hybrid contract. In other words, an entity will follow the guidance outlined in section 3.2.2 above, i.e., assess whether it is a Type 1 or Type 2 liability and follow the appropriate guidance. [IFRS 18.B56(a)(i), IFRS 18.BC171(a)]. There are specific requirements for entities with a main business activity of providing financing to customers, as discussed in section 3.3.3.B below.

The separated embedded derivative is classified in accordance with the requirements for similar stand-alone derivatives, which are addressed in section 3.2.8 below. [IFRS 18.B56(a)(ii), IFRS 18.BC171(b)].

Embedded derivative is *not* separated

In cases where the embedded derivative is not separated, IFRS 9 treats the hybrid instrument as a single unit of account and measures the combined liability in its entirety. [IFRS 18.BC170]. The following figure summarises the requirements for the classification of income and expenses arising from hybrid contracts where the embedded derivative is not separated: [IFRS 18.B56]

Figure 3-4: Classification for hybrid contracts (no separation)

For a hybrid contract (no separation) which arises from a transaction that involves only the raising of finance (i.e., a Type 1 liability hybrid), the entity classifies all income and expenses resulting from the liability in the financing category - essentially the hybrid instrument is treated as a Type 1 liability in its entirety, despite the presence of the embedded derivative suggesting that another activity is present. [IFRS 18.B56(b), IFRS 18.BC173(a)].

For a hybrid contract (no separation) which is a Type 2 liability, the following applies: [IFRS 18.BC173-BC174]

- For a hybrid contract with a host liability in the scope of IFRS 9 and measured at amortised cost, all income and expenses arising from the initial recognition and subsequent measurement (including on derecognition) of such a hybrid contract will be classified in the financing category - essentially the hybrid instrument measured at amortised cost is treated as a Type 1 liability. [IFRS 18.B56(c)(i)].

The IASB felt the cost of separating interest income and expenses from other income and expenses arising from remeasuring such an amortised cost liability would outweigh the benefit. [IFRS 18.BC175, IFRS 18.BC176].

An example of such a Type 2 liability hybrid is a trade payable with extended credit terms and an early prepayment option. This gives rise to interest income and expenses related to the extended credit terms, but also potentially income and expenses from remeasurement, triggered by changes in expectations in future cash flows, as expectations about the use of the prepayment option change. [IFRS 18.BC175].

- For a hybrid insurance contract in the scope of IFRS 17, income and expenses from the hybrid contract, including insurance finance income and expenses will be classified in the operating category. [IFRS 18.B56(c)(ii), IFRS 18.BC179(b)]. Also see section 3.3.5.B below.
- For all other Type 2 liability hybrid contracts: [IFRS 18.B56(c)(iii)]
 - Interest income and expenses (including from interest rate changes) identified for the purposes of applying other IFRS accounting standards, will be classified in the financing category.
 - While
 - All other income and expenses will be classified in the operating category

In other words, all other Type 2 liability hybrids are treated in the same way as any other Type 2 liability. [IFRS 18.BC173(b)].

Note that the means of assessing whether the contract is hybrid is not relevant, so this guidance must be followed for all hybrid contracts in which the embedded derivative is not separated, irrespective of whether that contract failed to meet the requirements of IFRS 9.4.3.3 for separation or whether the whole instrument was designated at fair value through profit or loss, applying IFRS 9.4.3.5. [IFRS 18.B57].

The treatment for hybrid contracts measured at amortised cost is discussed in the first bullet above. However, as noted above, hybrid contracts that arise from transactions combining financing with another activity (i.e., Type 2 liabilities) may also be designated at fair value through profit or loss as an entire contract under IFRS 9.4.3.5. Generally, income and expenses on this type of hybrid contracts are classified in the operating category because the interest expense is not separately recognised from changes in fair value for the purposes of applying other IFRS accounting standards, i.e., IFRS 9, and therefore, cannot be classified in the financing category. [IFRS 18.BC178].

3.2.2.E Classification of income and expense from selected liabilities

Frequently asked questions

Question 3-8: How is the interest expense on a contract liability (with a significant financing component) classified in profit or loss?

An IFRS 15 contract liability is noted as an example of a Type 2 liability in IFRS 18, as it does not involve only the raising of finance, but also relates to the provision of goods or services. [IFRS 18.B53(b)]. If, under an IFRS 15 customer contract, the entity receives a significant benefit of financing the transfer of the good or services, an interest expense may be recognised in profit or loss.

The interest expense recognised on a contract liability with a significant financing component is given as an example of an expense arising from a Type 2 liability that must be classified in the financing category. [IFRS 18.B54(b)].

Refer to Question 3-10 in section 3.2.3 below for a discussion of the classification of interest income on an IFRS 15 contract asset.

Question 3-9: Is it acceptable to disaggregate the 'time value' element from the remeasurement of a Type 2 liability for the purpose of determining the appropriate category?

Some measurements, such as fair value, implicitly include a time value element, but the accounting under the related IFRS accounting standard does not require this to be recognised separately. An example of this is the changes in the fair value arising from a share-based payment transaction accounted for under IFRS 2. This inherently includes a time value of money element, but it is not split out under IFRS 2 accounting - see section 3.2.2.B above.

The standard is clear that only the interest income or expense, including from changes in interest rates, on a Type 2 liability that an entity identifies for the purposes of applying another IFRS accounting standard is included in the financing category. [IFRS 18.61].

How we see it

We believe that, unless an IFRS accounting standard permits or requires interest income or expenses to be recognised, it is not acceptable for an entity to disaggregate income and expenses relating to the time element in order to classify them separately in the financing category, even for the measurement of a liability which implicitly includes a time value element.

3.2.3 Operating

IFRS 18 sets out the operating category as the category that contains all items which are not classified in either the investing, financing, income taxes or discontinued categories. [IFRS 18.52]. In other words, it positions the operating category as a default, or residual category, which ensures that all items from an entity's main business activities will be classified in operating. However, as the residual category, the operating category is not confined to items from the entity's main business activities and will include other items that are not classified within the other four categories. This reflects the Board's view that all income and expenses included in profit or loss, which do not relate to another category, arise from an entity's operations. Thus, an entity's operations are not limited to its main business activities, but also include its supporting activities, which could give rise to income and expenses, though those activities do not generate revenue directly. [IFRS 18.BC89].

This concept extends to volatile, unusual or non-recurring items, and thus such items are included in the operating category. There is acknowledgement that the inclusion of such items might not have predictive value, but the latter is not a characteristic which determines classification. An entity's operations may well be volatile and, therefore, volatile items of income and expense must be included in operating. Moreover, to achieve a faithful representation of the entity's operations for a given period, it is necessary to include such expenses. For example, impairment expenses as well as depreciation expenses relating to an item of equipment are classified in operating to give a complete picture of the results from the operations for the period. Omitting either of those expenses would not depict the operating decisions to buy and deploy the equipment, nor how those decisions had given rise to income and expenses. [IFRS 18.BC89].

This approach was intended to work for different business models, while still providing a complete picture of the entity's operations. By applying the residual approach, the operating category will include all income and expenses from an entity's main business activities. The only exception relates to entities which consider their equity accounted investments to be a main business activity. In that case, any income or loss from investments accounted for using the equity method will be included in the investing category as discussed in section 3.2.1.A above despite management considering these to be part of the entity's main business activities. [IFRS 18.B42].

How we see it

We believe that the use of the operating category as the 'default' category, thereby ensuring that all income and expenses from an entity's main business activities, whether volatile or not, are presented in the same category, will facilitate comparability between entities.

The standard clarifies that income and expenses that are classified in the income taxes or discontinued operations categories are not subject to the requirements for classifying items in the operating, investing or financing categories. [IFRS 18.B29].

Frequently asked questions

Question 3-10: Where is interest income on a contract asset (with a significant financing component) classified in profit or loss?

A contract with a customer under IFRS 15 may result in the recognition of a contract asset and related interest income, if the contract terms provide the customer with a significant benefit of financing the transfer of goods or services. Similar to a receivable arising from a revenue contract, such contract assets arise from the production or supply of goods and services and, consequently, do not generate a return individually and largely independently of the entity's other resources and therefore the interest income is classified in the operating category. [IFRS 18.B48(b)].

How we see it

As explained above, if a significant financing component is recognised on a contract asset under IFRS 15, the interest income is classified in the operating category. This may, at first glance, seem counterintuitive, as the interest on a contract liability (i.e., a Type 2 liability) is classified in the financing category. However, in this case, the entity is not raising finance, but providing financing to the customer by providing extended payment terms and the standards is clear that different classification rules apply to assets and liabilities.

Refer to Question 3-8 in section 3.2.2.E above for a discussion on the classification of interest expense on an IFRS 15 contract liability.

Question 3-11: Where is interest income on a financial asset arising from a service concession arrangement classified in profit or loss?

Interest income on a financial asset arising from a service concession arrangement in the scope of IFRIC 12 *Service Concession Arrangements* is treated in the same way as a receivable arising under IFRS 15, since it also arises from the production or supply of goods and services, for which the income and expenses are classified in the operating category. That is to say, the interest income is classified in the operating category. [IFRS 18.B48(b)].

Question 3-12: Where are gains and losses arising from the remeasurement of contingent consideration in a business combination classified?

The gains or losses recognised in profit or loss on the subsequent remeasurement of contingent consideration in a business combination under IFRS 3 are classified in the operating category, provided that the related business combination includes assets that will give rise to income and expenses classified in the operating category. [IFRS 18.B49(f), IFRS 18.B55(c)].

How we see it

In our view, the specific guidance on contingent consideration in IFRS 18 applies to all types of contingent consideration, including those meeting the definition of a derivative, despite the general requirements for classification of income and expenses from derivatives also provided in IFRS 18.

Question 3-13: How is income from government grants classified?

IAS 20 *Accounting for Government Grants and Disclosure of Government Assistance* permits income from government grants to be included in the statement of profit or loss 'gross' or 'net' of the related expense.¹⁰ Entities which choose to present the income from government grants 'gross' within the statement of profit or loss are then required to follow the general classification requirements of IFRS 18 when classifying this income in the statement of profit or loss. In contrast, government grant income netted against the related income, expense, asset or liability when applying IAS 20, in principle, follows the IFRS 18 classification of the *related item* against which it is netted.

Government grant income generally does not arise from an asset which generates returns individually and largely independently of an entity's other resources, nor from a liability which involves only the raising of finance (i.e., a Type 1 liability). Government grant income also does not represent interest income (including from interest rate changes) recognised on other liabilities (i.e., Type 2 liabilities) as a result of applying other IFRS accounting standards.

Consequently, government grant income presented gross will generally be classified in the default category, i.e., the operating category. This means that, in certain cases, government grant income presented gross in the statement of profit or loss applying IAS 20 could be classified in a different category from government grant income presented net under IAS 20.

Illustration 3-3: Classification of income from government grants**Illustrative example A**

Entity A receives a government grant to purchase a new rolling mill that it uses in combination with other assets to produce goods. [IFRS 18.B48(a)].

The entity recognises the grant as deferred income in the statement of financial position and has a policy of presenting the government grant income 'gross' in the statement of profit and loss. The deferred income is released to the statement of profit or loss over the useful life of the machine, applying the requirements of IAS 20.

Analysis

The grant income represents the release of the deferred income recognised in the statement of financial position. It does not arise from the investment in the rolling mill, which itself is an asset used in conjunction with others to generate a return. Neither does it arise from a Type 1 liability, nor does it represent interest income recognised on a Type 2 liability for the purposes of applying other IFRS accounting standards. It is appropriate to classify the government grant income in the operating category.

Had Entity A had an accounting policy of presenting the government grant income 'net', it would have reduced (or netted) the government grant income against the related depreciation expense on the mill, and given the nature of the asset, this lower depreciation expense would also have been classified in the operating category.

Illustrative example B

Entity B receives a government grant to reimburse it for the interest expense incurred on its loan arrangement with Bank X. The government grant income is received in full on the same date the loan is taken out.

Entity B has a policy of presenting government grant income 'gross' in the statement of profit or loss. It recognises the grant income as deferred income in the statement of financial position and releases the deferred income to the statement of profit or loss as the interest on the bank loan is paid, applying the requirements of IAS 20.

Analysis

The government grant income is not income arising from an asset which generates returns individually and largely independently, nor does it arise from a Type 1 liability, as it is not part of the initial or subsequent accounting for the amortised cost of the loan arrangement with Bank X under IFRS 9. It also does not represent interest income recognised on a Type 2 liability for the purposes of applying other IFRS accounting standards. As a result, it is appropriate for Entity B to classify the government grant income in the operating category.

Had Entity B had an accounting policy of presenting the government grant income net in the statement of profit or loss (i.e., setting it off against the interest charged), it would have presented a reduced interest expense on its Type 1 liability to Bank X and this reduced interest expense would have been classified in the financing category.

¹⁰ Refer to IAS 20.26, IAS 20.27 and IAS 20.29
See Chapter 25.

How we see it

We believe it is generally appropriate to classify government grant income which is presented 'gross' in the statement of profit or loss under IAS 20, within the default category - i.e., within the operating category. However, practice might develop on this matter and needs to be monitored.

3.2.3.A Operating profit or loss subtotal

The standard specifies that an entity must present a subtotal representing operating profit or loss, which comprises all income and expenses classified in the operating category. [IFRS 18.69(a), IFRS 18.70]. This has been introduced to provide decision-useful information to users, to reduce diversity in reporting and to enhance comparability. [IFRS 18.BC88].

Under current practice (IAS 1), many entities already present an operating profit measure, but the content of operating profit measures can vary quite significantly across entities, and these are often not comparable from one entity to the next.

Consistency is a key goal of the new requirements and the Board acknowledged that there are differing views about what should be included in 'operating profit'. However, the Board expects that requiring all entities to present an 'operating profit' subtotal, which comprises all income and expenses not included in the investing or financing categories, will provide a consistent starting point for the analysis by users and achieve comparability between entities. The Board explained that there are other mechanisms which can be used by an entity to provide additional information about aspects of its financial performance:

- Presentation of additional line items or subtotals (see section 2.1.1.B above)
 - Further disaggregation (see section 2.2 above)
- And
- Presentation of management-defined performance measures (or MPMs - see section 4 below). For example, the presentation of an MPM showing operating profit excluding expenses regarded as non-recurring or unusual could be disclosed. [IFRS 18.BC93].

As noted above, the operating category is a default category, therefore, 'operating profit' itself is not directly defined, as it would be near impossible to develop a direct definition that was appropriate for all entities and could be applied consistently. Moreover, applying a direct definition would inevitably require significant judgement and could result in inconsistent application, for example, an entity using a function of expense method might exclude from the operating category an operating expense that is not allocated to a function line item. By defining what is to be classified in the investing and financing categories, the Board believes that the application of judgement with respect to the operating category will be reduced and, therefore, more consistent application will be achieved. [IFRS 18.BC89, IFRS 18.BC91].

The Board considered how this requirement would relate to entities with a specified main business activity of investing in assets or providing financing to customers (see section 3.3.1 below). Without the specific requirements relating to classification for entities with specified main business activities, those entities would be prevented from presenting key measures of performance in the operating category. As explained in section 3.3.1 below, this resulted in the requirement for such entities to classify some income and expenses in operating category instead of investing or financing. It is important to note that the reverse does not apply. An entity cannot exclude income and expenses from its operating category, based on whether those income and expenses arise from its main business activities. [IFRS 18.BC90].

How we see it

Although many entities already present an operating profit or loss subtotal, it cannot be presumed that the classification of income and expenses to the operating category will not change. For example, many entities currently present 'share of the profit or loss of associates and joint ventures accounted for using the equity method' in the operating category, which is not permissible under IFRS 18.

Frequently asked questions

Question 3-14: Can an entity use alternative labels such as 'operating result' or 'net operating income' for the required subtotal 'operating profit or loss'?

Although IFRS 18 uses terms such as 'other comprehensive income', 'profit or loss' and 'total comprehensive income', the standard makes it clear that an entity may use other terms to label the required totals, subtotals and line items, as long as they are labelled in a way that faithfully represents the characteristics of the items. [IFRS 18.11, IFRS 18.43]. In addition, IFRS 18.11 uses the example of the term 'net income' as an allowable alternative label for 'profit or loss'. However, in practice, local jurisdictions could attach a different meaning to such labels.

How we see it

Since IFRS 18 allows for alternative labels for the required totals, subtotals and line items, we believe 'operating result' and 'net operating income' are acceptable alternative labels for 'operating profit' provided these alternative labels do not have a different connotation in the specific jurisdiction.

3.2.4 Income taxes

An entity is required to classify tax expense or tax income that are included in the statement of profit or loss applying IAS 12, and any related foreign exchange differences, in the income taxes category. [IFRS 18.67]. Income and expenses classified in the income tax category are not subject to the requirements for classifying income and expense in the operating, investing and financing categories. [IFRS 18.B29]. The Board clarified that the presentation of income and expenses related to income tax in that category complies with the presentation requirements of IAS 12. Although this category does not result in a required subtotal, generally entities present profit before income taxes as a subtotal when it is applicable. [IFRS 18.BC83].

3.2.5 Discontinued operations

An entity is required to classify in the discontinued operations category income and expenses from discontinued operations as required by IFRS 5. [IFRS 18.68]. Income and expenses classified in the discontinued operations category are not subject to the requirements for classifying income and expense in the operating, investing and financing categories. [IFRS 18.B29]. The Board clarified that the presentation of income and expenses related to discontinued operations in that category complies with the presentation requirements of IFRS 5. Although this category does not result in a required subtotal, generally entities present profit before discontinued operations as a subtotal when it is applicable. [IFRS 18.BC83].

3.2.6 Changes in classification and derecognition

Some transactions result in a change to the category in which an entity classifies income and expenses. For example, a non-financial asset might be derecognised or classified as held for sale or might be reclassified from one category to another on the statement of financial position. [IFRS 18.BC201].

The question arises as to whether such gains or losses arising from these transactions are classified according to the 'old' or 'new' classification of income and expenses. IFRS 18 specifically requires an entity to classify income and expenses arising from the derecognition or change in classification of an asset or liability in the same way as any other expenses arising from the asset or liability immediately before the derecognition or change in classification, i.e., in the 'old' way. [IFRS 18.BC202, IFRS 18.BC203].

The following Illustration, based on the standard and the Basis for Conclusion, shows three examples of this. [IFRS 18.B60, IFRS 18.BC200, IFRS 18.BC202].

Illustration 3-4 Gain or loss on disposal of selected assets

IFRS 18 requires an entity to classify income and expenses arising from the derecognition, or a change in classification, of an asset or liability in the same category as expenses arising from the asset or liability immediately before the derecognition or change in classification. The following illustrates how this applies in three common situations:

- **Property, plant and equipment**

Assume an entity sells an item of property, plant and equipment that it used in its own operations. Since depreciation on the item was classified in the operating category, the gain or loss on disposal of the item of property, plant and equipment is also classified in the operating category.

- **Investment property**

Assume an entity sells one of its investment properties, for which the income was previously classified in the investing category. The gain or loss on the disposal of the investment property is also classified in the investing category.

- **Step acquisition of a subsidiary**

Assume an entity with an equity accounted associate engages in a step acquisition to obtain a controlling shareholding. Before the execution of the step acquisition, the acquirer will have classified income and expenses from the associate in the investing category. Therefore, on remeasurement of the associate to fair value immediately before the step acquisition as required by IFRS 3,¹¹ the entity classifies any gain or loss on the pre-acquisition remeasurement in the investing category.

The standard explains that the requirement to classify income and expense from the asset in the 'old' category also applies to an individual asset classified as held for sale under IFRS 5. This would include the income and expenses from: [IFRS 18.B47(g), IFRS 18.B49(e), IFRS 18.B60]

- An impairment loss arising on classification as held for sale
- Any subsequent remeasurement while held for sale
- And
- The gain or loss upon ultimate disposal

3.2.6.A Change in use of an asset

Sometimes an entity might reclassify an asset without derecognising it; for example, it might reclassify an item of property, plant and equipment to investment property. In such a case, the entity classifies any income or expenses, recognised in the statement of profit or loss and arising from the accounting for the change in use of the asset, in the same category as it classified income and expenses from that asset immediately before the transfer. As a result, any decrease in the carrying amount of the property not included in a revaluation surplus or any increase which reverses a previous impairment¹² of the item of property, plant and equipment will be classified in the operating category. [IFRS 18.B62, IFRS 18.BC203].

¹¹ Refer to IFRS 3.42.

¹² Refer to paragraph 61-62 of IAS 40 *Investment Property*.

Frequently asked questions

Question 3-15: Where is the selling profit or loss on the recognition of a net investment in a finance lease classified?

Applying IFRS 16, on entering into a finance lease, the lessor derecognises the asset which is the subject of the lease, recognises the net investment in the lease, and records the resulting selling profit or loss.

IFRS 18 requires the profit or loss on disposal of an item to be classified in the same category as the income and expenses arising on that item immediately before derecognition. [IFRS 18.B60].

Therefore, for most items of property, plant and equipment, the selling profit or loss on entering into a finance lease will be classified in the operating category, as the property, plant and equipment will not have previously generated income individually and largely independently. This classification applies irrespective of whether the investment in the finance lease will give rise to income that will be classified in the investing category after the commencement of the lease, since gains or losses on derecognition are classified based on profit or loss category *before* the change in use or disposal.

There may also be cases where classification in the investing category is appropriate. As an example, this could arise if a lessor previously leased out an investment property, for which the income was classified in the investing category, under an operating lease. If the lessor then enters into a new arrangement which is assessed to be a finance lease, the selling profit or loss on derecognition of the investment property and recognition of the net investment in the lease would be classified in the investing category.

A different classification could apply to entities with a specified main business activity, see Question 3-20 in section 3.3.2.B below.

3.2.6.B Derecognition of liabilities

When derecognising a liability, an entity is required to apply the same classification requirements to classify the income and expense on derecognition as it would when recognising a liability (as discussed in section 3.2.2 above). Therefore, the entity will first need to assess whether it is a Type 1 or Type 2 liability and follow the appropriate guidance. For example, any gain or loss on the prepayment of a Type 1 liability, for which income and expenses was previously included in the financing category, will also be classified in the financing category. In contrast, income and expenses from the derecognition of a Type 2 liability such as a payable (for goods received) as part of a supplier finance arrangement, and the recognition of a new financial liability, will be classified in the operating category. [IFRS 18.B61].

3.2.6.C Derecognition of groups of assets (and liabilities)

A single transaction could result in derecognition, classification as held for sale, or a change in use of a whole group of assets (or a group of assets and liabilities). Income and expenses arising from these assets (or assets and liabilities) might have previously been classified in different categories immediately before the transaction. The standard introduces a 'tainting' concept, whereby the presence in a group of a single asset whose related income and expenses were classified in the operating category would require the income and expenses for the whole of that group to be classified in the operating category. [IFRS 18.B63]. Therefore, an entity classifies income and expense from such a transaction:

- In investing, if the group of assets previously generated income and expenses classified only as investing (any income tax assets in the group are disregarded for this purpose)
- In operating for all other groups of assets (or groups of assets and liabilities) [IFRS 18.B64, IFRS 18.BC204-BC206]

Thus, if a subsidiary that was disposed of included both assets that generated operating category income and expenses and an asset that generated only investing category income and expenses, the total gain or loss on disposal would be presented in the operating category, as the amount is not apportioned between categories.

Illustration 3-5: Classification of the gain or loss on the disposal of a subsidiary

Entity A, a conglomerate, disposed of three subsidiaries in the current period, resulting in a gain or loss on disposal for each.

The following table illustrates the different classifications of the gain or loss on disposal of each subsidiary in the consolidated statement of profit or loss of Entity A. [IFRS 18.B64, IFRS 18.BC204-BC206].

Type of subsidiary	Profit or loss category
Subsidiary B held assets which generated income and expenses previously classified in both the operating and investing categories within Entity A's consolidated financial statements.	Operating
Subsidiary C held only an investment property (and a related income tax asset). The income and expenses from the investment property were previously classified in the investing category. There are specific requirements for entities with a main business activity of investing in assets, as discussed in section 3.3.2 below.	Investing
Subsidiary D held the Group's entire manufacturing operations. The sale of Subsidiary D constitutes a discontinued operation under IFRS 5.	Discontinued operations

Note that foreign exchange differences reclassified from equity (e.g., from the foreign currency translation reserve) as part of the disposal of a foreign operation will form part of the gains or losses and, therefore, will also be included in the appropriate category - see section 3.2.7 below. [IFRS 18.B64(a)].

Disposal groups held for sale and discontinued operations

The same 'tainting' principle applies to income and expenses from a disposal group held for sale, for example:

- An impairment loss arising on classification of the disposal group as held for sale
- Any subsequent remeasurement while held for sale
- And
- The gain or loss upon ultimate disposal

Thus, if the disposal group included assets which generated income classified in the operating category, all the expenses listed above from the entire disposal group will also be included in that category. [IFRS 18.B64].

However, if the disposal group also meets the definition of a discontinued operation under IFRS 5, all the income and expenses are classified in the discontinued operations category (see section 3.2.5 above), rather than in the operating category. [IFRS 18.BC204].

3.2.7 Foreign exchange differences and the gain or loss on the net monetary position

The basic principle for classifying foreign exchange differences is that they follow the category in which the related income and expenses from the item giving rise to the foreign exchange difference have been classified, unless doing so would involve undue cost or effort. If the latter is the case, all such differences are classified in the operating category. [IFRS 18.B65, IFRS 18.B68, IFRS 18.BC207-BC208]. For example, foreign exchange differences on a trade receivable denominated in a foreign currency will be classified in the operating category. In contrast, foreign exchange differences arising from a Type 1 liability (for example, a debt instrument liability denominated in a foreign currency) will be classified in the financing category, if the related interest expense on that liability is classified in the financing category. [IFRS 18.B66]. There are specific requirements for entities with a main business activity of providing financing to customers, as discussed in section 3.3.3.E below.

In formulating this requirement, the Board considered that requiring the foreign exchange differences to be classified in the same category as the income or expense that gave rise to them contributes to a faithful representation of the business activities, as it provides a complete picture of the performance of an entity's main business activities. At the same time, the Board acknowledged that this could impose large implementation costs on preparers, as many systems are currently configured to capture all foreign exchange differences in aggregate as a single amount. [IFRS 18.BC209, IFRS 18.BC210, IFRS 18.BC211]. To address this, the Board introduced an exemption based on undue cost or effort for each item giving rise to foreign exchange differences. The exemption, requiring those differences to be classified in operating, is only applicable to the subset of differences that cannot be classified without undue cost or effort. [IFRS 18.BC212].

The assessment of whether classifying foreign exchange differences involves undue cost and effort is performed for each item giving rise to foreign exchange differences and is specific to the facts and circumstances of each case. Nonetheless, if the same facts and circumstances relate to a number of items, the same assessment can be applied. [IFRS 18.B68].

The Board acknowledged that the requirement to classify foreign exchange differences in the operating category under the undue cost and effort exemption is not a perfect solution, as it might cause other categories to be incomplete. However, it is consistent with the Board's view of the operating category as a default category and ensures that operating profit is complete, thus enhancing the usefulness of the operating profit subtotal as a measure of performance. [IFRS 18.BC213, IFRS 18.BC214, IFRS 18.BC215].

How we see it

The undue cost and effort exemption, resulting in the classification of particular foreign exchange differences in the operating category, is a pragmatic solution which could involve significant judgement.

In some cases, income and expenses from a Type 2 liability might be classified in two different categories, as the transactions involve financing and another activity, for example, purchased services denominated in a foreign currency with extended credit terms, could give rise to an operating expense for the purchase of the services and a financing expense for the interest on the payable. In this instance, judgement is required to determine to which of the two amounts the foreign exchange difference relates. The foreign exchange gain or loss will then be allocated in its entirety to the relevant category. Note that disaggregation of the foreign exchange difference arising on a Type 2 liability into more than one category is prohibited. Therefore, the judgement is made about the difference as a whole. It is made on a case-by-case basis and there is no requirement to classify in the same category differences on all Type 2 liabilities, but differences arising on liabilities of a similar nature must be classified in the same category.

[IFRS 18.B67, IFRS 18.BC217, IFRS 18.BC218, IFRS 18.BC219].

Frequently asked questions

Question 3-16: How are foreign exchange differences on intercompany loans, eliminated on consolidation, classified in profit or loss?

Within a multinational group, the parent commonly has a different functional currency from its subsidiaries. For any intercompany balances between a parent and its subsidiaries, which do not form part of the net investment in a foreign operation, and which have been eliminated on consolidation applying IFRS 10 *Consolidated Financial Statements*, the foreign exchange differences will not be eliminated and will remain in the consolidated profit or loss.

Applying the basic principle for classifying foreign exchange differences (i.e., classifying in the same category in which the related income and expenses from the underlying item have been classified) to such cases is problematic. This is since, from the consolidated group's perspective, the underlying intercompany balances that gave rise to the foreign exchange differences do not exist (i.e., they've been eliminated under IFRS 10). Therefore, there does not appear to be 'related income and expenses' that the foreign exchange differences can 'follow'.

How we see it

In our view, the classification is performed from the group's perspective as a single reporting entity and at a consolidated level there is no underlying loan transaction giving rise to the foreign exchange gain or loss. As a result, we believe it is acceptable to classify these gains and losses within the default category of operating within the consolidated statement of profit or loss. However, considering that IFRS 18 is silent on the matter, other categories cannot necessarily be ruled out and practice needs to be monitored, as it develops.

At the time of writing, the IFRS IC is considering a submission¹³ on this issue.

13 [IFRS IC Update](#), September 2025, available on the IFRS Foundation's website.

3.2.7.A Gains or losses on the net monetary position in a hyperinflationary economy

In a hyperinflationary economy, an entity might recognise a gain or a loss on the net monetary position, representing the excess of monetary assets over monetary liabilities and vice versa. IAS 29 *Financial Reporting in Hyperinflationary Economies* suggests that the gain or loss on the net monetary position might be presented with other related items such as interest income and expense and foreign exchange gains or losses. If the entity does not present the gain or loss on the net monetary position with the associated income and expense, it is required to classify the gain or loss in the operating category as it will not, in its totality, meet the requirements to be classified in the investing or financing categories. This is consistent with the use of the operating category as a default category. [IFRS 18.B69, IFRS 18.BC220, IFRS 18.BC221].

3.2.8 Gains and losses on derivatives and designated hedging instruments

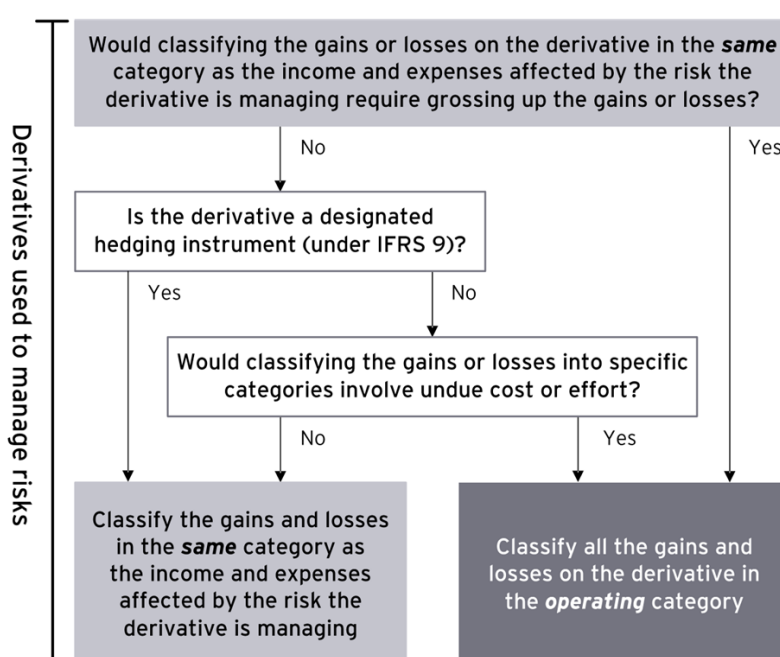

Specific requirements are set out for the classification of gains and losses on financial instruments designated as hedging instruments, to the extent these are recognised in profit or loss. The basic principle is that all gains and losses must be classified in the same category as the income and expenses (or assets or liabilities) affected by the risk the financial instrument is used to manage. However, in the event this would lead to the grossing up of gains and losses, all gains and losses on the hedging instrument or derivative must be classified in the operating category. The same requirements apply to gains and losses on a derivative that is not designated as a hedging instrument, but is used to manage identified risks, unless it would involve undue cost or effort, in which case the gain or loss is classified in the operating category. [IFRS 18.B70, IFRS 18.B72, IFRS 18.BC223].

Thus, the gains and losses are classified as follows: [IFRS 18.BC224]

- **Financial instruments designated as hedging instruments:**
To the extent the gain or loss on the derivative is recognised in the statement of profit or loss, these are classified in the same category as the income and expenses exposed to the risks that the derivative is covering, unless this would require grossing up of those gains and losses. If the latter is the case, an entity will classify all gains and losses on the derivative in the operating category.
- **Derivatives not designated as hedging instruments, but used to manage exposure to identified risks:**
The gains and losses on the derivative are classified in the same category as the income and expenses affected by the risks that the derivative is managing, unless this would require either undue cost or effort, or the grossing up of the gains and losses. If one of the latter two is applicable, an entity will classify all gains and losses on the derivative in the operating category.

The following diagram, based on Figure 5 in the Illustrative Examples to IFRS 18, summarises these requirements and the classification for each type is further discussed in section 3.2.8.A and section 3.2.8.B below. [IFRS 18.IE Figure 5].

Figure 3-5: Classification of gains and losses on derivatives used to manage risks

Any gains or losses arising on an undesignated component of a designated hedging instrument, will be classified in the same category as those arising on the designated component. Similarly, the ineffective portion of a gain or loss must be classified in the same category as the effective portion. [IFRS 18.B71]. The classification of derivatives that are not used to manage identified risk are discussed further in section 3.2.8.D below.

The requirements for derivatives only specify the appropriate category for gains and losses arising on such derivatives to the extent these gains or losses are recognised in profit or loss. They do not override the requirements in other IFRS accounting standards, nor do they specify the line item within the statement of profit or loss in which to include such gains or losses. As a result, entities will need to consider the aggregation and disaggregation guidance set out in section 2 above. [IFRS 18.B76].

3.2.8.A Gains and losses on designated hedging instruments

Entities with designated hedging instruments will have identified the link between the derivative and the risk being hedged in order to comply with the eligibility criteria in IFRS 9 and for the purposes of creating the hedge documentation. Therefore, providing users with information about the risk management strategy via classifying the gains and losses on both the derivative and the income and expenses arising from the hedged risk in the same category is expected to provide useful information. [IFRS 18.BC225].

However, if the hedged items are classified in more than one category, with offsetting risk positions, the entity would need to gross up the gains and losses on the hedging instrument to classify them in the relevant categories. Nevertheless, this presentation is not permitted by IFRS 9, as all gains and losses from a single hedging instrument must be presented in a separate line item, to avoid an artificial gross up. Consequently, IFRS 18 requires such gains or losses to be classified in the operating category to avoid a gross up. [IFRS 18.BC226].

The type of situation in which grossing up might occur is when an entity uses a derivative for a dual purpose, for example, to hedge net foreign currency risk on revenue (classified in operating) and interest expenses (classified in financing). Presenting the gain or loss on the derivative in each category would require a larger gain or loss to be presented in each category than actually arose on the derivative in order to arrive at the net position. Thus, this is prohibited and the whole gain or loss is presented in the operating category. [IFRS 18.B74, IFRS 18.B75].

3.2.8.B Gains and losses on other derivatives used to manage exposure to identified risks

As many entities use derivatives to manage risk without designating them as hedging instruments under the IFRS 9 hedge accounting rules, it is expected that those entities will be monitoring whether the derivatives actually mitigate the identified risk. As a result, the entity is expected to have the information necessary to determine the link between the derivative and the risk it manages, so the Board concluded that classifying the gains and losses in the same way as for designated hedging instruments will provide useful information. However, the Board acknowledges that, in some cases, identifying gains or losses affected by the risk managed could involve undue cost or effort. In such cases, the gains and losses must be classified in the operating category. [IFRS 18.BC227, IFRS 18.BC228].

The prohibition on grossing up gains and losses equally applies to derivatives that are not designated as hedging instruments, but are used to manage identified risks. Therefore, if grossing up were needed to allocate gains and losses into the applicable categories this would not be permitted and the net gains and losses are required to be classified in the operating category. [IFRS 18.BC230].

How we see it

Many entities already present the gains and losses on designated hedging instruments and on those instruments used to manage risk in the manner required by IFRS 18. However, the new prescriptive requirements will require entities who are not currently presenting this information in line with IFRS 18 to change current practice.

3.2.8.C Income and expenses on non-derivative financial instruments used to manage risk, but not designated as hedging instruments

An entity may use a *non-derivative* financial instrument to manage exposure to identified risks, without designating it as a hedging instrument. The IASB considered introducing a similar approach for such instruments to that required for derivative instruments, as described in section 3.2.8.B above, but decided against it as it might be too costly for entities to apply. This is because non-derivative financial instruments are typically held for more than just one purpose. For example, a debt instrument denominated in a foreign currency can have two functions: to provide financing; and to manage the entity's foreign currency risk exposure.

Given the IASB decided against providing specific requirements, an entity classifies the income and expenses on such non-derivative financial instruments in the operating, investing or financing categories, applying the general classification requirements of IFRS 18. [IFRS 18.BC229].

3.2.8.D Income and expenses arising on derivatives not used to manage exposure to identified risks

The classification of derivatives that are *not* used to manage identified risk depends on whether they relate to transactions that involve only the raising of financing. Therefore, if a derivative is not used to manage identified risks, and is: [IFRS 18.B73, IFRS 18.BC232, IFRS 18.BC233, IFRS 18.BC234, IFRS 18.BC235]

- **Related to a transaction that involves only the raising of finance**
Any gains or losses are classified in the financing category. There are specific requirements for entities with a main business activity of providing financing to customers, as discussed in section 3.3.3.C below.
- **Not related to transactions involving only the raising of finance**
Any gains or losses are classified in the operating category.

3.3 Requirements for specific entities

The Board identified that if certain entities applied the general requirements, they would classify income and expenses from their main business activities in categories other than the operating category. Therefore, as an exception to the general requirements, the standard requires entities with a 'specified main business' activity (see section 3.3.1 below) to classify *some* of their income and expenses in the operating category that would otherwise have been included in investing or financing. [IFRS 18.50].

The standard also includes certain exclusions to the financing category that apply to issuers of:

- Insurance contracts in the scope of IFRS 17 (see section 3.3.5 below)
- And/or
- Investment contracts with participation features in the scope of IFRS 9 (see section 3.3.6 below)

It is important to note that these specific requirements only apply to the income and expenses set out in section 3.3.2 to section 3.3.6 below while the rest of an entity's income and expenses are still subject to the general requirements. Therefore, these specific entities will be required to consider both the general requirements (discussed in section 3.2 above) and the relevant specific requirements discussed further in this section.

3.3.1 Entities with specified main business activities

A new concept in IFRS 18 is that of a 'specified main business activity'. When classifying its income and expenses, an entity will be required to assess whether it has one or both specified main business activities of:

- Investing in particular types of assets (referred to as 'investing in assets' hereafter)
- And
- Providing finance to customers

The identification of main business activities is limited to these two types. Therefore, it is not necessary to identify *all* the main business activities the entity engages in; it is only necessary to assess whether it engages in these two types, as there are particular classification requirements for entities with either or both of those specified main business activities. [IFRS 18.49].

The standard requires certain items of income and expenses arising from an entity's specified main business activity to be classified in the operating category and thus reflect the nature of these operations. Without the concept of a main business activity, such entities would have been required to classify items of income and expenses arising from their day-to-day operations in the investing and financing categories. [IFRS 18.50]. This is significant as investment returns are an important indicator of performance for entities whose main business activity is investing in assets. Similarly, for entities who provide financing to customers, the difference between interest revenue and the related interest expense is an important indicator of operating performance. [IFRS 18.BC94].

It is important to note that an entity's operations include, but are not limited to, its main business activities and that an entity could have just one, or more than one, main business activity; for example, an entity might manufacture a product and also provide financing to customers to buy that product. Both of these activities might be determined to be main business activities. [IFRS 18.B30]. It is also worth noting that

entities such as banks, with a main business activity of providing financing to customers and investing in financial assets, are not precluded from also identifying a main business activity of investing in non-financial assets, such as investment property.

IFRS 18 provides examples of the types of entities that might fall into these categories: [IFRS 18.B31, IFRS 18.B32]

Extract from IFRS 18

B31	Examples of entities that might invest in assets as a main business activity include: (a) investment entities as defined by IFRS 10 <i>Consolidated Financial Statements</i> ; (b) investment property companies; and (c) insurers.
B32	Examples of entities that might provide financing to customers as a main business activity include: (a) banks and other lending institutions; (b) entities that provide financing to customers to enable those customers to buy the entity's products; and (c) lessors that provide financing to customers in finance leases.

IFRS 18 is clear that whether an entity invests in assets or provides financing to customers as a main business activity is a matter of fact and not merely an assertion; the entity will use judgement to make its assessment, and the latter must be evidence-based. The standard points out that a key determinant of whether an entity has a main business activity of investing in assets or providing financing to customers is: [IFRS 18.B33, IFRS 18.B34, IFRS 18.BC96]

- Whether it uses a subtotal such as gross profit as an important indicator of performance
And
- Whether that subtotal would include items that would be classified in investing or financing, were the main business activities not identified as investing in assets, or providing financing to customers

For example, a bank might use net interest income as an important indicator of performance. That subtotal typically includes interest earned from interest-bearing assets such as loans to customers and interest expenses from interest-bearing liabilities such as deposits. Were the bank unable to identify a main business activity of providing financing to customers, it would be required to present the interest expenses in the financing section. This classification would not provide a useful structured summary of the bank's operations.

The standard provides the following examples of the type of evidence which indicates that an entity considers such a subtotal (e.g., gross profit) as an important indicator of performance: [IFRS 18.B35]

- The use of the subtotal in external explanations of operating performance, such as investor presentations
Or
- The use of the subtotal in internal assessment or monitoring

As mentioned above, the subtotal of net interest income is generally monitored or communicated as a measure of operating performance by entities who provide financing to customers as a main business activity. [IFRS 18.BC96].

If an entity applies IFRS 8 *Operating Segments*, it is also relevant to consider its segment information for evidence of whether its main business activities are investing in assets or providing financing to customers: [IFRS 18.BC97]

- If a reportable segment is comprised of a single business activity of investing in assets or providing financing to customers, this indicates that the performance of the reportable segment is an important indicator of the entity's performance. Consequently, the business activity of that reportable segment is a main business activity of the entity. [IFRS 18.B36(a)].
- If the performance of a single operating segment is an important indicator of the entity's performance and if the segment comprises a single business activity, this indicates that the activity could be a main business activity. [IFRS 18.B36(b)]. For example, when a reportable segment comprises several operating segments and one of the operating segments contains a single main business activity, the entity might determine that business activity included in that reportable segment, relating to the single operating segment, is a main business activity.

IFRS 18 requires an entity to make the assessment of main business activities for the reporting entity as a whole. Thus, it is possible for a reporting entity that is a consolidated group and a reporting entity that is a subsidiary within that group, to have differing conclusions about its main business activities. [IFRS 18.B37]. As a result, the classification of income and expenses for the subsidiary could differ from that of the group. This ensures that each reporting entity (consolidated, separate, or individual) appropriately reports its main business activities, notwithstanding that consolidation adjustments might be required as a result, thus incurring additional cost. [IFRS 18.BC98].

The same applies to a parent entity, which may be a holding company, while one of its subsidiaries provides financing to customers; thus, the main business activity for the consolidated financial statements and the parent's separate financial statements could differ. [IFRS 18.BC99].

Frequently asked questions

Question 3-17: In separate financial statements, where does a parent classify the income and expenses from its investments in subsidiaries accounted for at cost?

Parent entities may be pure holding companies while others have their own operations, alongside their holdings of investments in subsidiaries. Regardless of whether they have their own operations or not, it is reasonable to assess that investments in subsidiaries accounted for at cost in a parent's financial statements constitute assets which generate a return individually and largely independently of the other resources of the entity, in the form of dividends. As a result, it would be appropriate to classify the income and expenses in the investing category.

However, there may be situations in which, depending on the facts and circumstances, a parent might assess that investing in such assets is a main business activity. As noted above, IFRS 18 includes two indicators to help with this assessment. However, evidence that a parent entity uses a subtotal similar to gross profit to explain an entity's operating performance externally and information about its segments may not necessarily be relevant for its separate financial statements. Therefore, it is necessary to consider other evidence to make the assessment and such evidence might include:

- Use of a subtotal similar to gross profit used internally to monitor operating performance
- Assessment of the purpose of the entity, i.e., was the entity established to:
 - Shape the composition of the group by acquiring, managing and selling investments in subsidiaries, to realise the group's business strategy
 - Primarily carry out its own activities

If the entity does assess that it has a main business activity of investing in assets, classification in the operating category would be appropriate.

How we see it

Current practice (IAS 1) is mixed, with income and expenses from investments carried at cost in a parent's separate financial statements classified above and below operating profit. We believe that classification in either the operating category or the investing category could be appropriate, depending on the facts and circumstances and will depend on the entity's assessment of its main business activities.

It is important to consider the regulatory perspective in the different jurisdictions in which the parent entity operates, as specific requirements may need to be followed.

At the time of writing the IFRS IC is considering a submission on this issue.

The assessment of whether an entity invests as a main business activity in other assets that generate a largely independent return must be performed by assessing either an individual asset or a group of assets with shared characteristics (see section 2.2.2 above). When this principle is applied to groups of financial assets, those groups must be consistent with the classes of financial instruments used for disclosure by class under IFRS 7. [IFRS 18.B40, IFRS 18.BC147].

The assessment mentioned above is carried out at a point in time, based on facts at that time. This means that if, at a later date, there is a different outcome to the assessment, it will be based on new facts at that moment in time. As a result, any change is treated as a prospective adjustment from the date of the reassessment and there is no need to reclassify comparative amounts. However, to provide useful information to a user, disclosure of the amount and classification of items of income and expense immediately before and after the date of change in the current period is required, as well as information about the amount and classification in the prior period. [IFRS 18.B41, IFRS 18.51(c), IFRS 18.BC101, IFRS 18.BC102].

The identification of a main business activity is a relatively high bar and judgement is required. [IFRS 18.B34]. Not all activities which an entity conducts on a regular basis are necessarily main business activities, as some may constitute ancillary activities. Although the standard provides some indicators of when an activity is a 'main business activity', the list is not exhaustive. Other factors could therefore be relevant, depending on an entity's specific circumstances.

How we see it

The requirements of the standard and accompanying guidance suggest that the threshold for identifying a specified main business activity is higher than some might intuitively think and that 'main' is a key element of the term 'main business activity'. Therefore, ancillary or incidental activities do not meet the definition of a 'main business activity'.

3.3.1.A Specified main business activities disclosures

Entities with a specified main business activity must make certain disclosures to enable users to understand the assessment of their main business activity, as follows: [IFRS 18.51]

Extract from IFRS 18

- 51 If an entity:
- (a) invests in assets as a main business activity, it shall disclose that fact.
 - (b) provides financing to customers as a main business activity, it shall disclose that fact.
 - (c) identifies a different outcome from its assessment of whether it invests in assets or provides financing to customers as a main business activity (see paragraph B41), it shall disclose:
 - (i) the fact the outcome of the assessment has changed and the date of the change.
 - (ii) the amount and classification of items of income and expense before and after the date of the change in the outcome of the assessment in the current period and the amount and classification in the prior period for the items for which the classification has changed because of the changed outcome of the assessment, unless it is impracticable to do so. If an entity does not disclose the information because it is impracticable to do so, the entity shall disclose that fact.

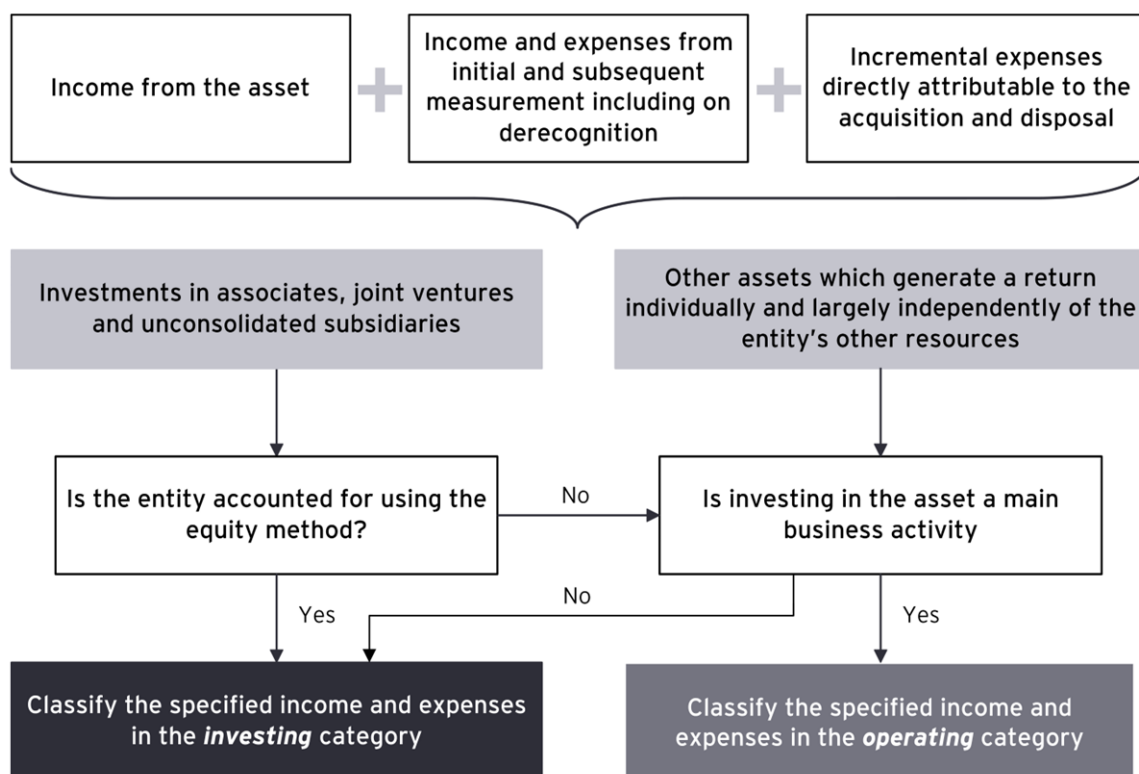

The requirement for entities to disclose whether they invest in assets or provide financing to customers as a main business activity helps users to understand the structure of an entity's statement of financial performance, especially in digital financial reports. To be clear, this disclosure is separate from the requirements to disclose a description of the nature of the entity's operations and its principal activities in IFRS 18.116(b). [IFRS 18.BC100].

As the assessment of an entity's main business activities is a matter of fact, it follows that facts may change, and an assessment performed at the point of the change could lead to a different conclusion. When this is the case, as noted above, an entity will classify and present income and expenses from the change in assessment prospectively and amounts before the change are not reclassified. As this will inevitably cause some disruption to trend analysis, the requirement to disclose the change and information about the effects of the change relating to both the current and prior periods, has been introduced to alleviate the disruption, unless it is impracticable to make the disclosure. [IFRS 18.B41, IFRS 18.51(c), IFRS 18.BC101, IFRS 18.BC102].

3.3.2 Investing in assets

The classification requirements for entities with a specified main business activity of investing in assets are shown in the diagram below, adapted from Figure 3.1 in the Illustrative Examples to IFRS 18. [IFRS 18.IE Figure 3.1].

Figure 3-6: Classification by entities that invest as a main business activity

Some entities, such as investment property companies, have a main business activity of investing in assets. For such entities, classifying rental income and remeasurements of investment property in the investing category would result in the operating profit subtotal excluding these items and would not faithfully represent the results of their operations. [IFRS 18.BC145]. The investments held by investment property companies typically generate a return individually and largely independently of the entity's other resources. The standard, therefore, specifies that entities that have a main business activity of investing in assets classify certain items of income and expense (which they would otherwise classify in the investing category) in the operating category, as follows: [IFRS 18.BC104]

- Income and expenses from investments in associates, joint ventures and unconsolidated subsidiaries accounted for at fair value through profit or loss or at cost [IFRS 18.55(b)]
 - Income and expenses from other assets that generate a return individually and largely independently of the entity's other resources, for example, investment properties [IFRS 18.58]
- And
- Income and expenses from cash and cash equivalents, for certain entities (see section 3.3.4 below) [IFRS 18.56(a)]

The type of income and expenses the standard envisages include rental income, interest, dividends, depreciation, impairment losses and their reversal, fair value gains and losses and income and expenses from the derecognition of the asset or from its classification and remeasurement as held for sale. [IFRS 18.B47].

3.3.2.A Investments in other entities *not* accounted for applying the equity method

Entities which are assessed as having a specified main business activity of investing in associates, joint ventures and unconsolidated subsidiaries which are *not* equity accounted, are required to classify specified income and expenses in the operating category, as follows: [IFRS 18.54, IFRS 18.55(b), IFRS 18.BC104, IFRS 18.BC106, IFRS 18.BC132]

- Income generated by the assets, e.g., dividend income from equity instruments
- Income and expenses that arise from the initial and subsequent measurement of the assets, including on derecognition of the assets e.g., impairment losses and reversals
- Incremental expenses directly attributable to the acquisition and disposal of the assets, e.g., transaction costs and costs to sell the assets - see section 3.2.1.B above

The standard defines 'unconsolidated subsidiaries' as investments in subsidiaries: [IFRS 18.B44]

- 1) Accounted for in separate financial statements using the equity method
- 2) Held by an investment entity and measured at fair value through profit or loss
- 3) Accounted for in accordance with IFRS 9

Or

- 4) Accounted for at cost in separate financial statements

For investments in associates, joint ventures, and unconsolidated subsidiaries which are *not* equity accounted (i.e., those investments accounted for at fair value through profit or loss in accordance with IFRS 9 or accounted for at cost in separate financial statements), the entity must perform the assessment of whether they constitute a main business activity, either by individual asset or by groups of assets with shared characteristics. If the entity prepares separate financial statements and chooses to use groups of assets to perform the assessment, it must group those assets according to the categories used in choosing the measurement basis for the investments applying IAS 27.10 - see Chapter 9 for a discussion on identifying these categories. [IFRS 18.B38, IFRS 18.B43, IFRS 18.BC147].

Income and expenses from equity accounted associates, joint ventures and unconsolidated subsidiaries are required to be classified in the investing category. Therefore, there is no need for an entity to assess whether they constitute a main business activity. [IFRS 18.55(a), IFRS 18.B38]. See section 3.2.1.A above for more detail.

3.3.2.B Assets which generate a return individually and largely independently of the entity's other resources

If an entity invests as a main business activity in assets that generate a return (either positive or negative) individually and largely independently of the entity's other resources, it is required to classify specified income and expenses in the operating category that otherwise would have been included in the investing category: [IFRS 18.53(c), IFRS 18.54, IFRS 18.58, IFRS 18.B45, IFRS 18.BC106]

Extract from IFRS 18

- | | |
|----|--|
| 54 | The income and expenses from the assets identified in paragraph 53 that an entity shall classify in the investing category comprise the amounts included in the statement of profit or loss for (see paragraph B47): |
| | (a) the income generated by the assets; |
| | (b) the income and expenses that arise from the initial and subsequent measurement of the assets, including on derecognition of the assets; and |
| | (c) the incremental expenses directly attributable to the acquisition and disposal of the assets-for example, transaction costs and costs to sell the assets. |
| 58 | For the assets specified in paragraph 53(c) (that is, other assets if they generate a return individually and largely independently of the entity's other resources) that an entity invests in as a main business activity (see paragraph B40), the entity shall classify the income and expenses specified in paragraph 54 in the operating category. |

For example, real estate companies will need to present rental income in the operating category. Assets such as debt and equity instruments can also generate individual and largely independent returns. If the entity invests in such assets as a main business activity, it is also required to classify the income and expenses from those assets in the operating category. [IFRS 18.58].

To clarify the concept of 'individual and largely independent' returns, the standard gives examples of certain assets that do *not* generate individual and largely independent returns. For example, plant and equipment used in a production process usually generates returns in conjunction with other resources. Similarly, a receivable arising from the supply of goods and services generates returns individually but has arisen from the use of other resources or assets. Some assets, such as a disposal group held for sale, might generate returns largely independently of an entity's other resources, but not individually. Income and expenses arising from these examples do not meet the criteria of generating both individual and largely independent returns. [IFRS 18.BC142].

The requirement to classify income and expenses in the operating category is only relevant for assets in which the entity invests as a main business activity. An entity that invests in investment property as a main business activity might have other investments such as financial assets that do not constitute a main business activity; therefore, income and expenses from those other investments will be classified in the investing category. [IFRS 18.BC146].

If an entity has a specified main business activity of investing in *financial* assets that generate a return individually and largely independently of the entity's other resources, it is required to classify the income and expenses from cash and cash equivalents in the operating category (see section 3.3.4 below). [IFRS 18.56(a)].

Frequently asked questions

Question 3-18: How is rental income from property, plant and equipment held on an operating lease classified in profit or loss by a lessor?

This Question is a continuation of Question 3-1 in section 3.2.1 above.

While a lessor without a specified main business activity would classify this type of income or expense in investing if the leased asset generated a return individually and largely independently of the entity's other operations, a lessor with a specified main business activity of investing in such assets will classify the rental income in the operating category.

Question 3-19: How is finance income on the net investment in a finance lease classified in profit or loss?

This Question is a continuation of Question 3-2 in section 3.2.1 above.

While the net investment in a lease is able to produce returns individually and largely independently of the lessor's other resources, if a lessor invests in such an asset as a main business activity (e.g., the lessor is a leasing company), then the finance income on the net investment in the lease will be classified in the operating category. [IFRS 18.58].

Question 3-20: Where is the selling profit or loss on recognition of a net investment in a finance lease classified?

This Question is a continuation of Question 3-15 in section 3.2.6.A above.

Applying IFRS 16, on entering into a finance lease, a lessor derecognises the asset, which is the subject of the lease, recognises the net investment in the lease, and records the resulting selling profit or loss. IFRS 18 requires the profit or loss on disposal of an item to be classified in the same category as the income and expenses arising on that item directly before derecognition. [IFRS 18.B60]. Therefore, if a lessor, with a main business activity of investing in investment properties, entered into a finance lease over one of its investment properties, it would recognise the selling profit or loss in the operating category.

Question 3-21: How are transaction costs incurred in acquiring an equity investment (without control, joint control or significant influence) in other entities classified in profit or loss?

This Question is a continuation of Question 3-6 in section 3.2.1.B above.

An entity that acquires an equity investment (without control, joint control or significant influence) may incur transaction costs which are included in profit or loss. In such a case, an entity that has a main business activity of investing in equity instruments classifies the transaction costs relating to that acquisition in the operating category.

Question 3-22: How are expenses related to holding investment property classified in profit or loss?

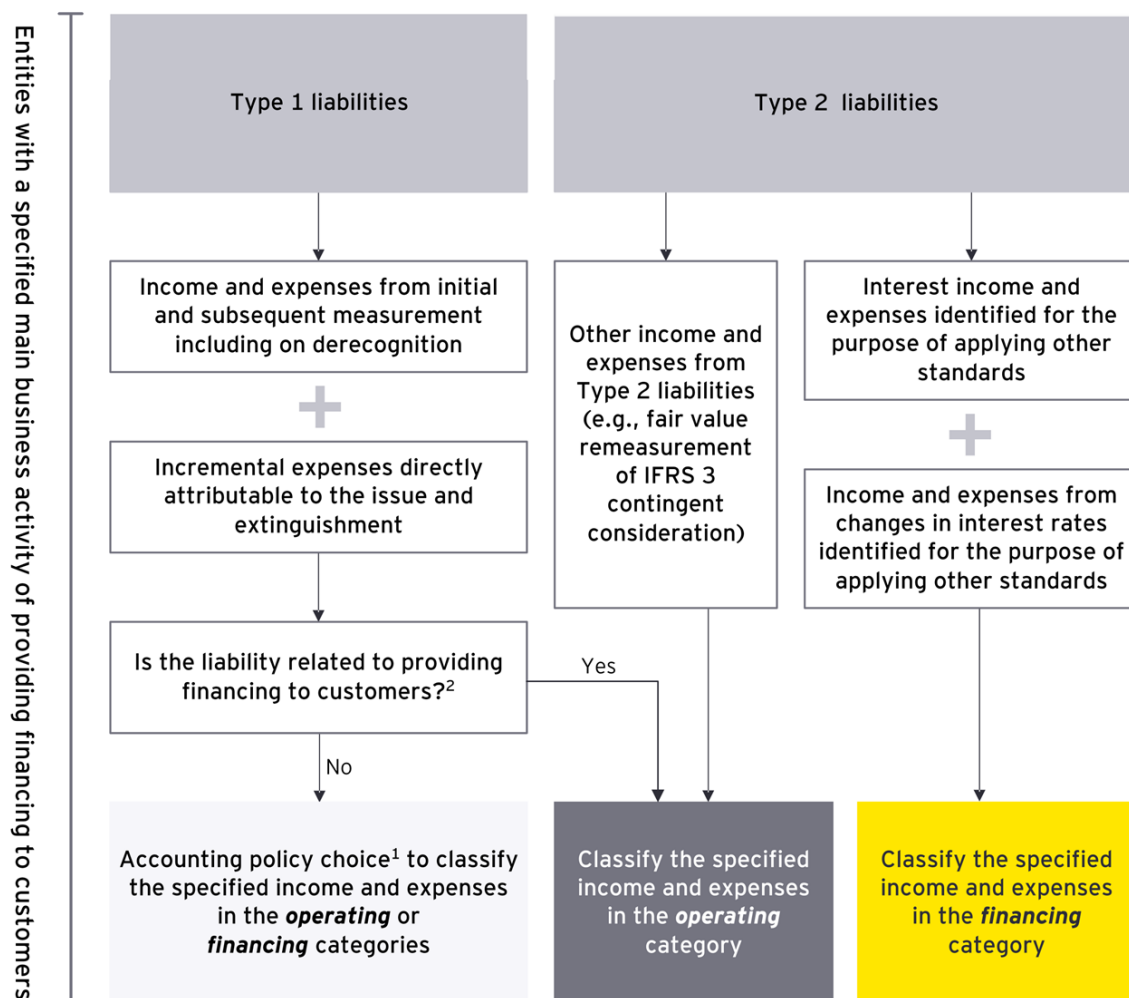

See the response to Question 3-3 in section 3.2.1 above.

Since these types of expenditure do not fall within the categories of expenditure listed in IFRS 18.54, expenses that arise from holding the investment, for example, maintenance expenses or rates and taxes levied on an investment property will be classified in the operating category.

3.3.3 Providing financing to customers

The following diagram, based on Figure 3.2 in the Illustrative Examples to IFRS 18, summarises the requirements for Type 1 and Type 2 liabilities (see section 3.2.2 above) held by entities with a specified main business activity of providing financing to customers: [IFRS 18.IE Figure 3.2]

Figure 3-7: Classification of income and expense related to liabilities of an entity with a specified main business activity of providing financing to customers

1 The choice of accounting policy must be consistent (where applicable) with that made for the classification of income and expenses from cash and cash equivalents (see section 3.3.4 below).

2 If the entity is unable distinguish between its Type 1 liabilities that are related to providing financing to customers and those that are not, it must apply the accounting policy 'choice' to classify income and expenses from such liabilities in the operating category.

There are specific requirements for the classification of income and expenses from Type 1 liabilities for entities which provide financing to customers as a main business activity. Such entities will need to determine which of their Type 1 liabilities (see section 3.2.2.A above) relate to providing financing to customers, as the following requirements apply:

- Income and expenses arising from Type 1 liabilities that relate to providing financing to customers will be classified in the operating category [IFRS 18.65(a)(i)]
Whereas
- Income and expenses from Type 1 liabilities that do *not* relate to providing financing to customers could be classified, as an accounting policy choice, either in the operating or in the financing category [IFRS 18.65(a)(ii)]

If an entity cannot distinguish between its Type 1 liabilities that relate to providing financing to customers and those that do not, income and expenses from such liabilities are required to be classified in the operating category (essentially applying the accounting policy choice described above and 'choosing' the operating category). [IFRS 18.66].

How we see it

We believe the requirement in IFRS 18.66 is an exception and applies only to those Type 1 liabilities where an entity is unable to distinguish whether they relate to its main business activity of providing financing to customers. It does not override the election made by an entity for Type 1 liabilities where it is clear they are unrelated to providing financing to customers.

These requirements are needed because the difference between the interest revenue from that main business activity and the interest expense incurred to finance that activity is an important measure of the entity's operating performance and without them, the interest expense would be classified in the financing category, thus preventing presentation of that measure. [IFRS 18.BC180]. This accounting policy choice arises because it might not be possible for certain entities, for example, those with a central treasury function, to distinguish easily between income and expenses that relate to the provision of finance to customers, without undue cost and effort. [IFRS 18.BC181-BC183].

Accounting policy for liabilities unrelated to providing financing

The accounting policy choice made must be consistent with the choice made for classifying income and expenses from cash and cash equivalents, addressed in section 3.3.4 below and is applicable only to those entities which have a main business activity of providing financing to customers. [IFRS 18.65(a)(ii)].

It is important to note that an entity with a main business activity of providing financing to customers, always classifies income and expenses from Type 1 liabilities that relate to providing financing to customers in the operating category. The accounting policy choice only relates to the income and expenses from Type 1 liabilities that do *not* relate to providing financing to customers. [IFRS 18.BC184].

Illustration 3-6: Determining which Type 1 liabilities are in the scope of the accounting policy choice in IFRS 18.65

Bank B, with a main business activity of providing financing to customers, entered into three Type 1 liabilities in the current period:

- Loan 1 - Entered into specifically to on-lend that financing to customers.
- Loan 2 - Taken out to fund the bank's own operations (e.g., to finance a business acquisition) as opposed to providing financing to customers.
- Loan 3 - A general purpose fixed rate loan entered into by the central treasury function of the bank. These funds have been intermingled with the bank's own excess cash and can be used by any part of the bank's business, including the lending operations. As a result, the bank cannot identify whether the liability solely relates to the provision of financing to customers.

The bank applies the accounting policy choice in IFRS 18.65 to Loan 2 only. This is because the accounting policy only applies to liabilities unrelated to providing financing to customers. [IFRS 18.BC184].

The income and expenses from Loan 1 and Loan 3 must be classified in the operating category by Bank B since:

- Income and expenses from liabilities that relate to a main business activity of providing financing to customers (i.e., Loan 1) are always classified in the operating category.
- And
- When an entity cannot identify whether the liability relates solely to its main business activity of providing financing to customers (i.e., Loan 3), IFRS 18.66 requires the entity to 'choose' an operating classification, effectively removing the accounting policy choice.

Therefore, there is no optionality for these two loans.

How we see it

The policy choices available to entities whose main business activity is providing financing to customers provide a practical option for preparers who are unable to distinguish easily between income and expenses that relate to the provision of finance to customers.

However, the availability of a policy choice is likely to create diversity in practice, which will result in some loss of comparability between similar entities.

Classification of income and expenses from Type 2 liabilities

An entity with a main business activity of providing financing to customers treats Type 2 liabilities (see section 3.2.2.B above) in the same way as an entity without such a main business activity - i.e., the classification requirements for Type 2 liabilities do not vary according to whether an entity has either or both of the specified main business activities. Thus, a financial institution, an insurer and a manufacturer will all treat their Type 2 liabilities in the same way.

Therefore, if interest income and expenses are identified for the purposes of applying other IFRS accounting standards or arise from changes in interest rates for the purposes of applying other IFRS accounting standards, entities are required to classify them in the financing category. [IFRS 18.65(b)(i), IFRS 18.BC187]. If the income and expenses are not interest income and expenses, they are classified as operating. [IFRS 18.65(b)(ii)].

This could change existing practice for some banks, as those institutions might currently classify interest expenses on leases or defined benefit liabilities in net interest income, but the requirements will ensure consistent presentation for all entities. [IFRS 18.BC188].

Application of the guidance

The following Illustration is a simple example of the application of the requirements. It shows the appropriate classification of income and expenses arising from a range of liabilities for an entity with a main business activity of providing financing to customers.

Illustration 3-7: Example of classification for an entity with a main business activity of providing financing to customers

Entity A, an automotive retailer, provides financing to customers as a main business activity to enable customers to buy Entity A's products. Entity A borrows from the bank to finance the loans it provides to its customers on deferred terms. Entity A also has the following liabilities:

- Lease liabilities (relating to its showrooms)
- A provision for litigation (which it expects to settle in three years and for which the discounting under IAS 37 is material)
- A liability for contingent consideration (relating to a business acquisition made in the prior year and payable in two years)
- A separate bank borrowing (to fund the business acquisition it made in the prior year)

Bank borrowings relate to providing financing to customers

The bank borrowings related to the provision of financing to customers are Type 1 liabilities (since Entity A receives finance in the form of cash and will return cash in exchange at a later date). As Entity A has a main business activity of providing financing to customers, the interest payable on those loans is classified in the operating category.

Lease liabilities

The lease liabilities are Type 2 liabilities (since Entity A receives a right of use asset, rather than finance in the form of cash or the extinguishment of a liability from these transactions) and it records interest expense on its lease liabilities as a result of applying IFRS 16. This expense is classified in the financing category.

Provision for litigation

The litigation provision is a Type 2 liability (since Entity A does not receive finance from this transaction). Entity A has discounted the provision in accordance with IAS 37, therefore, the unwinding of the discount is classified in the financing category. Remeasurements of the provision under IAS 37 are, however, classified in the operating category.

Contingent consideration

The contingent consideration liability is a Type 2 liability (since Entity A receives assets and liabilities, not finance in the form of cash from the transaction). The remeasurement of the fair value of the liability is neither 'interest income or expense', nor does it result from a change in interest rates. Therefore, this remeasurement is classified in the operating category.

Bank borrowing for business acquisition

The loan for the business acquisition is a Type 1 liability (since Entity A receives finance in the form of cash and will return cash at a later date in exchange), unrelated to the provision of financing to customers. Therefore, the entity can classify the income and expenses either in the operating or in the financing category based on the accounting policy choice discussed above.

The choice must be consistent with the choice made for classifying income and expenses from cash and cash equivalents, addressed in section 3.3.4 below.

Frequently asked questions

Question 3-23: How is the interest expense on a contract liability (with a significant financing component) classified in profit or loss?

See the response to Question 3-8 in section 3.2.2.E above.

The interest expense recognised on a contract liability with a significant financing component is given as an example of an expense arising from a Type 2 liability that must be classified in the financing category. [IFRS 18.B54(b)]. And as noted above, for a Type 2 liability, the classification of interest expenses on a contract liability is unaffected by whether an entity has a main business activity or not.

3.3.3.A Profit or loss before financing and income tax subtotal

As noted in section 3.2.1.D above, profit or loss before financing and income tax is the second subtotal introduced by IFRS 18 and comprises operating profit or loss and all income and expenses classified in the investing category. [IFRS 18.71]. Its role is to facilitate an analysis of an entity's performance, independently of how it is financed and to improve comparability between entities. [IFRS 18.BC148, IFRS 18.BC149].

An entity which provides financing to customers as a main business activity is prohibited from presenting this subtotal if, as an accounting policy choice, it classifies in the operating category all income and expenses from Type 1 liabilities (see section 3.3.3 above) that do not relate to the provision of financing to customers. In other words, this subtotal is not permitted when all income and expenses from liabilities arising from only the raising of finance have been presented in the operating category and some of that income and expenses does *not* relate to providing finance to customers.

Nonetheless, in these cases, consideration must be given to whether an additional subtotal after the investing category and before the financing category is required to provide a useful structured summary of an entity's income and expenses. If an entity were to present an additional subtotal, it must label the subtotal with a name that accurately describes it. For example, the label 'profit before financing' would be misleading in the case described above, as there could be financing income and expenses, unrelated to providing financing to customers, included in operating profit, and is consequently prohibited by IFRS 18. [IFRS 18.73, IFRS 18.74, IFRS 18.BC189, IFRS 18.BC190].

How we see it

The standard requires precision in the labelling of subtotals and totals but does not restrict the number of subtotals which can be presented, provided that they contribute to a useful structured summary. Entities need to carefully consider their choice of label for any additional subtotal presented, in order to faithfully represent the items included in that subtotal.

3.3.3.B Hybrid contracts containing a host liability

There are specific requirements for hybrid contracts held by entities with a main business activity of providing financing to customers and classification depends on whether the embedded derivative is separated from the host contract. [IFRS 18.B56, IFRS 18.BC171-BC178].

Embedded derivative is separated

If the embedded derivative is separated, income and expenses arising from the host liability will be classified in accordance with the requirements for classifying a similar liability that is not a host in a hybrid contract. An entity with a main business activity of providing financing to customers will, therefore, need to assess whether the separated host liability is a Type 1 or Type 2 liability and follow the guidance in section 3.3.3 above. [IFRS 18.B56(a)(i), IFRS 18.BC171].

The separated embedded derivative is classified in accordance with the requirements for similar stand-alone derivatives, addressed in section 3.2.8 above, unless the derivative is not used to manage identified risk, in which case the guidance in section 3.3.3.C below applies. [IFRS 18.B56(a)(ii), IFRS 18.BC171].

Embedded derivative is *not* separated

In cases where the embedded derivative is not separated, IFRS 9 treats the hybrid instrument as a single unit of account and measures the combined liability in its entirety. [IFRS 18.BC170].

Therefore, a hybrid contract (no separation) that arises from a transaction that involves only the raising of finance (i.e., a Type 1 liability hybrid) is essentially treated as a Type 1 liability for classification purposes under IFRS 18, despite the presence of the embedded derivative suggesting that another activity is present. [IFRS 18.B56(b), IFRS 18.BC173(a)].

Therefore, for a Type 1 liability hybrid (no separation) that relates to providing financing to customers, an entity with a main business activity of providing financing to customers classifies all such income and expenses in the operating category. [IFRS 18.B56(b), IFRS 18.BC173]. If the Type 1 liability hybrid does not relate to providing financing to customers, an entity with a main business activity of providing financing to customers has an accounting policy choice to classify the income and expenses in the operating or in the financing category. [IFRS 18.B56(b), IFRS 18.65(a)(ii)]. This treatment is consistent with the treatment of non-hybrid Type 1 liabilities which do not relate to the provision of financing to customers under the specified main business activity requirements.

The classification of the income and expenses on a hybrid contract (no separation) which do not arise from a transaction that involves only the raising of finance (i.e., a Type 2 liability hybrid), depends on the type of contract: [IFRS 18.BC173, IFRS 18.BC174]

- For a Type 2 liability hybrid contract (no separation) with a host liability in the scope of IFRS 9 and measured at amortised cost, the Board decided to require a treatment similar to that of a Type 1 rather than a Type 2 liability. [IFRS 18.BC176]. That is, all income and expenses arising from the initial recognition and subsequent measurement, including on derecognition, of such a hybrid contract is classified in the financing category, rather than just separating out the interest element. [IFRS 18.60, IFRS 18.B56(c)(i)].

An example of such a Type 2 liability hybrid is a trade payable with extended credit terms and an early prepayment option. This gives rise to interest income and expenses related to the extended credit terms, but also potentially income and expenses from remeasurement, triggered by changes in expectations in future cash flows, as expectations about the use of the prepayment option change. [IFRS 18.BC175].

Unlike a Type 1 liability, these hybrid contracts do not arise from transactions that involve only the raising of finance. Therefore, the requirement to classify income and expenses on Type 1 liabilities for entities with a main business activity of providing finance to customers does not apply, neither does the accounting policy choice discussed in section 3.3.3 above, as interest income and expenses from a Type 2 liability are never eligible to be classified in the operating category. [IFRS 18.B59, IFRS 18.BC177].

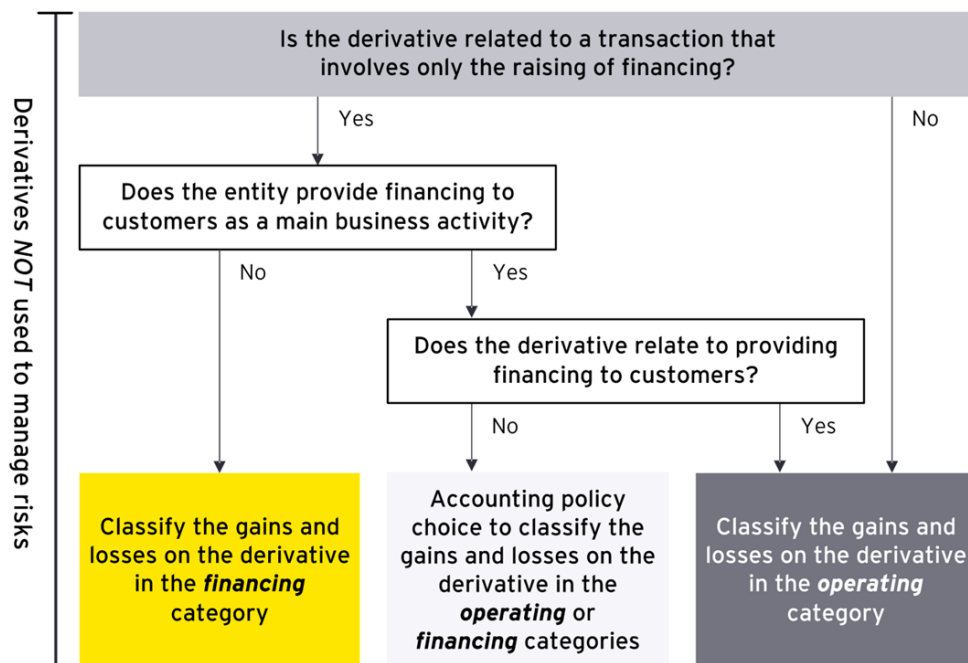

- For a hybrid insurance contract in the scope of IFRS 17, insurance finance income and expenses will be classified in the operating category. Also see section 3.3.5.B below. [IFRS 18.B56(c)(ii), IFRS 18.BC179(b)].
- For all other Type 2 liability hybrid contracts:
 - Interest income and expenses (including from interest rate changes) identified for the purposes of applying other IFRS accounting standards, will be classified in the financing category.
 - While
 - All other income and expenses will be classified in the operating category.

In other words, all other Type 2 liability hybrids are treated in the same way as any other Type 2 liability. [IFRS 18.BC173(b)].

3.3.3.C Income and expenses on derivatives *not* used to manage exposure to identified risks

The following diagram, based on Figure 5 in the Illustrative Examples to IFRS 18, summarises the requirements for classifying derivatives *not* used to manage exposure to identified risks. [IFRS 18.IE Figure 5].

Figure 3-8: Classification of gains and losses on derivatives *NOT* used to manage risks

The classification of derivatives that are not used to manage identified risk depends on whether: [IFRS 18.B73]

- They relate to transactions that involve only the raising of financing
 - Whether the entity has a main business activity of providing financing to customers
- And

- Whether the derivative itself relates to providing financing to customers

If an entity provides financing to customers as a main business activity, income and expenses from derivatives which are *not* used to manage exposure to identified risks are classified, as follows:

- **Operating category**
 - If the derivative is *not* related to a transaction that involves only the raising of finance [IFRS 18.B73(b)]
 - Or
 - If the derivative *is* related to a transaction that involves only the raising of finance and the derivative itself relates to providing finance to customers [IFRS 18.B59, IFRS 18.B73(a)]
- **Operating or financing category**
(i.e., the accounting policy choice discussed in section 3.3.3 above)
 - If the derivative *is* related to a transaction that involves only the raising of finance but the derivative itself does *not* relate to providing financing to customers [IFRS 18.B59, IFRS 18.B73(a)]

If an entity does not provide financing to customers as a main business activity the guidance in section 3.2.8.D applies.

3.3.3.D Derecognition

When derecognising a liability, an entity must apply the same classification requirements to classify income and expense from derecognition as it would when recognising a liability. Therefore, an entity with a main business activity of providing financing to customers will need to determine if it is a Type 1 or Type 2 liability and apply the guidance discussed in section 3.3.3 above. For example, such an entity will classify any gain or loss on the prepayment of a Type 1 loan, related to providing financing to customers, in the operating category. However, income and expenses from the derecognition of a Type 1 loan *not* related to providing financing to customers will be classified according to the accounting policy choice the entity has made and thus may be classified in either the operating or the financing category. [IFRS 18.B61].

3.3.3.E Foreign exchange differences

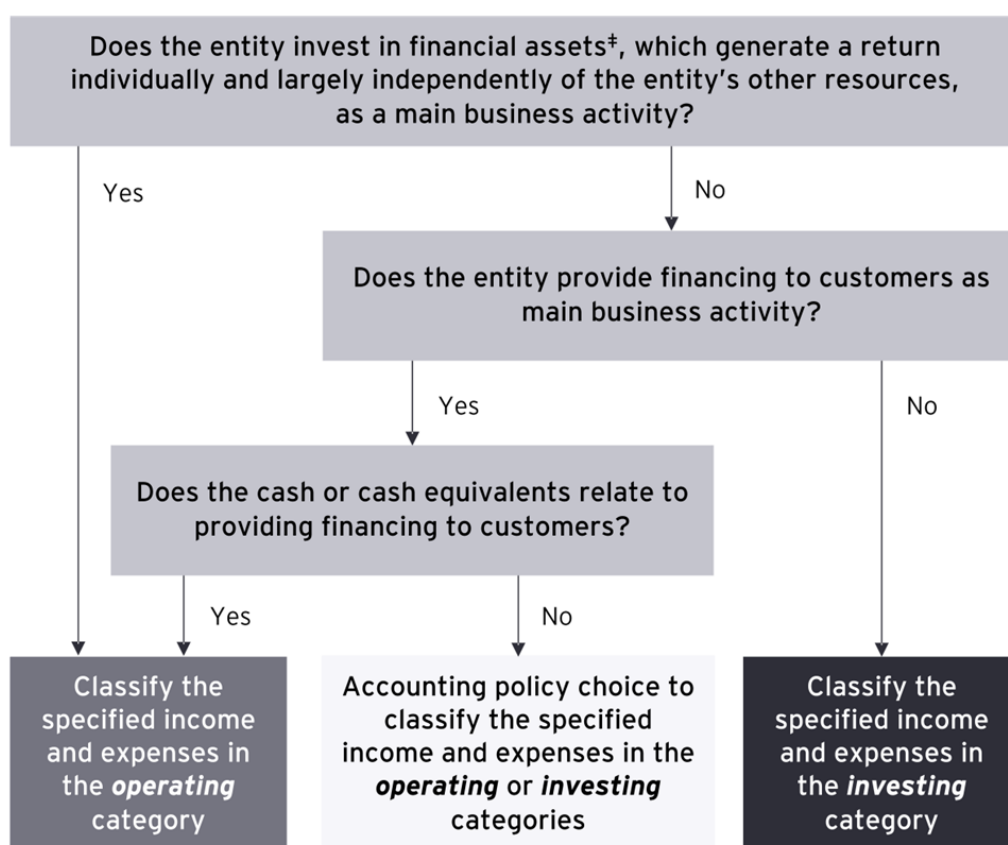

The basic principle for classifying foreign exchange differences (i.e., that they follow the category in which the related income and expenses have been classified) equally applies to entities that provide financing to customers as a main business activity, including the undue cost or effort exemption. If the latter applies, all such differences are classified in the operating category. [IFRS 18.B65, IFRS 18.B68, IFRS 18.BC207-BC208]. For example, foreign exchange differences arising from a Type 1 debt instrument liability, which is denominated in a foreign currency and is related to providing financing to customers, will also be classified in the operating category. [IFRS 18.B66].

3.3.4 Income and expenses from cash and cash equivalents

Most entities do not need to assess whether they invest in cash and cash equivalents as a main business activity, as the standard requires income and expenses from cash and cash equivalents to be classified in the investing category. [IFRS 18.53(b), IFRS 18.B39].

However, for entities with specified main business activities of investing in financial assets in the scope of IFRS 18.53(c) (i.e., financial assets other than cash and cash equivalents, associates, joint ventures and unconsolidated subsidiaries) or providing finance to customers, the requirements are different. The diagram below, based on Figure 3.3 in the Illustrative Examples to IFRS 18, sets out the various permutations. [IFRS 18.IE Figure 3.3].

Figure 3-9: Classification of income and expenses from cash and cash equivalents

† Other than cash and cash equivalents, associates, joint ventures and unconsolidated subsidiaries

Investing in *financial* assets as a main business activity

If an entity invests as a main business activity in financial assets (other than cash and cash equivalents, associates, joint ventures and unconsolidated subsidiaries) which generate a return individually and largely independently of the entity's other resources, such as debt instruments, it is required to classify the income and expenses from cash and cash equivalents in the operating category. This is relevant for financial institutions such as banks, asset managers and insurers. [IFRS 18.56(a), IFRS 18.BC137, IFRS 18.BC138].

Cash and cash equivalents related to providing financing to customers

If an entity provides financing to customers as a main business activity and the cash and cash equivalents relate to the provision of finance (for example, cash held for regulatory purposes), it classifies income and expenses from the cash and cash equivalents in the operating category. [IFRS 18.56(b)(i)].

Cash and cash equivalents *unrelated* to providing financing to customers

If an entity provides financing to customers as a main business activity and the cash and cash equivalents do *not* relate to the provision of finance, the entity has an accounting policy choice to classify the income and expenses arising from cash and cash equivalents in the operating or investing categories. This choice must be consistent with the similar accounting policy choice that exists for income and expenses arising from liabilities that do not relate to financing to customers, addressed in section 3.3.3 above. The outcome of this is that all income and expenses relating to the provision of financing to customers as a main business activity will always be classified in the operating category, whereas income and expenses on the portion that does not relate to the provision of financing could be classified in the investing category.

[IFRS 18.56(b)(ii), IFRS 18.65(a)(ii), IFRS 18.BC139-BC141].

If a reporting entity cannot distinguish between income and expenses from cash and cash equivalents related to providing finance to customers and from that unrelated, it is required (effectively applying the accounting policy choice above) to classify income and expenses from all its cash and cash equivalents in the operating category. [IFRS 18.57, IFRS 18.BC141].

Frequently asked questions

Question 3-24: How are income and expenses from cash and cash equivalents held by a conglomerate classified in profit or loss?

Many groups have multiple main business activities. However, IFRS 18 only requires a reporting entity (e.g., a consolidated group) to assess whether it has either, or both, specified main business activities. [IFRS 18.B30]. In a group for whom investing in *financial* assets, within the scope of IFRS 18.53(c), is a specified main business activity, IFRS 18 requires income and expenses from cash and cash equivalents to be classified in the operating category. [IFRS 18.56(a)]. The question arises as to whether the income and expenses from cash and cash equivalents held in other parts of the group which are not involved in the specified main business activities are also required to be classified in the operating category.

How we see it

In our view, where a main business activity of investing in financial assets has been identified, the income and expenses from all cash and cash equivalents held by the reporting entity must be classified in the operating category.

Question 3-25: Does the 'consistent accounting policy' requirements in IFRS 18.65(a)(ii) apply to an entity that invests in *financial* assets as a main business activity and has a main business activity of providing financing to customers?

An entity with a main business activity of providing financing to customers has an accounting policy choice to classify the income and expenses on Type 1 liabilities unrelated to providing financing to customers in either the operating or the financing category (see section 3.3.3 above). This accounting policy must be consistent with the IFRS 18.56(b) accounting policy choice made for cash and cash equivalents, discussed in the section above.

However, as noted in Question 3-24 above, a conglomerate that identifies a main business activity of investing in *financial* assets must classify the income and expenses from all its cash and cash equivalents in the operating category. This is a requirement of IFRS 18.56(a), rather than the accounting policy choice offered by IFRS 18.56(b). Therefore, since there is no IFRS 18.56(b) accounting policy to be consistent with, a conglomerate with a main business activity of both investing in *financial* assets and providing financing to customer is eligible to elect an accounting policy for the income and expenses from its Type 1 liabilities, which are not related to providing financing to customers, independent of how its cash and cash equivalents are classified.

Question 3-26: How is interest income on cash and cash equivalents that is received as an advanced payment from a customer classified in profit or loss?

This Question is a continuation of Question 3-7 in section 3.2.1.C above.

An entity with a main business activity of investing in financial assets will classify income and expenses from cash and cash equivalents in the operating category. This will include cash received as an advance from a customer under a revenue contract with a significant financing component.

3.3.5 Entities that issue insurance contracts

While issuing insurance contracts is not a specified main business activity, IFRS 18 provides specific guidance for insurers about equity method investees and the classification of income and expenses that result from insurance contracts. These are discussed in more detail in the following sub-sections.

How we see it

Insurance entities typically invest in assets as part of their operations and some provide financing to customers. Therefore, insurers need to assess whether they have a specified main business activity as discussed in section 3.3.1 above.

3.3.5.A Equity method investees held by insurers

The Board concluded that the reasons for excluding equity accounted investments from the operating category, discussed in section 3.2.1.A above, also applied to entities with specified main business activities. [IFRS 18.BC121]. Nonetheless, insurers raised specific concerns about the classification in the investing category of income and expenses from equity accounted investments that are linked to insurance contracts or are held for prudential purposes, as they would be considered part of 'net financial result', which is an important indicator of an insurer's operating performance. [IFRS 18.BC123].

The Board highlighted that, while a presentation 'mismatch' might arise, depending on the entity's choice to account for such investments using the equity method or at fair value through profit or loss, the issue does not appear to be pervasive. [IFRS 18.BC124, IFRS 18.BC125]. Insurers facing the 'mismatch' could present a line item for income and expenses from equity accounted investments immediately below operating profit and disaggregate the line item to highlight those investments considered part of their net financial result. They could also present an additional subtotal or disclose an MPM. These options are expected to enable a user of the financial statements to analyse appropriately the impact of equity accounted investments on the net financial result. [IFRS 18.BC127].

Frequently asked questions

Question 3-27: Can an entity present an additional subtotal for the income of only some equity accounted investments within the investing category?

Entities may have equity accounted investments which relate closely to their main business activity. For example, an insurer may have equity accounted investments which relate to their insurance business as well as equity accounted investments which are unconnected to that business. Such an entity may present an additional subtotal (see section 2.1.1.B above) within the investing category (e.g., just after the operating profit subtotal) to show the results of operating profit, plus the results of the insurance-related equity accounted investments, if this additional subtotal is required to provide a useful structured summary. [IFRS 18.24, IFRS 18.BC120(b)].

Note that such an additional subtotal could meet the definition of an MPM, see section 4.2.4.B below. [IFRS 18.BC367].

Illustration 3-8 Additional subtotal for insurance related associates

Entity I, a short-term insurer, has concluded that an additional subtotal is required in its consolidated statement of profit or loss to present separately the returns from its insurance related associates accounted for using the equity method.

Extract from Entity I's consolidated statement of profit or loss:

	20X1	20X2
Operating profit	XXX	ZZZ
Share of the profit of insurance-related associates	XX	ZZ
Operating profit and share of the profit of insurance-related associates	XXX	ZZZ
Share of the profit of other associates	XX	ZZ
Profit or loss before financing and income tax	XXX	ZZZ

Furthermore, the Board introduced transitional requirements which permit an eligible entity to change its election under paragraph 18 of IAS 28 for measuring an investment in an associate or joint venture from the equity method to fair value through profit or loss when it first applies IFRS 18. IAS 28 sets out what is meant by 'eligible entities': [IFRS 18.C7, IFRS 18.BC128, IFRS 18.BC423, IAS 28.18]

Extract from IAS 28

- 18 When an investment in an associate or a joint venture is held by, or is held indirectly through, an entity that is a venture capital organisation, or a mutual fund, unit trust and similar entities including investment-linked insurance funds, the entity may elect to measure that investment at fair value through profit or loss in accordance with IFRS 9. An example of an investment-linked insurance fund is a fund held by an entity as the underlying items for a group of insurance contracts with direct participation features. For the purposes of this election, insurance contracts include investment contracts with discretionary participation features. An entity shall make this election separately for each associate or joint venture, at initial recognition of the associate or joint venture. (See IFRS 17 *Insurance Contracts* for terms used in this paragraph that are defined in that Standard.)

3.3.5.B Insurance contracts

Certain exclusions apply to the financing category; insurance finance income and expenses included in the statement of profit or loss applying IFRS 17 must be classified in the operating category. Such income and expenses arise from issued insurance contracts, reinsurance contracts held and investment contracts with participation features in the scope of IFRS 17. This exclusion also applies to investment contracts with participation features in the scope of IFRS 9 (see section 3.3.6 below). [IFRS 18.64(b), IFRS 18.BC196]. This exclusion applies regardless of whether an entity issues insurance contracts as a main business activity. [IFRS 18.BC197].

Host insurance contract and embedded derivative are separated

This exclusion also applies to the host insurance contract in a hybrid contract, where the host liability and embedded derivative in an issued insurance contract are accounted for separately. Thus, income and expenses from the host liability will be classified in the operating category. [IFRS 18.B56(a), IFRS 18.BC179(a)]. Income and expenses from the separated embedded derivative are accounted for in the same way as a similar stand-alone derivative, see section 3.2.8 above.

Embedded derivative is *not* separated

If the host liability and the embedded derivative in an insurance contract are not separated, they are classified in the same way as for a single insurance contract and the income and expenses from the whole hybrid contract are classified in the operating category. [IFRS 18.B56(c)(ii), IFRS 18.BC179(b)].

3.3.6 Entities that issue investment contracts with participation features

The exclusion from the financing category also applies to income and expenses from issued investment contracts with participation features recognised applying IFRS 9. This will apply to any investment contract with participation features issued by an insurer, which does not meet the definition in IFRS 17 of an insurance contract with discretionary participation features, as well as any investment contract with participation features issued by an investment entity. [IFRS 18.64(a), IFRS 18.B58].

Without the exclusion, applying the requirements of IFRS 18 would result in income and expenses arising from the assets in such contracts being classified in the operating category (assuming that the entity invested in the assets as a main business activity), whereas income and expenses from the liability would be classified in the financing category. However, the difference between the returns on the assets and the expense from the investment contract liability is typically an important indicator of an entity's operating performance. Therefore, such an entity is required to classify the income and expenses from the liabilities arising from the investment contracts with participation features in the operating category. [IFRS 18.BC192, IFRS 18.BC193, IFRS 18.BC194].

Note that this requirement applies to all entities that have issued investment contracts with participation features, and not only to those that do this as a main business activity. In practice, most such entities are expected to assess investing in assets as a main activity. [IFRS 18.BC195].

3.4 Items to be presented in the statement of profit or loss

The standard specifies the line items to be presented separately in the statement of profit or loss, as follows: [IFRS 18.75, IFRS 18.76]

Extract from IFRS 18

- 75** An entity shall present in the statement of profit or loss line items for (see paragraph B77):
- (a) amounts required by this Standard, namely:
 - (i) revenue, presenting separately the line items described in (b)(i) and (c)(i);
 - (ii) operating expenses, presenting separately line items as required by paragraphs 78 and 82(a);
 - (iii) share of the profit or loss of associates and joint ventures accounted for using the equity method;
 - (iv) income tax expense or income; and
 - (v) a single amount for the total of discontinued operations (see IFRS 5);
 - (b) amounts required by IFRS 9, namely:
 - (i) interest revenue calculated using the effective interest method;
 - (ii) impairment losses (including reversals of impairment losses or impairment gains) determined in accordance with Section 5.5 of IFRS 9;
 - (iii) gains and losses arising from the derecognition of financial assets measured at amortised cost;
 - (iv) any gain or loss arising from the difference between the fair value of a financial asset and its previous amortised cost at the date of reclassification from amortised cost measurement to measurement at fair value through profit or loss; and
 - (v) any cumulative gain or loss previously recognised in other comprehensive income that is reclassified to profit or loss at the date of reclassification of a financial asset from measurement at fair value through other comprehensive income to measurement at fair value through profit or loss; and
 - (c) amounts required by IFRS 17, namely:
 - (i) insurance revenue;
 - (ii) insurance service expenses from contracts issued within the scope of IFRS 17;
 - (iii) income or expenses from reinsurance contracts held;
 - (iv) insurance finance income or expenses from contracts issued within the scope of IFRS 17; and
 - (v) finance income or expenses from reinsurance contracts held.
- 76** An entity shall present in the statement of profit or loss (outside all the categories described in paragraph 47) an allocation of profit or loss for the reporting period attributable to:
- (a) non-controlling interests; and
 - (b) owners of the parent.

However, despite this requirement for specified line items, as discussed in section 2.1.1.A above, IFRS 18 introduces a two-step approach to determine which of these line items to present:

Step 1: Assess which required line items are material

Step 2: Assess whether presentation of the material required line items (i.e., separate presentation in the primary financial statements) is necessary to present a useful structured summary

The outcome of this is that an entity is required to present the line items listed in IFRS 18.75 above, unless the line item is not necessary for the statement of profit or loss to fulfil its role of providing a useful structured summary. [IFRS 18.BC238]. If a line item is omitted on the grounds that it is unnecessary for providing a useful structured summary, it is disclosed in the notes, if it provides material information. [IFRS 18.BC237]. See section 2.1.1.A above for further discussion on the interaction between required line items and the useful structured summary in the primary financial statements as a whole.

IFRS 18 requires three totals and subtotals to be presented in the statement of profit or loss, which are intended to contribute to the presentation of a useful structured summary: [IFRS 18.69]

(a) Operating profit or loss

i.e., comprising all income and expenses classified in the operating category (see section 3.2.3.A above)

(b) Profit or loss before financing and income taxes

i.e., comprising operating profit or loss and all income and expenses classified in the investing category (see section 3.2.1.D and section 3.3.3.A above)

(c) Profit or loss

i.e., comprising the total of income less expenses included in the statement of profit or loss and, thus, includes all income and expenses classified in all categories in the statement of profit or loss [IFRS 18.72]

Following the introduction of the categories within the statement of profit or loss, an entity might need to present a required line item in more than one category. For example, impairment losses could arise on receivables for goods and services, as well as on financial assets that generate a return individually and largely independently of the entity's other resources. Such impairments recognised by an entity without a specified main business activity would be classified in the operating and investing categories, respectively. [IFRS 18.B77]. This requirement is intended to lead to enhanced comparability and understandability, compared with the alternative of requiring each line item to be presented in a single category. The standard requires any line item presented in more than one category to be described in a way that faithfully represents the characteristics of that item (which could be, for instance, 'expected credit losses on trade receivables balances' and 'expected credit losses on other financial assets' in the example above). [IFRS 18.BC239].

An entity uses judgement to determine whether to present additional line items in the statement of profit or loss to fulfil the role of providing a useful structured summary, or to disclose items in the notes. [IFRS 18.77]. An entity's judgement is based on an assessment of whether the characteristics of the items in question are similar or dissimilar. IFRS 18 provides guidance on how to apply that judgement and sets out the types of characteristics to consider, as follows: [IFRS 18.B78]

Extract from IFRS 18

B78

...

Such characteristics include:

- (a) nature (see paragraph 80);
- (b) function (role) within the entity's business activities (see paragraph 81);
- (c) persistence (including the frequency of the item of income or expense or whether it is recurring or non-recurring);
- (d) measurement basis;
- (e) measurement uncertainty or outcome uncertainty (or other risks associated with an item);
- (f) size;
- (g) geographical location or regulatory environment;
- (h) tax effects (for example, if different tax rates apply to items of income or expense); and
- (i) whether the income or expenses arise on initial recognition of a transaction or event or from a subsequent change in estimate relating to the transaction or event.

The standard helpfully provides a list of income and expenses which may have dissimilar characteristics to the extent that either presentation in the statement of profit or loss is necessary to provide a useful structured summary or disclosure in the notes is necessary to provide material information, as follows: [IFRS 18.B79]

- Write-downs and reversals thereof relating to inventories
- Impairment losses and reversals thereof relating to property, plant and equipment
- Income and expenses from restructurings of an entity's activities and reversals of any provisions for restructuring
- Income and expenses from disposals of property, plant and equipment
- Income and expenses from disposals of investments
- Income and expenses from litigation settlements
- Reversals of provisions
- Non-recurring income and expenses not included in the items above

Although some IFRS accounting standards require specific line items to be presented separately in the primary financial statements (for example, IFRS 18.75 above), an entity need not present separately a line item in a primary financial statement if doing so is not necessary for the statement to provide a useful structured summary. [IFRS 18.23].

Frequently asked questions

Question 3-28: Can an entity present gains or losses on disposal of an equity accounted investment in the same line item as the share of profit or loss from an equity accounted investment?

See the response to Question 3-5 in section 3.2.1.A above.

The principles of aggregation and disaggregation are discussed further in section 2.2.1 above.

3.4.1 Presentation of line items in the financing category

The line items to be presented in the statement of profit or loss have been brought forward from those required under IAS 1, with just two changes: the line item 'finance costs' has been removed; and 'operating expenses' has been included. [IFRS 18.BC236]. Although 'finance costs' has been removed as a line item, an entity will apply the requirements discussed in section 3.2.2 above and will, therefore, consider the following when determining the relevant line items in the financing category: [IFRS 18.BC242]

Extract from IFRS 18

BC242 The IASB also decided not to add any line items for expenses classified in the financing category to paragraph 75 of IFRS 18. However, an entity is required to present items classified in the financing category considering the role of the primary financial statements, which replaces the requirement in IAS 1 to present a line item for 'finance costs'. In applying the requirements in IFRS 18, an entity classifies in the financing category:

- (a) income and expenses that arise from the initial and subsequent measurement of liabilities that arise from transactions that involve only the raising of finance;
- (b) incremental expenses directly attributable to the issue and extinguishment of liabilities that arise from transactions that involve only the raising of finance; and
- (c) interest expenses and income and expenses arising from changes in interest rates of liabilities that do not arise from a transaction that involves only the raising of finance, but only if the entity identifies such income and expenses for the purpose of applying other requirements in IFRS Accounting Standards.

An entity applies judgement to determine whether and how there is a distinction between amounts classified in the financing category (see section 3.2.2 above). This will determine whether separate presentation provides a useful structured summary. If an entity decides that the presentation of a single line item is appropriate, it is required to disclose in the notes disaggregated information about those expenses, if the resulting information is material. [IFRS 18.BC243].

3.4.2 Presentation and disclosure of expenses classified in the operating category

The principle of providing a useful structured summary informs the requirements for the classification and presentation of line items in the operating category of the statement of profit or loss. [IFRS 18.BC246]. An entity must use one, or both of the following characteristics to present its operating expenses: [IFRS 18.78]

- The nature of expenses - see section 3.4.2.A below
- The function of expenses within the entity - see section 3.4.2.B below

Classifying and presenting operating expenses based on nature and/or function improves the usefulness of information. Analysing individual components is made possible by a nature presentation, whereas a function presentation enables the calculation of certain performance metrics. However, for some entities a mixture of both could provide the most useful structured summary, see section 3.4.2.E below. [IFRS 18.BC247].

Operating expenses are classified and presented consistently from one reporting period to another, unless the conditions in IFRS 18.30 set out below apply: [IFRS 18.30, IFRS 18.B83].

Extract from IFRS 18*

Consistency of presentation, disclosure and classification

- 30** An entity shall retain the presentation, disclosure and classification of items in the financial statements from one reporting period to the next unless:
- (a) it is apparent, following a significant change in the nature of the entity's operations or a review of its financial statements, that another presentation, disclosure or classification would be more appropriate having regard to the criteria for selecting and applying accounting policies in IAS 8 *Basis of Preparation of Financial Statements* (see paragraph B12); or
 - (b) an IFRS Accounting Standard requires a change in presentation, disclosure or classification.

* The consequential amendments, once effective, change the title of IAS 8 to 'Basis of Preparation of Financial Statements' to better reflect the amended content of IAS 8.

For example, a goodwill impairment presented as a nature line item in one period must be presented as such in subsequent periods, unless the requirements above apply. An expense of nil in a subsequent period does not constitute a change in classification and presentation. [IFRS 18.B83].

3.4.2.A Presentation of operating expenses by nature

As noted above, an entity can choose to present its operating expenses according to their nature (hereafter, "nature expenses" or "nature presentation"). A nature presentation provides information about operating expenses related to the nature of the economic resources consumed to execute the entity's activities. Such expenses do not refer to the activities in relation to which those resources were consumed. Examples of nature expenses include: [IFRS 18.80]

- Raw material expense
- Employee benefit expense
- Depreciation and amortisation

The amounts of nature expenses presented or disclosed in a period need not be the amounts recognised as an expense in that period, as certain amounts might have been capitalised as part of the carrying amount of an asset and will, therefore, be recognised as an expense in a future period. If an entity presents amounts that are not the same as the amounts recognised as an expense in the period, an additional line item must be presented for the change in the carrying amount of the affected assets. [IFRS 18.B84, IFRS 18.BC269, IFRS 18.BC270]. A common example of this is the presentation of a line item relating to the changes in inventories of finished goods and work in progress.

3.4.2.B Presentation of expenses by function

Entities can allocate and aggregate operating expenses according to the activity to which the consumed resource relates: this is classification by function. An example is cost of sales, which typically combines expenses relating to an entity's production or revenue-generating activities, such as raw material expense, employee benefit expense, depreciation and amortisation. 'Function' is not further defined in IFRS accounting standards, but it is a longstanding concept and considered to be widely understood. [IFRS 18.BC253].

Adopting a function presentation results in the allocation of expenses relating to economic resources of the same nature across several function line items; for example, employee benefits might be allocated to cost of sales and research and development, whereas a single function line item might contain allocations of expenses relating to economic resources of several differing natures. [IFRS 18.81, IFRS 18.BC254].

Building on the previous requirements in IAS 1, if an entity presents at least one or more line items of operating expense by function, it is required to: [IFRS 18.82, IFRS 18.BC255, IFRS 18.BC258]

- Present a separate line item for cost of sales, if its functions include a cost of sales function, which needs to include the total of inventory expense, described in paragraph 38 of IAS 2 *Inventories*.
- Disclose a qualitative description of the nature of expenses included in each function line item. The qualitative description of the nature of expenses included in each line item is expected to enhance the understandability of the composition of each line item. [IFRS 18.BC258].

Function line items inherently aggregate nature expense items that could respond differently to changes in the economic environment. To enable users to better forecast future operating expenses, there are additional disclosure requirements for entities which present one or more function line items in the operating category of the statement of profit or loss. Such entities must disclose the following in a single note: [IFRS 18.83, IFRS 18.BC259, IFRS 18.BC260]

Extract from IFRS 18

- 83** An entity that presents one or more line items comprising expenses classified by function in the operating category of the statement of profit or loss shall also disclose in a single note:
- (a) the total for each of:
 - (i) depreciation, comprising the amounts required to be disclosed by paragraph 73(e)(vii) of IAS 16 *Property, Plant and Equipment*, paragraph 79(d)(iv) of IAS 40 *Investment Property* and paragraph 53(a) of IFRS 16 *Leases*;
 - (ii) amortisation, comprising the amount required to be disclosed by paragraph 118(e)(vi) of IAS 38 *Intangible Assets*;
 - (iii) employee benefits, comprising the amount for employee benefits recognised by an entity applying IAS 19 *Employee Benefits* and the amount for services received from employees recognised by an entity applying IFRS 2 *Share-based Payment*;
 - (iv) impairment losses and reversals of impairment losses, comprising the amounts required to be disclosed by paragraphs 126(a) and 126(b) of IAS 36 *Impairment of Assets*; and
 - (v) write-downs and reversals of write-downs of inventories, comprising the amounts required to be disclosed by paragraphs 36(e) and 36(f) of IAS 2; and
 - (b) for each total listed in (a)(i)-(v):
 - (i) the amount related to each line item in the operating category (see paragraph B84); and
 - (ii) a list of any line items outside the operating category that also include amounts relating to the total.

Note that the requirement is limited to the five nature expenses listed in the extract above. This is intended to be a cost-effective solution to providing disaggregated information about operating expenses, which will provide useful information. [IFRS 18.BC265]. The disclosure is to be contained in a single note as users typically analyse information about operating expenses together. [IFRS 18.BC268(a)].

This requirement may appear to conflict with the requirement to disaggregate items to provide material information in IFRS 18.41 (see section 2.2.1 above). This means that there could be other nature items included within function line items, not listed above, which, when disaggregated, are individually material. The standard gives an exemption from disclosing those other items; there is no threshold for applying this exemption and so the exemption applies to all circumstances. [IFRS 18.84]. Without the exemption, an entity would have been required to disclose further information about all its material nature expenses contained within its function line items and this would not be cost effective. [IFRS 18.BC272-BC275].

IFRS 18 also provides an exemption for nature expenses that an IFRS accounting standard specifically requires to be disclosed in a note. For such expenses, disaggregated information about the amounts of the expenses included in each function line item presented in the operating category of the statement of profit or loss is limited to the five nature items listed in the extract above. [IFRS 18.84, IFRS 18.BC272-BC276].

Notwithstanding the exemption afforded above, entities are not exempted from applying the specific disclosure requirements relating to those expenses contained in other IFRS accounting standards. [IFRS 18.85]. Equally, other standards may require an entity to present or disclose information about its expenses by function. This does not mean that those entities are exempt from the requirements of IFRS 18.

The amounts of nature expenses disclosed in a period need not be the amounts recognised as an expense in that period, as certain amounts might have been capitalised as part of the carrying amount of an asset and will, therefore, be recognised as an expense in a future period - see section 3.4.2.A above for the requirements relating to such amounts. When an entity makes the required disclosures relating to the five nature items described in the extract above and discloses amounts that are not the amounts recognised as an expense in the period, it gives a qualitative explanation of that fact, identifying the assets involved. [IFRS 18.B84(b), IFRS 18.BC271].

How we see it

In practice, the five items requirement could require entities to add functionality to their systems. Although IAS 1.104 and current practice require the disclosure of the nature of depreciation/amortisation and employee benefits expenses, the IFRS 18 requirement adds specifically identified expenses. Importantly, it adds the requirement to identify the function line in which the nature expenses are included.

The following extract from the Illustrative Examples to IFRS 18 shows an example of the disclosure of the five specified expenses discussed above. [IFRS 18.IE7 Note 1].

Extract from Illustrative Examples on IFRS 18

Note 1-Specified expenses by nature

This table shows the totals of depreciation, amortisation, employee benefits, impairment losses and write-down of inventories and the amounts related to each line item in the operating category of XYZ Group's statement of profit or loss.

	(in thousands of CU)	
	20X2	20X1
Depreciation		
Cost of sales	23,710	21,990
Research and development expenses	2,515	2,590
General and administrative expenses	4,975	4,750
Total depreciation	31,200	29,330
Amortisation		
Research and development expenses	13,840	12,690
Total amortisation	13,840	12,690
Employee benefits		
Cost of sales	61,640	57,175
Selling expenses	7,515	7,110
Research and development expenses	6,545	6,750
General and administrative expenses	8,920	5,825
Total employee benefits	84,620	76,860
Impairment losses^(a)		
Research and development expenses	1,600	1,500
Goodwill impairment loss	4,500	-
Total impairment losses	6,100	1,500
Write-down of inventories^(a)		
Cost of sales	2,775	2,625
Total write-down of inventories	2,775	2,625

(a) The amounts disclosed represent the total of impairment losses and reversals of impairment losses and the total of write-down of inventories and reversals of write-down of inventories.

3.4.2.C 'Cost of sales' line item

Some stakeholders flagged the diversity in practice regarding the costs included in the 'cost of sales' line item. While the Board acknowledged these concerns, it stopped short of providing a definition for 'cost of sales'. [IFRS 18.BC256]. However, the Board decided to require entities to include inventory expense as set out in IAS 2.38 within the 'cost of sales' line item when one is presented. [IFRS 18.82(a)]. The Board concluded that the inclusion of the inventory expense, as described in IAS 2, ought to help reduce diversity in the costs included in cost of sales as, in practice, some entities have previously excluded certain components of inventory expense.¹⁴ The Board believes this will improve comparability between entities presenting the cost of sales line item. [IFRS 18.BC256, IFRS 18.BC257].

How we see it

The scope of cost of sales will remain judgemental under IFRS 18 since the Board did not develop a definition for the term. Entities will, therefore, still need to consider facts and circumstances when considering whether to classify, for instance, shipping and handling costs, and write-offs on items such as inventory and property, plant and equipment within the 'cost of sales' line item.

3.4.2.D Assessing which presentation provides the most useful structured summary

Any individual line item can only contain expenses aggregated on the basis of either nature or function. However, a mixed presentation within the operating category as a whole is permitted. [IFRS 18.79].

To make the determination of which presentation provides the most useful structured summary, an entity is required to consider the following: [IFRS 18.B80]

- Which line items provide the most useful information about the main components or drivers of the entity's profitability
- Which line items most closely represent the way the business is managed and the entity's internal reporting
- Standard industry practice to enhance comparability
- Whether the allocation of particular expenses to functions would be arbitrary to the extent that the line items would not provide a faithful representation of the functions

If the allocation of particular expenses is arbitrary, to the extent that a faithful presentation of functions is lost, the entity is required to classify the expenses by nature. [IFRS 18.B80].

These considerations can result in different presentations, depending on the industry in which the entity operates. For example, looking at drivers of profitability for a retail entity, the function of cost of sales might be a main driver, as there is a direct link between these costs and revenue. This is in contrast to a services industry, where information about the nature of certain expenses, such as employee benefits, might be more relevant as those expenses drive profitability. [IFRS 18.B80(a)].

Similarly, considering the way management reports internally could result in different presentation. Thus, a manufacturing entity that is managed by function is likely to have its internal reporting presented by function, whereas an entity with a single predominant function, such as providing finance to customers, might use nature of expense reporting for internal purposes. In both cases, this could influence the entity's assessment of the most useful structured summary of its expenses. [IFRS 18.B80(b)].

As previously stated, an entity is required to consider the level of aggregation that will provide the most useful structured summary. It might decide that certain activities such as human resources, information technology, legal services and accounting have a shared characteristic of being resources consumed in administrative activities. Thus, an entity might determine that a line item labelled 'administrative expenses' provides relevant information. The same entity might also incur expenses for resources consumed in selling activities and determine that these expenses have one dissimilar characteristic to the expenses aggregated in administrative expenses as they all relate to selling activities. For this reason, the entity might present a separate line item for 'selling expenses' in order to achieve the goal of presenting a useful structured summary. [IFRS 18.B85].

However, it is important to note that the general aggregation requirements of IFRS 18 still apply, and some items allocated to different functions or natures might need to be aggregated for presentation as line items in the statement of profit or loss to achieve a useful structured summary, see section 2.2.3 above.

¹⁴ For further information on including specific items in cost of sales, see Chapter 23 and Chapter 28.

3.4.2.E Mixed presentation

An outcome of considering the factors in the sub-section above is that an entity might conclude that a mixed presentation, i.e., classifying some expenses by function and others by nature, provides the most useful structured summary. This might be the case for entities with two different types of main business activity or for particular expenses, whose allocation to a function would be arbitrary. [IFRS 18.B81].

In the outreach stage of developing IFRS 18, mixed feedback was received about the concept of permitting a mixed presentation, with some users asserting that a mixed presentation can affect comparability, whereas others asserted that it facilitates the presentation of useful information, particularly when an entity has two types of main business activities. It also avoids arbitrary allocations of certain types of expenses, such as goodwill impairment, and allows for the separate presentation of certain expenses which might have characteristics that could aid understanding of the financial performance, for example, an impairment expense. The Board decided that a mixed presentation could, in some circumstances, provide the most useful structured summary and added application guidance, described below, to address the concerns of the first group of users. [IFRS 18.BC250, IFRS 18.BC251, IFRS 18.BC252].

The above does not mean that an entity has a free choice to present a mixed presentation, as it is constrained by the requirement to present the statement of profit or loss in the manner which results in the most useful structured summary. [IFRS 18.78]. Thus, it would be inappropriate in a presentation by function to present material nature line items in a different location, just to present a particular result (also see section 3.5 below).

If an entity adopts a mixed presentation, it labels the line items in a manner that allows users to clearly identify which expenses are included in each line item. For example, if some employee benefits are included in cost of sales and others in a nature line item, the nature line item must clearly identify that not all employee benefits are contained within, for example, 'employee benefits other than those included in cost of sales'. [IFRS 18.B82].

3.4.3 Presentation of profit or loss attributable to non-controlling interests

The standard requires 'profit or loss attributable to non-controlling interests' and 'profit or loss attributable to owners of the parent' to be presented in the statement of financial performance; they are presented as allocations of profit or loss, rather than as items of income or expense. [IFRS 18.76, IFRS 18.BC2244].

3.5. Separate presentation of "non-recurring" items

Under current (IAS 1) practice, some entities applying the 'by function' method of presentation present 'non-recurring' or 'unusual' items separately on the face of the statement of profit or loss, leading to a mixed presentation. The question arises as to whether entities are permitted to continue to do this, when otherwise following a 'by function' method of presentation under IFRS 18.

Separate presentation of 'non-recurring' items in the statement of profit or loss raises several questions:

- 1) Does IFRS 18 prohibit separate presentation of 'non-recurring' items?
- 2) What is considered to be 'non-recurring' and does such an item truly lack persistence?
- 3) Is disaggregation based on persistence permissible in a 'by function' presentation?
- 4) Is disaggregation of a required line item permissible to achieve a useful structured summary?
- 5) Can an entity present an additional subtotal when disaggregating certain items based on persistence?

1) Does IFRS 18 prohibit separate presentation of 'non-recurring' items?

An entity is required to present disaggregated line items in the primary financial statements if it contributes to a useful structured summary (see section 2.2.1 above). [IFRS 18.41, IFRS 18.B17].

IFRS 18 specifically mentions that 'non-recurring income and expenses' might have sufficiently dissimilar characteristics that presentation (i.e., in a separate line item) in the statement of profit or loss might be necessary to provide a useful structured summary. [IFRS 18.41(c), IFRS 18.B79(h)]. Further to this, IFRS 18 highlights persistence as a characteristic which could be sufficiently dissimilar to warrant separate presentation on the face of the statement of profit or loss. [IFRS 18.B78(c)].

The Basis for Conclusion to IFRS 18 indicates that information about unusual income and expenses is useful to users of financial statements and provides an example of separate presentation of restructuring costs due to a lack of persistence. [IFRS 18.BC55, IFRS 18.BC413].

It is apparent from the above that IFRS 18 does not prohibit the separate presentation of 'non-recurring' items and could, in fact, require it if such separate presentation is necessary for a primary financial statement to provide a useful structured summary.

2) What is considered to be 'non-recurring' and does such an item lack persistence?

The absence of 'persistence' is typically the characteristic which drives the presentation of a 'non-recurring' or 'unusual' item. However, what is considered 'non-recurring' or 'unusual' is inherently judgemental and will be specific to the particular facts and circumstances of the reporting entity. This is emphasised by the Board ultimately deciding against developing a definition for 'unusual' due to the differing views expressed by stakeholders in their feedback to the draft standard. [IFRS 18.BC407-BC412].

How we see it

Determining whether an item of income or expense is truly 'non-recurring' (i.e., lacks persistence) is an inherently judgemental assessment and will depend on the entity-specific facts and circumstances.

Entities must consider the regulatory perspective on presentation of 'non-recurring' or 'unusual' items in the jurisdictions in which they operate.

3) Is disaggregation based on persistence permissible in a 'by function' presentation?

If an entity presents separately a 'non-recurring' item on the basis of an absence of persistence in an otherwise 'by function' presentation, the item may become essentially a 'by nature' item. This is because it may provide information related to the nature of the economic resources consumed, rather than the activities in relation to which those economic resources were consumed (see section 3.4.2.A above).

In the case where an entity has already concluded that a 'by function' rather than 'by nature' or 'mixed' presentation provides the most useful structured summary, the question arises as to whether that conclusion can be overridden by presenting one 'by nature' line to show 'non-recurring' separately.

IFRS 18 is clear that it is possible to present line items in the statement of profit or loss using both a 'by nature' and a 'by function' presentation, that is, a mixed presentation is permitted, if that presentation is necessary to provide a useful structured summary. [IFRS 18.78, IFRS 18.BC252].

The standard also clarifies that if the allocation of some expenses to a function would be arbitrary, presentation of a nature line item is permitted, provided the line items are faithfully labelled. [IFRS 18.B80(d), IFRS 18.B81(a), IFRS 18.B82, IFRS 18BC251(a)(iii)]. It is important to note that the label 'non-recurring' is unlikely to be appropriate as it is non-specific and often would not meet the requirements for labelling to be clear and faithfully represent the characteristics of the item. [IFRS 18.43].

Therefore, an entity must apply judgement to assess which presentation achieves the most useful structured summary and, in doing so, must consider disaggregating items on the basis of dissimilar characteristics, including persistence (see section 2.2.2.A above).

4) Is disaggregation of a required line item permissible to achieve a useful structured summary?

Additional line items must be presented if they are necessary to provide a useful structured summary in the statement of profit or loss. [IFRS 18.24]. An entity may conclude that it needs to present an additional line item for a non-recurring expense, to achieve a useful structured summary. If this non-recurring expense would otherwise have formed part of a required 'by function' line item, it raises the question whether it is appropriate, or even required, to disaggregate that required line item, i.e., whether the entity would present both:

- The required 'by function' line item (including the non-recurring expense)
- And
- An additional line item for the adjusted version of that required line item (excluding the non-recurring expense)

An example of this is illustrated below.

Illustration 3-9: Presentation of non-recurring items separately from cost of sales

Entity A experiences a meteor strike on one of its warehouses, leading to an inventory write down. Management assesses that this is a non-recurring event (i.e., these expenses lack persistence) and has previously used a 'by function' presentation.

Entity A considers it necessary to present the effect of the meteor strike separately within the statement of profit or loss in order to provide a useful structured summary.

Extract from Entity A's statement of profit or loss:

	CU'000
Revenue	XXX
Cost of sales excluding effects of meteor strike	XXX
Inventory losses relating to meteor strike	XXX
Cost of sales	XXX
Gross profit	XXX
...	

In this case, management concluded that in order to provide a useful structured summary, the statement of profit or loss needs to present:

- A cost of sales line item (including the non-recurring item)
- And
- A disaggregation of cost of sales to show the non-recurring item separately

How we see it

In certain circumstances, in order to provide a useful structured summary, it may be necessary to disaggregate a required 'by function' line item and present a non-recurring measure separately in the statement of profit or loss, but this will be a highly judgemental assessment based on an entity's individual facts and circumstances.

In such cases, as presenting a 'by nature' line item would inevitably lead to an adjusted 'by function' measure being presented, it is also necessary to consider whether to present the unadjusted measure in order to achieve a useful structured summary.

Entities must consider the regulatory perspective in all relevant jurisdictions in which they operate.

5) Can an entity present an additional subtotal when disaggregating certain items based on persistence?

If an entity disaggregates items on the basis of persistence, as discussed above, it might well consider it necessary to also provide an additional subtotal of income and expenses that excludes non-recurring items. The Board considered prohibiting an entity from presenting management-defined subtotals of income and expense in the statement of profit or loss, in response to the concerns of some stakeholders that such measures could be misleading and might be given undue prominence. However, since such a prohibition could prevent an entity from meeting the requirements, discussed in section 2.1.1.B above, to present an additional subtotal when this is necessary to provide a useful structured summary, the Board decided not to include such a prohibition. However, such an additional subtotal would need to meet all the requirements set out in IFRS 18, see section 2.1.1.B above, and could also meet the definition of a management-defined performance measure (see section 4 below). [IFRS 18.BC374].

How we see it

It may be appropriate in some cases to present an additional subtotal, but only if it is necessary to provide a useful structured summary and if such a subtotal meets the requirements for additional subtotals in IFRS 18.24.

In such cases, presentation of the unadjusted subtotal may also be necessary to achieve a useful structured summary.

Nonetheless, entities must consider the regulatory perspective in all jurisdictions in which they operate, in case such subtotals are prohibited by local law.

4 Management-defined performance measures – IFRS 18

4.1 Overview of the new requirements

IFRS 18 introduces the concept of a management-defined performance measure (hereafter MPM). It defines an MPM as a subtotal of income and expenses that an entity uses in public communications outside financial statements to communicate to users management's view of an aspect of the financial performance of the entity as a whole (see section 4.2 below). IFRS 18 explicitly notes that subtotals required by an IFRS accounting standard, including IFRS 18 itself, are not MPMs. IFRS 18.118 lists other subtotals that are not MPMs, e.g., "gross profit or loss (revenue minus cost of sales) and similar subtotals" (see section 4.2.4 below). [IFRS 18.BC328].

Many entities currently use alternative performance measures (sometimes referred to as APMs) in their financial communications. However, the Board intentionally limited the definition of MPMs to subtotals of income and expenses. Therefore, a measure (such as 'adjusted profit or loss') which adjusts a total or subtotal specified in IFRS accounting standards is an MPM, while other measures (such as free cash flow or customer retention rate) which are not totals or subtotals of income and expenses are not MPMs.

[IFRS 18.BC331].

To improve the transparency around these measures, IFRS 18 requires an entity to disclose information about all its MPMs in a single note to the financial statements. [IFRS 18.BC369]. The standard requires several disclosures (see section 4.3 below) including:

- How the measure is calculated
- How it provides useful information
- And
- A reconciliation to the most comparable subtotal specified by IFRS 18 or another IFRS accounting standard

While developing the new requirements, users of financial statements indicated that information about MPMs can be useful because it provides insight into how management views the entity's financial performance, the persistence of the entity's financial performance and how the business is managed. However, concerns were raised about the quality of the information about these measures that is generally communicated outside the financial statements. [IFRS 18.BC325]. The Board agreed that MPMs can provide useful entity-specific information and that including these measures in the financial statements will make them subject to the same disclosure requirements, regardless of an entity's jurisdiction. [IFRS 18.BC326].

How we see it

We believe that the required disclosures around MPMs will improve transparency for users and since MPMs are required to be included in the financial statements, they will generally also be subject to audit. It is likely that the required disclosures will elevate the prominence of MPMs and result in increased scrutiny from regulators.

4.2 Definition and scope

IFRS 18 includes the following definition of an MPM: [IFRS 18.117, IFRS 18 Appendix A]

Extract from IFRS 18

Appendix A

Defined terms

management-defined performance measure

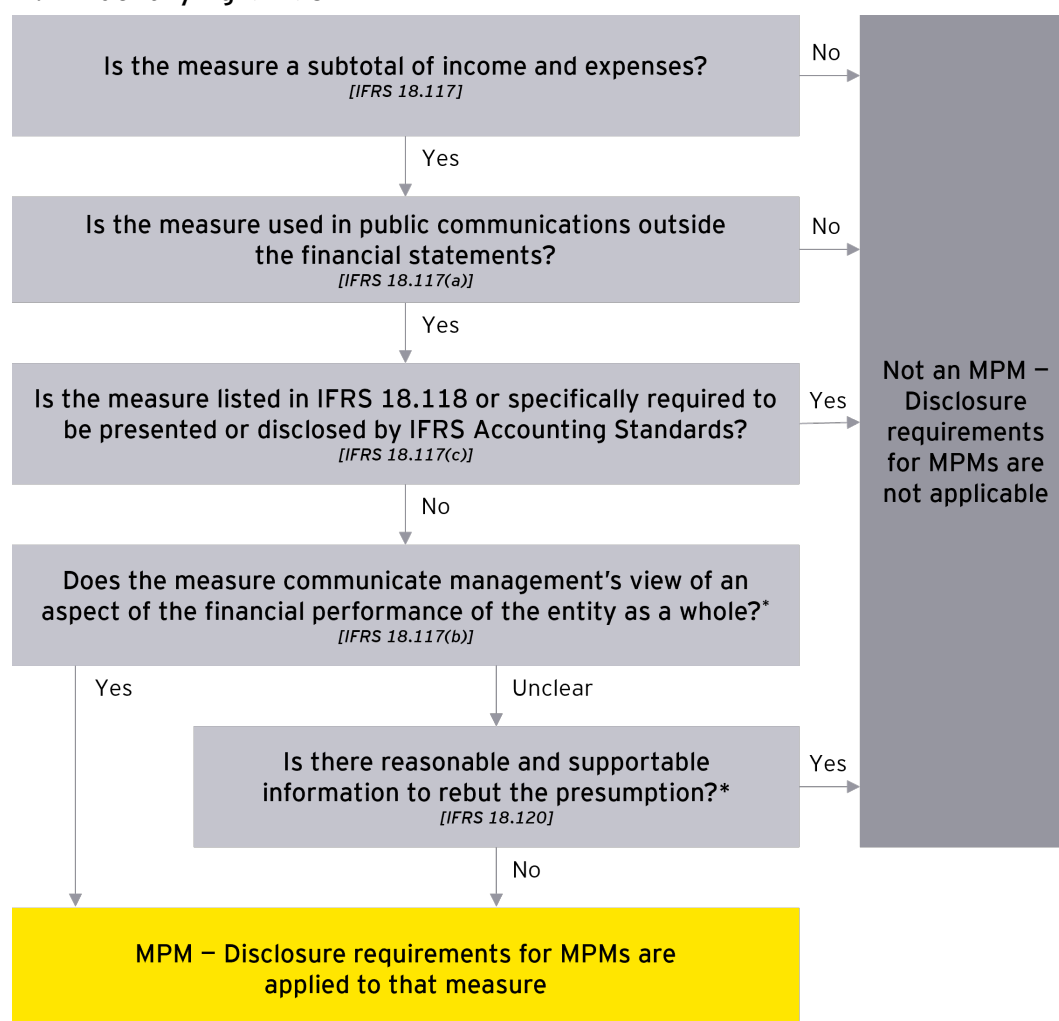

A subtotal of income and expenses that:

- (a) an entity uses in public communications outside financial statements;
- (b) an entity uses to communicate to users of financial statements management's view of an aspect of the financial performance of the entity as a whole; and
- (c) is not listed in paragraph 118 of IFRS 18, or specifically required to be presented or disclosed by IFRS Accounting Standards.

Each of the concepts in this definition is discussed further in the sub-sections below.

The following figure, based on Figure 6 in the Illustrative Examples to IFRS 18, provides an overview of how an entity identifies an MPM: [IFRS 18.IE Figure 6]

Figure 4-1: Identifying MPMs

* There is a rebuttable presumption that a subtotal of income and expenses used in public communications communicates management's view (see section 4.2.3.C below).

An entity might have no MPMs, just one, or multiple MPMs. For example, an entity that only uses totals and subtotals required by IFRS accounting standards to communicate publicly its financial performance to users does not have any MPMs. [IFRS 18.B113].

How we see it

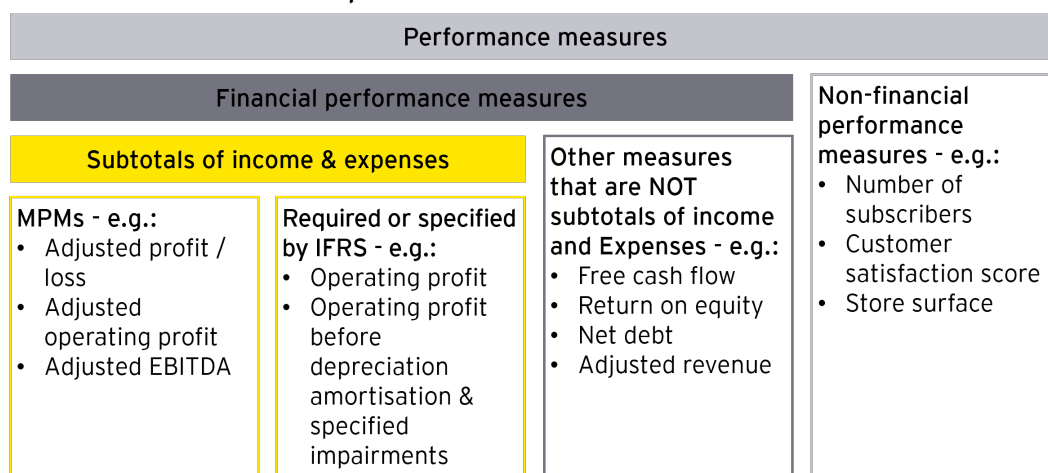

MPMs, as defined in IFRS 18, are a subset of alternative performance measures; many entities currently use alternative performance measures, which do not constitute MPMs, in their communications with capital markets *outside* the financial statements. Entities that plan to include alternative performance measures that are not also MPMs *within* the notes to the financial statements must consider whether this is appropriate. This assessment will require significant judgement, and such inclusion might not be appropriate in many instances since all information included within the financial statements needs to meet the overall 'fair presentation' requirement set out in IAS 8.6A.

Many regulators have restrictive guidance related to alternative performance measures and some do not accept their inclusion within the financial statements. Therefore, entities will also need to consider local laws and the views of their local regulators before including any alternative performance measures, that are not also MPMs, within the financial statements.

4.2.1 Subtotals of income and expenses

IFRS 18 intentionally limits the definition of MPMs to subtotals of income and expenses. [IFRS 18.BC331]. This narrow definition results in MPMs being a subset of other performance measures (e.g., alternative performance measures), as illustrated in the following diagram based on a presentation by the IASB Staff:¹⁵

Figure 4-2: MPMs versus other performance measures

Measures that are *not* subtotals of income and expenses

Since the definition of an MPM requires it to be a subtotal of income and expenses, the following measures would not be MPMs since they are not subtotals of income and expenses: [IFRS 18.B116]

(a) Subtotals of only income or only expenses

For example, a stand-alone measure of adjusted revenue

(b) Measures of assets, liabilities, equity or combinations of these elements

For example, net current operating assets

(c) Financial ratios

For example, return on assets. However, the numerator or denominator of a financial ratio could be an MPM (see below)

(d) Measures of liquidity or cash flows

For example, free cash flow

Or

(e) Non-financial performance measures

For example, customer satisfaction score

A financial ratio cannot be an MPM since it is not a subtotal of income and expenses. However, the numerator or denominator of a financial ratio could be an MPM if it represents a subtotal of income and expense that would meet the definition of an MPM, had it not been part of a ratio. [IFRS 18.B117].

¹⁵ [IASB Staff Paper AP1](#), Project: *Primary Financial Statements*, Topic: *Introduction to IFRS 18 Presentation and Disclosure in Financial Statements*, Emerging Economies Group Meeting, October 2023. Available on the IFRS Foundation's website.

Location of subtotals

A subtotal of income and expenses that meets the definition of an MPM does not need to be presented in the statement of profit or loss in order for it to be an MPM. [IFRS 18.B118]. For instance, an entity might present an adjusted operating profit measure outside the financial statements, without the same subtotal being included in the statement of profit or loss. In such a case, this subtotal could be an MPM, provided that it meets the other elements of the MPM definition.

An entity might decide to replicate its statement of profit or loss in a public communication (for example, in a presentation to users). The Board indicates that where the replicated statement of profit or loss includes an additional subtotal not listed in IFRS 18.118 or not specifically required by IFRS accounting standards (see section 4.2.4 below), that subtotal would meet the definition of an MPM, unless the entity rebuts the presumption (see section 4.2.3.C below). [IFRS 18.BC354].

Frequently asked questions

Question 4-1: Can the numerator of a ratio be an MPM, even if the numerator is never communicated by itself outside the financial statements?

Many entities use an adjusted earnings ratio (e.g., adjusted operating profit ÷ capital employed) as a key performance indicator in their public communications outside the financial statements. However, the value of the numerator is not always specifically indicated in public communications as some entities just disclose the formula used to derive the overall ratio.

IFRS 18 is clear that while a financial ratio is not an MPM (as it does not represent a subtotal of income or expense) the numerator in such a ratio could be an MPM if it *had met* the definition of an MPM had it not been used in a ratio. [IFRS 18.B117].

That is an entity is required to assess the numerator against the definition of an MPM and can ignore the requirement that the numerator is used by itself in public communications outside the financial statements. It is sufficient that the ratio in which the numerator is included is used in public communications outside the financial statements to communicate management's view of an aspect of the entity as a whole.

If an entity concludes such a subtotal meets the definition of an MPM, the disclosure requirements (see section 4.3 below) will apply to the numerator rather than the financial ratio itself.

Question 4-2: Are industry specific (e.g., insurance) APMs aligned with the definition of MPMs?

Entities within certain industry sectors typically use a range of alternative performance measures, but only some of these measures will fall into the narrowly-defined subset of MPMs. For example, measures used by some insurers such as 'adjusted equity' (combination of equity and liabilities), 'combined ratio' (financial ratio, also see Question 4-1 above) or 'embedded value' (measure of cash flows) will not meet the definition of an MPM as they are not subtotals of income and expenses.

Question 4-3: Can a 'what if' income and expense based alternative performance measure be an MPM?

Some entities use alternative performance measures, which adjust a subtotal for items that are not measured or recognised in accordance with IFRS accounting standards, as key performance indicators in public communications outside the financial statements. They typically reflect the entity's performance, had certain accounting requirements not applied (i.e., a 'what if' type of alternative performance measure). An example of that might be operating profit without the effects of IFRS 16.

The definition of an MPM refers to a 'subtotal of income and expense' which some could read as referring to only subtotals of 'income' and 'expenses' as defined within IFRS accounting standards. However, the Basis for Conclusions is clear that MPMs are defined by management and, therefore, by definition are not a measure required by IFRS accounting standards. [IFRS 18.BC330].

The disclosure requirements for MPMs (see section 4.3 below) also suggests that the IASB envisaged MPMs to include measures calculated using a 'non-IFRS' basis as it requires an entity to disclose when the calculation of the measure "differs from accounting policies required or permitted by IFRS Accounting Standards". [IFRS 18.B134(c)]. Rather than prohibiting such measures, IFRS 18 requires accurate labelling and MPMs to be described in a clear and understandable manner to ensure such measures are not misleading. [IFRS 18.123, IFRS 18.B134].

Therefore, if a subtotal which meets the definition of an MPM in IFRS 18 is used in public communication outside the financial statements, the MPM disclosures within the notes to the financial statements are required, even if the management-defined measure includes adjustments which are not in accordance with IFRS accounting standards,

How we see it

While the inclusion of disclosure about 'what if' alternative performance measures used by management is not optional if these measures meet the definition of an MPM, regulators might object to the use of certain measures, if they consider these to be misleading or lack neutrality.

If a regulator prohibits the use of a particular measure within public communications and requires its removal, such a measure would no longer meet the definition of an MPM (as it is no longer 'used in public communications').

4.2.2 Meaning of 'public communications'

A subtotal only meets the definition of an MPM if it is used by an entity in public communications outside the financial statements. Public communications include: *[IFRS 18.B119]*

- Management commentary
- Press releases
- Investor presentations

However, for the purpose of defining MPMs, public communication excludes:

- Oral communications
- Written transcripts of oral communications
- Social media posts

The Board decided to exclude these categories of communication in response to concerns raised by some stakeholders during the development of the standard that these types of communications were the most challenging to monitor. The Board expects that removing these categories from the scope of 'public communications' will reduce the costs of applying the requirements by eliminating the need to search these forms of communications. *[IFRS 18.BC336]*.

The Board considered providing specific requirements for private entities since they are less likely to have public communications. However, the Board concluded that the requirements are intended to provide transparency and discipline over measures communicated to users outside the financial statements, regardless of whether the entity is public or private. Therefore, the MPM requirements apply to all entities applying IFRS accounting standards and, if a private entity communicates subtotals that meet the definition of MPMs, that entity would be subject to the MPM requirements. It follows that, if an entity does not communicate measures of financial performance outside its financial statements, the MPM requirements would not apply, and no additional disclosures would be required. *[IFRS 18.BC342]*.

The Board observed, in response to stakeholder questions during the development of the standard, that the requirements for MPMs relate to performance for the same period as is covered by the financial statements. *[IFRS 18.BC337]*. To make this clear, the Board decided to specify in IFRS 18 that MPMs relate to the same reporting period as the financial statements. Specifically: *[IFRS 18.B120]*

- (a) A subtotal that relates to the interim financial statements, but not to the annual financial statements, is only an MPM in the interim financial statements
And
- (b) A subtotal that relates to the annual financial statements, but not to interim financial statements, is only an MPM in the annual financial statements

How we see it

While MPM disclosure is also required in interim financial statements (see section 5.4 below), the subtotals that are considered MPMs could differ between the interim and annual financial statements.

While it is common for entities to issue public communications, such as press releases, before or at the date the financial statements are authorised for issue, some public communications (for example, investor presentations) might not be made available until after the financial statements are authorised for issue. The Board decided to require an entity that routinely issues public communications containing performance measures after the financial statements are authorised for issue to consider what measures it included in the previous period's public communications when identifying MPMs for the current period. *[IFRS 18.B121, IFRS 18.BC339]*.

However, an entity is not required to include a measure identified in the prior period as an MPM where evidence indicates it will no longer be included in the public communications to be issued for the current reporting period. When a measure was previously disclosed as an MPM but is not identified as an MPM for the current reporting period, the disclosure requirements for a change to, or cessation of, an MPM in IFRS 18.124 apply (see section 4.3.5 below). *[IFRS 18.B122, IFRS 18.BC340]*.

4.2.3 Management's view

The Board decided to include the concept “management’s view of an aspect of the entity’s financial performance” in the definition of an MPM since making information about management’s view of an entity’s performance available to users was the reason for the Board developing the MPM requirements in the first place. Therefore, ‘*management-defined performance measures*’ are limited to those measures that communicate management’s view of an aspect of the financial performance of the entity as a whole. [IFRS 18.BC343].

4.2.3.A Management’s view versus management’s performance

The focus of MPMs is on communicating an aspect of an entity’s performance rather than communicating management’s performance. As a result, a subtotal only used to measure management’s performance (for example, a measure used internally for the purpose of management remuneration but not used externally to communicate management’s view of an aspect of an entity’s performance) would not meet the definition of an MPM. [IFRS 18.BC344]. However, in some cases, a measure used externally to communicate management’s view of an aspect of the entity’s performance might be used for the purpose of assessing management’s performance, and thus the two could overlap.

4.2.3.B Entity as a whole

How we see it

Since the definition of an MPM refers to the entity as a whole, the focus is at an entity-level (for individual or stand-alone financial statements) or at group level (for consolidated financial statements), rather than just at part of the entity or group. Therefore, a measure used by a listed subsidiary in its public communications that meets the definition of an MPM at the subsidiary level would not necessarily meet the definition of an MPM at the consolidated group level.

To meet the definition of an MPM, the measure must communicate management’s view of an aspect of the financial performance of the entity as a *whole* to users. For example, a subtotal of income and expenses related to a reportable segment (disclosed in accordance with IFRS 8) that does not provide information about an aspect of the financial performance of the entity as a whole, does not meet the definition of an MPM. [IFRS 18.B114].

However, in some cases, a subtotal of income and expenses related to a reportable segment could provide information about an aspect of the financial performance of the entity as a whole and, therefore, meet the definition of an MPM. An indicator of this is where a reportable segment contains a single main business activity of an entity and a subtotal of income and expenses relating to that segment is presented in the statement of profit or loss. [IFRS 18.B115].

Frequently asked questions

Question 4-4: When would a reportable segment profit measure represent ‘an aspect of the financial performance of the entity as a whole’?

Since an operating segment is defined¹⁶ as a ‘component’ of an entity, it appears unlikely that information about a segment would reflect the performance of the **entity as a whole**. However, the Board observed that while a subtotal related to a reportable segment (disclosed under IFRS 8) used in public communications might not provide information about the performance of the entity as a whole, it could in certain circumstances. Therefore, the Board decided not to exclude reportable segment measures from the definition of an MPM, but rather to clarify that in order for any measure to be an MPM, it must reflect management’s view of an aspect of the performance of the *entity as a whole*. [IFRS 18.BC345, IFRS 18.BC346].

It is, therefore, clear that a reportable segment profit measure could, in certain circumstances, meet the definition of an MPM. But since there is limited guidance in the standard, an entity needs to apply judgement in making the assessment of whether such a reportable segment profit measure is also an MPM.

¹⁶ Refer to Appendix A to IFRS 8.

How we see it

An entity needs to apply judgement, based on its particular facts and circumstances, to assess whether a reportable segment profit measure used outside the financial statements is also an MPM.

If a reportable segment profit measure is also an MPM, the disclosure requirements for MPMs (see section 4.3 below) will apply, including the requirement to provide all disclosure about MPMs within a single note.

The following situations may indicate that a reportable segment profit measure represents an aspect of the financial performance of the entity as a whole:

- (a) The statement of profit or loss presents a subtotal related to a reportable segment that contains a single main business activity of the entity
- (b) The measure represents the total of all segments combined
- (c) The entity only has one segment
- (d) The measure is unique to only one of the entity's segments

The situation in (a) is based on the example included in the standard, [IFRS 18.B115], while the situations in (b) - (d) above are based on the Board's discussion, and related Staff paper, 17 while developing the standard.

4.2.3.C Rebuttable presumption

The standard contains a *rebuttable presumption* that a subtotal of income and expenses used in public communications outside the entity's financial statements communicates to users management's view of an aspect of the financial performance of the entity as a whole. [IFRS 18.119].

An entity can only rebut this presumption (i.e., assert that a subtotal does not communicate management's view of an aspect of the financial performance of the entity as a whole) if it is able to demonstrate, using reasonable and supportable information that: [IFRS 18.120, IFRS 18.B124]

- (1) The subtotal does not communicate management's view of an aspect of the financial performance of the entity as a whole

And

- (2) There is a reason for using the subtotal in the entity's public communications other than communicating management's view of an aspect of the financial performance of the entity as a whole

The Board felt it is reasonable to expect that an entity includes a subtotal of income and expenses in public communications for the purposes of communicating management's view of an aspect of the entity's financial performance to users. Where this condition is not true, reasonable and supportable information is required to rebut the presumption. [IFRS 18.BC349].

The rebuttable presumption applies to the subtotal as a whole and not to individual items of income and expense that make up that subtotal. Therefore, an entity cannot rebut the presumption based on information indicating that an individual item (or items) of income or expense within the subtotal does not represent management's view. [IFRS 18.B130].

Instead of specifying types of measures for which it would be appropriate to rebut the presumption, the Board provided examples of reasonable and supportable information that could support rebutting the presumption that the subtotal communicates management's view of an aspect of the financial performance of an entity as a whole: [IFRS 18.B125, IFRS 18.BC351]

- (i) The subtotal is communicated without prominence
- (ii) The subtotal is not used internally to assess or monitor the entity's financial performance

Each of these examples is discussed in more detail further below.

17 [IASB Agenda paper 21B](#), *Issues related to Management Performance Measures and IFRS 8 Operating Segments*, May 2023, available on the IFRS Foundation's website.

IFRS 18 also includes examples of 'reasonable and supportable information' that indicate the entity has a reason, other than to communicate management's view, for using a subtotal in its public communications: [IFRS 18.B129]

- (a) The subtotal is required to be included in a public communication by law or regulation
- (b) The subtotal communicates performance related to financial statements prepared under another accounting framework (i.e., other than IFRS accounting standards)
- (c) The subtotal is used in a public communication on the request of an external party
- (d) The subtotal is used to communicate information other than financial performance

In practice, entities often include a measure in their public communications as a result of a regulatory requirement or on the request of investors (examples (a) and (c) above). However, in some cases, these measures also communicate management's view despite originally being included for regulatory reasons or at the request of investors and, in these instances, the assumption cannot be rebutted. [IFRS 18.BC351].

The other two examples are likely to be less common in practice since a subtotal of income and expenses would typically be used as a financial measure (example (d) above) and it is likely that measures calculated under another accounting framework (example (b) above) will be provided due to a regulatory requirement or on the request of investors.

(i) The subtotal is communicated without prominence

Whether a subtotal is communicated without prominence is a matter of fact based on the particular circumstances and will require the use of judgement. The application guidance in IFRS 18 includes some factors to consider in making this judgement: [IFRS 18.B126]

Extract from IFRS 18

- B126** Whether an entity communicates a subtotal without prominence is a matter of judgement based on a number of factors, for example:
- (a) the extent of references to the subtotal—few references indicate a lack of prominence, numerous references indicate prominence; and
 - (b) the content of commentary or analysis about or relying on the subtotal, for example:
 - (i) a description of the subtotal as information that does not communicate management's view and that is provided only in response to frequent requests from some users of financial statements indicates a lack of prominence;
 - (ii) use of the subtotal to support management analysis and commentary on the entity's financial performance and to provide explanations of the reasons for changes in the subtotal from period to period indicates prominence; and
 - (iii) a comparison of the subtotal to competitors' subtotals or industry benchmarks indicates prominence.

(ii) The subtotal is not used internally

Management's use of a subtotal to assess or monitor an aspect of the entity's financial performance as a whole would be an indicator that the subtotal communicates management's view of an aspect of the financial performance of the entity as a whole. However, since the definition of an MPM requires it to be used in public communications outside the financial statements, when management only uses a subtotal internally without including it in its public communications, that subtotal does not meet the definition of an MPM. [IFRS 18.B127].

An entity might also adjust a subtotal included in its public communications for its internal assessment or monitoring of the entity's financial performance by management. In such cases, judgement will be required to assess whether the subtotal included in the entity's public communications externally is sufficiently similar to the subtotal used internally. The more similar the subtotals are, the more likely it is that the subtotal used in the entity's public communications communicates management's view of an aspect of the financial performance of the entity as a whole to users. [IFRS 18.B128].

4.2.3.D Changes to public communications

An entity could change whether it uses a subtotal to communicate to users management's view of an aspect of the financial performance of the entity as a whole, causing the subtotal to become, or cease to be, an MPM. For example, an entity required by regulation to report a particular subtotal that initially did not communicate management's view of an aspect of the financial performance of the entity as a whole, could over time start using the measure internally to assess and monitor the entity's financial performance or expand the commentary and explanations in its public communications beyond the regulatory requirements, resulting in the measure meeting the definition of an MPM.

Judgement will be required to identify whether a measure not identified as an MPM in the prior period has become one, or whether a measure previously identified as an MPM has ceased to be one. [IFRS 18.B131]. Such a change to a measure becoming, or ceasing to be, an MPM will trigger required disclosures (see section 4.3.5 below).

4.2.4 Subtotals that are not MPMs

IFRS 18 explicitly notes that subtotals required by an IFRS accounting standard, including IFRS 18 itself, are not MPMs and IFRS 18 also lists other subtotals that are not MPMs.

4.2.4.A Subtotals specifically required by IFRS accounting standards

The Board also decided to exclude subtotals specifically required by an IFRS accounting standard from the definition of an MPM. [IFRS 18.117]. Since these subtotals are required by IFRS accounting standards, they are by definition not 'management-defined'. Such subtotals include those required by IFRS 18 (see section 3.4 above): [IFRS 18.69]

- Operating profit or loss
- Profit or loss before financing and income taxes
- Profit or loss

Frequently asked questions

Question 4-5: Can additional subtotals included in profit or loss applying IFRS 18.24, meet the definition of an MPM?

IFRS 18 requires an entity to present an additional subtotal within profit or loss, if such a subtotal is necessary for the statement of profit or loss to present a useful structured summary. [IFRS 18.24].

Since IFRS 18 excludes from the definition of an MPM, subtotals of income and expenses that are **specifically** required by IFRS accounting standards, [IFRS 18.117(c)], some could read this as including additional subtotals required by IFRS 18.24. However, IFRS 18.24 indicates that when an entity presents additional subtotals, these additional subtotals must "be displayed no more prominently than the totals and subtotals required by IFRS Accounting Standards" suggesting that such additional subtotals are separate from those *specifically* required by IFRS accounting standards. [IFRS 18.24(d)].

How we see it

In our view, an additional subtotal that is considered necessary for the statement of profit or loss to provide a useful structured summary, while required generally by IFRS 18.24, is not '**specifically**' required. Such a subtotal will, therefore, meet the definition of an MPM, if it complies with the other elements of the definition.

4.2.4.B Subtotals specifically excluded

Some subtotals are not required or defined by IFRS accounting standards, but are commonly used by entities in their financial statements and are well understood by users (for example, a gross profit subtotal). The Board is of the view that "providing the management-defined performance measures disclosures for such measures would not provide useful information because their purpose and relationship to totals or subtotals defined by IFRS Accounting Standards are well understood or would usually be apparent from their presentation in the statement(s) of financial performance." Therefore, the standard includes a list of such subtotals, in IFRS 18.118, and specifically excludes these subtotals from the definition of an MPM: [IFRS 18.118, IFRS 18.BC362]

- (a) Gross profit or loss (revenue minus cost of sales) and similar subtotals
- (b) Operating profit or loss before depreciation, amortisation and impairments within the scope of IAS 36
- (c) Operating profit or loss and income and expenses from all investments accounted for using the equity method
- (d) For an entity that applies the accounting policy choice to present income and expense from liabilities that do not relate to the provision of financing to customers in the operating category (see section 3.3.3 above), a subtotal comprising operating profit or loss and all income and expenses classified in the investing category
- (e) Profit or loss before income taxes
- (f) Profit or loss from continuing operations

Subtotals similar to gross profit

As noted above, subtotals similar to gross profit are not MPMs. A subtotal is similar to gross profit when it represents the difference between a type of revenue and the directly related expenses incurred in generating that revenue. The standard provides the following, non-exhaustive, list as examples of such subtotals: [IFRS 18.B123]

Extract from IFRS 18

Subtotals similar to gross profit

- B123 In accordance with paragraph 118(a), subtotals similar to gross profit are not management-defined performance measures. A subtotal is similar to gross profit when it depicts the difference between a type of revenue and directly related expenses incurred in generating that revenue. Examples include:
- (a) net interest income;
 - (b) net fee and commission income;
 - (c) insurance service result;
 - (d) net financial result (investment income minus insurance finance income and expenses); and
 - (e) net rental income.

EBITDA

During the deliberations, the Board considered defining 'earnings before interest, tax, depreciation and amortisation' (EBITDA), but ultimately decided against it. The Board noted that while EBITDA is one of the most commonly used alternative performance measures, it is not used in some industries (such as banking and insurance) and there is no consensus in practice on what EBITDA represents, other than serving as a starting point for various analyses. [IFRS 18.BC363].

The Board acknowledged that an EBITDA measure could meet the definition of an MPM and concluded that a measure calculated as 'operating profit before depreciation, amortisation and impairments within the scope of IAS 36' would provide similar information to many of the EBITDA measures currently used in practice. However, the Board decided against describing this subtotal as 'EBITDA' since this would implicitly equate 'operating profit or loss' with 'earnings before interest and tax' and this might not always be the case. For example, under IFRS 18 'operating profit' excludes income and expenses classified in the investing category and, therefore, might exclude income that some consider to be 'earnings'. [IFRS 18.BC365]. However, the label 'EBITDA' could be an accurate description of the corresponding measure if, for example, all of an entity's earnings are included in operating profit, since it has no income and expenses that are required to be included in the investing category. In such cases, the standard would not prevent an entity from labelling the subtotal 'operating profit before depreciation, amortisation and specified impairments within the scope of IAS 36' as 'EBITDA'. [IFRS 18.BC366].

In the Board's view, if an entity presented a subtotal for 'operating profit before depreciation, amortisation and impairments within the scope of IAS 36', the costs of the additional information required by the MPM disclosures would exceed its benefits since the measure is already well defined. Therefore, the Board decided to exclude this subtotal from the definition of an MPM. [IFRS 18.BC364].

Income and expenses from *some* equity accounted investees

As noted above, IFRS 18.118(c) specifically excludes a subtotal representing "operating profit or loss and income and expenses from *all* investments accounted for using the equity method" (emphasis added) from the definition of an MPM. [IFRS 18.118(c)]. However, this exclusion would not extend to a subtotal which only includes the income and expenses from *some* equity accounted investees (see Question 3-27 in section 3.3.5.A above). Such a subtotal, for only certain equity accounted investees, could therefore be an MPM. [IFRS 18.BC367].

4.3 Disclosure of MPMs

4.3.1 Objective

The standard includes the following objective for the MPM disclosures: *[IFRS 18.121]*

Extract from IFRS 18

- 121** The objective of the disclosures for management-defined performance measures is for an entity to provide information to help a user of financial statements understand:
- (a) the aspect of financial performance that, in management's view, is communicated by a management-defined performance measure; and
 - (b) how the management-defined performance measure compares with the measures defined by IFRS Accounting Standards.

The Board concluded that transparency about MPMs is enhanced by clearly stating the purpose and limitations of an MPM. Since an MPM reflects management's judgement about what is useful to users, sufficient information about that judgement is required for users to understand the information provided by the MPM and how it faithfully represents an aspect of the entity's financial performance. *[IFRS 18.BC377]*.

4.3.2 Information to be disclosed

IFRS 18 requires an entity to disclose information about all its MPMs in a single note to the financial statements and requires that this note includes a statement that MPMs provide management's view and are not comparable to MPMs of other entities.

The standard requires that each MPM is labelled and described in a clear and understandable manner and specifically requires the entity to make the following disclosures for each MPM: *[IFRS 18.123]*

- (a) A description of the aspect of the entity's financial performance that, in management's view, is communicated by the MPM, including an explanation of why management believes that the MPM provides useful information about the entity's financial performance
- (b) How the MPM is calculated
- (c) A reconciliation to the most directly comparable total or subtotal specifically required by IFRS accounting standards or one of the subtotals listed in IFRS 18.118 (i.e., those which are not required, or defined, by IFRS accounting standards but which are commonly used by entities and well understood by users) (see section 4.2.4 above)
- (d) The income tax effect and the effect on non-controlling interests for each reconciling item disclosed in the reconciliation required by (c) above
- (e) A description of how the entity determined the income tax effect required by (d) above

Comparative numbers are also required for all MPM disclosures. *[IFRS 18.31]*

Any changes in MPMs need to be explained and comparative information must be restated to reflect these changes, unless it is impracticable to do so (see section 4.3.5 below).

Each of these requirements is discussed in more detail below.

Management's statement on the use of MPMs

An entity is required to include, in its MPM note, a statement that MPMs provide management's view of an aspect of the financial performance of the entity as a whole and are not necessarily comparable with measures provided by other entities that have a similar label or description. *[IFRS 18.122]*.

While the Board agreed MPMs can provide useful information, these measures are, by definition, entity-specific and, therefore, not necessarily comparable across entities, *[IFRS 18.BC326]*, and transparency about MPMs is enhanced by an entity clearly stating the purpose and limitations of an MPM. *[IFRS 18.BC377]*.

Labelling MPMs

An entity is required to label and describe each MPM in a clear and understandable manner that does not mislead users. *[IFRS 18.123]*. To meet this requirement, an entity will need to disclose information that enables users to understand which items of income or expense are included in, and which are excluded from, the particular subtotal.

The standard expands on this requirement by requiring an entity to label and describe each MPM in a way that faithfully represents its characteristics in accordance with the aggregation and disaggregation guidance in IFRS 18 (see section 2.2 above) by: *[IFRS 18.B135]*

- (a) Labelling the measure in a way that represents the characteristics of that particular subtotal (for example, using the label 'operating profit before non-recurring expenses' only for a subtotal that does in fact exclude all expenses identified as non-recurring by the entity)
- (b) Explaining the meaning of the terms used in the description that are necessary to understand the aspect of financial performance being communicated (for example, explaining how the entity defines 'non-recurring expenses' in its specific circumstances)

If the calculation of the MPM differs from the accounting policies the entity uses for the items in its statement(s) of financial performance, it is required to state that fact and disclose the calculations it used for the MPM. Additionally, where the calculation of the MPM also differs from accounting policies permitted or required by IFRS accounting standards, the entity must state that fact and where necessary explain the meaning of the terms used in calculating the MPM (see (b) above). *[IFRS 18.B134]*.

4.3.3 Reconciliation

IFRS 18 requires an entity to provide a reconciliation of each MPM to the most directly comparable total or subtotal specifically required by an IFRS accounting standard or a subtotal listed in IFRS 18.118 (see section 4.2.4 above). *[IFRS 18.123(c)]*. For example, an entity that discloses in the notes an MPM of 'adjusted operating profit or loss' will be required to reconcile that measure to the operating profit or loss total required to be presented under IFRS 18. *[IFRS 18.B136]*.

The Board decided to require such a reconciliation since it provides important information helping users to: *[IFRS 18.BC378]*

- Understand how an MPM relates to the totals or subtotals required by IFRS accounting standards
- Understand how the MPM compares with similar measures provided by other entities
- Judge whether to make their own adjustments to the measure

An entity applies the normal principles of aggregation and disaggregation to the reconciling items in order to decide the level of detail required. *[IFRS 18.B136]*.

For each reconciling item, an entity is required to disclose: *[IFRS 18.B137]*

- (a) The line item presented in the statement(s) of financial performance that include the amount(s) making up the reconciling item
- (b) A description of how the item:
 - (i) Is calculated
 - And
 - (ii) Contributes to the MPM providing useful information (see below)

The Board decided to require the disclosure under (a) above since the fieldwork conducted while developing the standard indicated that the information provided by the reconciliation could vary depending on both the form of the reconciliation and the amount of detail included. The Board decided that linking the reconciling items with the related line items presented in the statement(s) of financial performance would help users understand the relationship between an MPM and the most directly comparable total or subtotal specifically required by an IFRS accounting standard or one of the subtotals listed in IFRS 18.118. *[IFRS 18.BC380]*.

The disclosure under (b) above is required, for each reconciling item, if it is necessary in order to explain (see section 4.3.2 above):

- (1) What aspect of the entity's financial performance is being communicated by the MPM and why management believes the MPM provides useful information about the entity's financial performance
- And/or
- (2) How the MPM is calculated

This could be the case if there is more than one reconciling item and each item is calculated on a different basis or contributes to providing useful information in a different way. For example, an entity could exclude several items of expense from an MPM, some because they are considered outside management's control and others because they are considered non-recurring. In order to explain how the MPM provides useful information in such a case, the disclosure would need to distinguish which items contribute to which type of adjustment. *[IFRS 18.B138]*.

Conversely, a single explanation could be applicable to more than one item, or even all the reconciling items collectively. For example, an entity might calculate an MPM by excluding several items of income or expense based on an entity-specific application of 'non-recurring'. In such a case, the requirements in (b) above could be satisfied by a single explanation that applies to all reconciling items including the entity's definition of 'non-recurring' (i.e., what items it considers to be non-recurring and why). [IFRS 18.B139].

The standard allows an entity to reconcile an MPM to a total or subtotal listed in IFRS 18.118; this is the case even if the entity does not present that total or subtotal in its statement(s) of financial performance.

In such cases, in addition to the reconciliation of the MPM to the total or subtotal listed in IFRS 18.118, the entity: [IFRS 18.B140]

(1) Is required to provide a reconciliation from that total or subtotal (listed in IFRS 18.118) to the most directly comparable total or subtotal actually presented by the entity in its statement(s) of financial performance

But

(2) Is not required to disclose the income tax effect and the effect on non-controlling interest for any of the reconciling items between the total or subtotal listed in IFRS 18.118 and the total or subtotal actually presented by the entity in its statement(s) of financial performance

The Board did not stipulate a specific format (for example, a table with reconciling items presented in columns) for the reconciliation since, in the Board's view, the most appropriate format for the reconciliation will depend on the MPM. [IFRS 18.BC382].

4.3.3.A Income tax effect and the effect on non-controlling interests

An entity is required to disclose the income tax effect and the effect on non-controlling interests for each item disclosed in the reconciliation between an MPM and the most directly comparable total or subtotal specifically required by an IFRS accounting standard, or one of the subtotals listed in IFRS 18.118.

[IFRS 18.B141]. The Board decided to require this disclosure for each reconciling item because it gives users the necessary information to calculate their own adjusted earnings per share measure based on only the adjustments they want to consider in their analyses. [IFRS 18.BC385].

Simplified approach

During the development of the standard, some preparers raised concerns that disclosing the tax effect for each reconciling item could be complex and costly if it had to be calculated in accordance with IAS 12.

However, users indicated that high-level information about the tax effects of each reconciling item would meet their needs. Therefore, the Board decided to allow a simplified approach for calculating the income tax effect of the reconciling items in order to alleviate the costs to preparers. [IFRS 18.BC386].

Under this simplified approach, an entity determines the income tax effect of each reconciling item by calculating the income tax effects for the underlying transaction(s) at the statutory tax rate(s) applicable to the particular transaction(s) in the relevant tax jurisdiction(s). [IFRS 18.B141].

Alternative approaches

Alternatively, the standard also allows an entity to calculate the tax effects for the underlying transaction(s): [IFRS 18.B141]

- Based on a reasonable pro rata allocation of the entity's current and deferred tax in the relevant tax jurisdiction(s)

Or

- Using another method, provided it achieves a more appropriate allocation in the circumstances

The Board decided to allow the use of alternative approaches for calculating the tax effects since limiting the methods would restrict an entity's judgement in providing the best possible information in the circumstances, which could reduce the usefulness of the information provided. This approach is similar to the approach set out in IAS 12.63 for determining the income tax effect on items of other comprehensive income.¹⁸ [IFRS 18.BC387].

IFRS 18.123(e) requires an entity to disclose a description of how it determined the income tax effect, discussed above, for the reconciling items it discloses. [IFRS 18.123(e)]. If an entity uses more than one method to calculate the income tax effects of its reconciling items, the entity is required to disclose how it determined the tax effects for each reconciling item. [IFRS 18.B142].

¹⁸ See Chapter 29.

4.3.3.B Example of a reconciliation

The Illustration below is based on the example included in the Illustrative Examples to IFRS 18 and shows XYZ Group's disclosures for its MPM. [IFRS 18.IE8]. In the interest of brevity, the comparative table has not been provided in the Illustration below, but comparative numbers are required for all MPM disclosures. [IFRS 18.31].

For the purpose of this Illustration, assume that XYZ Group has:

- (a) Disclosed a statement stating that adjusted operating profit provides management's view of XYZ Group's operating profit and profit and is not necessarily comparable with measures sharing similar labels or descriptions provided by other entities (see section 4.3.2 above)
- (b) Labelled and described its MPM in a clear and understandable manner by explaining that it has adjusted operating profit and profit for non-recurring items of income or expense that it does not expect to arise for several future annual reporting periods (see section 4.3.2 above)
- (c) Included a description of the aspect of financial performance the MPM communicates. The entity explained that, in management's view, adjusted operating profit provide useful information about XYZ Group's financial performance because it provides information that is helpful in understanding trends in underlying profitability (see section 4.3.2 above)
- (d) Explained how it calculated adjusted operating profit by explaining the specific adjusting items and it has cross-referred its adjusting items to related notes in its financial statements and provided a detailed explanation of restructuring expenses in its note on MPMs (see section 4.3.3 above)
- (e) Provided a reconciliation between operating profit and adjusted operating profit - that is, a reconciliation to the most directly comparable subtotal presented in XYZ Group's statement of profit or loss (see section 4.3.3 above)
- (f) Included for each of its adjusting items the income tax effect, the effect on non-controlling interests and the amount(s) related to each line item in XYZ Group's statement of profit or loss (see section 4.3.3.A above).
- (g) Included a description of how it determined the income tax effects (see section 4.3.3.A above)

Illustration 4-1: MPMs note

XYZ Group's management-defined performance measures

XYZ Group uses the management-defined performance measure adjusted operating profit in its public communications. This measure is not specified by IFRS accounting standards. Therefore, it might not be comparable to apparently similar measures used by other entities.

To provide management's view of XYZ Group's financial performance, operating profit has been adjusted for items of income or expense that XYZ Group does not expect to arise for several future annual reporting periods. XYZ Group's management believes adjusting operating profit for such items provides information that is helpful in understanding trends in XYZ Group's underlying profitability.

XYZ Group generally adjusts for these items of income or expense:

- Impairment losses (or reversals thereof) of property, plant and equipment (including right-of-use assets) and intangible assets (for information related to impairments, refer to Note X Property, plant and equipment, Note Y Intangible assets and Note Z Research and development expenses)
- Restructuring expenses (for information related to restructuring expenses, refer to Note U Employee benefits and Note V General and administrative expenses)
- Non-recurring litigation expenses (for information related to litigation expenses, refer to Note W Provisions and Note V General and administrative expenses)
- Gains or losses on disposal of property, plant and equipment and of intangible assets (for information related to disposal of property, plant and equipment and intangible assets, refer to Note X Property, plant and equipment, Note Y Intangible assets and Note T Other operating income)
- Gains or losses on disposal of subsidiaries, associates and joint ventures

XYZ Group assesses non-recurrence of litigation expenses on a case-by-case basis. XYZ Group generally categorises litigation expenses arising from intellectual property disputes, regulatory violations and employee claims as 'non-recurring'. This classification is based on XYZ Group's proactive approach of having in place measures designed to prevent such events from occurring.

Management-defined performance measures 20X2

(in thousands of CU)

		Income tax expense:	Profit attributable to NCI
Operating profit (IFRS-specified)	57,000		
Gains on disposal of property, plant and equipment (included in 'Other operating income')	(1,800)	297	-
Impairment losses:	6,100	-	305
▪ Included in 'Research and development expenses'	1,600		
▪ Included in 'Goodwill impairment loss'	4,500		
Restructuring expense (included in 'General and administrative expenses')	3,800	(589)	161
Adjusted operating profit (MPM)	65,100		
Impairment losses	Impairment losses incurred in 20X2 did not yield any tax benefits because they were not eligible for tax deductions in Country A and Country B.		
Restructuring expenses	The restructuring expenses in 20X2 are related to XYZ Group's restructuring programme 'Apollo 20X2'. These expenses include redundancy expenses, employee retraining expenses and relocation expenses, all related to the closure of several factories in Country C. The tax effect of these restructuring expenses is calculated based on the statutory tax rate applicable in Country C at the end of 20X2, which was 15.5%.		
Gains on disposal of property, plant and equipment	The tax effect of gains on disposal of property, plant and equipment is calculated based on the statutory tax rate applicable in Country D at the end of 20X2, which was 16.5%.		

4.3.4 All required MPM disclosures in a single note

The standard requires that an entity includes all the required information about MPMs in a single note to the financial statements. [IFRS 18.122]. The Board decided this will improve the transparency of those measures by: [IFRS 18.BC369]

- (a) Providing MPMs in the same place as the calculations, explanations and reconciliations necessary to understand those MPMs

And

- (b) Helping users easily locate all the information about MPMs

The Board decided not to specify that an entity can comply with the requirements by cross-reference since, if an entity uses cross-referencing, the information would be fragmented between several locations, possibly reducing transparency by making it more difficult to locate the information and understand the financial statements as a whole. The Board decided that an explicit prohibition against cross-referencing is not required as common practice under IFRS accounting standards is only to cross-refer if an IFRS accounting standard specifically allows it. [IFRS 18.BC370, IFRS 18.BC371]. This raises the question of whether an entity, in an effort to avoid duplication, is allowed to combine MPM disclosures with other information in the same note. This is addressed in IFRS 18.B132:

Extract from IFRS 18

B132 Paragraph 122 requires an entity to include in a single note all information about management-defined performance measures required by paragraphs 121-125. If an entity also discloses other information in that note, the information in the note shall be labelled in a way that clearly distinguishes the information required by paragraphs 121-125 from the other information.

The standard does not prohibit an entity from including additional information in the note on MPMs; in fact, IFRS accounting standards require disclosure of additional information when compliance with the specific requirements in IFRS accounting standards is insufficient to enable users to understand the effect of transactions and other events and conditions on the entity's financial position and financial performance. However, the Board concluded that it was important to separately identify the required information about MPMs from other information included in the financial statements, so that it is clear which measures are subject to the MPM requirements. [IFRS 18.BC373].

Therefore, if an entity also discloses other information in the same note, the MPM information needs to be labelled in such a way that it can be clearly distinguished from the other information. [IFRS 18.B132]. For example, where the reportable segment information of an entity applying IFRS 8 includes an MPM, the entity could disclose the required MPM information in the same note as the other reportable segment information, provided the entity either: [IFRS 18.B133]

- (a) Includes the required information about MPMs for all its MPMs in that note and labels the information in a way that clearly distinguishes the MPM information required by IFRS 18 from the other information required by IFRS 8

Or

- (b) Provides a separate MPM note that includes the required information for all of the entity's MPMs, thereby duplicating the MPM information already included in the reportable segment note

4.3.5 Changes to MPMs

When an entity changes how it calculates an MPM, starts using a new MPM, stops using a previously disclosed MPM, or changes how it determines the income tax effects of any items disclosed in the reconciliation required for each MPM, it must disclose: [IFRS 18.124]

- (a) An explanation enabling users to understand the change, addition or cessation and its related effects
- (b) The reasons for the change, addition or cessation

And

- (c) Restated comparative information reflecting the change, addition or cessation unless it is impracticable to restate comparatives

These disclosures are based on the information required by IAS 8 if an entity changes its accounting policies since the Board concluded that similar information would be useful to users if an entity makes changes to its MPMs. However, the Board stated that the choice of an MPM, including how the measure is calculated or how the entity calculates the income tax effects of reconciling items, is not an accounting policy choice as defined in IAS 8 and the disclosure requirements in IAS 8, therefore, do not apply.

[IFRS 18.BC388]. The standard clarifies that while an entity's selection of an MPM is not an accounting policy choice, an entity is still required to apply the requirements in IAS 8.50-53 when assessing whether it is impracticable to restate comparative information. [IFRS 18.124].

If an entity is not able to disclose the restated comparative information required by IFRS 18.124(c) because it is impracticable to do so, the entity must disclose that fact. [IFRS 18.125].

4.4 Presentation of MPMs

The Board initially considered prohibiting an entity from presenting MPMs on the face of the statement(s) of financial performance, since some stakeholders were concerned that MPMs could be misleading and might otherwise be given undue prominence, but it ultimately decided against doing so. IFRS 18 requires an entity to present line items and subtotals (including line items and subtotals not specifically required by an IFRS accounting standard) in the statement(s) of financial performance if they are necessary to provide a 'useful structured summary' of the entity's income and expenses. Therefore, prohibiting an entity from presenting MPMs in the statement(s) of financial performance could prevent it from complying with this requirement.

[IFRS 18.BC374].

The Board noted that an entity presenting an MPM in the statement(s) of financial performance, will need to comply with the requirements set out in IFRS 18.24 for additional subtotals presented in the statement(s) of financial performance (see section 2.1.1.B above). An entity that presents an MPM in the statement(s) of financial performance would also need to disclose all the information required for MPMs in a single note, even if this results in duplication. [IFRS 18.BC375].

5 Consequential amendments to other standards – IFRS 18

IFRS 18 introduced consequential amendments to other IFRS accounting standards. Most of the amendments are of an editorial nature, such as replacing references to IAS 1. Other more significant consequential amendments are discussed in the sub-sections below.

An entity is required to apply these consequential amendments when it applies IFRS 18. For more information on transition, refer to section 6 below.

5.1 IAS 7 *Statement of Cash Flows*

The amended IAS 7, once effective, will require all entities to use the 'operating profit' subtotal as the starting point for determining cash flows from operating activities under the indirect method. [IAS 7(2027).18(b)]. The Board decided to require all entities to use the same starting point for the indirect method to reduce existing diversity in practice. The use of the operating profit subtotal is expected to provide a consistent starting point, make the statement of cash flows more consistent and help investors analyse and compare companies' operating cash flows. The change in the starting point will also simplify the presentation of cash flows from operating activities as it will eliminate some reconciling items that are used at present. [IAS 7(2027).BC47].

How we see it

Since the current guidance in IAS 7 (before the IFRS 18 amendments) requires the use of 'profit or loss' as the starting point without defining what 'profit or loss' refers to, entities currently use 'profit (or loss) before tax' or 'profit (or loss) after tax' as a starting point for the reconciliation under the indirect method. Therefore, we expect the amendments to IAS 7 to impact most, if not all, entities.

The amendments will also remove the optionality around the classification of cash flows from dividends and interest in the statement of cash flows. That removal aims to increase comparability between entities and provide more meaningful information as currently, the different classifications of these cash flows do not necessarily convey information about the role of interest and dividends in an entity's business activities.

[IAS 7(2027).BC48].

All entities

The standard requires that cash flows from dividends paid must be included in financing cash flows because dividends paid are a cost of obtaining financing. [IAS 7(2027).33A, IAS 7(2027).BC49].

Entities without a specified main business activity

Entities that do not have a specified main business activity of investing in assets or providing finance to customers will be required to classify interest paid as financing activities, and interest and dividends received as cash flows from investing activities. [IAS 7(2027).34A, IFRS 18.BC53].

Entities with a specified main business activity

For entities that have a specified main business activity of investing in assets or providing finance to customers (as discussed in section 3.3.1 above), the classification of cash flows from dividends received, interest paid and interest received will follow the classification of the related income and expenses in the statement of profit or loss. This means that entities will determine how to classify dividends received, interest received, and interest paid in the statement of cash flows by referring to how the related dividend income, interest income and interest expenses are classified in the statement of profit or loss applying IFRS 18. [IAS 7(2027).34B].

The IASB decided to adopt a 'single category' approach to classifying dividends received, interest paid, and interest received. Therefore, the amended IAS 7 will require an entity to classify the total of each of these cash flows in a single category (i.e., either as operating, investing or financing activities). [IAS 7(2027).34B, IAS 7(2027).BC50]. This means that an entity with a main business activity of investing in assets will, for example, classify the total of all the cash flows from interest paid in financing activities in its statement of cash flows, if that entity classifies all of its interest expense in the financing category in its statement of profit or loss. The same requirements equally apply to the total of all interest received and the total of all dividends received respectively.

This single category approach applies even if the associated income and expenses are classified into more than one category in the statement of profit or loss when applying IFRS 18. [IAS 7(2027).BC55]. If that is the case, IAS 7 provides the following accounting policy choice: [IAS 7(2027).34D]

Extract from IAS 7 (as amended by IFRS 18)

34D In applying IFRS 18, an entity may be required to classify each of dividend income, interest income and interest expenses in more than one category of the statement of profit or loss. In such a case, in applying paragraph 34B the entity shall make an accounting policy choice to classify the related cash flows in one of the associated activities in the statement of cash flows. For example, if an entity classifies interest expenses in the operating category and the financing category of the statement of profit or loss, the entity would classify all its interest paid in accordance with its accounting policy as either cash flows from operating activities or cash flows from financing activities.

The application of these requirements and the accounting policy choice will result in the total of: (a) dividends received, (b) interest paid and (c) interest received, each respectively being classified into a single category within the statement of cash flows.

The total of each type of cash flow (i.e., (a)-(c) above) must be assessed separately and the three types would not necessarily be classified into the same category. For example, an entity that classifies all interest paid into financing activities in its statement of cash flows (in alignment with its profit or loss classification) might classify the total of all dividends received within investing activities in its statement of cash flow (applying the requirements or the accounting policy choice discussed above). [IAS 7(2027).34C].

The table below, based on Table 4 in the IASB's *Effects Analysis* of IFRS 18,¹⁹ presents the comparison of the IAS 7 requirements before and after the amendments:

Cash flow item	Classification before amendments to IAS 7	Classification after amendments to IAS 7	
		Companies without specified main business activities	Companies with specified main business activities
<i>Interest received</i>	Operating or investing	Investing	A single category for the total of each type of cash flow* - operating, investing or financing
<i>Interest paid</i>	Operating or financing	Financing	
<i>Dividends received</i>	Operating or investing	Investing	
<i>Dividends paid</i>	Operating or financing	Financing	

* As noted above, classification of these types of cash flows for entities with a specified main business will be impacted by how the related income and expenses are classified in the statement of profit or loss.

The new requirements are illustrated below, based on the Illustrative Example A that accompanies the amended IAS 7. [IAS 7(2027).IE A].

Since this chapter focuses on the new requirements introduced by IFRS 18, only the consolidated statement of financial performance and the statement of cash flow using the indirect method are presented.

¹⁹ [Effect Analysis: IFRS 18 Presentation and Disclosure in Financial Statements](#), April 2024. Available on the IFRS Foundation's website.

The example illustrates only the current period; however, comparative information for the preceding period is required to be presented in accordance with IFRS 18.

Illustration 5-1: A statement of cash flows for an entity without a specified main business activity

Consolidated statement of financial performance for the period ended 20X2^(a)

Sales	30,650
Cost of sales	(26,450)
<i>Gross profit</i>	<u>4,200</u>
Selling expenses	(600)
General and administrative expenses	(310)
<i>Operating profit</i>	<u>3,290</u>
Share of equity accounted investments	50
Investment income	450
Foreign exchange loss	(40)
<i>Profit before financing and income taxes</i>	<u>3,750</u>
Interest expenses	(400)
<i>Profit before income taxes</i>	<u>3,350</u>
Income tax expense	(300)
<i>Profit/total comprehensive income</i>	<u>3,050</u>

(a) The entity did not recognise any components of other comprehensive income in the period ended 20X2

Consolidated statement of cash flows

Cash flows from operating activities	20X2
Operating profit	3,290
Adjustments for:	
Depreciation	350
Amortisation	100
Operating profit before depreciation and amortisation	<u>3,740</u>
Increase in trade receivables	(500)
Decrease in inventories	1,050
Decrease in trade payables	(1,740)
Cash from operating activities before income taxes	<u>2,550</u>
Income taxes paid	(900)
<i>Net cash from operating activities</i>	1,650
Cash flows from investing activities	
Acquisition of Subsidiary X, net of cash acquired	(550)
Purchase of property, plant and equipment	(350)
Proceeds from sale of equipment	20
Interest received	200
Dividends received	200
<i>Net cash used in investing activities</i>	(480)

Cash flows from financing activities

Proceeds from issue of share capital	250	
Proceeds from long-term borrowings	250	
Payment of lease liabilities	(90)	
Interest paid	(270)	
Dividends paid	(1,200)	
Net cash used in financing activities		(1,060)
Net increase in cash and cash equivalents		110
Cash and cash equivalents at beginning of period		120
Cash and cash equivalents at end of period		230

The operating, investing and financing categories in IFRS 18 have different meanings to those in IAS 7. While developing IFRS 18, the IASB prioritised the objectives of each primary financial statement and did not seek alignment between the operating, investing and financing categories in the statement of profit or loss and the statement of cash flows (see section 3 above). [IFRS 18.BC86].

5.2 IAS 8 Accounting Policies, Changes in Accounting Estimates and Errors

The amendments, once effective, will change the scope and title of IAS 8, due to certain sections previously included within IAS 1 being moved to IAS 8.

The objective of the amended standard is to enhance the relevance and reliability of an entity's financial statements, and the comparability of those financial statements over time and with financial statements of other entities, by prescribing the basis of preparation of financial statements. [IAS 8(2027).1].

While developing IFRS 18, the Board concluded that some requirements setting out general features of financial statements and some disclosure requirements fit better with the content of the current version of IAS 8. Therefore, the Board decided to move those requirements from IAS 1 to IAS 8. The requirements moved are: [IAS 8(2027).BC3A]

- (a) The concepts of fair presentation and compliance with IFRS accounting standards
- (b) Whether an entity is a going concern
- (c) The accrual basis of accounting
- (d) Disclosure of an entity's selection and application of accounting policies
- (e) Disclosure of judgements and sources of estimation uncertainty

These relocated requirements are in addition to the guidance currently included in IAS 8 on accounting policies, changes in estimates and errors.²⁰

The Board changed the title of the amended IAS 8 to *Basis of Preparation of Financial Statements* to better reflect the updated content of IAS 8.

How we see it

Although the consequential amendments to IAS 8 might seem significant in terms of volume, since these requirements are carried over from IAS 1 mostly unchanged, we do not expect any significant impact on current practice.

Given the IASB's intention in relocating the guidance to IAS 8 was to improve the organisation of the IFRS accounting standards and to provide users with all the relevant topical content in one standard, we expect the experience of preparers navigating between the different standards and requirements to improve.

²⁰ For the relevant guidance on the requirements currently included in IAS 8, see Chapter 3.

5.3 IAS 33 *Earnings per share*

IAS 33 requires entities to report basic and diluted earnings per share. The amended IAS 33, once effective, will permit entities to disclose additional amounts per share, if the numerator used in the calculation meets specified criteria. The IASB concluded that it was necessary to specify the numerator (or numerators) an entity can use when disclosing additional amounts per share to ensure that users of financial statements receive the same information about additional amounts per share as they receive for MPMS. [IAS 33(2027).BC16, IAS 33(2027).BC17].

Therefore, an entity can only use additional numerators that are amounts attributable to ordinary equity holders of the parent entity as follows: [IAS 33(2027).73B]

- A total or subtotal identified in IFRS 18 (in paragraphs 69, 86 and 118 of IFRS 18 - see section 4.2.4 above)
- Or
- A management-defined performance measure (or MPM) as defined by IFRS 18 (see section 4.2 above)

Frequently asked questions

Question 5-1: Can an entity disclose an additional earnings per share measure based on a numerator that does not comply with IAS 33.73B?

An entity cannot disclose an additional earnings per share measure based on a numerator that does not comply with IAS 33.73B.

IAS 33 has specific requirements for presenting additional earnings per share measures and indicates that only those numerators that meet the IAS 33.73B criteria can be used for additional earnings per share measures.

Illustration 5-2 Revenue based additional earnings per share measure

Entity A uses revenue per share (calculated as total revenue ÷ outstanding shares) as a key performance indicator in its public communications outside the financial statements.

'Total revenue', the numerator used by Entity A, is not:

- An MPM as defined by IFRS 18
- Or
- A total or subtotal listed in IFRS 18.69, 86 or 118

Therefore, disclosure of this additional earnings per share measure within the financial statements is not permitted under IFRS accounting standards requirements.

Question 5-2: Can an IFRS 18.B117 MPM be the basis for an additional earnings per share measure?

As discussed above, an MPM is one of the allowed numerators for an IAS 33 additional earnings per share measure. IFRS 18.B117 makes it clear that while a ratio cannot be an MPM (see section 4.2.1 above), the numerator within a ratio could be, if it would have met the MPM definition, had it not been included in a ratio.

Since an earnings per share measure is by definition a ratio, the question arises as to whether the use of an alternative earnings per share measure outside the financial statements could result in the numerator of such a measure meeting the definition of an MPM and if so, whether the numerator would be allowable under IAS 33.

Illustration 5-3 Adjusted earnings per share ratio

Entity A uses an adjusted earnings per share measure as a key performance indicator in its public communications outside the financial statements to communicate management's view of an aspect of their overall performance.

While the adjusted operating profit used in the adjusted earnings per share measure is a subtotal of income and expense (as envisaged by IFRS 18.117), Entity A does not specifically indicate the value of the numerator anywhere in its public communications. Entity A just discloses the formula used to derive the overall ratio being:

$$\frac{\text{adjusted operating profit}}{\text{weighted average number of ordinary shares outstanding}}$$

The 'adjusted operating profit' in this fact pattern is:

- A subtotal of both income and expense
- Not listed in IFRS 18.118, or specifically required to be presented or disclosed by IFRS accounting standards
- Used outside the financial statements to communicate management's view of an aspect of their overall performance

That is, the 'adjusted operating profit' numerator meets all the criteria of an MPM, other than being used by itself in public communications outside financial statements.

How we see it

Many entities currently use adjusted earnings ratios as key performance indicators in their public communications outside their financial statements. Despite the restrictions on the permitted numerators for additional per share measures, entities will be able to disclose such adjusted earnings ratios in the financial statements, if the numerator used is a subtotal that itself meets the definition of an MPM (see section 4.2 above).

This includes subtotals only used as the numerator within a ratio (i.e., the subtotals are not separately used in communications as a stand-alone MPM), if the subtotals meets the MPM definition in their own right (see section 4.2.1 above).

It is important to note that any numerator that meets the definition of an MPM in its own right will also be subject to the MPM disclosure requirements (see section 4.3 above).

In line with the current requirements in IAS 33, the amended standard specifies that additional basic and diluted amounts per share must be disclosed with equal prominence and must be calculated using the weighted-average number of ordinary shares determined in accordance with IAS 33. [IAS 33(2027).73C(a), IAS33(2027).73C(b)].

The amended standard explicitly states that the additional amount per share cannot be presented in the primary financial statement and can only be disclosed in the notes. [IAS 33(2027).73C(c)]. The 'note only' disclosure requirement results from the fact that additional 'amounts per share' calculations require additional information and reconciliations between these additional amounts and the measures presented in the primary financial statements, in order to be understood by users. [IAS 33(2027).BC18].

If an entity uses an MPM as a numerator in an earnings per share calculation, it must follow the disclosure guidance required for MPMs, in IFRS 18.121-125 (see section 4.3 above), for that numerator. [IAS 33(2027).73C(d)].

Sometimes an entity is required by local law or regulation to disclose amounts per share in addition to basic and diluted earnings per share as required by IAS 33 (for example, adjusted earnings per share). Under the restrictions on allowable numerators in the amended standard, the entity would be permitted to disclose that amount per share in its financial statements, if it concludes that the numerator required by local law or regulation meets the definition of an MPM in IFRS 18. [IAS 33(2027).BC17].

How we see it

Although both the current and amended IAS 33 allow entities to disclose additional amounts per share, the amended IAS 33 introduces restrictions on the nature of allowable numerators to be used in the calculation of such an additional amount per share and requires additional disclosures.

5.4 IAS 34 *Interim Financial Reporting*

IFRS 18, once effective, will impact the disclosure requirements for interim financial reporting. Under IAS 34 as amended, an entity will be required to make disclosures about its MPMs, as defined in IFRS 18 (see section 4 above), in the notes to the condensed interim financial statements. [IAS 34(2027).16A(m)]. The scope of these disclosures in the condensed interim financial statements is the same as that required in an entity's complete set of financial statements. As a result, an entity will be required to provide the same range of information on MPMs in its interim financial reporting, no matter what the form and content of the interim financial statements might be.

The requirement in the amended IAS 34 to provide information on MPMs in the interim reporting is intended to provide users with transparent information about these measures and allow them to analyse all aspects of an entity's performance on a timely basis. [IAS 34(2027).BC10A].

Consistent with the objective of condensed interim financial reports, an entity does not need to repeat previously reported information about MPMs, for example, information about why an entity's management considers that an MPM communicates aspects of the entity's performance. [IAS 34(2027).BC10B].

It is worth noting that, because MPMs relate to performance for the same reporting period as the financial statements, a subtotal that relates to the annual financial statements, but not to interim financial statements, is only an MPM in the annual financial statements (see section 4.2.2 above).

How we see it

Generally, the disclosure requirements in IAS 34 are less prescriptive for condensed interim financial statements compared to complete financial statements. The fact that the Board decided that the same level of prescriptiveness is required for disclosure about MPMs in condensed interim financial statements highlights the Board's assessment that more detailed information about MPMs is also decision-useful in combination with otherwise condensed financial information.

6 Transition - IFRS 18

IFRS 18 supersedes IAS 1 and is effective for reporting periods beginning on or after 1 January 2027. Earlier application is permitted and must be disclosed in the notes. [IFRS 18.C1, IFRS 18.BC414]. An entity is required to apply the consequential amendments to other IFRS accounting standards when it applies IFRS 18.

The standard applies retrospectively. However, an entity is not required to present the quantitative information specified in IAS 8.28(f) (i.e., the adjustment for each financial statement line item affected and the related effect on basic and diluted earnings per share, for the current period and each prior period presented). [IFRS 18.C2, IFRS 18.BC417].

In its annual financial statements, an entity must disclose, for the comparative period immediately preceding the period in which IFRS 18 is first applied, a reconciliation for each line item in the statement of profit or loss between: [IFRS 18.C3, IFRS 18.BC418]

- The restated amounts presented in accordance with IFRS 18
- And
- The amounts previously presented applying IAS 1

An entity is permitted, but not required, to provide the reconciliation for: [IFRS 18.C6, IFRS 18.BC419]

- The reporting period in which IFRS 18 is first applied
- And/or
- Earlier comparative periods

As noted above, IFRS 18 requires a reconciliation (between the amounts presented under IFRS 18 and those presented previously under IAS 1 for each item in the statement of profit or loss) only for the period immediately preceding the period of first application. However, entities that present more than one comparative period must take into account any local regulatory requirements as these may require a reconciliation for all periods presented. For example, if local regulations require that an entity presents two years of comparative information in its financial statements, the entity may also be required to provide a reconciliation for all periods presented.

At the date of initial application of IFRS 18, an entity that is eligible²¹ to apply IAS 28.18 (see section 3.3.5.A above) is permitted to change its election for measuring an investment in an associate or joint venture from the equity method to fair value through profit or loss in accordance with IFRS 9. If an entity makes such a change, it applies the change retrospectively, applying IAS 8. An entity that applies the election is required to account for the applicable investments in the same way in its separate financial statements, as required by IAS 27.11. [IFRS 18.C7, IFRS 18.BC423].

How we see it

While there might appear to be ample time before the effective date of IFRS 18, entities are strongly encouraged to determine the impact of the new requirements on their particular business. Many entities will need to identify and collect information, which in some cases, could necessitate changes to their internal information systems and their financial statement close process.

Management needs to plan ahead as the transition process could require considerable time and involve the combination of resources from financial reporting, legal and investor relations, among others.

In addition, there could be impacts on remuneration agreements and covenants. Entities are advised to monitor practice as it develops, with a focus on the specific developments in their particular industry.

Some entities might consider a "phased transition" before the mandatory effective date. That is, IFRS 18, although a new standard, carries over most of the requirements of IAS 1, and many of the new requirements, such as the additional guidance on aggregation and disaggregation, comply to a great extent with the requirements of IAS 1. Similarly, the new requirements regarding MPM disclosures generally do not conflict with the disclosure requirements of IAS 1. Furthermore, some of the required changes in presentation when adopting IFRS 18, could, in some cases, be justifiable under the guidance in IAS 1 and IAS 8 regarding changes in presentation policies. Whether a phased or a 'all at once' transition to IFRS 18 is appropriate will have to be determined by an entity's specific facts and circumstances.

²¹ For further guidance on eligible entities, see Chapter 12.

6.1 Interim reporting

If an entity prepares condensed interim financial statements in accordance with IAS 34, in the first year of applying IFRS 18, it presents each heading it expects to use and the subtotals required in IFRS 18 in its condensed interim financial statements. This is despite the requirement in IAS 34.10 to retain in the interim financial statements the headings and subtotals included in the most recent annual financial statements. That requirement is effectively ignored in each set of condensed interim financial statements until an entity has issued its first set of annual financial statements prepared in accordance with IFRS 18. [IFRS 18.C4, IFRS 18.BC421].

As part of the information required by IAS 34.16A(a) (i.e., where accounting policies have changed since the last annual period, a description of the nature and effect of these changes), an entity that applies IAS 34 to prepare interim financial statements in the first year of applying IFRS 18, discloses a reconciliation for each line item presented in the statement of profit or loss for the comparative periods immediately preceding the current periods between: [IFRS 18.C5, IFRS 18.BC422]

- (a) The restated amounts applying IFRS 18 to the comparative period and the cumulative comparative period
And
- (b) The amounts previously presented applying IAS 1 to the comparative period and cumulative comparative period

An entity can voluntarily provide additional reconciliations between the IAS 1 and IFRS 18 presentation for: [IFRS 18.C6]

- The current interim period (and the cumulative current interim period)
And/or
- An earlier interim period in addition to those immediately preceding the current period as required above

These requirements are shown in the Illustration below:

Illustration 6-1: Entity publishing quarterly interim financial reports

Entity A's financial year ends on 31 December 2027 (i.e., calendar year) and it prepares quarterly interim financial statements. Entity A adopts IFRS 18 from 1 January 2027.

Entity A will present the following periods in its statement of profit or loss in its second quarterly interim statements report as of 30 June 2027:

		Statement of profit or loss applying IFRS 18	
		Comparatives*	Current period
Year to date	6 months ending:	30 June 2026	30 June 2027
Q2	3 months ending:	30 June 2026	30 June 2027

* Retrospectively restated

In addition, it will disclose a reconciliation between each line items as presented in the comparative (and cumulative comparative) statement of profit or loss applying IFRS 18 and the amounts previously presented for those comparatives applying IAS 1, for the following periods:

		Comparatives
Year to date	6 months ending	30 June 2026
Q2	3 months ending	30 June 2026

7 Future developments - IFRS 18

As a result of the publication of IFRS 18, IFRS Interpretations Committee (IFRS IC) agenda decisions which refer to IAS 1 have been assessed to see if they need to be either withdrawn in their entirety, as the requirements contained in them have been superseded, or whether an amended reference to the relevant paragraphs of IFRS 18 will suffice.

For the majority of IFRS IC agenda decisions containing a reference to IAS 1, the latter's requirements have not been amended by IFRS 18 and therefore an amended reference to IFRS 18 will be sufficient. However, a number of agenda decisions have been identified which refer to requirements which were not carried forward unchanged.

As a result, the IASB asked the IFRS IC to consider:

- Replacing the current references to IAS 1 with references to IFRS 18 for those agenda decisions that refer to the general requirements about presentation, materiality and aggregation of information in the financial statements
- And
- Explaining how an entity would apply IFRS 18 to the fact pattern in the agenda decision on supply chain financing arrangements²²

In its June meeting, the IFRS IC proposed updating these agenda decisions and therefore published a tentative agenda decision, which was open for comment until 6 October 2025.²³

²² [IFRIC Update](#), December 2020, available on the IFRS Foundation's website.

²³ [IFRIC Update](#), June 2025, available on the IFRS Foundation's website.

8 IFRS 19 *Subsidiaries without Public Accountability: Disclosures*

8.1 Overview

In May 2024, the IASB issued IFRS 19 *Subsidiaries without Public Accountability: Disclosures*, which allows eligible entities to elect to apply the reduced disclosure requirements of IFRS 19, while still applying the recognition, measurement and presentation requirements in other IFRS accounting standards. The application of the standard is optional for eligible entities and an entity applying IFRS 19 is required to disclose that fact as part of its general IFRS accounting standards compliance statement.

The standard will become effective for reporting periods beginning on or after 1 January 2027, with early application permitted. In the first year of applying IFRS 19, an entity is required to disclose comparative information for the current year amounts disclosed as required by IFRS 19 (rather than the amounts disclosed in the prior year as required under other IFRS accounting standards), unless IFRS 19 or another IFRS accounting standard permits or requires otherwise.

The following subsections contain a summary of the context, purpose and contents of the standard.

8.2 The need for a reduced disclosure framework

The standard was developed in response to the Board's *Request for Views: 2015 Agenda Consultation*. Respondents had suggested that the Board consider permitting a subset of subsidiaries to apply IFRS accounting standards with reduced disclosure requirements. Respondents noted that although the *IFRS for SMEs accounting standard* has fewer disclosure requirements, its recognition and measurement requirements differ from those in IFRS accounting standards. This means that a subsidiary which applies the *IFRS for SMEs accounting standard* must maintain additional accounting records, in order to meet the group reporting requirements of its parent.

Eligible subsidiaries are subsidiaries of a parent that prepares consolidated financial statements available for public use, which comply with IFRS accounting standards. The Board noted that some disclosures in other IFRS accounting standards are more relevant to investment decisions in public capital markets than to transactions, other events and conditions encountered by typical eligible subsidiaries; these subsidiaries would therefore benefit from a reduced disclosure framework.

The Board undertook the project to reduce the cost of preparing financial statements under IFRS accounting standards for subsidiaries that are not publicly accountable and to extend the application of IFRS accounting standards within groups, while maintaining the usefulness of the information provided. The Board believes that the usefulness of the financial statements is maintained because the disclosures would be tailored to the needs of users of the subsidiaries' financial statements.

8.3 Key features of the standard

8.3.1 The objective of the standard

The objective of the standard is to allow eligible entities to apply the reduced disclosure requirements set out in IFRS 19, while still applying the recognition, measurement and presentation requirements in other IFRS accounting standards. Unless otherwise specified, eligible entities that elect to apply IFRS 19 will not need to apply the disclosure requirements in other IFRS accounting standards. [IFRS 19.2, IFRS 19.3].

8.3.2 Eligible entities

An entity may elect to apply IFRS 19 if at the end of the reporting period:

- It is a subsidiary as defined in IFRS 10
 - It does not have public accountability
- And
- It has a parent (either ultimate or intermediate) that prepares consolidated financial statements, available for public use, which comply with IFRS accounting standards

An eligible entity (including an intermediate parent) can apply IFRS 19 in its consolidated, separate or individual financial statements. IFRS 19 is applicable for both annual and interim reporting. [IFRS 19.7].

8.3.2.A Public accountability

IFRS 19 uses the same language as the *IFRS for SMEs* accounting standard to define 'public accountability'. An entity is publicly accountable if:

- "its debt or equity instruments are traded in a public market or it is in the process of issuing such instruments for trading in a public market"
- Or
- it "holds assets in a fiduciary capacity for a broad group of outsiders as one of its primary businesses"

Entities that fall within the 'holding assets in a fiduciary capacity' criterion must do so for the purposes of their primary business (for example, this is often the case for banks, insurance companies and mutual funds). Entities that hold assets in a fiduciary capacity for reasons that are incidental to their primary business are not publicly accountable (for example, this might be the case for travel or real estate agents and utility companies that receive payments in advance of delivery of the goods or services). [IFRS 19.11, IFRS 19.12].

8.3.3 Voluntary application

An entity that meets the requirements to apply IFRS 19 as described above may apply the standard on a voluntary basis. An entity may revoke its election to apply IFRS 19 at any time, in which case, it would be required to prepare financial statements that provide the disclosures set out in other IFRS accounting standards. IFRS 19 permits an entity to elect to apply the standard more than once, enabling entities that have revoked their election to reapply it in a later period. [IFRS 19.13].

8.3.4 Statement of compliance

IFRS 19 requires an entity to disclose the fact that it is applying the standard as part of its general compliance statement, by making an explicit and unreserved statement of compliance with IFRS accounting standards and the disclosure requirements in IFRS 19. [IFRS 19.20]. The reference to IFRS 19 in the compliance statement must be made in both annual and interim financial statements.

How we see it

Based on IFRS 19.20 and IFRS 19.BC63, an example of such a compliance statement could be as follows:

'These [consolidated/ separate/ individual] financial statements have been prepared in accordance with IFRS Accounting Standards including IFRS 19 *Subsidiaries without Public Accountability: Disclosures*.'

8.3.5 Principles used to develop the disclosure requirements

Despite its name, the *IFRS for SMEs* accounting standard can be used by a company of any size, provided it does not have public accountability. Therefore, as a starting point, the Board applied the broad principles it had used for developing the disclosure requirements of that standard. However, there are recognition and measurement differences for certain topics between the *IFRS for SMEs* accounting standard and other IFRS accounting standards. For topics where the recognition and measurement requirements are the same, the disclosure requirements in the *IFRS for SMEs* accounting standard have been used, with the wording aligned to that used in other IFRS accounting standards. For topics where the recognition and measurement requirements differ, the disclosure requirements in IFRS 19 have been developed directly from the IFRS accounting standards addressing those topics. [IFRS 19.BC41, IFRS 19.BC44].

The Board identified six broad principles which would provide information about topics important to users and to their understanding of the financial statements. Users are typically interested in information about: [IFRS 19.BC33]

- Short-term cash flows, obligations, and commitments or contingencies (whether or not they are recognised as liabilities)
- Liquidity and solvency
- Measurement uncertainties
- An entity's accounting policy choices
- Disaggregation of amounts presented in the financial statements
- Disclosures relevant to transactions and other events and conditions encountered by typical eligible entities

8.3.6 Disclosure requirements and references to other IFRS accounting standards

The disclosure requirements in IFRS 19 are organised into subheadings by IFRS accounting standard. Some disclosure requirements in IFRS accounting standards (e.g., those embedded in paragraphs that include recognition, measurement or presentation requirements) remain applicable and these are specified under the subheading for each IFRS accounting standard. For example, the subsection related to IFRS 5 includes a paragraph labelled “Disclosure requirements in IFRS 5 that remain applicable”, with specific references to paragraphs in IFRS 5 that are still applicable. [IFRS 19.4(a), IFRS 19.40].

IFRS 19 disclosures exclude IFRS 8, IFRS 17 and IAS 33. Therefore, if an entity that applies IFRS 19 is required to apply IFRS 17 or elects to apply IFRS 8 and/or IAS 33, that entity would be required to apply all the relevant disclosure requirements in those standards. [IFRS 19.4(b)]. Similarly, the disclosure requirements for management-defined performance measures are not included in IFRS 19. Instead IFRS 19 requires eligible entities that choose to use MPMs to provide all the MPM disclosures required by IFRS 18.

[IFRS 19.163, IFRS 19BC123].

A new or amended IFRS accounting standard may include transitional disclosure requirements (i.e., those disclosures required in the first year of application of a new or amended IFRS accounting standard). Any relief from such transitional disclosure requirements will be set out in the new or amended IFRS accounting standard. [IFRS 19.4(c)].

How we see it

Within the various subsections, IFRS 19 identifies specific disclosure requirements in other IFRS accounting standards that remain applicable. Therefore, entities will need to refer to other IFRS accounting standards and follow the specified disclosure requirements. As such, IFRS 19 is not a ‘stand-alone’ accounting standard.

8.3.7 Overarching principle of materiality

Eligible entities that elect to apply IFRS 19 do not need to provide a disclosure specified by IFRS 19, if the information resulting from that disclosure is not material. Furthermore, entities need to consider whether to provide additional disclosures when compliance with the specific requirements in IFRS 19 is insufficient to enable users to understand the effect of transactions and other events and conditions on the entity’s financial position and financial performance. [IFRS 19.5].

8.4 Effective date and transition

IFRS 19 is effective for reporting periods beginning on or after 1 January 2027 and earlier application is permitted. If an eligible entity chooses to apply the standard earlier, it is required to disclose that fact. [IFRS 19.A1].

An entity is required, during the first period (annual and interim) in which it applies the standard, to disclose comparative information for current year amounts as required by IFRS 19 (rather than the amounts disclosed in the prior year as required under other IFRS accounting standards), unless IFRS 19 or another IFRS accounting standard permits or requires otherwise. If relevant, an entity will include comparative information for narrative and descriptive information. Similarly, an entity that revokes its election to apply IFRS 19 will need to provide comparatives for all amounts disclosed under the requirements in other IFRS accounting standards. [IFRS 19.14, IFRS 19.15].

If an entity that applied IFRS accounting standards, but not IFRS 19, in the immediately preceding period, elects to apply IFRS 19 in the current period, the requirements in IFRS 1 *First-time Adoption of International Financial Reporting Standards* and the requirements for changes in accounting policies in IAS 8 will not be applicable. Similarly, if an entity revokes its election (or is no longer eligible) to apply IFRS 19 but continues to apply IFRS accounting standards, the requirements of IFRS 1 and the requirements of IAS 8 for changes in accounting policies would not be applicable. [IFRS 19.18, IFRS 19.19].

As an entity could adopt IFRS 19 voluntarily before it is required to adopt IFRS 18, there is provision for the required disclosures in such a situation. Such an entity must provide the disclosures required by Appendix B, based on disclosures in IAS 1, rather than the disclosures in the section related to IFRS 18 in the main body of the standard. [IFRS 19.B1].

How we see it

Early application of IFRS 19 is permitted and the standard does not impact recognition and measurement. Since the standard will reduce the disclosure requirements for eligible entities, we anticipate that eligible preparers may consider early adopting the standard, if endorsed in the relevant jurisdiction.

8.4.1 Published 'catch-up' amendments

In developing the disclosure requirements in IFRS 19, the IASB considered the disclosure requirements in other IFRS accounting standards as at 28 February 2021. In the first issued version of the standard, IFRS 19 did not contain reduced versions of any disclosure requirements that were amended or added to IFRS accounting standards after that date. Consequently, in July 2024, the IASB published an Exposure Draft setting out whether and how to reduce the disclosure requirements of these post-28 February 2021 amendments and additions for the purpose of updating IFRS 19. This was finalised in August 2025.

Appendix B - Index of Frequently asked questions

Question 2-1:	Is it acceptable to present separately realised and unrealised gains and losses on financial instruments at fair value through profit or loss?	184
Question 2-2:	How are foreign exchange differences presented within the five categories in the statement of profit or loss?	189
Question 3-1:	How is rental income from property, plant and equipment held on an operating lease classified in profit or loss by a lessor?	200
Question 3-2:	How is finance income on the net investment in a finance lease classified in profit or loss?	200
Question 3-3:	How are expenses related to holding investment property classified in profit or loss?	200
Question 3-4:	Can an entity present an additional subtotal for the income of only some equity accounted investments within the investing category?	201
Question 3-5:	Can an entity present gains or losses on disposal of an equity accounted investment in the same line item as the share of profit or loss from an equity accounted investment?	201
Question 3-6:	How are transaction costs incurred in acquiring investments in other entities classified in profit or loss?	202
Question 3-7:	How is interest income on cash and cash equivalents that is received as an advanced payment from a customer classified in profit or loss?	203
Question 3-8:	How is the interest expense on a contract liability (with a significant financing component) classified in profit or loss?	210
Question 3-9:	Is it acceptable to disaggregate the 'time value' element from the remeasurement of a Type 2 liability for the purpose of determining the appropriate category?	210
Question 3-10:	Where is interest income on a contract asset (with a significant financing component) classified in profit or loss?	211
Question 3-11:	Where is interest income on a financial asset arising from a service concession arrangement classified in profit or loss?	211
Question 3-12:	Where are gains and losses arising from the remeasurement of contingent consideration in a business combination classified?	211
Question 3-13:	How is income from government grants classified?	212
Question 3-14:	Can an entity use alternative labels such as 'operating result' or 'net operating income' for the required subtotal 'operating profit or loss'?	214
Question 3-15:	Where is the selling profit or loss on the recognition of a net investment in a finance lease classified?	216
Question 3-16:	How are foreign exchange differences on intercompany loans, eliminated on consolidation, classified in profit or loss?	218
Question 3-17:	In separate financial statements, where does a parent classify the income and expenses from its investments in subsidiaries accounted for at cost?	223
Question 3-18:	How is rental income from property, plant and equipment held on an operating lease classified in profit or loss by a lessor?	227
Question 3-19:	How is finance income on the net investment in a finance lease classified in profit or loss?	227
Question 3-20:	Where is the selling profit or loss on recognition of a net investment in a finance lease classified?	227
Question 3-21:	How are transaction costs incurred in acquiring an equity investment (without control, joint control or significant influence) in other entities classified in profit or loss?	227
Question 3-22:	How are expenses related to holding investment property classified in profit or loss?	227

Question 3-23:	How is the interest expense on a contract liability (with a significant financing component) classified in profit or loss?	231
Question 3-24:	How are income and expenses from cash and cash equivalents held by a conglomerate classified in profit or loss?	235
Question 3-25:	Does the 'consistent accounting policy' requirements in IFRS 18.65(a)(ii) apply to an entity that invests in financial assets as a main business activity and has a main business activity of providing financing to customers?	235
Question 3-26:	How is interest income on cash and cash equivalents that is received as an advanced payment from a customer classified in profit or loss?	235
Question 3-27:	Can an entity present an additional subtotal for the income of only some equity accounted investments within the investing category?	236
Question 3-28:	Can an entity present gains or losses on disposal of an equity accounted investment in the same line item as the share of profit or loss from an equity accounted investment?	240
Question 4-1:	Can the numerator of a ratio be an MPM, even if the numerator is never communicated by itself outside the financial statements?	251
Question 4-2:	Are industry specific (e.g., insurance) APMs aligned with the definition of MPMs?	251
Question 4-3:	Can a 'what if' income and expense based alternative performance measure be an MPM?	251
Question 4-4:	When would a reportable segment profit measure represent 'an aspect of the financial performance of the entity as a whole'?	253
Question 4-5:	Can additional subtotals included in in profit or loss applying IFRS 18.24, meet the definition of an MPM?	256
Question 5-1:	Can an entity disclose an additional earnings per share measure based on a numerator that does not comply with IAS 33.73B?	268
Question 5-2:	Can an IFRS 18.B117 MPM be the basis for an additional earnings per share measure?	268

Appendix C - Defined terms

Extract from IFRS 18

Appendix A Defined terms

This appendix is an integral part of the IFRS Accounting Standard.

aggregation	The adding together of assets, liabilities, equity, income, expenses or cash flows that share characteristics and are included in the same classification.
classification	The sorting of assets, liabilities, equity, income, expenses and cash flows based on shared characteristics.
disaggregation	The separation of an item into component parts that have characteristics that are not shared.
IFRS Accounting Standards	Accounting standards issued by the International Accounting Standards Board. They comprise: <ul style="list-style-type: none"> (a) International Financial Reporting Standards; (b) International Accounting Standards; (c) IFRIC Interpretations; and (d) SIC Interpretations. IFRS Accounting Standards were previously known as International Financial Reporting Standards, IFRS, IFRSs and IFRS Standards.
management-defined performance measure	A subtotal of income and expenses that: <ul style="list-style-type: none"> (a) an entity uses in public communications outside financial statements; (b) an entity uses to communicate to users of financial statements management's view of an aspect of the financial performance of the entity as a whole; and (c) is not listed in paragraph 118 of IFRS 18, or specifically required to be presented or disclosed by IFRS Accounting Standards.
notes	Information in financial statements provided in addition to that presented in the primary financial statements.
operating profit or loss	The total of all income and expenses classified in the operating category.
primary financial statements	The statement(s) of financial performance, the statement of financial position, the statement of changes in equity and the statement of cash flows.
profit or loss	The total of income less expenses included in the statement of profit or loss.
profit or loss before financing and income taxes	The total of operating profit or loss and all income and expenses classified in the investing category.
useful structured summary	A structured summary provided in a primary financial statement of a reporting entity's recognised assets, liabilities, equity, income, expenses and cash flows that is useful for: <ul style="list-style-type: none"> (a) obtaining an understandable overview of the entity's recognised assets, liabilities, equity, income, expenses and cash flows; (b) making comparisons between entities, and between reporting periods for the same entity; and (c) identifying items or areas about which users of financial statements may wish to seek additional information in the notes.

Chapter 5 Non-current assets held for sale and discontinued operations

Overview

This chapter deals with the requirements of IFRS 5 *Non-current Assets Held for Sale and Discontinued Operations*.

As its title suggests, the standard deals with two distinct but overlapping broad areas.

The first relates to the measurement and presentation of non-current assets when these will be principally recovered by disposal rather than by continuing use. The requirements deal with, *inter alia*:

- Classification as held for sale (and changes to a plan to sell)
- The ceasing of depreciation and amortisation
- The writing down of an asset and group of assets and liabilities to be disposed of to the lower of their carrying amount and fair value less costs to sell

And

- The separate presentation of such assets and liabilities in the statement of financial position

The second matter relates to the concept of a discontinued operation. Requirements in this regard cover the identification of and presentation in profit and loss of the results of discontinued operations, the representation of comparative information to reflect the status of the operation at the end of the current period and cash flow information relating to the operation.

The standard sets out disclosure requirements in relation to the above.

What you need to know

- IFRS 5 sets out the criteria for classification of an asset and group of assets and liabilities as held for sale and the definition of discontinued operations, as well as corresponding measurement, presentation and disclosure requirements.
- The standard by design requires often significant judgements, based on the specific facts and circumstances applicable to an entity.
- Various matters relating to the standard have been raised over the years and discussed by the IFRS IC which deferred them to the IASB, such as the allocation of impairments in a disposal group or the treatment of intragroup transactions between continuing and discontinued operations. To date the IASB has not performed a post-implementation review of IFRS 5 nor otherwise addressed these matters.
- Entities need to carefully consider disclosing information needed to evaluate the financial effects of discontinued operations and disposals of non-current assets (or disposal groups), including the basis for and the effects of significant judgements and accounting policy choices made based on the entity's specific facts and circumstances.

1 Objective and scope of IFRS 5

The objective of IFRS 5 is to specify the accounting for assets held for sale, and the presentation and disclosure of discontinued operations. In particular, the standard requires that non-current assets (and, in a 'disposal group', related liabilities and current assets, discussed in section 2.1.1 below) meeting its criteria to be classified as held for sale be:

- (a) Measured at the lower of carrying amount and fair value less costs to sell, with depreciation (or amortisation) on them ceasing

And

- (b) Presented separately on the face of the statement of financial position with the results of discontinued operations presented separately in the statement of comprehensive income [IFRS 5.1]

The classification and presentation requirements apply to all recognised non-current assets and disposal groups, while there are certain exceptions to the measurement provisions of the standard. [IFRS 5.2, IFRS 5.5]. These issues are discussed further in section 2.2 below.

The classification, presentation and measurement requirements of IFRS 5 applicable to assets (or disposal groups) classified as held for sale also apply to those classified as held for distribution to owners acting in their capacity as owners. [IFRS 5.5A]. This is discussed in section 2.1.2 below.

2 Non-current assets (and disposal groups) held for sale or held for distribution to owners

2.1 Classification of non-current assets (and disposal groups) held for sale or held for distribution to owners

IFRS 5 frequently refers to current assets and non-current assets. It provides a definition of each term as follows: [IFRS 5 Appendix A]

Extract from IFRS 5

Appendix A

Defined terms

current asset

An entity shall classify an asset as current when:

- (a) it expects to realise the asset, or intends to sell or consume it, in its normal operating cycle;
- (b) it holds the asset primarily for the purpose of trading;
- (c) it expects to realise the asset within twelve months after the reporting period; or
- (d) the asset is cash or a cash equivalent (as defined in IAS 7) unless the asset is restricted from being exchanged or used to settle a liability for at least twelve months after the reporting period.

non-current asset

An asset that does not meet the definition of a **current asset**.

disposal group

A group of assets to be disposed of, by sale or otherwise, together as a group in a single transaction, and liabilities directly associated with those assets that will be transferred in the transaction. The group includes goodwill acquired in a business combination if the group is a **cash-generating unit** to which goodwill has been allocated in accordance with the requirements of paragraphs 80-87 of IAS 36 *Impairment of Assets* (as revised in 2004) or if it is an operation within such a cash-generating unit.

The first two definitions are the same as those in IAS 1 *Presentation of Financial Statements* (discussed in Chapter 3).

2.1.1 The concept of a disposal group

As its title suggests, IFRS 5 addresses the accounting treatment of non-current assets held for sale, that is assets whose carrying amount will be recovered principally through sale rather than continuing use in the business. [IFRS 5.6]. However, the standard also applies to certain liabilities and current assets where they form part of a 'disposal group'.

The standard observes that sometimes an entity will dispose of a group of assets, possibly with some directly associated liabilities, together in a single transaction. [IFRS 5.4]. A common example would be the disposal of a subsidiary. For these circumstances, IFRS 5 introduces the concept of a disposal group, which it defines as a group of assets to be disposed of, by sale or otherwise, together as a group in a single transaction, and liabilities directly associated with those assets that will be transferred in the transaction. The group includes goodwill acquired in a business combination if the group is a cash-generating unit to which goodwill has been allocated in accordance with the requirements of IAS 36 *Impairment of Assets* (discussed in Chapter 21) or if it is an operation within such a cash-generating unit. [IFRS 5 Appendix A].

The use of the phrase 'together in a single transaction' indicates that the only liabilities that can be included in the group are those assumed by the purchaser. Accordingly, any borrowings of the entity which are to be repaid out of the sales proceeds would be excluded from the disposal group.

The standard goes on to explain that a disposal group:

- May be a group of cash-generating units, a single cash-generating unit, or part of a cash-generating unit. Once the cash flows from an asset or group of assets are expected to arise principally from sale rather than continuing use, they become less dependent on cash flows arising from other assets, and a disposal group that was part of a cash-generating unit becomes a separate cash-generating unit.
- And
- May include any assets and any liabilities of the entity, including current assets, current liabilities and assets outside the scope of the measurement requirements of IFRS 5 (see section 2.2 below). [IFRS 5.4].

Discontinued operations are discussed in section 3 below. As noted there, it seems highly unlikely that the definition of a discontinued operation would ever be met by a single non-current asset. Accordingly, a discontinued operation will normally include one or more disposal groups, while a disposal group oftentimes will not meet the definition of a discontinued operation. Also, while discontinued operations involve clearly distinguishable cash flows and a major line of business or major geographical area, none of those characteristics need to be present in disposal groups.

2.1.1.A Deferred tax assets and liabilities in a disposal group held for sale

There may be various deferred tax assets and liabilities recorded in association with items included within a disposal group, such as deferred taxes on temporary differences between the tax base and the carrying amount of individual assets and liabilities included in a disposal group, or deferred tax assets on unused tax losses. It follows from the definition of a disposal group that an entity only classifies as held for sale those assets and liabilities that will be transferred to the buyer. [IFRS 5 Appendix A]. The standard does not include any further guidance on whether or when deferred tax assets and liabilities shall be included within a disposal group held for sale.

How we see it

In our view, it would be consistent with the definition of a disposal group to include deferred tax assets and liabilities within a disposal group if they will be assumed (taken over) by the buyer. However, where the disposal is expected to trigger a reversal of temporary differences related to assets and liabilities retained in the disposal group, any related deferred tax assets and liabilities would be retained (and ultimately settled) by the seller and must therefore be excluded from the disposal group.

Whilst any assessment will have to reflect the specific facts and circumstances of the expected disposal transaction and the tax regulations in the specific jurisdictions involved, deferred taxes will often be assumed by the buyer if the disposal group is a separate legal entity and the disposal will be carried out by way of a 'share deal' (i.e., the sale of shares in the entity). In such a case, in many jurisdictions the tax bases of the individual assets and liabilities (sometimes referred to as the 'tax history') will be retained in the legal entity being sold and thereby will be transferred to the buyer. These deferred tax assets and liabilities shall therefore be included in the disposal group. [IFRS 5 Appendix A, IAS 12.51A]. Care must also be taken to ensure that any 'outside' temporary differences related to the entity being sold (i.e., deferred taxes related to a temporary difference between the carrying amount of the seller's investment in the legal entity and the tax base of its investment) are not included in the disposal group, as this represents a liability or asset of the seller. 'Outside' temporary differences are discussed in Chapter 29.

If a group of individual assets and liabilities are being sold (i.e., the disposal will be carried out by way of an 'asset deal'), the sale is likely to be treated by the tax authorities as a recovery of the related assets (or settlement of the related liabilities) and give rise to a reversal of previous temporary differences for the seller. A new tax base of those assets and liabilities for the buyer will usually be based on the purchase price. The seller will settle (realise) the deferred taxes on a disposal and will therefore not include these deferred tax balances in the disposal group. [IFRS 5 Appendix A, IAS 12.51A].

The form of the anticipated disposal ('share deal' or 'asset deal') will often be considered a significant element of the plan to sell. As discussed in section 2.1.2.B below, for the sale to be highly probable, significant changes to the plan shall be unlikely. [IFRS 5.8]. Therefore, if an entity finds it difficult to establish whether an anticipated sale will be carried out by way of a share deal or an asset deal, it may indicate that the held for sale criteria have not been met. Subject to specific facts and circumstances, the form of the disposal may be relevant for determining which assets and liabilities are to be classified as held for sale, as highlighted in the Illustration 2-1 below.

Illustration 2-1: Deferred tax liability on remeasurement of an investment property held for sale

Entity A, which operates in the real estate industry, is committed to a plan to sell a shopping mall that is held by its fully-owned subsidiary. The only assets of the subsidiary are the investment property itself, trade receivables and cash. The subsidiary has no liabilities, except for a deferred tax liability reflecting the difference between the carrying amount of the investment property and its tax base (which equals to the costs directly attributable to the construction of the shopping mall).

Depending on whether the disposal is planned in the form of a share or asset deal, the scope of the disposal group will be impacted, as illustrated by Scenario 1 and Scenario 2 below.

1. Management of Entity A intends to dispose of the investment property by way of a share deal. The disposal group meets all the criteria to be classified as held for sale (see section 2.1.2 below). In the jurisdiction in which Entity A operates, no taxes are levied on sale of shares.
The deferred tax liability will be transferred to the buyer, along with all the other assets of the subsidiary. Therefore, the entity includes the deferred tax liability of the subsidiary in the disposal group held for sale.
2. Management of Entity A intends to dispose of the investment property by way of an asset deal. On the disposal, the subsidiary will derecognise the investment property and realise the deferred tax liability associated with the investment property. The deferred tax liability is therefore excluded from the disposal group.

The two scenarios above significantly impact the scope of the disposal group (assuming that the deferred tax liability of the subsidiary is material), and therefore an intention to realise the disposal through a share or an asset deal needs to be carefully considered before concluding whether held for sale classification is appropriate. A mere intention will often not be sufficient to conclude that a change in the form of the disposal is unlikely.

Any income tax effect of the disposal is accounted for under IAS 12 *Income Taxes* and is not included in costs to sell when measuring the disposal group held for sale, as discussed in section 2.2.2.A below.

An intention to dispose of a group of assets or a subsidiary undertaking can affect the measurement of deferred tax assets and liabilities before the proposed transaction gives rise to a reclassification of those related assets and liabilities into a disposal group under IFRS 5. For example, the measurement of deferred tax assets and liabilities may have to be reassessed because the manner of recovery is expected to be through sale rather than continuing use. [IAS 12.51]. This is discussed in Chapter 29 (in the context of the recognition of deferred tax assets) and in section 8.4.11 (in the context of expected manner of recovery of an asset or settlement of liability).

Any income tax gain or loss on disposal of a disposal group which represents a discontinued operation is presented within discontinuing operations (see section 3.2 below).

2.1.2 Classification as held for sale or as held for distribution to owners

IFRS 5 requires a non-current asset (or disposal group) to be classified as held for sale if its carrying amount will be recovered principally through a sale transaction rather than through continuing use. [IFRS 5.6]. For these purposes, sale transactions include exchanges of non-current assets for other non-current assets when the exchange has commercial substance in accordance with IAS 16 *Property, Plant and Equipment* (discussed in Chapter 19). [IFRS 5.10]. For assets classified according to a liquidity presentation (see Chapter 3), non-current assets are taken to be assets that include amounts expected to be recovered more than twelve months after the reporting date. [IFRS 5.2].

Determining whether (and when) an asset stops being recovered principally through continuing use and becomes recoverable principally through sale is the critical distinction, and much of the standard is devoted to explaining how to make the determination.

For an asset (or disposal group) to be classified as held for sale:

- (a) It must be available for immediate sale in its present condition, subject only to terms that are usual and customary for sales of such assets (or disposal groups)
- (b) Its sale must be highly probable [IFRS 5.7]
And
- (c) the disposal must be expected to qualify for recognition as a completed sale within one year from the date of classification [IFRS 5.8].

These criteria are discussed further below.

If an asset (or disposal group) has been classified as held for sale, but these criteria cease to be met, an entity must cease to classify the asset (or disposal group) as held for sale. [IFRS 5.26]. Changes in disposal plans are discussed in section 2.2.5 below.

The reclassification from held for use to held for sale results from changes in relevant facts and circumstances. Often, a specific event will trigger held for sale classification, such as a formalised management decision or the receipt of a binding purchase offer, in which case the classification as held for sale must reflect the timing of the triggering event (assuming all of the criteria listed above are met, as also discussed further in sections 2.1.2.A, 2.1.2.B and 2.1.2.C below).

It follows that the criteria for classification as held for sale are assessed throughout the reporting period. When these criteria are met at a specific point in time during the reporting period, a non-current asset (or disposal group) is reclassified from held for use and IFRS 5 measurement requirements (as discussed in section 2.2 below) apply from that date onwards, including that a non-current asset (or a disposal group) is remeasured to fair value less costs to sell and non-current assets cease to be depreciated or amortized. See also section 2.1.2.B for discussion on how external evidence (such as letters of intent, a binding offer or a firm purchase commitments) may impact the assessment of the highly probable criterion.

Illustration 2-2: Timing of reclassification to held for sale

The management of an international multi-industry group considers disposal of its German subsidiary. The subsidiary is available for immediate sale in its present condition. No regulatory approval is required. Financial year-end is 31 December and the Group issues half-year interim financial statements.

The following summarises the relevant chain of events in 20X1:

1 February 20X1	Management began to investigate whether disposal of the German subsidiary represented a realistic alternative, including feasibility studies and financial analyses.
30 April 20X1	The disposal plan was formally approved by the shareholders and management began active marketing of the subsidiary. Given the scale of the German subsidiary, the complexity of the potential transaction and the economic outlook at the time, management assessed that the sale was unlikely (and therefore not highly probable) to be closed before the end of June 20X2.
30 June 20X1	Management reviewed the above assumptions for the purposes of half-year reporting. No significant changes in facts and circumstances were identified.
July - September 20X1	A few non-binding offers were received and discussions were held with potential buyers. None of these events led management to assess that the disposal was highly probable within the next 12 months.
1 October 20X1	A binding purchase offer was received. The management considered all the facts and circumstances and assessed that completion of the sale within the next 12 months became highly probable.

In this fact pattern, the German subsidiary was classified as held for sale as at 1 October 20X1 being the first date at which all criteria were met, including the one year criterion.

Slightly different criteria apply when an entity acquires a non-current asset (or disposal group) exclusively with a view to its subsequent disposal. In that case it must only classify the non-current asset (or disposal group) as held for sale at the acquisition date if:

- The 'one-year rule' is met subject to its one exception (this is part of being 'highly probable', discussed in section 2.1.2.B below)
- And
- It is highly probable that any other criteria in (a) and (b) above that are not met at that date will be met within a short period following the acquisition (usually within three months) [IFRS 5.11]

The standard also makes it clear that the criteria above must be met at the reporting date for a non-current asset (or disposal group) to be classified as held for sale in those financial statements. However, if those criteria are met after the reporting date but before the authorisation of the financial statements for issue, the standard requires certain additional disclosures (discussed in section 5 below). [IFRS 5.12].

The classification, presentation and measurement requirements of IFRS 5 applicable to non-current assets (or disposal groups) classified as held for sale also apply to those classified as held for distribution to owners acting in their capacity as owners. [IFRS 5.5A]. This applies when an entity is committed to distribute the non-current asset (or disposal group) to its owners. For this to be the case, the assets must be available for immediate distribution in their present condition and the distribution must be highly probable.

2.1.2.A Meaning of available for immediate sale

To qualify for classification as held for sale, a non-current asset (or disposal group) must be available for immediate sale in its present condition subject only to terms that are usual and customary for sales of such assets (or disposal groups). This is taken to mean that an entity currently has the intention and ability to transfer the asset (or disposal group) to a buyer in its present condition. The standard illustrates this concept with the following examples. [IFRS 5.IG Example 1, IFRS 5.IG Example 2, IFRS 5.IG Example 3].

Illustration 2-3: Meaning of 'available for immediate sale'

1 Disposal of a headquarters building

An entity is committed to a plan to sell its headquarters building and has initiated actions to locate a buyer.

- (a) The entity intends to transfer the building to a buyer after it vacates the building. The time necessary to vacate the building is usual and customary for sales of such assets. The criterion of being available for immediate sale would therefore be met at the plan commitment date.
- (b) The entity will continue to use the building until construction of a new headquarters building is completed. The entity does not intend to transfer the existing building to a buyer until after construction of the new building is completed (and it vacates the existing building). The delay in the timing of the transfer of the existing building imposed by the entity (seller) demonstrates that the building is not available for immediate sale. The criterion would not be met until construction of the new building is completed, even if a firm purchase commitment for the future transfer of the existing building is obtained earlier.

2 Sale of a manufacturing facility

An entity is committed to a plan to sell a manufacturing facility and has initiated actions to locate a buyer. At the plan commitment date, there is a backlog of uncompleted customer orders.

- (a) The entity intends to sell the manufacturing facility with its operations. Any uncompleted customer orders at the sale date will be transferred to the buyer. The transfer of uncompleted customer orders at the sale date will not affect the timing of the transfer of the facility. The criterion of being available for immediate sale would therefore be met at the plan commitment date.
- (b) The entity intends to sell the manufacturing facility, but without its operations. The entity does not intend to transfer the facility to a buyer until after it ceases all operations of the facility and eliminates the backlog of uncompleted customer orders. The delay in the timing of the transfer of the facility imposed by the entity (seller) demonstrates that the facility is not available for immediate sale. The criterion would not be met until the operations of the facility cease, even if a firm purchase commitment for the future transfer of the facility were obtained earlier.

3 Land and buildings acquired through foreclosure

An entity acquires through foreclosure a property comprising land and buildings that it intends to sell.

- (a) The entity does not intend to transfer the property to a buyer until after it completes renovations to increase the property's sales value. The delay in the timing of the transfer of the property imposed by the entity (seller) demonstrates that the property is not available for immediate sale. The criterion of being available for immediate sale would therefore not be met until the renovations are completed.
- (b) After the renovations are completed and the property is classified as held for sale but before a firm purchase commitment is obtained, the entity becomes aware of environmental damage requiring remediation. The entity still intends to sell the property. However, the entity does not have the ability to transfer the property to a buyer until after the remediation is completed. The delay in the timing of the transfer of the property imposed by others *before* a firm purchase commitment is obtained demonstrates that the property is not available for immediate sale (different requirements could apply if this happened *after* a firm commitment is obtained, as illustrated in scenario (b) of Illustration 2-5 in section 2.1.2.B below). The criterion that the asset be available for immediate sale would not continue to be met. The property would be reclassified as held and used in accordance with the requirements discussed in section 2.2.5 below.

There may be circumstances other than those illustrated above where a non-current asset (or disposal group) is not available for immediate sale. A common example is when the expected transaction requires legal reorganizations before it can be executed (e.g., a carve out of activities in the disposal plan from continuing activities). Whether a non-current asset (or disposal group) is available for immediate sale will generally be obvious. However, this assessment will sometimes require a careful consideration of all facts and circumstances and involve some degree of judgement. When significant judgement is involved and this has a material impact on the financial statements, appropriate disclosures should be provided in the notes. [IAS 1.122].

2.1.2.B Meaning of highly probable

Many observers may consider the meaning of 'highly probable' to be reasonably self-evident, albeit highly judgemental. However, IFRS 5 provides extensive discussion of the topic. As a first step, the term is defined by the standard as meaning "significantly more likely than probable". This is supplemented by a second definition - 'probable' is defined as "more likely than not". [IFRS 5 Appendix A]. Substituting the latter into the former leads to a definition of highly probable as meaning 'significantly more likely than more likely than not'.

The standard goes on to elaborate as follows:

For the sale to be highly probable:

- The appropriate level of management must be committed to a plan to sell the asset (or disposal group).
- An active programme to locate a buyer and complete the plan must have been initiated.
- The asset (or disposal group) must be actively marketed for sale at a price that is reasonable in relation to its current fair value.
- The sale must be expected to qualify for recognition as a completed sale within one year from the date of classification (although in certain circumstances this period may be extended as discussed below).

And

- Actions required to complete the plan must indicate that it is unlikely that significant changes to the plan will be made or that the plan will be withdrawn. [IFRS 5.8].

In September 2013, the IFRS IC published an agenda decision in which it observed that the first three items above must have occurred to allow classification as held for sale.¹ The other criteria would be assessed based on expectations of the future with their probability of occurrence included in the assessment of whether a sale is highly probable.

The assessment can be highly judgemental and requires analysis of all relevant facts and circumstances, including the assessment of probability of obtaining shareholders' approval, if relevant. [IFRS 5.8]

Illustration 2-4: Shareholders' approval

The board has approved a plan to sell a manufacturing facility and has initiated actions to identify a buyer before the end of the reporting period. In accordance with the articles of association, formal approval by a majority of shareholders is required to finalise the sale. The next shareholders meeting is scheduled after the end of the reporting period.

The following two scenarios illustrate how shareholder approvals may impact the assessment of whether the highly probable criterion is met under different circumstances:

- (a) The shareholding is widely dispersed and the rationale for the sale is assumed to potentially be controversial. In this scenario, the board would generally not have sufficient evidence to conclude that it is reasonable to expect that a majority of shareholders will vote for the sale. Therefore, the entity concludes that the highly probable criterion is not met.
- (b) Before the end of the reporting period, the management had discussions with the majority shareholder who clearly suggested that it would vote in favour of the disposal. In such a scenario, there may be a basis to conclude that the highly probable criterion is met, albeit that depends on facts and circumstances. In particular, if the management is provided with a written consent from the majority shareholder before the end of the reporting period, that would normally be considered sufficient to conclude that the highly probable criterion is met (absent any other circumstances which would indicate otherwise).

An entity needs to consider all relevant facts and circumstances (including for example communication by the entity outside the financial statements) and apply judgement when assessing whether and when a sale becomes highly probable. The standard does not require specific evidence for the highly probable criterion to be met but the hurdle is generally high and a mere intention to sell an asset would not trigger a classification as held for sale. Therefore, the lack of external evidence such as letters of intent, a binding offer or a firm purchase commitment often indicates that the criterion is not met. Conversely, even if a firm purchase commitment is obtained before the end of the reporting period, the entity can still conclude in some cases that the criterion is not met if other facts and circumstances cast doubt on whether the sale will be finalised - for instance, if a required regulatory approval is highly uncertain.

¹ [IFRIC update](#), September 2013, available on the IFRS Foundation's website.

As noted above, the classification, presentation and measurement requirements of IFRS 5 applicable to non-current assets (or disposal groups) classified as held for sale also apply to those classified as held for distribution to owners acting in their capacity as owners (see section 2.1.2 above). [IFRS 5.5A].

For the distribution to be highly probable, actions to complete the distribution must have been initiated and must be expected to be completed within one year from the date of classification. Actions required to complete the distribution must indicate that it is unlikely that significant changes to the distribution will be made or that the distribution will not be completed. Whilst judgement will be needed in individual circumstances, relevant actions to consider could include: the steps taken by management to prepare for the distribution, board decisions illustrating the commitment to the planned distribution, and steps taken to organise the meeting of shareholders, if their approval is required. The probability of shareholders' approval, if this is required, must be considered as part of the assessment of whether the distribution is highly probable. [IFRS 5.12A].

The basic rule above that for qualification as held for sale the sale must be expected to qualify for recognition as a completed sale within one year from the date of classification (the 'one year rule') is applied quite strictly by the standard. [IFRS 5.IG Example 4].

Extract from IFRS 5 - Guidance on implementing

Completion of sale expected within one year (paragraph 8)

Example 4

To qualify for classification as held for sale, the sale of a non-current asset (or disposal group) must be highly probable (paragraph 7), and transfer of the asset (or disposal group) must be expected to qualify for recognition as a completed sale within one year (paragraph 8). That criterion would not be met if, for example:

- (a) an entity that is a commercial leasing and finance company is holding for sale or lease equipment that has recently ceased to be leased and the ultimate form of a future transaction (sale or lease) has not yet been determined.
- (b) an entity is committed to a plan to 'sell' a property that is in use as part of a sale and leaseback transaction, but the transfer does not qualify to be accounted for as a sale in accordance with paragraph 99 of IFRS 16 Leases and, instead, will be accounted for in accordance with paragraph 103 of IFRS 16.

In (a), the entity does not yet know whether the asset will be leased out in an operating lease rather than sold or leased out under a finance lease and hence may not presume that it will be sold within a year.

In (b), whilst in legal form the asset has been sold, it will not be recognised as sold in the financial statements. Sale and leaseback transactions are discussed in Chapter 24.

As indicated above, the standard contains an exception to the one-year rule. It states that events or circumstances may extend the period to complete the sale beyond one year. Such an extension would not preclude an asset (or disposal group) from being classified as held for sale if the delay is caused by events or circumstances beyond the entity's control and there is sufficient evidence that the entity remains committed to its plan to sell the asset (or disposal group). This will be the case in the following situations: [IFRS 5.9, IFRS 5.B1]

- (a) At the date an entity commits itself to a plan to sell a non-current asset (or disposal group) it reasonably expects that others (not a buyer) will impose conditions on the transfer of the asset (or disposal group) that will extend the period required to complete the sale, and:
 - (i) Actions necessary to respond to those conditions cannot be initiated until after a firm purchase commitment is obtained.
 - And
 - (ii) A firm purchase commitment is highly probable within one year.
- (b) An entity obtains a firm purchase commitment and, as a result, a buyer or others unexpectedly impose conditions on the transfer of a non-current asset (or disposal group) previously classified as held for sale that will extend the period required to complete the sale, and:
 - (i) Timely actions necessary to respond to the conditions have been taken.
 - And
 - (ii) A favourable resolution of the delaying factors is expected.

- (c) During the initial one-year period, circumstances arise that were previously considered unlikely and, as a result, a non-current asset (or disposal group) previously classified as held for sale is not sold by the end of that period, and:
- (i) During the initial one-year period the entity took action necessary to respond to the change in circumstances.
 - (ii) The non-current asset (or disposal group) is being actively marketed at a price that is reasonable, given the change in circumstances.
- And
- (iii) The non-current asset (or disposal group) remains available for immediate sale and the sale is highly probable. *[IFRS 5 Appendix B].*

The standard provides no quantification in relation to the possible length of any extension to the period required to complete a disposal, which means judgement will be required considering individual circumstances. However, as a general observation, the longer the expected extension becomes, as a result of conditions imposed by others, the less likely it is that the sale meets the highly probable threshold.

Firm purchase commitment is a defined term in IFRS 5, meaning an agreement with an unrelated party, binding on both parties and usually legally enforceable, that:

- (1) Specifies all significant terms, including the price and timing of the transactions
- And
- (2) Includes a disincentive for non-performance that is sufficiently large to make performance highly probable *[IFRS 5 Appendix A]*

The word 'binding' in this definition seems to envisage an agreement still being subject to contingencies. The standard provides an example where a 'firm purchase commitment' exists but is subject to regulatory approval (see scenario (a) in Illustration 2-5 below).

The standard illustrates each of these exceptions to the one-year rule with the following examples. *[IFRS 5.IG Example 5, IFRS 5.IG Example 6, IFRS 5.IG Example 7].*

Illustration 2-5: Exceptions to the 'one year rule'

Scenario illustrating (a) above

An entity in the power generating industry is committed to a plan to sell a disposal group that represents a significant portion of its regulated operations. The sale requires regulatory approval, which could extend the period required to complete the sale beyond one year. Actions necessary to obtain that approval cannot be initiated until after a buyer is known and a firm purchase commitment is obtained. However, a firm purchase commitment is highly probable within one year. In that situation, the conditions for an exception to the one-year requirement would be met.

Scenario illustrating (b) above

An entity is committed to a plan to sell a manufacturing facility in its present condition and classifies the facility as held for sale at that date. After a firm purchase commitment is obtained, the buyer's inspection of the property identifies environmental damage not previously known to exist. The entity is required by the buyer to make good the damage, which will extend the period required to complete the sale beyond one year. However, the entity has initiated actions to make good the damage, and satisfactory rectification of the damage is highly probable. In that situation, the conditions for an exception to the one-year requirement would be met.

Scenario illustrating (c) above

An entity is committed to a plan to sell a non-current asset and classifies the asset as held for sale at that date.

- (a) During the initial one-year period, the market conditions that existed at the date the asset was classified initially as held for sale deteriorate and, as a result, the asset is not sold by the end of that period. During that period, the entity actively solicited but did not receive any reasonable offers to purchase the asset and, in response, reduced the price. The asset continues to be actively marketed at a price that is reasonable given the change in market conditions, and the criteria regarding availability for immediate sale which is highly probable are therefore met. In that situation, the conditions for an exception to the one-year requirement would be met. At the end of the initial one-year period, the asset would continue to be classified as held for sale.
- (b) During the following one-year period, market conditions deteriorate further, and the asset is not sold by the end of that period. The entity believes that the market conditions will improve and has not further reduced the price of the asset. The asset continues to be held for sale, but at a price in excess of its current fair value. In that situation, the absence of a price reduction demonstrates that the asset is not available for immediate sale. In addition, to meet the condition that a sale be highly probable also requires an asset to be marketed at a price that is reasonable in relation to its current fair value. Therefore, the conditions for an exception to the one-year requirement would not be met. The asset would be reclassified as held and used in accordance with the requirements discussed in section 2.2.5 below.

2.1.2.C Form of disposal

For an asset (or a disposal group) to be classified as held for sale, it must be expected that its disposal will qualify for recognition as a completed sale within one year from the date of classification. Such disposal may take the form of a sale or a finance lease. [IAS 16.69].

Conversely, IFRS 5 stipulates that a non-current asset (or disposal group) that is to be abandoned must not be classified as held for sale. This includes non-current assets (or disposal groups) that are to be used to the end of their economic life and non-current assets (or disposal groups) that are to be closed rather than sold. The standard explains that this is because its carrying amount will be recovered principally through continuing use. [IFRS 5.13].

2.1.3 Partial disposals of operations

2.1.3.A Loss of control of a subsidiary

The standard provides that when an entity is committed to a sale plan involving loss of control of a subsidiary it must classify all the assets and liabilities of that subsidiary as held for sale when the relevant criteria are met (see section 2.1 above). This is regardless of whether it will retain a non-controlling interest in the former subsidiary after the sale, such as for instance an interest in an associate or a joint venture. [IFRS 5.8A].

If the retained interest represents a joint operation, it could be argued that, since the entity retains a direct interest in the underlying assets and obligations for the liabilities after the disposal, the transaction is in substance a sale of parts of the underlying assets and liabilities. On that basis, only the disposed of portions of the assets and liabilities would be classified as held for sale. The counter argument is that the requirement in IFRS 5 does not scope out situations in which the retained interest represents a joint operation. Furthermore, the loss of control of a subsidiary is a significant economic event in that it changes the relationship between the entity and the investee fundamentally, and therefore it would be appropriate to classify all assets and liabilities of the subsidiary as held for sale. Some further argue that classification as held for sale will depend on whether the operation of the joint operation represents a business as defined by IFRS 3 *Business Combinations*. [IFRS 3 Appendix A]. If it does, it could be argued that applying IFRS 5 better reflects the substance of the transaction, namely that control over a business is lost (i.e., that effectively all assets and liabilities of the subsidiary are being disposed of). On that analysis, classification of all assets and liabilities of the subsidiary as held for sale is appropriate.

How we see it

Pending any changes to the standard, we believe that entities have an accounting policy choice as to whether to reclassify all assets and liabilities of the subsidiary or only the portion thereof that will not be retained when control is lost in a subsidiary and the retained interest represents a joint operation, to be applied consistently and disclosed.

If the subsidiary in question meets the definition of a discontinued operation, the standard's presentation and disclosure requirements for discontinued operations apply (see section 3.2 below). [IFRS 5.36A].

IFRS 5 does not explicitly extend these requirements to loss of control of a subsidiary in other ways. Given the alignment of the rules on sales with distributions to owners, it seems clear that partial distributions triggering loss of control would result in held for distribution classification.

However, control may be lost in other ways than an actual sale or distribution of shares. Such 'deemed disposals' are discussed in section 2.1.4 below.

2.1.3.B Partial disposal of an associate or joint venture

In accordance with IAS 28 *Investments in Associates and Joint Ventures*, IFRS 5 will apply to an investment, or a portion of an investment, in an associate or a joint venture that meets the criteria to be classified as held for sale (see section 2.1.2 above). Any retained portion of such an investment that has not been so classified must be accounted for using the equity method until disposal of the portion that is classified as held for sale takes place. After the disposal takes place, any retained interest must be accounted for in accordance with IFRS 9 *Financial Instruments* unless the retained interest continues to be an associate or a joint venture, in which case the equity method must be used.

If such an investment ceases to be classified as held for sale, it must be accounted for using the equity method retrospectively from the date of its original classification as held for sale. Financial statements for the periods since classification as held for sale must be amended accordingly. [IAS 28.20, IAS 28.21].

2.1.4 Deemed disposals

Control may be lost in other ways than an actual sale or distribution of shares. Examples would include:

- Loss of control due to dilution (i.e., a subsidiary issuing shares to third parties)
- Loss of control due to contractual rights and obligations, for instance:
 - Control established by a contract coming to an end
 - Potential voting rights held by the group expiring unexercised
 - Potential voting rights held by a non-controlling shareholder becoming exercisable

The standard does not address deemed disposals. However, the Basis for Conclusions sheds some light on the views of the Board. In particular, the following: [IFRS 5.BC24B, IFRS 5.BC24C]

Extract from IFRS 5

BC24B The Board noted that paragraph 6 states that 'An entity shall classify a non-current asset (or disposal group) as held for sale if its carrying amount will be recovered principally through a sale transaction rather than through continuing use.' The Board also noted that IAS 27 Consolidated and Separate Financial Statements (as amended in January 2008) defines control and requires a parent to consolidate a subsidiary until control is lost.⁷ At the date control is lost, all the subsidiary's assets and liabilities are derecognised and any investment retained in the former subsidiary is recognised. Loss of control is a significant economic event that changes the nature of an investment. The parent-subsidiary relationship ceases to exist and an investor-investee relationship begins that differs significantly from the former parent-subsidiary relationship. Therefore, the new investor-investee relationship is recognised and measured initially at the date when control is lost.

BC24C The Board concluded that, under the sale plan described above, the controlling interest in the subsidiary is, in substance, exchanged for a non-controlling interest. Therefore, in the Board's view, being committed to a plan involving loss of control of a subsidiary should trigger classification as held for sale. The Board also noted that this conclusion is consistent with IAS 27.

7 ...

This, and the fact that the standard applies to assets held for distribution to owners, may suggest that the explicit rules for partial sales of assets resulting in loss of control must also apply to loss of control from other causes. However, the standard is not explicit, and the IFRS IC concluded in January 2016² that this issue must be considered for a broad-scope project on IFRS 5 (future developments of IFRS 5 are discussed in section 6 below).

How we see it

Pending any changes to the standard, we believe entities have an accounting policy choice, as to whether IFRS 5 is applied to all losses of control or only to those resulting from an actual sale or distribution, to be applied consistently to similar events and conditions and disclosed.

2 [IFRIC Update](#), January 2016, available on the IFRS Foundation's website.

2.2 Measurement of non-current assets (and disposal groups) held for sale or held for distribution to owners

2.2.1 Scope of the measurement requirements

IFRS 5's classification, presentation and disclosure requirements apply to all recognised non-current assets (which is defined in the same way as in IAS 1, discussed in section 2.1 above) and disposal groups.

However, the measurement provisions of the standard do not apply to the following assets (which remain covered by the standards listed) either as individual assets or as part of a disposal group: [IFRS 5.2, IFRS 5.5]

- (a) Deferred tax assets (dealt with in IAS 12)
- (b) Assets arising from employee benefits (dealt with in IAS 19 *Employee Benefits*)
- (c) Financial assets within the scope of IFRS 9
- (d) Non-current assets that are accounted for in accordance with the fair value model in IAS 40 *Investment Property*
- (e) Non-current assets that are measured at fair value less costs to sell in accordance with IAS 41 *Agriculture*
And
- (f) Groups of contracts within the scope of IFRS 17 *Insurance Contracts*.

2.2.2 Measurement of non-current assets and disposal groups held for sale or held for distribution to owners

2.2.2.A Measurement on initial classification as held for sale

IFRS 5 requires that immediately before the initial classification of an asset (or disposal group) as held for sale, the carrying amount of the asset (or all the assets and liabilities in the group) must be measured in accordance with applicable IFRS accounting standards. [IFRS 5.18]. The same approach is applicable in case of non-current assets (or disposal group) held for distribution to owners. In other words, an entity must apply its usual accounting policies up until the criteria for classification under IFRS 5 are met.

Thereafter, a non-current asset (or disposal group) classified as held for sale or for distribution to owners must be measured at the lower of its carrying amount and fair value less costs to sell (distribute). [IFRS 5.15, IFRS 5.15A]. IFRS 13 *Fair Value Measurement* defines fair value as "the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date" (see Chapter 15). [IFRS 13.9].

Costs to sell are defined as "the incremental costs directly attributable to the disposal of an asset (or disposal group), excluding finance costs and income tax expense." [IFRS 5 Appendix A]. The same definition applies for costs to distribute. [IFRS 5.15A]. The examples of such costs include broker commissions, legal and title fees necessary to execute the sale, transaction taxes, advisors, levies by regulatory agencies and similar costs. Although the guidance applies equally to both external and internal costs, the internal costs are not often incremental.

The costs of holding the assets (i.e., insurance, security services, utility expenses and similar) that are to be incurred between the date of classifying a non-current asset (or disposal group) as held for sale and the date of the disposal are not costs to sell. Those costs are not incremental costs directly attributable to the sale of an asset (or disposal group) as they would be incurred irrespective of the expected disposal.

Some costs may be incurred concurrently with the disposal of a non-current asset (or disposal group), but they may not necessarily be the 'cost to sell'. For example, the sale of a subsidiary may require an entity to pay redundancy costs to employees, however, those costs are not 'costs to sell' as they are not essential to the sale itself.

The costs to sell should be expensed when they are incurred unless they meet the definition of an asset under other IFRS accounting standards (for example in case of prepayment for future services).

When the sale is expected to occur beyond one year, the costs to sell must be measured at their present value. Any increase in the present value of the costs to sell that arises from the passage of time must be presented in profit or loss as a financing cost. [IFRS 5.17].

For disposal groups, the standard adopts a portfolio approach. It requires that if a non-current asset within the scope of its measurement requirements is part of a disposal group, the measurement requirements must apply to the group as a whole, so that the group is measured at the lower of its carrying amount and fair value less costs to sell. [IFRS 5.4]. It will still be necessary to apportion any write down to the underlying assets of the disposal group, but it is not clear whether any element could or should be apportioned to items outside the scope of the standard's measurement provisions. This is discussed further in section 2.2.3 below.

The fair value less costs to sell of the disposal group will take into account fair value of assets and liabilities not recorded on the balance sheet (for instance fair value of unrecognised intangible assets or contingent liabilities) if that is consistent with the assumptions market participants would use when pricing the disposal group. [IFRS 13.11, IFRS 13.22].

If a newly acquired asset (or disposal group) meets the criteria to be classified as held for sale (which, as discussed in section 2.1.2 above, are subtly different for assets acquired exclusively with a view to subsequent disposal), applying the above requirements will result in the asset (or disposal group) being measured on initial recognition at the lower of its carrying amount had it not been so classified (for example, cost) and fair value less costs to sell. This means that if the asset (or disposal group) is acquired as part of a business combination, it will be measured at fair value less costs to sell. [IFRS 5.16].

The implementation guidance accompanying the standard provides the following example of a subsidiary acquired with a view to sale. [IFRS 5.IG Example 13].

Illustration 2-6: Measuring and presenting subsidiaries acquired with a view to sale and classified as held for sale

Entity A acquires Entity H, which is a holding company with two subsidiaries, S1 and S2. S2 is acquired exclusively with a view to sale and meets the criteria to be classified as held for sale. Accordingly, S2 is also a discontinued operation (see section 3.1 below).

The fair value less costs to sell of S2 is CU135. A accounts for S2 as follows:

- Initially, A measures the identifiable liabilities of S2 at fair value, say at CU40.
 - Initially, A measures the acquired assets as the fair value less costs to sell of S2 (CU135) plus the fair value of the identifiable liabilities (CU40), i.e., at CU175.
 - At the reporting date, A remeasures the disposal group at the lower of its cost and fair value less costs to sell, say at CU130. The liabilities are remeasured in accordance with applicable IFRS accounting standards, say at CU35. The total assets are measured at CU130 + CU35, i.e., at CU165.
 - At the reporting date, A presents the assets and liabilities separately from other assets and liabilities in its consolidated financial statements as shown in Illustration 2-8 in section 2.2.4 below.
- And
- In the statement of comprehensive income, A presents the total of the post-tax profit or loss of S2 and the post-tax gain or loss recognised on the subsequent remeasurement of S2, which equals the remeasurement of the disposal group from CU135 to CU130.

Further analysis of the assets and liabilities or of the change in value of the disposal group is not required.

The final sentence in the above example says no further analysis of the assets and liabilities is required. This must refer to there being no such disclosure requirement for financial statements.

How we see it

In our view, a detailed purchase price analysis and tracking of the acquired entity may still be needed, notwithstanding a partial relaxation of what is required to be disclosed by IFRS 5. This may be needed to be able to determine the split between gross assets and liabilities and how movements in the carrying amounts are reflected in profit or loss, or other comprehensive income.

2.2.2.B Subsequent remeasurement

While a non-current asset is classified as held for sale or while it is part of a disposal group classified as held for sale, it must not be depreciated or amortised. Interest and other expenses attributable to the liabilities of a disposal group classified as held for sale must continue to be recognised. [IFRS 5.25].

On subsequent remeasurement of a disposal group, the standard requires that the carrying amounts of any assets and liabilities that are not within the scope of its measurement requirements, be remeasured in accordance with applicable IFRS accounting standards before the fair value less costs to sell of the disposal group is remeasured. [IFRS 5.19].

It is noteworthy that there may be amounts corresponding to items included within a disposal group, which are recorded in the equity reserves (including those recognised in other comprehensive income and accumulated as equity reserves), such as exchange differences on translation of foreign operations. These balances are reclassified upon sale of the disposal group and they are not anticipated for IFRS 5 measurement purposes. There might therefore be additional gains or losses that need to be recognised upon disposal, resulting from reclassification from other comprehensive income. [IFRS 5.BC37, IFRS 5.BC38]. See also Chapter 49 for discussion on whether cash flow hedges within a subsidiary need to be discontinued (and therefore corresponding balances accumulated as equity reserves need to be reclassified to profit or loss) in the consolidated financial statements when the subsidiary is anticipated to be disposed of.

Any cumulative income or expense recognised directly in other comprehensive income relating to a non-current asset (or disposal group) classified as held for sale must be presented separately, as discussed in section 2.2.4 below. [IFRS 5.38]. This will allow users to identify amounts that will be recognised upon disposal only.

2.2.3 Impairments and reversals of impairment

The requirement to measure a non-current asset or disposal group held for sale at the lower of carrying amount and fair value less costs to sell may give rise to a write down in value (impairment loss) and possibly its subsequent reversal. As noted above, the first step is to account for any items outside the scope of the standard's measurement rules in the normal way. After that, any excess of carrying value over fair value less costs to sell must be recognised as an impairment. [IFRS 5.20].

Any subsequent increase in fair value less costs to sell of an asset up to the cumulative impairment loss previously recognised either in accordance with IFRS 5 or in accordance with IAS 36 must be recognised as a gain. [IFRS 5.21]. In the case of a disposal group, any subsequent increase in fair value less costs to sell must be recognised:

- (a) To the extent that it has not been recognised under another standard in relation to those assets outside the scope of IFRS 5's measurement requirements
But
- (b) Not in excess of the cumulative amount of losses previously recognised under IFRS 5 or before that under IAS 36 in respect of the non-current assets in the group which are within the scope of the measurement rules of IFRS 5 [IFRS 5.22]

Any impairment loss (or any subsequent gain) recognised for a disposal group must be allocated to the non-current assets in the group that are within the scope of the measurement requirements of IFRS 5. The order of allocation must be:

- First, to reduce the carrying amount of any goodwill in the group
And
- Then, to the other non-current assets of the group pro rata on the basis of the carrying amount of each asset in the group [IFRS 5.23]

This is illustrated by the standard with the following example: [IFRS 5.IG Example 10]

Illustration 2-7: Allocation of impairment loss to the components of a disposal group

An entity plans to dispose of a group of its assets (as an asset sale). The assets form a disposal group, and are measured as follows:

	Carrying amount at the end of the reporting period before classification as held for sale	Carrying amount as remeasured immediately before classification as held for sale
	CU	CU
Goodwill	1,500	1,500
Property, plant and equipment (carried at revalued amounts)	4,600	4,000
Property, plant and equipment (carried at cost)	5,700	5,700
Inventory	2,400	2,200
Investments in equity instruments	1,800	1,500
Total	16,000	14,900

The entity recognises the loss of CU1,100 (CU16,000 - CU14,900) immediately before classifying the disposal group as held for sale. The entity measures the fair value less costs to sell of the disposal group as CU13,000. Because an entity measures a disposal group classified as held for sale at the lower of its carrying amount and fair value less costs to sell, the entity recognises an impairment loss of CU1,900 (CU14,900 - CU13,000) when the group is initially classified as held for sale. The impairment loss is allocated to non-current assets to which the measurement requirements of IFRS 5 are applicable. Therefore, no impairment loss is allocated to inventory and investments in equity instruments. The loss is allocated to the other assets in the order of allocation described above.

The allocation can be illustrated as follows:

First, the impairment loss reduces any amount of goodwill. Then, the residual loss is allocated to other assets *pro rata* based on the carrying amounts of those assets.

	Carrying amount as remeasured immediately before classification as held for sale	Allocated impairment loss	Carrying amount after allocation of impairment loss
	CU	CU	CU
Goodwill	1,500	(1,500)	-
Property, plant and equipment (carried at revalued amounts)	4,000	(165)	3,835
Property, plant and equipment (carried at cost)	5,700	(235)	5,465
Inventory	2,200	-	2,200
Investments in equity instruments	1,500	-	1,500
Total	14,900	(1,900)	13,000

As noted in section 2.2.2.A above, an entity is required to remeasure the assets as normal under the relevant standards immediately before classifying them as held for sale. This would mean the difference of CU1,100 reflects routine accounting entries (such as depreciation and revaluation) from the start of the period to the date of classification as held to sale. Also worthy of note is that the example does not say where the entity recognises the loss of CU1,100. Given that the disposal group contains investments in equity instruments, some of this amount might be recorded in other comprehensive income rather than in profit or loss. Similarly, movements in property, plant and equipment held at revalued amounts may be recorded directly in other comprehensive income.

One thing which the example above fails to illustrate is that the measurement requirements of the standard are incomplete. It is quite possible that the required impairment exceeds the carrying value of the non-current assets within the scope of the standard's measurement rules. IFRS 5 is silent on what to do in such circumstances.

This issue was brought to the attention of the IFRS IC which referred it to the IASB. The IASB intended to address the issue through a future amendment to IFRS 5. The Board decided tentatively to consider amending IFRS 5 as a matter of priority and to work with the FASB to ensure IFRS 5 remains aligned with US GAAP.³ However, at its December 2009 meeting, the IASB "decided not to add a project to its agenda to address the impairment measurement and reversal issues at this time."⁴ Possible future developments are discussed in section 6 below.

How we see it

Possible approaches to the above would be:

- (a) To apply the impairment to current assets
- (b) To apply the impairment to non-current assets outside the scope of the standard's measurement rules
- (c) To recognise a separate liability
- Or
- (d) Restrict the impairment to the carrying value of the non-current assets within the scope of the standard's measurement requirements.

Pending any changes to the Standard, we believe entities have an accounting policy choice, as to which one of the above approaches is applied, to be applied consistently to similar events and conditions and disclosed.

The standard contains a reminder that requirements relating to derecognition are set out in IAS 16 for property, plant and equipment (discussed in Chapter 19), and IAS 38 *Intangible Assets* for intangible assets (discussed in Chapter 18) and notes that a gain or loss not previously recognised by the date of the sale of a non-current asset (or disposal group) must be recognised at the date of derecognition. [IFRS 5.24]. This may happen, for example, if the fair value less costs to sell of an asset classified as held for sale at the end of the previous period falls during the current period.

The standard is not clear on whether the reversal of impairment losses as a result of any subsequent increase in fair value less costs to sell also applies to impairment losses allocated to goodwill.

The issue was discussed by the IFRS IC in 2010, which noted "a potential conflict between the guidance in paragraph 22 and paragraph 23 of IFRS 5 relating to the recognition and allocation of the reversal of an impairment loss for a disposal group when it relates to goodwill."⁵

The IFRS IC discussion on the same issue in 2016 concluded that a broad-scope project on IFRS 5 might be warranted.⁶ However, since then no further actions have been taken by the IASB.

How we see it

In our view, the following approaches to the reversal of goodwill impairment losses recognised under IFRS 5 are acceptable.

One approach prohibits the reversal of impairment allocated to goodwill. This approach considers the requirements of IAS 36. IFRS 5 requires an entity to recognise any gain on reversal of an impairment to be made in the order of allocation set out in IAS 36. As paragraph 124 of IAS 36 prohibits the reversal of an impairment of goodwill, any reversal of impairments allocated to goodwill is not acceptable.

Another, alternative, approach permits reversals of goodwill impairment losses recognised under IFRS 5. This approach considers the requirement in IFRS 5 to apply its measurement requirements to a disposal group as a whole. As the disposal group under IFRS 5 is a single unit of account for measurement purposes, reversal of impairments made for the disposal group as a whole, including impairment losses allocated to goodwill, is acceptable.

Whichever approach is applied, it should be applied consistently.

2.2.4 Presentation in the statement of financial position of non-current assets and disposal groups held for sale

The general requirement, discussed in Chapter 3, to classify items in the statement of financial position as current or non-current (or present them broadly in order of liquidity) is overlaid with further requirements by IFRS 5 regarding non-current assets held for sale and disposal groups. IFRS 5's aim is that entities must present and disclose information that enables users of the financial statements to evaluate the financial effects of disposals of non-current assets (or disposal groups). [IFRS 5.30]. In pursuit of this aim, IFRS 5 requires:

- Non-current assets classified as held for sale and the assets of a disposal group classified as held for sale to be presented separately from other assets in the statement of financial position
- And
- The liabilities of a disposal group classified as held for sale to be presented separately from other liabilities in the statement of financial position

These assets and liabilities must not be offset and presented as a single amount. In addition:

- (a) Major classes of assets and liabilities classified as held for sale must generally be separately disclosed either on the face of the statement of financial position or in the notes. However, this is not necessary for a disposal group if it is a newly acquired subsidiary that met the criteria to be classified as held for sale on acquisition.
- And
- (b) Any cumulative income or expense recognised directly in other comprehensive income relating to a non-current asset (or disposal group) classified as held for sale must be presented separately. [IFRS 5.38, IFRS 5.39].

Although the IASB in IFRS 5.IG Example 12 (see Illustration 2-8 below) suggests presenting non-current assets and liabilities held for sale separately from current assets and current liabilities, respectively, an alternative approach applied by some in practice is to present non-current assets and liabilities held for sale on separate lines, but within current assets and current liabilities, respectively. However, not presenting non-current assets and liabilities held for sale in the statement of financial position, but adding disclosures to that effect in the notes, would not be in compliance with the requirement in IFRS 5.38.

The requirement in (b) was included in response to comments made to the IASB during the development of the standard. [IFRS 5.BC58].

Extract from IFRS 5

BC58 Respondents to ED 4 noted that the separate presentation within equity of amounts relating to assets and disposal groups classified as held for sale (such as, for example, unrealised gains and losses on available-for-sale assets¹⁴ and foreign currency translation adjustments) would also provide useful information. The Board agreed and has added such a requirement to the IFRS.

14 IFRS 9 Financial Instruments eliminated the category of available-for-sale financial assets. This paragraph refers to matters relevant when IFRS 5 was issued.

As noted in section 3.2 below, the standard requires an analysis of the income for the period attributable to owners between continuing and discontinued operations.

IFRS 5 is silent as to whether the information specified in (b) above must be on the face of the statement of financial position or in a note. However, the implementation guidance to IFRS 5 shows a caption called 'Amounts recognised in other comprehensive income and accumulated in equity in relation to non-current assets held for sale' and illustrates the requirements as follows: [IFRS 5.IG Example 12]

Illustration 2-8: Presenting non-current assets or disposal groups classified as held for sale

At the end of 20X2, an entity decides to dispose of part of its assets (and directly associated liabilities). The disposal, which meets the criteria to be classified as held for sale, takes the form of two disposal groups, as follows:

	Carrying amount after classification as held for sale	
	Disposal group I	Disposal group II
	CU	CU
Property, plant and equipment	4,900	1,700
Investments in equity instruments	*1,400	-
Liabilities	(2,400)	(900)
Net carrying amount of disposal group	3,900	800

* An amount of CU400 relating to these assets has been recognised in other comprehensive income and accumulated in equity.

The presentation in the entity's statement of financial position of the disposal groups classified as held for sale can be shown as follows:

	20X2	20X1
	CU	CU
ASSETS		
Non-current assets	X	X
AAA	X	X
BBB	X	X
CCC	X	X
	<u>X</u>	<u>X</u>
Current assets		
DDD	X	X
EEE	X	X
	<u>X</u>	<u>X</u>
Non-current assets classified as held for sale	8,000	-
	<u>X</u>	<u>X</u>
Total assets	<u>X</u>	<u>X</u>
EQUITY AND LIABILITIES		
Equity attributable to equity holders of the parent		
FFF	X	X
GGG	X	X
Amounts recognised in other comprehensive income and accumulated in equity relating to non-current assets held for sale	400	-
	<u>X</u>	<u>X</u>
Non-controlling (or minority) interests	X	X
Total equity	<u>X</u>	<u>X</u>
Non-current liabilities		
HHH	X	X
III	X	X
JJJ	X	X
	<u>X</u>	<u>X</u>
Current liabilities		
KKK	X	X
LLL	X	X
MMM	X	X
	<u>X</u>	<u>X</u>
Liabilities directly associated with non-current assets classified as held for sale	3,300	-
	<u>X</u>	<u>X</u>
Total liabilities	<u>X</u>	<u>X</u>
Total equity and liabilities	<u>X</u>	<u>X</u>

The presentation requirements for assets (or disposal groups) classified as held for sale at the end of the reporting period do not apply retrospectively. The comparative statements of financial position for any previous periods are therefore not re-presented.

Once assets have been classified as non-current, they must not be reclassified as current assets until they meet the criteria to be classified as held for sale in accordance with IFRS 5. So, for example, a mere intention to sell an asset would not trigger reclassification until all the criteria discussed in section 2.1.2 above have been met.

Assets of a class that an entity would normally regard as non-current that are acquired exclusively with a view to resale also must not be classified as current unless they meet the slightly relaxed criteria to be classified as held for sale (see section 2.1.2 above). [IFRS 5.3].

The treatment of comparatives when the classification as held for sale commences or ceases is discussed in section 4 below.

2.2.5 Changes to a plan of sale or to a plan of distribution

2.2.5.A Assets (or disposal groups) to be retained by the entity

An asset (or disposal group) must cease to be classified as held for sale (or distribution) if and when the criteria discussed in section 2.1.2 above are no longer met. [IFRS 5.26].

If an individual asset or liability is removed from a disposal group classified as held for sale or classified as held for distribution, the remaining assets and liabilities of the disposal group must only continue to be measured as a group if the group still meets the criteria to be held for sale (or for distribution) under IFRS 5. Otherwise, the remaining non-current assets of the group that individually meet the criteria must be measured individually at the lower of their carrying amounts and fair values less costs to sell at that date. Any non-current assets that do not meet the criteria must cease to be classified as held for sale or held for distribution. [IFRS 5.29].

A non-current asset (or disposal group) that ceases to be classified as held for sale or for distribution (or ceases to be included in a disposal group which is so classified) must be measured at the lower of:

- (a) Its carrying amount before the asset (or disposal group) was classified as held for sale or for distribution, adjusted for any depreciation, amortisation or revaluations that would have been recognised had the asset (or disposal group) not been so classified

And

- (b) Its recoverable amount at the date of the subsequent decision not to sell or distribute [IFRS 5.27]

Regarding (b) above, the standard notes that if the non-current asset is part of a cash-generating unit, its recoverable amount is the carrying amount that would have been recognised after the allocation of any impairment loss arising on that cash-generating unit in accordance with IAS 36. [IFRS 5.27].

Recoverable amount is defined as the higher of:

- An asset's fair value less costs to sell

And

- Its value in use.

Value in use is defined as "the present value of estimated future cash flows expected to arise from the continuing use of an asset and from its disposal at the end of its useful life." [IFRS 5 Appendix A].

How we see it

If a disposal group that ceases to be classified as held for sale (or distribution) contains goodwill that has been previously impaired under IFRS 5, and its value upon reclassification to held for use based on the above requirement exceeds the carrying amount of the group under IFRS 5, we believe the considerations in section 2.2.3 above on the reversal of impairment losses recognised under IFRS 5 also apply.

Any required adjustment to the carrying amount of a non-current asset that ceases to be classified as held for sale or for distribution must be included:

- (a) In profit or loss from continuing operations in the period in which the criteria are no longer met (unless the asset had been revalued in accordance with IAS 16 or IAS 38 before classification as held for sale, in which case the adjustment must be treated as a revaluation increase or decrease)

And

- (b) In the same caption of the statement of comprehensive income used to present any gain or loss recognised in relation to remeasuring non-current assets (or disposal groups) held for sale or distribution but not meeting the definition of a discontinued operation [IFRS 5.28, IFRS 5.37]

Financial statements for the periods since classification as held for sale must be amended accordingly if the disposal group or non-current asset that ceases to be classified as held for sale is a subsidiary, joint operation, joint venture, associate, or a portion of an interest in a joint venture or an associate. The adjustment must be presented in the same caption in the statement of comprehensive income described at (b) above.

The treatment of comparative information on the cessation of held-for-sale classification is discussed in section 4.2 below.

2.2.5.B Change in method of disposal

An entity may change the manner in which an asset (or disposal group) will be disposed of from being held for sale to being held for distribution to owners (or *vice versa*). Such a change raises the question as to whether the previous accounting treatment under IFRS 5 must be 'unwound' and started afresh based on the new disposal method, or whether a seamless transition from one to the other must be treated as a continuation of one overall disposal plan.

When the manner of disposal changes directly from one method to the other, the change in classification is considered to be a continuation of the original plan of disposal. In such cases:

- (a) The guidance discussed in section 2.2.5.A above does not apply. Rather, the classification, presentation and measurement requirements that are applicable to the new method of disposal must be applied (see sections 2.1 and 2.2 above); that is, without first treating the asset (or disposal group) as ceasing to be held for sale by reversing the preceding accounting treatment.
- (b) Any reduction or increase in the fair value less costs to sell/costs to distribute of the non-current asset (or disposal group) must be recognised as discussed in section 2.2.3 above.

And

- (c) The date of classification as held for sale or for distribution does not change; nor does such a change preclude an extension of the 'one year rule' (both as discussed in section 2.1.2 above if the relevant conditions are met). [IFRS 5.26A].

3 Discontinued operations

As discussed in section 3.2 below, IFRS 5 requires the presentation of a single amount on the face of the or statement of comprehensive income relating to discontinued operations, with further analysis either on the face of the statement or in the notes.

3.1 Definition of a discontinued operation

IFRS 5 defines a discontinued operation as: [IFRS 5.32, IFRS 5 Appendix A]

Extract from IFRS 5

Appendix A

Defined terms

discontinued operation	<p>A component of an entity that either has been disposed of or is classified as held for sale and:</p> <ul style="list-style-type: none"> (a) represents a separate major line of business or geographical area of operations, (b) is part of a single co-ordinated plan to dispose of a separate major line of business or geographical area of operations or (c) is a subsidiary acquired exclusively with a view to resale.
------------------------	---

Classification as held for sale is discussed in section 2.1 above. For the purposes of the above definition, a 'component of an entity' is also defined by the standard as comprising "operations and cash flows that can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity. In other words, a component of an entity will have been a cash-generating unit or a group of cash-generating units while being held for use." [IFRS 5.31, IFRS 5 Appendix A]. IFRS 5 defines cash generating unit in the same way as IAS 36, that is as "the smallest identifiable group of assets that generates cash inflows that are largely independent of the cash inflows from other assets or groups of assets." [IFRS 5 Appendix A]. Cash generating units are discussed in Chapter 21.

How we see it

In our view, it seems unlikely that this definition of a component would ever be met by a single non-current asset (for example, a single building or single equity-accounted investment). Accordingly, a discontinued operation will also be one or more 'disposal groups' which is a group of assets to be disposed of, by sale or otherwise, together as a group in a single transaction, and liabilities directly associated with those assets that will be transferred in the transaction (discussed in section 2.1.1 above).

Furthermore, even if a single equity-accounted investment was considered to meet the definition of a component, only in rare circumstances would it represent a separate major line of business or geographical area of operations. [IFRS 5.32(a)].

Considering that the definition of discontinued operations also requires that it represents a "separate *major* line of business or geographical area of operations" (emphasis added), a question may arise whether the adjective 'major' refers also to the latter component of the definition, i.e., whether also a geographical operation needs to be 'major' for the definition of discontinued operations to be met.

How we see it

We believe that the term 'major' in the definition of the discontinued operation refers to both 'line of business' and 'geographical area of operations', i.e., a discontinued operations needs to represent either a major line of business or a major geographical area of operations.

That is consistent with the intention of the Board that the size of the unit that could be classified as discontinued is not too small and therefore the information provided by separately presenting discontinued operations is useful. [IFRS 5.BC69].

Consequently, a component which neither represents a major line of business nor a major geographical area of operations would not meet the definition of a discontinued operation and cannot be presented as such.

The meaning of 'separate major line of business or geographical area' was raised with the IFRS IC. It concluded, in January 2016, that it must be considered for a broad-scope project on IFRS 5 (possible future developments of IFRS 5 are discussed in section 6 below).⁷

Pending more guidance, determining whether a line of business or geographical area is major may involve judgement and require appropriate disclosures in accordance with IAS 1 (specifically IAS 1.122).

The concept of 'single co-ordinated plan' is not defined in the standard but suggests that the component representing a major line of business or a major geographical area need not be sold in one transaction in order to be presented as a discontinued operation. For instance, it may be that the entity is expecting to sell the component piecemeal to two or more buyers, and that the piecemeal transactions are expected to occur at different times. In such a case, the different parts of the component may not qualify for held for sale classification at the same time, for instance because one or more parts are not expected to be sold within one year. The requirements for presenting discontinued operations would, however, still be applicable for the part (or parts) expected to be sold within one year in the current period, because the corresponding piecemeal disposal is a part of a single co-ordinated plan to sell a major line of business or geographical area of operations. The other part (or parts) would be presented under the discontinued operations guidance in the future periods when they meet the held for sale classification requirements. In these cases, the different parts of a component may not need to represent major lines of business or major geographical areas by themselves.

As discussed in section 2.1.2.C above, IFRS 5 stipulates that a non-current asset (or disposal group) that is to be abandoned must not be classified as held for sale. This includes non-current assets (or disposal groups) that are to be used to the end of their economic life and non-current assets (or disposal groups) that are to be closed rather than sold. However, if the disposal group to be abandoned meets the criteria above, the standard requires it to be treated as a discontinued operation 'at the date on which it ceases to be used'. [IFRS 5.13]. In other words, the treatment as discontinued only starts in the period when abandonment actually occurs (see Illustration 3-1 and Illustration 3-2 below).

A non-current asset that has been temporarily taken out of use must not be accounted for as if it had been abandoned. [IFRS 5.14]. Accordingly, it would not be presented as a discontinued operation. An example given by the standard is of a manufacturing plant that ceases to be used because demand for its product has declined but which is maintained in workable condition and is expected to be brought back into use if demand picks up. The plant is not regarded as abandoned. [IFRS 5.IG Example 8]. However, in these circumstances an impairment test and review of useful life will need to be performed in accordance with IAS 36 (discussed in Chapter 21) and, as appropriate, IAS 16 or IAS 38 (discussed in Chapter 19 and Chapter 18, respectively).

The standard provides an example of a discontinued operation arising from abandonment upon which the following Illustration is based. [IFRS 5.IG Example 9].

Illustration 3-1: Discontinued operation arising from abandonment

In October 20X1 an entity decides to abandon all of its cotton mills, which constitute a major line of business. All work stops at the cotton mills during the year ended 31 December 20X2. In the financial statements for the year ended 31 December 20X1, results and cash flows of the cotton mills are treated as continuing operations. In the financial statements for the year ended 31 December 20X2, the results and cash flows of the cotton mills are treated as discontinued operations and the entity makes the disclosures required (see section 3.2 below).

If an entity is gradually extinguishing its operations, it generally will not present them as discontinued operations before all revenue-generating operations are ceased, as illustrated below:

Illustration 3-2: Operations ceasing gradually

An entity operating in construction industry has decided to cease its activities in the USA. The US component is a separate major geographical area. All current contracts will be completed, but no new contracts will be entered into. Employees from the selling and marketing departments have been made redundant and their employment is terminated.

In this case, the disposal group has not ceased to be used and thus cannot be presented as a discontinued operation. [IFRS 5.13].

⁷ [IFRIC Update](#), January 2016, available on the IFRS Foundation's website.

On the other hand, although all revenue-generating activities have ceased, some administrative tasks may still need to be continued, as illustrated below:

Illustration 3-3: Administrative activities ongoing

An entity operating in construction industry has decided to cease its activities in the USA. The US component is a separate major geographical area. All contracts with customers have been fulfilled, the inventory has been sold out, but some administrative activities are still ongoing, e.g.:

- Debtors are still being collected
- Outstanding rent is to be paid
- A few employees are still employed to execute the outstanding administrative activities.

In this case, the disposal group has ceased to be used and thus represents a discontinued operation in spite of certain administrative tasks still being outstanding. [IFRS 5.13]

How we see it

Although the standard does not further explain the meaning of the words 'cease to be used' when applied to an activity, we believe that they typically refer to the cessation of revenue-generating activities. This is because an activity will normally use assets (or groups of assets) to generate revenues and ceasing to use such assets will therefore result in cessation of any revenue derived from using them.

3.2 Presentation of discontinued operations

IFRS 5 requires the presentation of a single amount on the face of the statement of comprehensive income comprising the total of:

- (a) The post-tax profit or loss of discontinued operations

And

- (b) The post-tax gain or loss recognised on the measurement to fair value less costs to sell or on the disposal of the assets or disposal group(s) constituting the discontinued operation [IFRS 5.33(a)]

This single amount must be further analysed (either on the face of the statement or in the notes) into:

- (a) The revenue, expenses and pre-tax profit or loss of discontinued operations

- (b) The gain or loss recognised on the measurement to fair value less costs to sell or on the disposal of the assets or disposal group(s) constituting the discontinued operation

And

- (c) Separately for each of (a) and (b) the related income tax expense as required by IAS 12 (see Chapter 29)

The above analysis is not required for disposal groups that are newly acquired subsidiaries that meet the criteria to be classified as held for sale on acquisition (see section 2.2.2 above). [IFRS 5.33(b)].

If the required analysis is presented on the face of the statement of comprehensive income it must be presented in a section identified as relating to discontinued operations, i.e., separately from continuing operations. [IFRS 5.33A]. The standard also makes clear that any gain or loss on the remeasurement of a non-current asset (or disposal group) classified as held for sale that does not meet the definition of a discontinued operation must not be included within these amounts for discontinued operations, but be included in profit or loss from continuing operations. [IFRS 5.37].

Only those expenses that will no longer be incurred by the entity after the sale of the operations can be attributed to discontinued operations. Typically, most group overheads do not cease with the disposal and will therefore be allocated entirely to continuing operations.

Presentation of discontinued operations can be affected by how an entity presents elimination of certain intercompany transactions between continuing and discontinued operations. This is discussed in section 3.3 below.

IFRS 5 requires disclosure of the amount of income from continuing operations and discontinued operations attributable to owners of the parent. This may be given either in the notes or on the face of the statement of comprehensive income. [IFRS 5.33(d)].

IFRS 5 requires that all the above disclosures be re-presented for prior periods presented in the financial statements so that the disclosures relate to all operations that have been discontinued by the reporting date for the latest period presented. [IFRS 5.34]. Accordingly, adjustments to the comparative information as originally reported will be necessary for those disposal groups categorised as discontinued operations. Comparative information relating to discontinued operations is discussed further in section 4 below.

The implementation guidance accompanying IFRS 5 provides an example illustration of the presentation of discontinued operations which has been replicated in the Illustration below. [IFRS 5.IG Example 11]. (Note that the illustrative example assumes that the entity did not recognise any components of other comprehensive income in the periods presented.)

Illustration 3-4: Presenting discontinued operations

XYZ GROUP - STATEMENT OF COMPREHENSIVE INCOME FOR THE YEAR ENDED 31 DECEMBER 20X2

(illustrating the classification of expenses by function)

(in thousands of currency units)

	20X2	20X1
Continuing operations		
Revenue	X	X
Cost of sales	(X)	(X)
Gross profit	X	X
Other income	X	X
Distribution costs	(X)	(X)
Administrative expenses	(X)	(X)
Other expenses	(X)	(X)
Finance costs	(X)	(X)
Share of profit of associates	X	X
Profit before tax	X	X
Income tax expense	(X)	(X)
Profit for the period from continuing operations	X	X
Discontinued operations		
Profit for the period from discontinued operations*	X	X
Profit for the period	X	X
Attributable to:		
Owners of the parent		
Profit for the period from continuing operations	X	X
Profit for the period from discontinued operations	X	X
Profit for the period attributable to owners of the parent	X	X
Non-controlling interest		
Profit for the period from continuing operation	X	X
Profit for the period from discontinued operations	X	X
Profit for the period attributable to non-controlling interests	X	X
	X	X

* The required analysis would be given in the notes.

The above reflects the requirement to disclose the amount of income from continuing operations and discontinued operations attributable to owners of the parent. It is noteworthy that the standard's illustrative example goes beyond what is strictly required by also giving an equivalent analysis for income attributable to non-controlling interests.

Adjustments in the current period to amounts previously presented in discontinued operations that are directly related to the disposal of a discontinued operation in a prior period must be classified separately in discontinued operations. The nature and amount of the adjustments must be disclosed. Examples given by the standard of circumstances in which these adjustments may arise include the following:

- (a) The resolution of uncertainties that arise from the terms of the disposal transaction, such as the resolution of purchase price adjustments and indemnification issues with the purchaser.
- (b) The resolution of uncertainties that arise from and are directly related to the operations of the component before its disposal, such as environmental and product warranty obligations retained by the seller.

And

- (c) The settlement of employee benefit plan obligations, provided that the settlement is directly related to the disposal transaction. [IFRS 5.35].

As a discontinued operation will also include one or more disposal group(s), the requirements regarding presentation of disposal groups in the statement of financial position (discussed in section 2.2.4 above) also apply to discontinued operations.

3.2.1 Cash flows attributable to discontinued operations

In addition, IFRS 5 requires disclosure of the net cash flows attributable to the operating, investing and financing activities of discontinued operations. The standard allows that these disclosures may be presented either in the notes or on the face of the financial statements. IFRS 5 does not amend the requirements of IAS 7 *Statement of Cash Flows* to present cash flows classified by activity, however, the disclosures can be provided in different ways; this is discussed in Chapter 36. These disclosures are not required for disposal groups that are newly acquired subsidiaries that meet the criteria to be classified as held for sale on acquisition (see section 2.2.2 above). [IFRS 5.33(c)].

The Standard does not clarify whether proceeds from the disposal of discontinued operations are attributable to discontinued or continuing operations. These cash flows can be considered attributable to discontinued operations because they will not continue after the sale - same as a gain or loss on disposal is attributable to the discontinued operations in the statement of comprehensive income. [IFRS 5.33(a)(ii)]. An alternative view is that because the cash flows from disposals are not generated by the discontinued operations, rather they are retained by the continuing operations which are disposing of the discontinued operations, they are attributable to the continuing operations.

How we see it

We believe entities have an accounting policy choice, as to whether attribute proceeds from disposal to discontinued operations or continuing operations. The selected accounting policy needs to be applied consistently and disclosed.

If material, it may be appropriate to present the proceeds from disposal of discontinued operations as a separate line item on the face of the statement of cash flows. See also Chapter 36 for discussion on presentation and disclosure of material cash flows.

3.3 Trading between continuing and discontinued operations

Notwithstanding the one-line presentation discussed above, discontinued operations remain consolidated in group financial statements. That means any transactions between discontinued and continuing operations are eliminated as usual in the consolidation. As a consequence, the amounts ascribed to the continuing and discontinued operations will be income and expense only from transactions with counterparties external to the group. However, the presentation of the eliminations is not addressed by the standard. If all intragroup transactions between continuing and discontinued operations are eliminated without any adjustments, the results presented on the face of the statement of comprehensive income will not represent the activities of the operations as individual entities. Some might consider the results for the continuing and discontinued operations on this basis to be of little use to readers of accounts. An argument could be made that allocating external transactions to or from the discontinued operation would yield more meaningful information.

The IFRS IC discussed this matter and published its agenda decision in January 2016.⁸

In that decision the IFRS IC includes the following: “The Interpretations Committee noted that neither IFRS 5 nor IAS 1 includes requirements regarding the presentation of discontinued operations that override the consolidation requirements in IFRS 10 *Consolidated Financial Statements*. The Interpretations Committee also noted that paragraph B86(c) of IFRS 10 requires elimination of, among other things, income and expenses relating to intragroup transactions, and not merely intragroup profit. Consequently, the Interpretations Committee observed that not eliminating intragroup transactions would be inconsistent with the elimination requirements of IFRS 10.”

The IFRS IC went on to observe: “The Interpretations Committee also noted that paragraph 30 of IFRS 5 requires an entity to present and disclose information that enables users of the financial statements to evaluate the financial effects of discontinued operations and disposal activity. In the light of this objective, the Interpretations Committee observed that, depending on the particular facts and circumstances, an entity may have to provide additional disclosures in order to enable users to evaluate the financial effects of discontinued operations.”

How we see it

In our view, it will clearly be a matter of judgement whether additional information is needed when transactions between continuing and discontinued operations are significant and, if it is, what the form and content of that information must be.

There are generally two alternative ways of eliminating transactions between continuing and discontinued operations: either to eliminate all transactions without any adjustments or to eliminate intragroup transactions, but make adjustments to reflect how transactions between continuing or discontinued operations will be reflected in continuing operations going forward. The latter alternative can be considered as providing more relevant outcome in certain circumstances. This can be illustrated with the following example, which is based on illustrative examples provided in the IFRS IC staff paper accompanying the discussions of the IFRS IC⁹:

Illustration 3-5: Elimination of transactions between continuing and discontinued operations

Group X consists of two entities: A and B. Entity A is a producer of components which are input to entity B's production process. Entity A was sold by the group in December 20X2. All revenues of Entity A consist of intercompany sales to Entity B. The consolidated financial statements for the year ended 31 December 20X2 present Entity A's business as discontinued operations. Entity B will continue to purchase components from entity A. The standalone results of operations of Entity A, Entity B and the consolidated group for the year 20X2 are as follows:

	Entity A (discontinued operations)		Entity B (continuing operations)		Eliminations		Group
	CU		CU		CU		CU
	{1}		{2}		{3}		{1}+{2}+{3}
Revenue	800	{A1}	3,200	{B1}	(800)	{-A1}	3,200
Cost of sales	500	{A2}	2,800	{B2}	(800)	{-A1}	2,500
Profit/(Loss)	300		400		-		700

The following alternatives can be considered when it comes to eliminating the transactions between continuing and discontinued operations (and, consequently, determining the split of net profit/loss between the profit/loss from continuing and discontinued operations):

- Alternative 1: Eliminate all intragroup transactions without any adjustments.
- Alternative 2: Eliminate intragroup transactions but make adjustments to reflect how transactions between continuing or discontinued operations will be reflected in continuing operations going forward.

As already discussed above, no elimination of intragroup transactions is not acceptable, as IFRS 10 requires elimination of intragroup transactions in the consolidated financial statements.

⁸ [IFRIC Update](#), January 2016, available on the IFRS Foundation's website.

⁹ [IASB Staff paper 3B](#), Project: *IFRS 5 Non-current Assets Held for Sale and Discontinued Operations* Paper topic: *Presentation of intragroup transactions between continuing and discontinued operations*, IFRS IC Meeting, May 2015. Available on the IFRS Foundation's website.

The outcome of these approaches for the consolidated statement of profit or loss of Group X for the year ended 31 December 20X2 would be as follows:

Consolidated statement of profit or loss for the year 20X2

	Alternative 1 eliminate without any adjustments CU	Alternative 2 eliminate with adjustments CU	No eliminations of intragroup transactions (not acceptable) CU
Revenue	3,200	3,200	3,200
Cost of sales	2,000 {B2}-{A1}	2,800 {B2}	2,800 {B2}
Profit from continuing operations	1,200	400	400
Revenue	-	-	800 {A1}
Cost of sales	500 {A2}	(300) {A2}-{A1}	500 {A2}
Profit/(Loss) from discontinued operations	(500)	300	300
Profit for the year	700	700	700

Under Alternative 1, consolidated profit from continuing operations shows only results of transaction with entities outside the group. Under Alternative 2, intragroup transactions are eliminated against Entity A so that the profit from continuing operations shows an expected impact of future purchases from Entity A.

How we see it

Pending any changes to the standard, we believe entities have an accounting policy choice (to be applied consistently and disclosed), as to whether eliminate the intragroup balances with or without adjustments to reflect the potential impact of these transactions in continuing operations going forward. Additional disclosures may be needed if that is useful to the users of the financial statements.

4 Comparative information

As discussed in Chapter 3, IAS 1 requires the presentation of comparative information. IFRS 5 contains particular requirements for non-current assets held for sale (and disposal groups) and discontinued operations.

Entities will need to consider whether any (and, if so, what) changes are necessary to comparative information as previously reported whenever:

- Non-current assets or disposal groups first become classified as such
- And
- That classification ceases

4.1 Treatment of comparative information on initial classification as held for sale

4.1.1 The statement of comprehensive income

For non-current assets and disposal groups not qualifying as discontinued operations there are no special requirements relating to presentation in the statement of comprehensive income, accordingly no restatement of comparative amounts would be relevant.

When a component of an entity becomes classified as a discontinued operation, separate presentation of the total of its results for the period and any gain or loss on remeasurement is required on the face of the statement (see section 3.2 above). IFRS 5 requires that these disclosures be re-presented for prior periods presented in the financial statements so that the disclosures relate to all operations that have been discontinued by the reporting date for the latest period presented. [IFRS 5.34]. Accordingly, adjustments to the comparative information as originally reported will be necessary for those disposal groups categorised as discontinued operations.

4.1.2 The statement of financial position

IFRS 5 states that an entity shall not reclassify or re-present amounts presented for non-current assets or for the assets and liabilities of disposal groups classified as held for sale in the statements of financial position for prior periods to reflect the classification in the statement of financial position for the latest period presented. [IFRS 5.40]. The standard has no separate requirements relating to the statement of financial position for a disposal group also qualifying as a discontinued operation and accordingly comparatives are not adjusted.

4.2 Treatment of comparative information on the cessation of classification as held for sale

As discussed in section 2.2.5 above, when a non-current asset ceases to be classified as held for sale the measurement basis for it reverts to what it would have been if it had not been so classified at all (or recoverable amount if lower). Typically, this would require a 'catch-up' depreciation charge as depreciation would not have been accounted for while it was held for sale. The standard explicitly requires this to be a current year charge. [IFRS 5.28]. This indicates that for non-current assets and disposal groups ceasing to be so classified the measurement of items in comparative information (statement of comprehensive income and statement of financial position) must not be revisited. This requirement applies equally to discontinued operations. However, there are additional considerations relevant for subsidiaries, joint arrangements and associates ceasing to be classified as held for sale.

IFRS 5 explains that "Financial statements for the periods since classification as held for sale or as held for distribution to owners shall be amended accordingly if the disposal group or non-current asset that ceases to be classified as held for sale or as held for distribution to owners is a subsidiary, joint operation, joint venture, associate, or a portion of an interest in a joint venture or an associate. The entity shall present that adjustment in the same caption in the statement of comprehensive income" within continuing operations used to record any gains and losses on non-current assets (or disposal groups) held for sale. [IFRS 5.28, IFRS 5.37]. IAS 28 clarifies that, as regards associates and joint ventures, the amendment of financial statements 'for the periods since classification as held for sale' means retrospectively from the date of its original classification as held for sale. [IAS 28.21]. This clarification is not repeated in IFRS 10 or IFRS 11 *Joint Arrangements*. However, we believe the clarification also applies to assets or disposal groups within the scope of those standards and that this is the most common approach seen in practice. As a result, when a disposal group or non-current asset that was classified as held for sale represented an entire subsidiary, joint operation, joint venture or associate or was a portion of an interest in a joint venture or associate, and subsequently no longer qualifies as held for sale, financial statements must be amended retrospectively as though the disposal group or non-current asset never qualified as held for sale.

How we see it

For subsidiaries, joint arrangements and associates ceasing to be classified as held for sale, the financial statements must be amended retrospectively for the purpose of measurement. The standard is not explicit on whether the retrospective application requirement is also applicable for presentation purposes. In our view, it is necessary to align presentation and measurement, and thus comparatives are restated as if the investee never qualified as held for sale.

This area has been considered by the IFRS IC. The IFRS IC decided not to add it to its agenda, noting at the time that IFRS 5 was a possible subject for a research project by the IASB which would examine a number of areas (possible future developments of IFRS 5 are discussed in section 6 below). In its agenda decision the IFRS IC observed the following: “paragraph 28 requires the effects of a remeasurement (upon ceasing to be classified as held for sale) of a non-current asset to be recognised in profit or loss in the current period. Paragraph 28 also requires financial statements for the periods since classification as held for sale or as held for distribution to owners to be ‘amended accordingly’ if the disposal group or non-current asset that ceases to be classified as held for sale or as held for distribution to owners is a subsidiary, joint operation, joint venture, associate, or a portion of an interest in a joint venture or an associate. The issue relates to a situation in which a disposal group that consists of both a subsidiary and other non-current assets ceases to be classified as held for sale. In such a situation, should an entity recognise the remeasurement adjustments relating to the subsidiary and the other non-current assets in different accounting periods, and should any amendment apply to presentation as well as to measurement?”¹⁰

Regarding the treatment of discontinued operations in the statement of comprehensive income, the standard states that if an entity ceases to classify a component as held for sale, the results of operations of the component previously presented in discontinued operations must be reclassified and included in income from continuing operations for all periods presented. The amounts for prior periods must be described as having been re-presented. [IFRS 5.36].

As discussed in section 4.1.2 above, the amounts presented for non-current assets or for the assets and liabilities of disposal groups classified as held for sale in the comparative statement of financial position must not be reclassified or re-presented.

¹⁰ [IFRIC Update](#), January 2016, available on the IFRS Foundation’s website.

5 Disclosure requirements

5.1 Requirements of IFRS 5

The standard includes the following general disclosure objective:

Extract from IFRS 5

- | | |
|----|--|
| 30 | An entity shall present and disclose information that enables users of the financial statements to evaluate the financial effects of discontinued operations and disposals of non-current assets (or disposal groups). |
|----|--|

[IFRS 5.30]

As discussed in sections 2.2.4 and 3.2 above, IFRS 5 sets out detailed requirements for the prominent presentation of amounts relating to non-current assets held for sale, disposal groups and discontinued operations. In particular, and as discussed in section 3.2 above, the single amount reflecting the income from discontinued operations must be analysed into its components, either on the face of the statement of comprehensive income or in the notes.

IFRS 5 also requires disclosure of the net cash flows attributable to the operating, investing and financing activities of discontinued operations (discussed in section 3.2.1 above and in Chapter 36).

In addition, disclosure is required in the notes in the period in which a non-current asset (or disposal group) has been either classified as held for sale or sold:

- (a) A description of the non-current asset (or disposal group)
- (b) A description of the facts and circumstances of the sale, or leading to the expected disposal, and the expected manner and timing of that disposal
- (c) The gain or loss recognised as a result of measuring the non-current asset (or disposal group) at fair value less costs to sell (discussed in section 2.2 above) and, if not separately presented on the face of the statement of comprehensive income, the caption in the statement that includes that gain or loss
And
- (d) If applicable, the segment in which the non-current asset (or disposal group) is presented in accordance with IFRS 8 *Operating Segments* (discussed in Chapter 32) [IFRS 5.41]

Siemens Aktiengesellschaft provided the following disclosures with respect to discontinued operations in its 2021 consolidated financial statements (apart from cash flows from discontinued operations which were disclosed on the face of the statement of cash flows):

Practical example 5-1: Siemens Aktiengesellschaft (2021) Germany

Siemens Report 2021 [extract]

Consolidated Financial Statements [extract]

6. Notes to Consolidated Financial Statements [extract]

Note 3 Acquisitions, dispositions and discontinued operations [extract]

Sale of Flender GmbH

In October 2020, Siemens signed an agreement to sell 100% of its shares in Flender GmbH including Siemens' Wind Energy Generation business (Flender) to The Carlyle Group, U.S. Both businesses were previously reported under Portfolio Companies. In the first quarter of fiscal 2021, the businesses of Flender (the disposal group) met the criteria for classification as held for disposal as well as for discontinued operation, and, accordingly, Siemens ceased depreciation and amortization of assets within the disposal group. Upon closing of the transaction in March 2021, Siemens no longer controls Flender. The consideration was €1.875 billion. Derecognized net assets amounted to €954 million. The results of Flender are reported as discontinued operations in the Consolidated Statements of Income and Cash Flows for all periods presented:

(in millions of €)	FY 2021	FY 2020
Revenue	928	1,885
Expenses	(818)	(1,710)
Disposal gain net of disposal costs	885	(5)
Income (loss) from discontinued operations before income taxes	995	170
Income taxes on ordinary activities	(8)	(36)
Other income taxes	(40)	–
Income (loss) from discontinued operations, net of income taxes	946	134
thereof attributable to Siemens AG shareholders	946	134

The carrying amounts of the major classes of assets and liabilities derecognized were as follows:

(in millions of €)	Mar 10, 2021
Cash and cash equivalents	95
Trade and other receivables	510
Other current financial assets	143
Inventories	540
Goodwill	123
Property, plant and equipment	359
Miscellaneous current and non-current assets	92
Assets classified as held for disposal	1,862
Trade payables	355
Other current financial liabilities	193
Miscellaneous current liabilities	244
Miscellaneous non-current liabilities	116
Liabilities associated with assets classified as held for disposal	907

If a non-current asset (or disposal group) meets the criteria to be classified as held for sale after the reporting date but before the financial statements are authorised for issue, the information specified in (a), (b) and (d) above must also be disclosed in the notes. [IFRS 5.12].

Further, should:

- A non-current asset (or disposal group) ceases to be classified as held for sale
- Or
- An individual asset or liability be removed from a disposal group

Then IFRS 5 requires disclosure of, in the period of the decision to change the plan to sell the non-current asset (or disposal group), a description of the facts and circumstances leading to the decision and the effect of the decision on the results of operations for the period and any prior periods presented. [IFRS 5.42]. ENGIE SA provided the following information in its 2021 financial statements:

Practical example 5-2: ENGIE SA (2021)	France
2021 MANAGEMENT REPORT AND ANNUAL CONSOLIDATED FINANCIAL STATEMENTS [extract] NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS [extract] 5.2 Assets held for sale [extract] <p>The assets related to renewable energy in India recorded as “Assets classified as held for sale” at December 31, 2020 were sold in 2021. However, the Group's stake in EV Charged BV (EV Box), for which the planned disposal of the majority of the shares was announced in December 2020, is no longer classified under IFRS 5 following the parties' decision to put to an end the planned transaction.</p> <p style="text-align: center;">...</p>	

5.2 Disclosures required by standards other than IFRS 5

IFRS 5 explains that disclosures in other IFRS accounting standards do not apply to non-current assets (or disposal groups) classified as held for sale or discontinued operations unless those IFRS accounting standards require:

- Specific disclosures in respect of non-current assets (or disposal groups) classified as held for sale or discontinued operations
- Or
- Disclosures about the measurement of assets and liabilities within a disposal group that are not within the scope of the measurement requirement of IFRS 5 and such disclosures are not already provided in the other notes to the financial statements. [IFRS 5.5B].

The requirement in the second bullet above reflects the fact that such assets continue to be measured in accordance with the specific IFRS accounting standard dealing with them. In practice, much of the requirement will be satisfied by the disclosure of accounting policies. The requirement for other disclosures will depend on the standard concerned. An example would be actuarial assumptions used to measure a pension plan as the surplus or deficit is not within the measurement scope of IFRS 5.

IFRS 12 *Disclosure of Interests in Other Entities* clarifies that all the disclosures of that standard apply to interests that are classified as held-for-sale, with the exception only of those disclosures (summarised financial information) identified by IFRS 12 as not being required. [IFRS 12.5A, IFRS 2.B17].

The standard goes on to say that additional disclosures about non-current assets (or disposal groups) classified as held for sale or discontinued operations may be necessary to comply with the general requirements of IAS 1, in particular paragraphs 15 and 125 of that standard. [IFRS 5.5B]. Those provisions deal with fair presentation and estimation uncertainty and are discussed in Chapter 3.

Entities need also to carefully consider disclosing information regarding significant judgements and accounting policy choices made when applying the standard, as required by paragraphs 117 to 122 of IAS 1, such as:

- Whether IFRS 5 is applied when control is lost in a subsidiary and the retained interest represents a joint operation (see section 2.1.3.A above).
- Whether IFRS 5 is applied to all losses of control or only to those resulting from an actual sale or distribution (see section 2.1.4 above).
- How the entity accounts for impairment if it exceeds the carrying value of the non-current assets within the scope of the standard's measurement rules (see section 2.2.3 above).
- Whether the intragroup balances are eliminated with or without adjustments to reflect the potential impact of these transactions in continuing operations going forward (see section 3.3 above).

5.3 Disclosures required by IFRS 19 *Subsidiaries without Public Accountability: Disclosures*

IFRS 19 *Subsidiaries without Public Accountability: Disclosures* was issued by the IASB in May 2024 to simplify the preparation of financial statements by eligible subsidiaries. Eligible subsidiaries that elect to apply IFRS 19 are allowed to provide reduced disclosures while still applying the recognition, measurement and presentation requirements in other IFRS accounting standards. IFRS 19 is effective for annual reporting periods beginning on or after 1 January 2027, with earlier application permitted (subject to jurisdictional endorsement). See Chapter 4 for further details on the requirements of IFRS 19.

6 Possible future developments

The IASB has, over recent years, discussed a number of issues related to IFRS 5, as set out below.¹¹

- (a) The scope of held-for-sale classification; discussed in section 2.1.3.A above
- (b) Accounting for disposal groups consisting mainly of financial instruments
- (c) The 'excess impairment' issue; discussed in section 2.2.3 above
- (d) The reversal of goodwill impairments in a disposal group
- (e) The allocation of impairments within a disposal group; discussed in section 2.2.3 above
- (f) The definition of discontinued operation and disclosures; discussed in section 3.1 above
- (g) The presentation of other comprehensive income of disposal groups
- (h) The application of the term 'major line of business'; discussed in section 3.1 above
- (i) The treatment of intragroup transactions between continuing and discontinued operations; discussed in section 3.3 above
- (j) The application of the presentation requirements in the standard to a disposal group consisting of a subsidiary and other non-current assets in the case of a change to a plan of sale; discussed in section 4.2 above

And

- (k) The applicability of the disclosure requirements in IFRS 12 to a subsidiary classified as held-for-sale
- Item (i) above was referred to the IFRS IC for consideration. It published an agenda decision in January 2016, which is discussed in section 3.3 above. As regards item (k) above, the Board has amended IFRS 12 (see section 5.2 above).

With regard to the rest of the items, the IASB included a reference to them in its request for views in its 2015 Agenda Consultation. In November 2016, the Board published *IASB Work Plan 2017-2021: Feedback Statement on the 2015 Agenda Consultation*. This document notes: "The Board agreed that the best way to start a review of these issues would be through a post-implementation review of IFRS 5. The Board intends to carry out that review after the forthcoming post-implementation reviews of IFRS 13 and of IFRS accounting standards 10-12."¹²

The Board completed the post-implementation review of IFRS 13 in December 2018¹³, and the post-implementation review of IFRS 10, IFRS 11 and IFRS 12 in June 2022.¹⁴

In March 2021, the Board published a request for information with regard to the third agenda consultation.¹⁵ This document acknowledged the history of questions arising in relation to IFRS 5 and specifically asked respondents for views on whether they were 'still a priority'.¹⁶ In the feedback statement to the third agenda consultation, the Board explained that mixed feedback was received from the respondents on the priority of the project on discontinued operations and disposal groups, and this project was not added to the IASB's work plan for 2022 to 2026.¹⁷

Time will tell whether the Board will conduct a review of IFRS 5 and, if it does, which, if any, of the matters discussed above will be addressed.

Appendix A - Index of Illustrations

Illustration 2-1:	Deferred tax liability on remeasurement of an investment property held for sale	288
Illustration 2-2:	Timing of reclassification to held for sale	289
Illustration 2-3:	Meaning of 'available for immediate sale'	290
Illustration 2-4:	Shareholders' approval	291
Illustration 2-5:	Exceptions to the 'one year rule'	293
Illustration 2-6:	Measuring and presenting subsidiaries acquired with a view to sale and classified as held for sale	297
Illustration 2-7:	Allocation of impairment loss to the components of a disposal group	299
Illustration 2-8:	Presenting non-current assets or disposal groups classified as held for sale	301
Illustration 3-1:	Discontinued operation arising from abandonment	306
Illustration 3-2:	Operations ceasing gradually	306
Illustration 3-3:	Administrative activities ongoing	307
Illustration 3-4:	Presenting discontinued operations	308
Illustration 3-5:	Elimination of transactions between continuing and discontinued operations	310

Appendix B - Defined terms

Extract from IFRS 5

Appendix A Defined terms

This appendix is an integral part of the IFRS.

cash-generating unit	The smallest identifiable group of assets that generates cash inflows that are largely independent of the cash inflows from other assets or groups of assets.
component of an entity	Operations and cash flows that can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity.
costs to sell	The incremental costs directly attributable to the disposal of an asset (or disposal group), excluding finance costs and income tax expense.
current asset	An entity shall classify an asset as current when: <ul style="list-style-type: none"> (a) it expects to realise the asset, or intends to sell or consume it, in its normal operating cycle; (b) it holds the asset primarily for the purpose of trading; (c) it expects to realise the asset within twelve months after the reporting period; or (d) the asset is cash or a cash equivalent (as defined in IAS 7) unless the asset is restricted from being exchanged or used to settle a liability for at least twelve months after the reporting period.
discontinued operation	A component of an entity that either has been disposed of or is classified as held for sale and: <ul style="list-style-type: none"> (a) represents a separate major line of business or geographical area of operations, (b) is part of a single co-ordinated plan to dispose of a separate major line of business or geographical area of operations or (c) is a subsidiary acquired exclusively with a view to resale.
disposal group	A group of assets to be disposed of, by sale or otherwise, together as a group in a single transaction, and liabilities directly associated with those assets that will be transferred in the transaction. The group includes goodwill acquired in a business combination if the group is a cash-generating unit to which goodwill has been allocated in accordance with the requirements of paragraphs 80-87 of IAS 36 <i>Impairment of Assets</i> (as revised in 2004) or if it is an operation within such a cash-generating unit.
fair value	<i>Fair value</i> is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. (See IFRS 13.)
firm purchase commitment	An agreement with an unrelated party, binding on both parties and usually legally enforceable, that (a) specifies all significant terms, including the price and timing of the transactions, and (b) includes a disincentive for non-performance that is sufficiently large to make performance highly probable .
highly probable	Significantly more likely than probable .
non-current asset	An asset that does not meet the definition of a current asset .
probable	More likely than not.
recoverable amount	The higher of an asset's fair value less costs of disposal and its value in use .
value in use	The present value of estimated future cash flows expected to arise from the continuing use of an asset and from its disposal at the end of its useful life.

Chapter 6

First-time adoption

Contents

Overview	327
1 Introduction	328
1.1 Objectives of first-time adoption	328
1.2 Convergence with US GAAP	328
1.3 Future developments	329
1.4 Defined terms	329
2 Who is a first-time adopter?	330
2.1 The first IFRS financial statements in scope of IFRS 1	330
2.1.1 What are general purpose financial statements?	332
2.2 When is IFRS 1 applied?	333
2.2.1 Repeat application of IFRS 1	333
2.3 Determining the previous GAAP	334
2.3.1 Transition to IFRS accounting standards from a similar GAAP	336
3 Opening IFRS statement of financial position	337
3.1 First-time adoption timeline	337
3.2 Opening IFRS statement of financial position and accounting policies	338
3.3 Fair value and deemed cost	340
3.4 Transitional provisions in other standards	340
3.5 Departures from full retrospective application	341
4 Exceptions to the retrospective application of other IFRS accounting standards	343
4.1 Introduction	343
4.2 Estimates	343
4.3 Derecognition of financial assets and financial liabilities	346
4.4 Hedge accounting: general	347
4.4.1 Applicability of IAS 39 hedge requirements	349
4.5 Hedge accounting in the opening IFRS statement of financial position	350
4.5.1 Measurement of derivatives and elimination of deferred gains and losses	350
4.5.2 Hedging relationships reflected in the opening IFRS statement of financial position	351
4.5.2.A Prohibition on retrospective designation	351
4.5.2.B Designation in anticipation of adoption of IFRS accounting standards	351
4.5.3 Reflecting cash flow hedges in the opening IFRS statement of financial position	352
4.5.4 Reflecting fair value hedges in the opening IFRS statement of financial position	353
4.5.5 Reflecting foreign currency net investment hedges in the opening IFRS statement of financial position	353

4.5.6	'Costs of hedging' (where excluded from the hedging relationship under previous GAAP)	354
4.6	Hedge accounting: subsequent treatment	355
4.6.1	Discontinuation of a hedging relationship	355
4.6.2	Ineffectiveness of cash flow and foreign currency net investment hedges in continuing hedging relationships	355
4.6.3	Ineffectiveness of fair value hedges in continuing hedging relationships	356
4.6.4	'Costs of hedging' (where excluded from the hedging relationship under previous GAAP)	357
4.7	Hedge accounting: Illustrations	357
4.8	Non-controlling interests	359
4.9	Classification and measurement of financial instruments	360
4.9.1	Classification of financial assets	360
4.9.1.A	Assessment of a modified time value of money element	360
4.9.1.B	Assessment of whether the fair value of a prepayment feature is insignificant	360
4.9.2	Measurement of financial instruments measured at amortised cost	360
4.9.3	Transition adjustments	361
4.10	Impairment of financial assets	361
4.11	Embedded derivatives	362
4.12	Government loans	362
4.13	Insurance contracts	363
4.14	Deferred tax related to leases and decommissioning, restoration and similar liabilities	363
5	Optional exemptions from the requirements of certain IFRS accounting standards	364
5.1	Introduction	364
5.2	Business combinations and acquisitions of associates and joint arrangements	364
5.2.1	Scope of the business combinations exemption in IFRS 1	364
5.2.1.A	Asset acquisitions	365
5.2.1.B	Associates and joint arrangements	365
5.2.2	Option to restate business combinations retrospectively	366
5.2.3	Classification of business combinations	368
5.2.3.A	Business combinations under common control	369
5.2.4	Assets and liabilities to be recognised in the opening IFRS statement of financial position	369
5.2.4.A	Assets and liabilities to be excluded	370
5.2.4.B	Recognition of assets and liabilities	371
5.2.4.C	Previous GAAP carrying amount as deemed cost	372
5.2.4.D	In-process research and development	374
5.2.4.E	Subsequent measurement under IFRS accounting standards not based on cost	374
5.2.4.F	Illustration of recognition and measurement requirements	375
5.2.5	Restatement of goodwill	376
5.2.5.A	Prohibition of other adjustments to goodwill	379
5.2.5.B	Derecognition of negative goodwill	379
5.2.5.C	Goodwill previously deducted from equity	380
5.2.6	Currency adjustments to goodwill	381
5.2.7	Previously unconsolidated subsidiaries	382
5.2.8	Previously consolidated entities that are not subsidiaries	384

5.2.9	Measurement of deferred taxes and non-controlling interests	384
5.2.10	Transition accounting for contingent consideration	385
5.3	Share-based payment transactions	385
5.3.1	Use of previously published fair values	388
5.3.2	Restatement of costs recognised under previous GAAP	388
5.4	Deemed cost	389
5.4.1	Fair value or revaluation as deemed cost	390
5.4.1.A	Determining deemed cost	391
5.4.1.B	Deemed cost determined before the date of transition to IFRS accounting standards	393
5.4.2	Event-driven fair value measurement as deemed cost	393
5.4.2.A	'Push down' accounting	394
5.4.2.B	'Fresh start' accounting	395
5.4.2.C	Exemption for event-driven revaluations after the date of transition	395
5.4.3	Deemed cost for oil and gas assets	395
5.4.4	Deemed cost for assets used (or previously used) in operations subject to rate regulation	397
5.4.5	Summary	399
5.5	Leases	400
5.6	Cumulative translation differences	401
5.6.1	Gains and losses arising on related hedges	402
5.7	Investments in subsidiaries, joint ventures and associates	403
5.7.1	Consolidated financial statements: subsidiaries and structured entities	403
5.7.2	Separate financial statements: Cost of an investment in a subsidiary, joint venture or associate	403
5.8	Assets and liabilities of subsidiaries, associates and joint ventures	404
5.8.1	Subsidiary becomes a first-time adopter later than its parent	405
5.8.1.A	Cumulative translation differences	407
5.8.2	Parent becomes a first-time adopter later than its subsidiary	407
5.8.3	Implementation guidance on accounting for assets and liabilities of subsidiaries, associates and joint ventures	409
5.8.4	Adoption of IFRS accounting standards on different dates in separate and consolidated financial statements	409
5.8.5	Application to investment entities under IFRS 10	410
5.8.5.A	Subsidiary adopts IFRS accounting standards after investment entity parent	410
5.8.5.B	Non-investment entity parent adopts IFRS accounting standards after investment entity subsidiary	410
5.9	Compound financial instruments	410
5.10	Designation of previously recognised financial instruments	411
5.10.1	Designation of financial asset as measured at fair value through profit or loss	411
5.10.2	Designation of financial liability at fair value through profit or loss	411
5.10.3	Designation of investment in an equity instrument	412
5.10.4	Determination of an accounting mismatch for presenting a gain or loss on financial liability	412
5.11	Fair value measurement of financial assets or financial liabilities at initial recognition	412

5.12	Decommissioning liabilities included in the cost of property, plant and equipment	412
5.12.1	IFRIC 1 exemption	412
5.12.2	IFRIC 1 exemption for oil and gas assets at deemed cost	415
5.13	Financial assets or intangible assets accounted for in accordance with IFRIC 12	415
5.14	Borrowing costs	416
5.14.1	Borrowing cost exemption	416
5.14.2	Interaction with other exemptions	417
5.15	Extinguishing financial liabilities with equity instruments	417
5.16	Severe hyperinflation	417
5.17	Joint arrangements	418
5.18	Stripping costs in the production phase of a surface mine	418
5.19	Designation of contracts to buy or sell a non-financial item	418
5.20	Revenue from contracts with customers	419
5.20.1	Definition of a completed contract	421
5.20.2	Implementation questions on definition of a completed contract	422
5.20.2.A	Elements in a contract to be considered	422
5.20.2.B	Identification of a contract under previous GAAP	422
5.20.2.C	Some or all of revenue has not been recognised under previous GAAP	424
5.20.2.D	Accounting for completed contracts excluded from transition	424
5.21	Foreign currency transactions and advance consideration	424
5.22	Regulatory deferral accounts	425
5.22.1	Defined terms in IFRS 14	425
5.22.2	Scope	426
5.22.3	Continuation of previous GAAP accounting policies (temporary exemption from IAS 8.11)	426
5.22.4	Recognition of regulatory deferral account balances	427
5.22.5	Changes in accounting policies	428
5.22.6	Presentation	429
5.22.6.A	Presentation of deferred tax balances	429
5.22.6.B	Presentation of earnings per share amounts	429
5.22.6.C	Presentation of discontinued operations and disposal groups	430
5.22.6.D	Illustrative presentation of financial statements	430
5.22.7	Disclosures	433
5.22.7.A	Explanation of activities subject to rate regulation	433
5.22.7.B	Explanation of recognised amounts	434
5.22.8	Interaction with other IFRS accounting standards	435
5.22.8.A	Application of IAS 10	435
5.22.8.B	Application of IAS 12	435
5.22.8.C	Application of IAS 36	435
5.22.8.D	Application of IFRS 3	435
5.22.8.E	Application of IFRS 5	436
5.22.8.F	Application of IFRS 10 and IAS 28	436
5.22.9	Future developments	436

6	Presentation and disclosure	437
6.1	Comparative information	437
6.2	Non-IFRS comparative information and historical summaries	437
6.3	Explanation of transition to IFRS accounting standards	438
6.3.1	Disclosure of reconciliations	439
6.3.1.A	Reconciliation by a first-time adopter that continues to publish previous GAAP financial statements	440
6.3.2	Line-by-line reconciliations and detailed explanations	441
6.3.3	Recognition and reversal of impairments	448
6.3.4	Inclusion of IFRS 1 reconciliations by cross reference	449
6.4	Disclosure of financial instruments	449
6.4.1	Designation of financial instruments	449
6.4.2	Classification of financial instruments	449
6.5	Disclosures regarding deemed cost	449
6.5.1	Use of fair value as deemed cost	449
6.5.2	Use of deemed cost for investments in subsidiaries, joint ventures and associates in separate financial statements	450
6.5.3	Use of deemed cost for oil and gas assets	450
6.5.4	Use of deemed cost for assets used (or previously used) in operations subject to rate regulation	450
6.5.5	Use of deemed cost after severe hyperinflation	450
6.6	Interim financial reports	450
6.6.1	Reconciliations in the interim financial reports	450
6.6.2	Disclosures in the interim financial report	453
6.7	Disclosure of IFRS information before adoption of IFRS accounting standards	453
6.8	Disclosure requirements for subsidiaries without public accountability (IFRS 19)	454
6.8.1	Interaction with IFRS 1	454
6.8.2	Disclosure requirements in IFRS 19 relating to the transition to IFRS accounting standards	454
7	Accounting policies and practical application issues	455
7.1	IAS 7 <i>Statement of Cash Flows</i>	455
7.2	IAS 8 <i>Accounting Policies, Changes in Accounting Estimates and Errors</i>	457
7.2.1	Changes in IFRS accounting policies during the first IFRS reporting period	457
7.2.2	Changes in estimates and correction of errors	457
7.3	IAS 12 <i>Income Taxes</i>	457
7.3.1	Previous revaluation of plant, property and equipment treated as deemed cost on transition	458
7.3.2	Share-based payment transactions subject to transitional provisions of IFRS 1	458
7.3.3	Retrospective restatements or applications	459
7.3.4	Defined benefit pension plans	460

Overview

IFRS 1 *First-time Adoption of International Financial Reporting Standards* ensures that an entity's first IFRS financial statements, and its interim financial reports for part of the period covered by those financial statements, contain high quality information that is transparent for users and comparable over all periods presented; provides a suitable starting point for accounting in accordance with IFRS accounting standards; and can be generated at a cost that does not exceed the benefits. [IFRS 1.1].

This chapter addresses the accounting for the transition to IFRS accounting standards in an entity's first IFRS financial statements, including the scope of the first IFRS financial statements in section 2 below, exceptions to the retrospective application of other IFRS accounting standards in section 4 below and exemptions from other IFRS accounting standards in section 5 below. The chapter also discusses the requirements for presentation and disclosure in the first IFRS financial statements in section 6 below, some practical issues arising from the requirements of IFRS 1 in section 7 below, and some regulatory issues in section 8 below. This chapter generally discusses the requirements of IFRS 1 for accounting periods beginning on or after 1 January 2026 unless otherwise stated and reflects the amendments to the revised version of IFRS 1 referred to in section 1.1 below.

This chapter does not deal with the first-time adoption of the earlier versions of IFRS 1. A detailed discussion of the first-time adoption using the earlier versions of the standard can be found in Chapter 6 of *International GAAP 2025* and prior editions.

What you need to know

- A first-time adopter is an entity that presents its first IFRS financial statements, which are the first annual financial statements in which the entity adopts IFRS accounting standards by an explicit and unreserved statement of compliance with IFRS accounting standards.
- IFRS 1 applies to the first IFRS financial statements and to each interim financial report, if any, presented in accordance with IAS 34 Interim Financial Reporting for part of the period covered by the first IFRS financial statements. An entity that reapplies IFRS accounting standards, but whose most recent annual financial statements did not contain an explicit and unreserved statement of compliance, is permitted to choose to apply IFRS 1 or to retrospectively apply IFRS accounting standards as if it had never stopped applying IFRS accounting standards.
- A first-time adopter must use the same accounting policies in its opening IFRS statement of financial position (as at the date of transition to IFRS accounting standards, being the beginning of the earliest comparative period presented) and throughout all periods presented in its first IFRS financial statements. These accounting policies must comply with IFRS accounting standards effective at the end of the first IFRS reporting period, except for certain mandatory exceptions and voluntary exemptions. The transitional provisions in IFRS accounting standards available to existing IFRS reporters do not apply.
- When an entity makes estimates in accordance with IFRS accounting standards, these must be consistent with estimates made under previous GAAP for the same date (after adjusting for the effects of any differences in accounting policies), unless there is objective evidence that the previous GAAP estimates were in error.
- IFRS 1 requires a first-time adopter to present its opening IFRS statement of financial position and to explain the transition to IFRS accounting standards, including reconciliations of equity at the date of transition and the end of the comparative period and of total comprehensive income of the comparative period with previous GAAP. An explanation of material adjustments to the cash flow statement is also needed. The first IFRS financial statements must also comply with the presentation and disclosure requirements of other IFRS accounting standards. There are certain disclosures, including reconciliations to previous GAAP, required in interim financial reports to which IFRS 1 applies.

1 Introduction

1.1 Objectives of first-time adoption

In principle, a first-time adopter prepares financial statements as if it had always applied IFRS accounting standards. Although entities routinely have to apply new accounting standards by way of prior year adjustment, adopting IFRS accounting standards, a new basis of accounting, is a challenging undertaking and poses a distinct set of problems. One cannot underestimate the magnitude of the effort involved in adopting a large number of new accounting standards. The requirements of individual standards will often differ significantly from those under an entity's previous GAAP and adoption of IFRS accounting standards could require information to be collected that was not needed under the previous GAAP.

IFRS 1 has a rather limited objective: to ensure that an entity's first IFRS financial statements, and its interim financial reports for part of the period covered by those first IFRS financial statements, contain high quality financial information that: *[IFRS 1.1]*

- (a) Is transparent for users and comparable over all periods presented
 - (b) Provides a suitable starting point for accounting in accordance with IFRS accounting standards
- And

- (c) Can be generated at a cost that does not exceed the benefits

It is important for users to be mindful of this objective as it provides the principal rationale underlying many of the decisions reflected in the standard, in particular the various exceptions that require, and exemptions that allow, a first-time adopter to deviate from the general rule (i.e., a retrospective application).

Although IFRS 1 owes its existence to the 2005 adoption of IFRS accounting standards by EU companies whose securities were traded on an EU regulated market,¹ one of the IASB's aims was "to find solutions that would be appropriate for any entity, in any part of the world, regardless of whether adoption occurs in 2005 or at a different time". *[IFRS 1.BC3]*. IFRS 1 had to be written in a way that completely ignores a first-time adopter's previous GAAP. This means that first-time adoption exemptions are made available to all first-time adopters, including those whose previous GAAP was very close to IFRS accounting standards. A first-time adopter that so desires will be able to make considerable adjustments to its opening IFRS statement of financial position, using the available exemptions in IFRS 1, even if the differences between its previous GAAP and IFRS accounting standards were only minor. The requirement to use the same IFRS accounting standards for all periods presented in the first IFRS financial statements could also give rise to considerable adjustments from previous GAAP.

Another issue is the potential for lack of comparability between different first-time adopters, and between first-time adopters and entities already applying IFRS accounting standards. *[IFRS 1.BC9]*. The IASB ultimately decided that it was "more important to achieve comparability over time within a first-time adopter's first IFRS financial statements and between different entities adopting IFRSs for the first time at a given date; achieving comparability between first-time adopters and entities that already apply IFRSs is a secondary objective." *[IFRS 1.BC10]*.

A revised IFRS 1 was issued in November 2008, which retains the substance of the previous version of the standard but within a changed structure. *[IFRS 1.BC3B]*. The standard has been further amended as a result of the IASB's annual improvements process, consequential amendments resulting from issuance of new standards, as well as to provide limited exceptions and exemptions that address specific matters. This approach always carried the risk that its complexity might eventually overwhelm its practical application. All these amendments are incorporated into the applicable sections of this chapter.

1.2 Convergence with US GAAP

Differences between the IFRS accounting standards and US GAAP guidance on this topic are not addressed in this chapter as the standards are not converged. Therefore, differences between IFRS accounting standards and US GAAP may exist which are not discussed in this publication.

1 Regulation (EC) No 1606/2002 of the European Parliament and of the Council of 19 July 2002 on the application of international accounting standards, Article 4.

1.3 Future developments

Consideration will be given at the time of deliberations to how new standards or amendments could impact a first-time adopter of IFRS accounting standards and any consequential amendments to IFRS 1 will be included in the new standards or amendments. Entities contemplating conversion to IFRS accounting standards are recommended to monitor the IASB's agenda in order to anticipate the potential impact of future standards or amendments on their conversions.

1.4 Defined terms

IFRS 1 defines the following terms in connection with the transition to IFRS accounting standards. [IFRS 1 Appendix A]. Regardless of the following defined terms, we refer to 'IFRS accounting standards' instead of 'International Financial Reporting Standards' or 'IFRSs' in this chapter. We also refer to the 'date of transition to IFRS accounting standards' or the 'date of transition' instead of the 'date of transition to IFRSs'. The term 'IFRS financial statements' is, however, used to mean annual financial statements prepared in accordance with IFRS accounting standards.

Extract from IFRS 1

Appendix A

Defined terms

date of transition to IFRSs	The beginning of the earliest period for which an entity presents full comparative information under IFRSs in its first IFRS financial statements .
first IFRS financial statements	The first annual financial statements in which an entity adopts International Financial Reporting Standards (IFRSs) , by an explicit and unreserved statement of compliance with IFRSs.
first IFRS reporting period	The latest reporting period covered by an entity's first IFRS financial statements .
first-time adopter	An entity that presents its first IFRS financial statements .
International Financial Reporting Standards (IFRSs)	Standards and Interpretations issued by the International Accounting Standards Board (IASB). They comprise: <ul style="list-style-type: none"> (a) International Financial Reporting Standards; (b) International Accounting Standards; (c) IFRIC Interpretations; and (d) SIC Interpretations.¹
opening IFRS statement of financial position	An entity's statement of financial position at the date of transition to IFRSs .
previous GAAP	The basis of accounting that a first-time adopter used immediately before adopting IFRSs.

¹ Definition of IFRSs amended after the name changes introduced by the revised Constitution of the IFRS Foundation in 2010.

2 Who is a first-time adopter?

2.1 The first IFRS financial statements in scope of IFRS 1

An entity's first IFRS financial statements are the first annual financial statements in which the entity adopts IFRS accounting standards, by making in those financial statements an explicit and unreserved statement of compliance with IFRS accounting standards. IFRS 1 provides a description of the circumstances in which an entity is a first-time adopter and therefore is within the standard's scope (see the extract from IFRS 1 below). [IFRS 1.3, IFRS 1 Appendix A].

Extract from IFRS 1

- 3 An entity's first IFRS financial statements are the first annual financial statements in which the entity adopts IFRSs, by an explicit and unreserved statement in those financial statements of compliance with IFRSs. Financial statements in accordance with IFRSs are an entity's first IFRS financial statements if, for example, the entity:
- (a) presented its most recent previous financial statements:
 - (i) in accordance with national requirements that are not consistent with IFRSs in all respects;
 - (ii) in conformity with IFRSs in all respects, except that the financial statements did not contain an explicit and unreserved statement that they complied with IFRSs;
 - (iii) containing an explicit statement of compliance with some, but not all, IFRSs;
 - (iv) in accordance with national requirements inconsistent with IFRSs, using some individual IFRSs to account for items for which national requirements did not exist; or
 - (v) in accordance with national requirements, with a reconciliation of some amounts to the amounts determined in accordance with IFRSs;
 - (b) prepared financial statements in accordance with IFRSs for internal use only, without making them available to the entity's owners or any other external users;
 - (c) prepared a reporting package in accordance with IFRSs for consolidation purposes without preparing a complete set of financial statements as defined in IAS 1 *Presentation of Financial Statements* (as revised in 2007); or
 - (d) did not present financial statements for previous periods.

An entity whose most recent previous financial statements contained an explicit and unreserved statement of compliance with IFRS accounting standards can never be considered a first-time adopter. This is the case even in the following circumstances: [IFRS 1.4]

- The entity presented financial statements containing an explicit and unreserved statement of compliance with IFRS accounting standards despite the fact that the auditors issued a qualified audit report on those IFRS financial statements. By contrast, an entity that makes a statement of compliance that excludes any IFRS accounting standards will still be a first-time adopter (see Illustration 2-1 below).
- The entity presented financial statements stating compliance with both national GAAP and IFRS accounting standards.
Or
- The entity stops presenting a separate set of financial statements under national requirements, which was previously presented in addition to its IFRS financial statements (see Illustration 2-2 below).

The IASB could have introduced special rules that would have required an entity that significantly departed from IFRS accounting standards to apply IFRS 1. However, the IASB considered that such rules would lead to "complexity and uncertainty". [IFRS 1.BC5]. In addition, this would have given entities applying 'IFRS-lite' (entities not applying IFRS accounting standards rigorously in all respects e.g., applying IFRS accounting standards except for certain standards and interpretations) an option to sidestep the requirements of IAS 8 *Accounting Policies, Changes in Accounting Estimates and Errors* to disclose departures from IFRS accounting standards as errors. [IFRS 1.BC6].

Illustrations 2-1 to 2-3 below demonstrate certain scenarios in connection with determining whether an entity is a first-time adopter.

Illustration 2-1: Scope of application of IFRS 1 - statement of compliance

Entity A applied IFRS accounting standards in its previous financial statements, but stated that it “applied IFRS accounting standards except for IFRS 2 *Share-based Payment*.”

Entity A is a first-time adopter because its previous financial statements did not contain an unreserved statement of compliance with IFRS accounting standards. It is irrelevant whether the auditors’ report was qualified or not. [IFRS 1.3(a)(iii)]

Entity B applied IFRS accounting standards in its previous financial statements and stated that “the financial statements are prepared in conformity with IFRS accounting standards.” Despite that statement, Entity B had not applied IFRS 2.

Entity B is not a first-time adopter because its financial statements contained an unreserved statement of compliance with IFRS accounting standards. Even if the auditors had qualified their report, the entity would still not be a first-time adopter. [IFRS 1.4(c)].

It is clear that the scope of IFRS 1 is very much rules-based, which as Illustration 2-1 above demonstrates, can lead to different answers in similar situations and sometimes to counter-intuitive answers.

Illustration 2-2: Scope of application of IFRS 1 - entity applying national GAAP and IFRS accounting standards

Entity C prepares two sets of financial statements, one set of financial statements based on its national GAAP and the other set based on IFRS accounting standards. The IFRS financial statements contained an explicit and unreserved statement of compliance with IFRS accounting standards and were made available externally. From 20X3 onwards, Entity C stops presenting financial statements based on its national GAAP.

Entity C is not a first-time adopter because it already published financial statements that contained an explicit and unreserved statement of compliance with IFRS accounting standards. [IFRS 1.4(a)].

Illustration 2-3: Scope of application of IFRS 1 - first IFRS financial statements outside the annual financial statements

Entity D prepared financial statements under its previous GAAP for the year ended 31 December 20X2. In connection with its initial public offering, Entity D published an offering document that includes IFRS financial statements that contain an explicit and unreserved statement of compliance with IFRS accounting standards. The date of transition to IFRS accounting standards for the purposes of those financial statements, which cover the most recent three financial years, was 1 January 20X0.

Entity D’s annual financial statements (as required by the legal or regulatory framework of its jurisdiction) are prepared under IFRS accounting standards for the first time for the year ended 31 December 20X3.

The IFRS financial statements included in Entity D’s offering document were its first IFRS financial statements, containing an explicit and unreserved statement of compliance with IFRS accounting standards. Therefore, Entity D does not apply IFRS 1 in its first annual financial statements prepared under IFRS accounting standards as it is not a first-time adopter. [IFRS 1.3]. Although not required by IFRS accounting standards, Entity D could, if it wished to do so, repeat information about its transition to IFRS accounting standards in its annual financial statements for the year ended 31 December 20X3.

If, however, Entity D had included financial statements in its offering document that did not contain an explicit and unreserved statement of compliance with IFRS accounting standards then the annual financial statements for 20X3 would need to be prepared in accordance with IFRS 1. If those financial statements only included comparative information for the year ended 31 December 20X2 then Entity D’s date of transition would be 1 January 20X2.

An entity will be a first-time adopter if it has previously prepared financial statements in accordance with IFRS accounting standards but only for internal purposes, for example, where the entity had:

- Prepared financial statements in accordance with IFRS accounting standards for internal use only, without making them available to the entity’s owners or any other external users [IFRS 1.3(b)]
- Or
- Prepared a reporting package in accordance with IFRS accounting standards for consolidation purposes without preparing a complete set of financial statements as defined in IAS 1 [IFRS 1.3(c)]

How we see it

Where previous financial statements containing an explicit and unreserved statement of compliance with IFRS accounting standards have been authorised for issue, but are subject to restrictions for specific use or that limited the distribution to certain users, these restrictions will need to be evaluated to determine whether or not those previous financial statements were general purpose financial statements (see section 2.1.1 below).

If the previous financial statements were general purpose financial statements made available to the entity's owners or any other external users, the entity is not a first-time adopter. In our view, the availability of financial statements, as described in IFRS 1.3(b), does not require active distribution of the financial statements. If the financial statements could be requested by owners or other external users (and there is a known mechanism by which such requests could be made), the financial statements would be available.

An entity that is a subsidiary of its parent that reports in accordance with IFRS accounting standards and has previously prepared only a reporting package in accordance with IFRS accounting standards for consolidation purposes is a first-time adopter. However, it could use the amounts reported for it in the group's financial statements when it adopts IFRS accounting standards for its own financial statements on the basis explained in section 5.8.1 below.

Finally, IFRS 1 applies also to a first-time adopter that did not present financial statements for previous periods. [IFRS 1.3(d)]. For example, when an entity transfers its operations into a new company prior to an issue to the public, the new company would be a first-time adopter if the entity never applied IFRS accounting standards in the past.

An entity that is already applying IFRS accounting standards in preparing its financial statements must not apply IFRS 1 to changes in its accounting policies. Instead, such an entity applies: [IFRS 1.5]

- The requirements on changes in accounting policies in IAS 8
- And
- Specific transitional requirements in other IFRS accounting standards

2.1.1 What are general purpose financial statements?

IFRS accounting standards are intended to be applied in the preparation of general purpose financial statements, i.e., those intended to meet the needs of users who are not in a position to require an entity to prepare reports tailored to their particular information needs. Many existing and potential investors, lenders and other creditors ('the primary users') cannot require reporting entities to provide information directly to them and must rely on general purpose financial statements for much of the financial information they need. [IAS 1.1, IFRS 18.1, IAS 1.7, IFRS 18 Appendix A, CF 1.5]. The objective of general purpose financial reporting is to provide financial information about the reporting entity that is useful to the primary users in making decisions relating to providing resources to the entity. [CF 1.2]. Management of an entity need not rely on general purpose financial reports, since the relevant information can be obtained internally (see Chapter 2 and Chapter 3). [CF 1.9].

How we see it

Judgement is required in making the determination of whether or not the previous financial statements were general purpose financial statements in accordance with IFRS accounting standards, based on the specific facts and circumstances. Factors to consider include: the purpose and intended use for which the financial statements have been prepared (including the nature of any restrictions over their use); the extent to which the financial statements have been made available to owners or other external users; whether or not the recipients are permitted to make the financial statements available to other users; and whether the financial statements have been authorised for issue by the relevant body.

A restriction of the distribution (or over the use) of the financial statements authorised for issue does not necessarily mean the financial statements are not general purpose financial statements, as explained below.

For example, if a set of financial statements that includes an explicit and unreserved statement of compliance with IFRS accounting standards was made available to an external party (such as a bank for the purposes of a lending decision) and the information has not specifically been tailored for the bank's needs, the financial statements would generally be regarded as general purpose financial statements. However, where a set of financial statements that includes an explicit and unreserved statement of compliance with IFRS accounting standards was made available only to an entity's board members, CEO or CFO (who are also the entity's shareholders) but not to other owners, there could be a question over whether these are general purpose financial statements. Accordingly, it would be necessary to understand the full facts and circumstances in making this determination, taking into account the above factors.

2.2 When is IFRS 1 applied?

An entity that presents its first IFRS financial statements is a first-time adopter, [IFRS 1 Appendix A], and, accordingly, must apply IFRS 1 in preparing those financial statements. [IFRS 1.2(a)]. It must also apply the standard in each interim financial report that it presents in accordance with IAS 34 for part of the period covered by its first IFRS financial statements. [IFRS 1.2(b)]. Therefore, a first-time adopter does not apply IFRS 1 to a 'trading statement', an 'earnings press release' or other financial report issued at its interim reporting date that is not described as complying with IAS 34 or IFRS accounting standards. In Practical example 2-1 below, Sony Group Corporation described its adoption of IFRS accounting standards in its interim or quarterly financial statements.

Practical example 2-1: Sony Group Corporation (For the three months ended June 30, 2021)	Japan
<p>Quarterly Securities Report [extract] Notes to Condensed Consolidated Financial Statements (Unaudited) [extract] 2. Basis of preparation [extract]</p> <p><i>Compliance with International Financial Reporting Standards</i></p> <p>The condensed consolidated financial statements of Sony have been prepared in accordance with International Accounting Standards ("IAS") 34 "Interim Financial Reporting", as issued by the International Accounting Standards Board ("IASB").</p> <p>Sony adopted International Financial Reporting Standards ("IFRS") for the first time this fiscal year (commencing on April 1, 2021 and ending on March 31, 2022), and so the annual consolidated financial statements for this fiscal year are the first ones prepared in conformity with IFRS. The date of Sony's transition to IFRS is April 1, 2020. Sony adopted IFRS 1 "First-Time Adoption of International Financial Reporting Standards" ("IFRS 1") for the transition to IFRS.</p> <p>The effect of the transition to IFRS on Sony's financial position, results of operations and cash flows is presented in Note 11.</p>	

2.2.1 Repeat application of IFRS 1

In some cases, an entity's most recent annual financial statements did not contain an explicit and unreserved statement of compliance with IFRS accounting standards, but the entity applied IFRS accounting standards in a previous reporting period (giving an explicit and unreserved statement of compliance with IFRS accounting standards).

IFRS 1 does not prohibit an entity from applying IFRS 1 more than once. In May 2012, IFRS 1 was amended to clarify that an entity that stopped applying IFRS accounting standards in the past and chooses, or is required, to resume preparing IFRS financial statements has the option to apply IFRS 1 again. [IFRS 1.4A]. The Board decided, based on cost-benefit grounds, that "the entity should be allowed, rather than required, to apply IFRS 1" when it reapplies IFRS accounting standards. [IFRS 1.BC6C]. If the entity chooses not to reapply IFRS 1, it must retrospectively restate its financial statements in accordance with IAS 8 as if it had never stopped applying IFRS accounting standards.

Whichever option is selected the entity is required to disclose the reasons why it stopped applying IFRS accounting standards and why it resumed applying IFRS accounting standards. [IFRS 1.23A]. When the entity does not elect to reapply IFRS 1, it must also disclose the reasons for choosing the retrospective restatement method, in addition to giving the disclosures required by IAS 8. [IFRS 1.4B, IFRS 1.23B].

The IASB explained this issue with an example of an entity that had applied IFRS 1 in connection with a foreign listing, subsequently delisted from the foreign exchange and no longer presented IFRS financial statements, but is now adopting IFRS accounting standards again together with other entities in its local jurisdiction - see Illustration 2-4 below. [IFRS 1.BC6A].

Illustration 2-4: Repeated application of IFRS 1 when an entity does not apply IFRS accounting standards for one year

Entity A prepared IFRS financial statements for 20X0 and 20X1 that contained an explicit and unreserved statement of compliance with IFRS accounting standards. However, in 20X2 Entity A did not make an explicit and unreserved statement of compliance with IFRS accounting standards.

If Entity A resumes presenting financial statements in accordance with IFRS accounting standards, it could choose to apply IFRS accounting standards as a first-time adopter or it could elect to restate its financial statements retrospectively as if it had never stopped producing IFRS financial statements.

If it elects to apply IFRS accounting standards as a first-time adopter for the purposes of its 20X3 financial statements, there is no requirement under IFRS 1 for Entity A to base its first IFRS financial statements in 20X3 on the IFRS information that it produced before 20X3. Therefore, Entity A is able to apply the IFRS 1 exemptions without regard to the elections it made in its first IFRS financial statements in 20X0. In fact, in this case, Entity A is unable to apply certain IFRS 1 exemptions by reference to the date of transition to IFRS accounting standards that it used in its 20X0 financial statements (see section 3.5 below).

2.3 Determining the previous GAAP

Some entities prepare two complete sets of financial statements, e.g., one set of financial statements based on national GAAP and another set for distribution to foreign investors based on US GAAP. Applying the definition of 'previous GAAP', i.e., "The basis of accounting that a **first-time adopter** used immediately before adopting IFRSs", [IFRS 1 Appendix A], to a dual reporting entity is not straightforward, as the examples below illustrate:

- (a) *A dual reporting entity adopts IFRS accounting standards and at the same time stops presenting financial statements under its national GAAP and US GAAP:*

Both national GAAP and US GAAP meet the definition of 'previous GAAP'. However, the entity can only present one set of IFRS financial statements. Therefore, the entity must choose a 'previous GAAP'.

How we see it

While, at least in theory, this appears to be a free choice there are a number of limiting constraints to take into account in determining previous GAAP:

- (i) National legislation and regulatory requirements could restrict an entity's options and require either national GAAP or US GAAP to be designated as the previous GAAP.
- (ii) Comparability with other entities in the same jurisdiction could be increased if all entities in that jurisdiction use the same GAAP as their previous GAAP.
- (iii) One set of financial statements could be considered to be the 'main' set of financial statements, for example:
 - If the national GAAP financial statements received very limited circulation then they are clearly not the entity's 'main' financial statements. Conversely, if the US GAAP financial statements are only prepared for a specific purpose (e.g., to obtain a bank loan) then they might not be the entity's 'main' financial statements.
 - The relative dominance of shareholder groups might provide an indication as to which set of financial statements is considered to be the 'main' set of financial statements.

An entity applies judgement when the constraints above do not all identify the same GAAP as the previous GAAP.

IFRS 1 only requires disclosure of reconciliations between an entity's previous GAAP and IFRS accounting standards. However, it will be advisable for an entity to provide disclosures, on a voluntary basis, that contain sufficient information to enable users to understand the material reconciling items between the IFRS financial statements and the financial statements that were prepared under its financial reporting framework which is not selected as the previous GAAP. Some national regulators (e.g., the US Securities and Exchange Commission), in fact, expect such disclosures (see section 8.1.2 below).²

² International Practices Task Force - November 25, 2008 - Highlights, Center for Audit Quality Washington Office, 25 November 2008.

- (b) *A dual reporting entity adopts IFRS accounting standards and at the same time continues to present financial statements under its national GAAP but stops presenting financial statements under US GAAP:*

How we see it

While one might expect US GAAP to be treated as the previous GAAP, both national GAAP and US GAAP meet the definition of 'previous GAAP'. An entity therefore considers the criteria (i) to (iii) under (a) above in determining its previous GAAP.

If an entity treated its national GAAP as its previous GAAP, then it could still present an explanation of the differences between US GAAP and IFRS accounting standards to aid former users of the US GAAP financial statements, if it wishes or if a regulator requires it.

As illustrated in Practical example 2-2 below, when Infosys Technologies Limited adopted IFRS accounting standards it treated Indian GAAP as its previous GAAP even though it continued to report under Indian GAAP for statutory purposes. However, Infosys provided additional reconciliations between US GAAP and its previous GAAP.

- (c) *A dual reporting entity adopts IFRS accounting standards and at the same time stops presenting financial statements under US GAAP. Several years later it stops presenting financial statements under its national GAAP:*

The entity is not a first-time adopter when it ceases to present financial statements under its national GAAP, even if the entity treated US GAAP (rather than its national GAAP) as its previous GAAP when it adopted IFRS accounting standards. [IFRS 1.4(a)]. However, the entity could still present an explanation of the differences between its national GAAP and IFRS accounting standards to aid former users of its national GAAP financial statements, if it wishes or if a regulator requires it.

Practical example 2-2: Infosys Technologies Limited (2009)

India

FORM 20-F [extract]

Notes to the Consolidated Financial Statements [extract]

2 Notes to the consolidated financial statements [extract]

2.1 Transition to IFRS reporting

The financial statements of Infosys Technologies Limited and its subsidiaries have been prepared in accordance with IFRS. Infosys Technologies Limited and its subsidiaries adopted all IFRS standards and the adoption was carried out in accordance to IFRS 1, using April 1, 2007 as the transition date. The transition was carried out from Indian GAAP, which was considered as the Previous GAAP. The effect of adopting IFRS has been summarized in the reconciliations provided.

The transition to IFRS reporting has resulted in changes in the reported financial statements, notes thereto and accounting principles compared to what had been presented previously.

Until the adoption of IFRS, the financial statements included in the Annual Reports on Form 20-F and Quarterly Reports on Form 6-K were prepared in accordance with accounting principles generally accepted in the United States of America (U.S. GAAP) under the historical cost convention on the accrual basis. However, for the purposes of the transition, such transition was carried out from Indian GAAP, which has been considered as the Previous GAAP. The reconciliation statements provided in Note 2.2 describe the differences between IFRS and Indian GAAP. In addition, reconciliations from U.S. GAAP to Indian GAAP have been provided in Note 2.3 for the periods presented.

The Group's financial statements for the year ending March 31, 2009 are the first annual financial statements to comply with IFRS.

...

2.3 The following voluntary reconciliations provide a quantification of reconciliation items between U.S. GAAP and Previous GAAP :

- equity as at April 1, 2007 (Note 2.3.1)
- equity as at March 31, 2008 (Note 2.3.2)
- equity as at March 31, 2009 (Note 2.3.3)
- net income for the year ended March 31, 2008 (Note 2.3.4)
- net income for the year ended March 31, 2009 (Note 2.3.5)

...

2.3.1 Transition to IFRS accounting standards from a similar GAAP

One consequence of the ongoing harmonisation of accounting standards around the world is that many national GAAPs are now virtually identical to IFRS accounting standards. However, differences between these national GAAPs and IFRS accounting standards often exist regarding the scope, transitional provisions, effective dates and actual wording of standards. In addition, some national GAAPs contain accounting alternatives not permitted by IFRS accounting standards.

When an entity reporting under such a national GAAP (e.g., Singapore GAAP) adopts IFRS accounting standards there will often not be major changes required in its accounting policies to comply with IFRS accounting standards. A similar situation could arise where an entity reporting under the IFRS for SMEs adopts full IFRS accounting standards, for example, due to an IPO. However, under IFRS 1, it is not relevant whether or not a previous GAAP was very similar to IFRS accounting standards. Therefore, regardless of the absence of significant differences in accounting policies, that entity would be a first-time adopter when it includes an explicit and unreserved statement of compliance with IFRS accounting standards for the first time. So, even if the entity's accounting policies were already fully aligned with IFRS accounting standards:

- (a) It would be permitted to apply the IFRS 1 exemptions and required to apply the IFRS 1 exceptions.
- (b) It would need to restate items for which the applicable first-time adoption exceptions differ from the transitional rules applicable to ongoing reporters (e.g., classification and measurement of financial assets).
- (c) It would not be permitted to apply different versions of IFRS accounting standards that were effective at earlier dates.
- (d) It would need to explain the transition to IFRS accounting standards.

How we see it

Notwithstanding the above, we believe an entity that:

- Reported under a national GAAP that is virtually identical with IFRS accounting standards in all respects
- Applied the national GAAP equivalent of IFRS 1 when the entity adopted that national GAAP
- Made an explicit and unreserved statement of compliance with that national GAAP in its most recent financial statements

And

- Could have made an explicit and unreserved statement of compliance with IFRS accounting standards in those financial statements, if required

Does not have to reapply IFRS 1 the first time that it makes an explicit and unreserved statement of compliance with IFRS accounting standards.

For example, if an entity that meets the requirements described above decides to make an explicit and unreserved statement of compliance with IFRS accounting standards for the first time, either voluntarily or required to do so by a regulatory requirement related to an IPO, the entity would not be required to reapply IFRS 1.

3 Opening IFRS statement of financial position

At the date of transition to IFRS accounting standards, an entity is required to prepare and present an opening IFRS statement of financial position that is the starting point for its accounting under IFRS accounting standards. [IFRS 1.6]. The date of transition to IFRS accounting standards is the beginning of the earliest period for which an entity presents full comparative information under IFRS accounting standards in its first IFRS financial statements. [IFRS 1 Appendix A]. Therefore, the date of transition for an entity reporting under IFRS accounting standards for the first time for the year ended on 31 December 20X3 and presenting one year of comparative figures is 1 January 20X2. It is recommended that entities consider the filing requirements for interim financial reports that a regulator in their jurisdiction could impose. For example, a regulator could require the opening IFRS statement of financial position to be presented in the first IFRS interim financial report even though this is not an IFRS 1 presentation requirement (see section 6.6 below).

3.1 First-time adoption timeline

An entity's first annual IFRS financial statements must include at least three statements of financial position (i.e., balance sheets), two statements of profit or loss and other comprehensive income, two separate statements of profit or loss (if presented), two statements of cash flows and two statements of changes in equity and related notes, including comparative information for all statements presented. [IFRS 1.21]. The beginning of the earliest comparative period for which the entity presents full comparative information under IFRS accounting standards will be treated as its date of transition to IFRS accounting standards. Figure 3-1 below shows how for an entity with a December year-end the above terms are related:

Figure 3-1: First-time adoption timeline

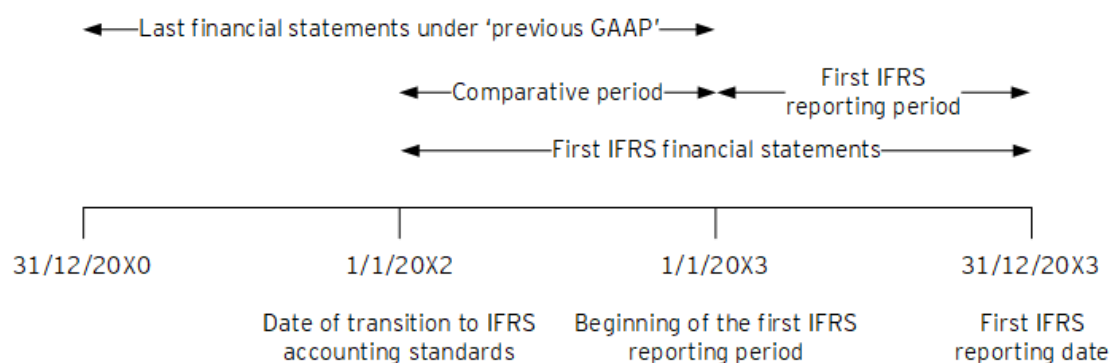

Figure 3-1 above also illustrates that there is a period of overlap, for the financial year 20X2, which is reported first under the entity's previous GAAP and then as a comparative period under IFRS accounting standards. Illustration 3-1 below demonstrates how an entity determines its date of transition to IFRS accounting standards.

Illustration 3-1: Determining the date of transition to IFRS accounting standards

Entity A's year-end is 31 December, and it presents financial statements that include one comparative period. Entity A is required (e.g., by national legislation) to produce IFRS financial statements for the first annual accounting period starting on or after 1 January 20X3.

Entity A's first IFRS financial statements are for the period ending on 31 December 20X3. Its date of transition to IFRS accounting standards is 1 January 20X2, which is the beginning of the single comparative period included in its first IFRS financial statements.

Entity B's year-end is 31 July, and it presents financial statements that include two comparative periods. Entity B is required to produce IFRS financial statements for the first annual accounting period starting on or after 1 January 20X3.

Entity B's first IFRS financial statements are for the period ending on 31 July 20X4. Its date of transition to IFRS accounting standards is 1 August 20X1, which is the beginning of the earliest period for which full comparative information is included in its first IFRS financial statements.

Entity C's most recent financial statements, under its previous GAAP, are for the period from 1 July 20X1 to 31 December 20X2. Entity C presents its first IFRS financial statements (that include one comparative period) for the period ending 31 December 20X3.

Entity C's date of transition to IFRS accounting standards is 1 July 20X1, which is the beginning of the comparative period included in its first IFRS financial statements.

How we see it

While IFRS accounting standards require presentation of at least one comparative period, the comparative period is not required to be equal in length to the current period. Thus, the entity's date of transition will be the beginning of the earliest comparative period, irrespective of the length of that period.

However, an entity must disclose the reason why the comparative period is not equal in length and the fact that the amounts presented in the financial statements are not entirely comparable. [IAS 1.36, IFRS 18.28].

Similarly, it is generally not considered to be a problem if the current or comparative period in an entity's first IFRS financial statements only covers a 52-week period, because IAS 1 does not preclude the practice of presenting financial statements for 52-week financial periods. [IAS 1.37, IFRS 18.29].

3.2 Opening IFRS statement of financial position and accounting policies

Extract from IFRS 1

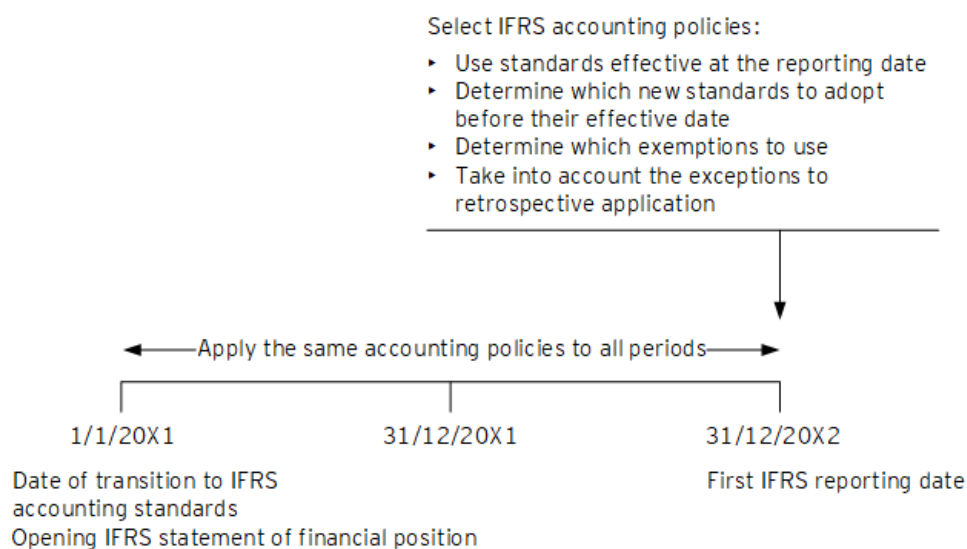

- | | |
|---|--|
| 7 | An entity shall use the same accounting policies in its opening IFRS statement of financial position and throughout all periods presented in its first IFRS financial statements. Those accounting policies shall comply with each IFRS effective at the end of its <i>first IFRS reporting period</i> , except as specified in paragraphs 13-19 and Appendices B-E. |
| 8 | An entity shall not apply different versions of IFRSs that were effective at earlier dates. An entity may apply a new IFRS that is not yet mandatory if that IFRS permits early application. |
| | ... |
| 9 | The transitional provisions in other IFRSs apply to changes in accounting policies made by an entity that already uses IFRSs; they do not apply to a <i>first-time adopter's</i> transition to IFRSs, except as specified in Appendices B-E. |

The fundamental principle of IFRS 1 is to require full retrospective application of IFRS accounting standards effective at the end of an entity's first IFRS reporting period, but with limited exceptions and exemptions for the opening IFRS statement of financial position. IFRS 1 requires a first-time adopter to use the same accounting policies in its opening IFRS statement of financial position and for all periods presented in its first IFRS financial statements. However, this is not always straightforward, since to achieve this, the entity complies with each IFRS accounting standard effective at the end of its first IFRS reporting period fully retrospectively, after taking into account a number of allowed exemptions from certain IFRS accounting standards and mandatory exceptions to retrospective application of other IFRS accounting standards in accordance with IFRS 1, as provided in IFRS 1.13-18³ and Appendices B-E of IFRS 1 (see section 3.5 below). [IFRS 1.7, IFRS 1.9, IFRS 1.13, IFRS 1.18].

The requirement to apply the same accounting policies to all periods also prohibits a first-time adopter from applying previous versions of standards that were effective at earlier dates. [IFRS 1.8]. As well as enhancing comparability, the IASB believes that this gives users comparative information that is based on IFRS accounting standards that are superior to superseded versions of those standards and avoids unnecessary costs. [IFRS 1.BC11].

For similar reasons, IFRS 1 also permits an entity to choose to apply either the current standard or a new standard that is not yet mandatory if that standard allows early application. [IFRS 1.8]. Whichever standard is selected it would need to be applied consistently throughout the periods presented in its first IFRS financial statements on a retrospective basis, unless IFRS 1 provides an exemption or an exception that permits or requires otherwise. [IFRS 1.BC11A]. Figure 3-2 below summarises these requirements in IFRS 1.

3 IFRS 1.7 refers to paragraphs 13-19 as in the extract above, but paragraph 19 has been deleted.

Figure 3-2: Timeline for the first IFRS financial statements

Depending on the end of its first IFRS reporting period, there could be a choice over which version of a particular standard to apply.

Illustration 3-2: Prohibition from applying superseded standards

Entity A's first IFRS reporting period ends on 31 December 2026 and its date of transition to IFRS accounting standards is 1 January 2025 as it presents financial statements including one comparative period.

How does Entity A apply *Contracts Referencing Nature-dependent Electricity* (Amendments to IFRS 9 and IFRS 7), which are effective for annual periods beginning on or after 1 January 2026, in its first IFRS financial statements?

IFRS 1 requires Entity A to apply the amendments to IFRS 9 and IFRS 7 because they are effective at the end of its first IFRS reporting period. IFRS 1 prohibits an entity from applying a superseded version of IFRS 9 and IFRS 7 to transactions that occurred before 1 January 2026 while applying the amended standard in the periods beginning on or after 1 January 2026. Entity A must apply the above-mentioned amendments to IFRS 9 and IFRS 7 fully retrospectively for all periods presented. [IFRS 1.7, IFRS 1.8].

IFRS 1 sets out requirements for the recognition, derecognition, classification and measurement of assets and liabilities in an entity's opening statement of financial position as follows: [IFRS 1.10]

Extract from IFRS 1

- 10 Except as described in paragraphs 13-19 and Appendices B-E, an entity shall, in its opening IFRS statement of financial position:
- recognise all assets and liabilities whose recognition is required by IFRSs;
 - not recognise items as assets or liabilities if IFRSs do not permit such recognition;
 - reclassify items that it recognised in accordance with previous GAAP as one type of asset, liability or component of equity, but are a different type of asset, liability or component of equity in accordance with IFRSs; and
 - apply IFRSs in measuring all recognised assets and liabilities.

Any change in accounting policies on adoption of IFRS accounting standards could cause changes in the amounts recorded under previous GAAP in respect of events and transactions that occurred before the date of transition to IFRS accounting standards. The effects of these changes are recognised at the date of transition to IFRS accounting standards in retained earnings or, if appropriate, in another category of equity. [IFRS 1.11]. For example, an entity that applies the revaluation model under IAS 16 *Property, Plant and Equipment* (see Chapter 19) in its first IFRS financial statements would recognise the difference between cost (or deemed cost) and the revalued amount of property, plant and equipment in a revaluation reserve as a separate component of equity. [IFRS 1.16.10]. By contrast, an entity that had applied a revaluation model under its previous GAAP, but decided to apply the cost model under IAS 16, would reallocate the revaluation reserve to retained earnings or a separate component of equity not described as a revaluation reserve (see section 7.4.3 below).

A first-time adopter is under no obligation to ensure that its IFRS accounting policies are similar to or as close as possible to its previous GAAP accounting policies. Therefore, for example, a first-time adopter could adopt the IAS 16 revaluation model despite the fact that it applied a cost model under its previous GAAP or *vice versa*. However, a first-time adopter would need to take into account the guidance in IAS 8 to ensure that its choice of accounting policy results in information that is relevant and reliable. [IAS 8.8, IAS 8.10, IAS 8.11, IAS 8.12].

The requirement to prepare an opening IFRS statement of financial position and 'reset the clock' at that date poses a number of challenges for first-time adopters. Even a first-time adopter that already applies a standard that is directly based on IFRS accounting standards might need to or decide to restate items in its opening IFRS statement of financial position (see section 2.3.1 above). For example, an entity applying a property, plant and equipment standard under previous GAAP that is based on IAS 16 could decide to use a deemed cost exemption for certain of its assets as allowed by IFRS 1.

3.3 Fair value and deemed cost

Some exemptions in IFRS 1 refer to 'fair value' and 'deemed cost', which the standard defines as follows: [IFRS 1 Appendix A]

- **Deemed cost:**

An amount used as a surrogate for cost or depreciated cost at a given date. Subsequent depreciation or amortisation assumes that the entity had initially recognised the asset or liability at the given date and that its cost was equal to the deemed cost.

- **Fair value:**

The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date (see Chapter 15 and IFRS 13 *Fair Value Measurement*).

The fair values determined by a first-time adopter reflect the conditions that existed at the date for which they were determined, i.e., the first-time adopter does not apply hindsight in measuring the fair value at an earlier date.

3.4 Transitional provisions in other standards

The transitional provisions in other standards only apply to entities that already report under IFRS accounting standards. Therefore, a first-time adopter is not able to apply those transitional provisions (unless specified by the requirements in IFRS 1.14-17 and Appendices B-E of IFRS 1). [IFRS 1.9, IFRS 1.12, IFRS 1.13, IFRS 1.18]. The exceptions and the exemptions to this general rule are covered in the later parts of this chapter that deal with the exceptions to the retrospective application of other IFRS accounting standards (see section 4 below) and the exemptions from other IFRS accounting standards (see section 5 below).

It is important to note that the transition rules for first-time adopters and entities that already report under IFRS accounting standards could differ significantly.

The IASB considers "case by case when it issues a new IFRS whether a first-time adopter should apply that IFRS retrospectively or prospectively. The Board expects that retrospective application will be appropriate in most cases, given its primary objective of comparability over time within a first-time adopter's first IFRS financial statements. However, if the Board concludes in a particular case that prospective application by a first-time adopter is justified, it will amend the IFRS on first-time adoption of IFRSs." [IFRS 1.BC14].

IAS 8 allows exceptions from retrospective application for entities that cannot apply a requirement after making every reasonable effort to do so. There is no such relief in IFRS 1. The IFRS Interpretations Committee (IFRS IC) agreed "that there were potential issues, especially with respect to 'old' items, such as property, plant and equipment. However, those issues could usually be resolved by using one of the transition options available in IFRS 1." (See section 3.5 below).⁴ For example, an entity could elect to use fair value as deemed cost at the date of transition to IFRS accounting standards if an entity is unable to apply IAS 36 *Impairment of Assets* on a fully retrospective basis (see section 7.12 below). Therefore no 'impracticability relief' was added to the standard for first-time adopters. The transition options usually involve using certain surrogate values as deemed cost and are discussed in section 5.4 below.

⁴ [IFRIC Update](#), October 2004, available on the IFRS Foundation's website.

3.5 Departures from full retrospective application

Extract from IFRS 1

- 12 This IFRS establishes two categories of exceptions to the principle that an entity's opening IFRS statement of financial position shall comply with each IFRS:
- (a) paragraphs 14-17 and Appendix B prohibit retrospective application of some aspects of other IFRSs.
 - (b) Appendices C-E grant exemptions from some requirements of other IFRSs.

IFRS 1 provides for mandatory exceptions and optional exemptions as follows. [IFRS 1.12].

Mandatory exceptions: IFRS 1 prohibits retrospective application of IFRS accounting standards in some areas, particularly where this would require judgements by management about past conditions after the outcome of a particular transaction is already known. The mandatory exceptions in the standard cover the following situations: [IFRS 1.12(a), IFRS 1.13, IFRS 1.14, IFRS 1.B1]

- (a) Estimates (see section 4.2 below)
 - (b) Derecognition of financial assets and financial liabilities (see section 4.3 below)
 - (c) Hedge accounting (see sections 4.4 to 4.7 below)
 - (d) Non-controlling interests (see section 4.8 below)
 - (e) Classification and measurement of financial instruments (see section 4.9 below)
 - (f) Impairment of financial assets (see section 4.10 below)
 - (g) Embedded derivatives (see section 4.11 below)
 - (h) Government loans (see section 4.12 below)
 - (i) Insurance contracts (see section 4.13 below)
- And
- (j) Deferred tax related to leases and decommissioning, restoration and similar liabilities (see section 4.14 below)

The reasoning behind most of the exceptions is that retrospective application of IFRS accounting standards in these situations could easily result in an unacceptable use of hindsight. [IFRS 1.BC12(b)]. This could lead to arbitrary or biased restatements, which would be neither relevant nor reliable.

Optional exemptions: In addition to the mandatory exceptions, IFRS 1 grants limited optional exemptions from the general requirement of full retrospective application of the standards in force at the end of an entity's first IFRS reporting period, considering the fact that the cost of complying with them would be likely to exceed the benefits to users of financial statements. [IFRS 1.BC12(a)]. The standard provides exemptions in relation to: [IFRS 1.12(b), IFRS 1.18, IFRS 1 Appendix C, IFRS 1.D1]

- (a) Business combinations and acquisitions of associates and joint arrangements (see section 5.2 below)
- (b) Share-based payment transactions (see section 5.3 below)
- (c) Deemed cost (see section 5.4 below)
- (d) Leases (see section 5.5 below)
- (e) Cumulative translation differences (see section 5.6 below)
- (f) Investments in subsidiaries, joint ventures and associates (see section 5.7 below)
- (g) Assets and liabilities of subsidiaries, associates and joint ventures (see section 5.8 below)
- (h) Compound financial instruments (see section 5.9 below)
- (i) Designation of previously recognised financial instruments (see section 5.10 below)
- (j) Fair value measurement of financial assets or financial liabilities at initial recognition (see section 5.11 below)
- (k) Decommissioning liabilities included in the cost of property, plant and equipment (see section 5.12 below)
- (l) Financial assets or intangible assets accounted for in accordance with IFRIC 12 *Service Concession Arrangements* (see section 5.13 below)
- (m) Borrowing costs (see section 5.14 below)
- (n) Extinguishing financial liabilities with equity instruments (see section 5.15 below)
- (o) Severe hyperinflation (see section 5.16 below)

- (p) Joint arrangements (see section 5.17 below)
- (q) Stripping costs in the production phase of a surface mine (see section 5.18 below)
- (r) Designation of contracts to buy or sell a non-financial item (see section 5.19 below)
- (s) Revenue from contracts with customers (see section 5.20 below)
- (t) Foreign currency transactions and advance consideration (see section 5.21 below)

And

- (u) Regulatory deferral accounts (see section 5.22 below). This exemption is dealt with in IFRS 14 *Regulatory Deferral Accounts*, rather than IFRS 1. [IFRS 14.5].

In addition to the above, IFRS 1 grants certain exemptions that are intended to have short-term applications. These are included in Appendix E to the standard. [IFRS 1 Appendix E]. At the time of writing, there are no short-term exemptions that apply where an entity's first IFRS reporting period begins on or after 1 January 2026 (and therefore the requirements of Appendix E are not discussed in this chapter). First-time adopters should monitor developments for any new short-term exemptions that could be issued after the publication of this edition.

It is specifically prohibited under IFRS 1 to apply exemptions by analogy to other items. [IFRS 1.18].

How we see it

Application of the transition exemptions is entirely optional except for IFRS 1.D16 and D17 (see section 5.8 below), i.e., a first-time adopter can pick and choose the exemptions that it wants to apply. Importantly, the IASB did not establish a hierarchy of exemptions. Therefore, we believe when an item is covered by more than one exemption, a first-time adopter has a free choice in determining the order in which it applies the exemptions.

Illustration 3-3 below provides an example.

Illustration 3-3: Order of application of exemptions

Entity A acquired a building in a business combination. If Entity A were to apply the business combinations exemption described in section 5.2 below, it would, at the date of transition to IFRS accounting standards, recognise the building at the acquisition date value net of subsequent depreciation and impairment of CU120. However, if it were to use the fair value as the deemed cost of the building it would have to recognise it at CU150. Which value does Entity A use?

Entity A can choose whether it wants to recognise the building at CU120 or CU150 in its opening IFRS statement of financial position. The fact that Entity A uses the business combinations exemption does not prohibit it from also applying the 'fair value as deemed cost' exemption in relation to the same assets. Also, Entity A is not required to apply the 'fair value as deemed cost' exemption to all assets or to all similar assets as entities can choose to which assets they want to apply this exemption (see section 5.4 below).

4 Exceptions to the retrospective application of other IFRS accounting standards

4.1 Introduction

IFRS 1 provides a number of mandatory exceptions that specifically prohibit retrospective application of some aspects of other IFRS accounting standards as listed in section 3.5 above. Each of the exceptions is explained in detail below.

4.2 Estimates

Extract from IFRS 1

- 14** An entity's estimates in accordance with IFRSs at the date of transition to IFRSs shall be consistent with estimates made for the same date in accordance with previous GAAP (after adjustments to reflect any difference in accounting policies), unless there is objective evidence that those estimates were in error.

The above requirement, [IFRS 1.14], has the effect that an entity must not apply hindsight and make 'better' estimates when it prepares its first IFRS financial statements. This also means that an entity is not allowed to consider subsequent events that provide evidence of conditions that existed at that date, but that came to light after the date its previous GAAP financial statements were finalised. If an estimate made under previous GAAP requires adjustment because of new information after the relevant date, an entity treats this information in the same way as a non-adjusting event after the reporting period under IAS 10 *Events after the Reporting Period*. [IFRS 1.BC84]. Effectively, the IASB wishes to prevent entities from using hindsight to 'clean up' their balance sheets as part of the preparation of the opening IFRS statement of financial position. In addition, the exception also ensures that a first-time adopter need not conduct a search for, and change the accounting for, events that might have otherwise qualified as adjusting events.

IFRS 1 provides the following guidance on estimates:

- When previous GAAP required estimates of similar items for the date of transition to IFRS accounting standards, an entity can be in one of the following two positions: [IFRS 1.IG3]
 - Its previous GAAP accounting policy was consistent with IFRS accounting standards, in which case the estimates under IFRS accounting standards need to be consistent with those made for that date under previous GAAP, unless there is objective evidence that those estimates were in error under IAS 8. [IAS 8.5].
 - Its previous GAAP accounting policy was not consistent with IFRS accounting standards, in which case it adjusts the estimates only for the difference in accounting policies (unless there is objective evidence that those estimates were in error under IAS 8). [IAS 8.5].

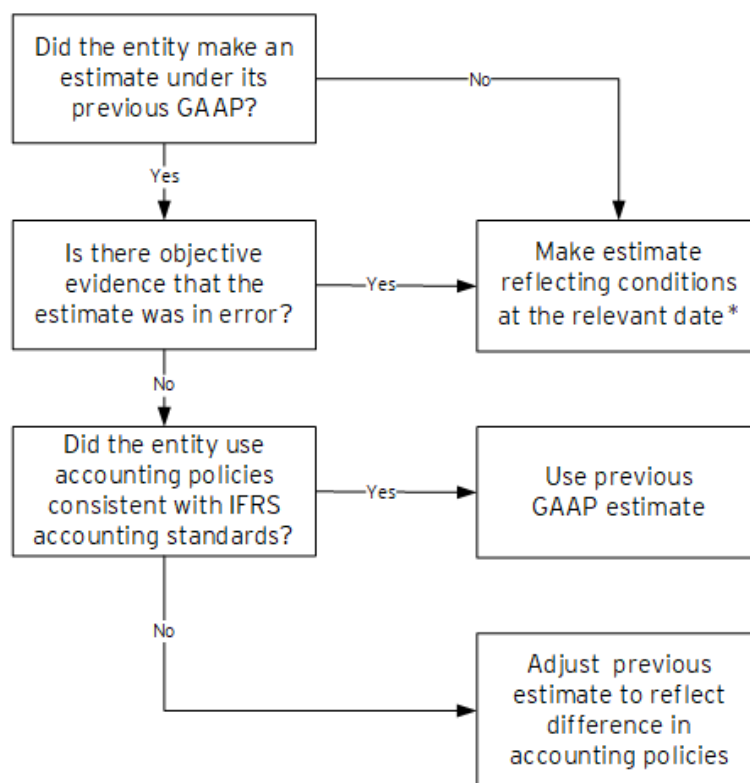

In both situations, it accounts for the revisions to those estimates in the period in which it makes the revisions in the same way as a non-adjusting event after the reporting period under IAS 10. [IFRS 1.15, IFRS 1.IG3, IAS 10.10].

And

- When an entity needs to make estimates under IFRS accounting standards at the date of transition to IFRS accounting standards that were not required under its previous GAAP, those estimates must reflect conditions that existed at that date. This is consistent with the distinction in IAS 10 between adjusting events and non-adjusting events after the reporting period. In particular, estimates of market prices, interest rates or foreign exchange rates reflect market conditions at that date. [IFRS 1.16, IFRS 1.IG3]. Entities that are preparing for transition to IFRS accounting standards need to consider gathering the data required for the estimate at the date of transition to IFRS accounting standards to make the transition easier and to ensure that hindsight is not incorporated into the estimate.

The requirements above apply both to estimates made in respect of the date of transition to IFRS accounting standards and to those in respect of any comparative period presented, in which case the references to 'the date of transition to IFRS accounting standards' above are replaced by references to 'the end of that comparative period'. [IFRS 1.17].

Figure 4-1 below shows the decision-making process that an entity needs to apply in dealing with estimates at the date of transition to IFRS accounting standards and during any of the comparative periods included in its first IFRS financial statements.

Figure 4-1: The treatment of estimates in the first IFRS financial statements

* The relevant date is the date to which the estimate relates

The general prohibition in IFRS 1 on the use of hindsight in making estimates about past transactions does not override the requirements in other IFRS accounting standards that base classifications or measurements on circumstances existing at a particular date, e.g., the distinction between finance leases and operating leases for a lessor. [IFRS 1.IG4].

IFRS 1 requires an entity that is unable to determine whether a particular portion of an adjustment is a transition adjustment or a change in estimate, to treat that portion as a change in accounting estimate under IAS 8.32-38, with appropriate disclosures as required by IAS 8.39-40. [IFRS 1.IG58B, IAS 8.36, IAS 8.37, IAS 8.39, IAS 8.40]. The distinction between changes in accounting policies and changes in accounting estimates is discussed in detail in Chapter 3.

If a first-time adopter concludes that estimates under previous GAAP were made in error, it distinguishes the correction of those errors from changes in accounting policies in its reconciliations from previous GAAP to IFRS accounting standards (see section 6.3.1 below). [IFRS 1.26].

Illustration 4-1 below demonstrates how an entity deals with estimates on the date of transition to IFRS accounting standards and in comparative periods included in its first IFRS financial statements.

Illustration 4-1: Application of IFRS 1 to estimates

Entity A's first IFRS financial statements have a reporting date of 31 December 20X3 and include comparative information for one year. In its previous GAAP financial statements for 31 December 20X2, Entity A accounted for its pension plan on a cash basis. However, under IAS 19 Employee Benefits the plan is classified as a defined benefit plan and actuarial estimates are required.

Entity A will need to make estimates under IFRS accounting standards at the relevant date that reflect conditions that existed at the relevant date. This means, for example, that Entity A's:

- Discount rates at 1 January 20X2 (date of transition to IFRS accounting standards) and 31 December 20X2 for the pension plan reflect market conditions at those dates
- Actuarial assumptions at 1 January 20X2 and 31 December 20X2 about future employee turnover rates do not reflect conditions that arose after those dates, such as a significant increase in estimated employee turnover rates as a result of a redundancy plan in 20X3 [IFRS 1.IG Example 1]

Entity B accounted for inventories at the lower of cost and net realisable value under its previous GAAP. Entity B's accounting policy is consistent with the requirements of IAS 2 Inventories. Under previous GAAP, the goods were accounted for at a price of CU1.25/kg. Due to changes in market circumstances, Entity B ultimately could only sell the goods in the following period for CU0.90/kg.

Assuming that Entity B's estimate of the net realisable value was not in error, it will account for the goods at CU1.25/kg upon transition to IFRS accounting standards and will make no adjustments because the estimate was not in error and its accounting policy was consistent with IFRS accounting standards. The effect of selling the goods for CU0.90/kg will be reflected in the period in which they were sold.

Entity C's first IFRS financial statements have a reporting date of 31 December 20X3 and include comparative information for one year. In its previous GAAP financial statements for 31 December 20X1, Entity C accounted for a provision of CU150,000 in connection with a court case. Entity C's accounting policy was consistent with the requirements of IAS 37 Provisions, Contingent Liabilities and Contingent Assets, except for the fact that Entity C did not discount the provision for the time value of money. The discounted value of the provision at 31 December 20X1 would have been CU135,000. The case was settled for CU190,000 during 20X2.

In its opening IFRS statement of financial position at 1 January 20X2, Entity C will measure the provision at CU135,000. IFRS 1 does not permit an entity to adjust the estimate itself, unless it was in error, but does require an adjustment to reflect the difference in accounting policies. The unwinding of the discount and the adjustment due to the under-provision will be included in the comparative statement of profit or loss and other comprehensive income for 20X2.

Entity D's first IFRS financial statements have a reporting date of 31 December 20X3 and include comparative information for one year. In its previous GAAP financial statements for 31 December 20X2, Entity D did not recognise a provision for a court case arising from events that occurred in September 20X2. When the court case was concluded on 30 June 20X3, Entity D was required to pay CU1,000,000 and paid this on 10 July 20X3.

In preparing its comparative statement of financial position at 31 December 20X2, the treatment of the court case at that date depends on the reason why Entity D did not recognise a provision under its previous GAAP at that date.

Scenario 1 - Previous GAAP was consistent with IAS 37. At the date of preparing its 20X2 financial statements, Entity D concluded that the recognition criteria were not met. In this case, Entity D's assumptions under IFRS accounting standards are required to be consistent with its assumptions under previous GAAP. Therefore, Entity D does not recognise a provision at 31 December 20X2 and the effect of settling the court case is reflected in the 20X3 statement of profit or loss and other comprehensive income.

Scenario 2 - Previous GAAP was not consistent with IAS 37. Therefore, Entity D develops estimates under IAS 37, which requires that an entity determines whether a present obligation exists at the end of the reporting period by taking account of all available evidence, including any additional evidence provided by events after the end of the reporting period. Similarly, under IAS 10, the resolution of a court case after the end of the reporting period is an adjusting event if it confirms that the entity had a present obligation at that date. In this instance, the resolution of the court case confirms that Entity D had a liability in September 20X2 (when the events occurred that gave rise to the court case). Therefore, Entity D recognises a provision at 31 December 20X2. Entity D measures that provision by discounting the CU1,000,000 paid on 10 July 20X3 to its present value, using a discount rate that complies with IAS 37 and reflects market conditions at 31 December 20X2. [IFRS 1.IG Example 1].

Some of the potential consequences of applying IAS 37 resulting in changes in the way an entity accounts for provisions are addressed in section 7.13 below.

4.3 Derecognition of financial assets and financial liabilities

Extract from IFRS 1

Derecognition of financial assets and financial liabilities

- B2** Except as permitted by paragraph B3, a first-time adopter shall apply the derecognition requirements in IFRS 9 prospectively for transactions occurring on or after the date of transition to IFRSs. For example, if a first-time adopter derecognised non-derivative financial assets or non-derivative financial liabilities in accordance with its previous GAAP as a result of a transaction that occurred before the date of transition to IFRSs, it shall not recognise those assets and liabilities in accordance with IFRSs (unless they qualify for recognition as a result of a later transaction or event).
- B3** Despite paragraph B2, an entity may apply the derecognition requirements in IFRS 9 retrospectively from a date of the entity's choosing, provided that the information needed to apply IFRS 9 to financial assets and financial liabilities derecognised as a result of past transactions was obtained at the time of initially accounting for those transactions.

IFRS 1's requirements on derecognition of financial assets and financial liabilities, [IFRS 1.B2, IFRS 1.B3], will effectively prevent most first-time adopters from restating transactions that occurred before the date of transition to IFRS accounting standards.

A first-time adopter that derecognised non-derivative financial assets and financial liabilities before the date of transition to IFRS accounting standards and chose not to apply the derecognition requirements in IFRS 9 *Financial Instruments* retrospectively from an earlier date does not recognise these items under IFRS accounting standards even if they meet the IFRS 9 recognition criteria. [IFRS 1.IG53]. An entity does not recognise financial assets and financial liabilities in its opening statement of financial position that do not qualify for recognition in accordance with IFRS 9, or have already qualified for derecognition in accordance with IFRS 9. [IFRS 1.IG54].

Some arrangements for the transfers of assets, particularly securitisations, could last for some time, with the result that transfers could be made both before and after (or on) the date of transition to IFRS accounting standards under the same arrangement. IFRS 1 clarifies that transfers made under such arrangements fall within the first-time adoption exception only if they occurred before the date of transition to IFRS accounting standards (assuming the entity does not choose to apply IFRS 1.B3). [IFRS 1.B3]. Transfers on or after the date of transition to IFRS accounting standards are subject to the full requirements of IFRS 9. [IFRS 1.IG53].

However, an entity could have derecognised, under its previous GAAP, non-derivative financial assets and financial liabilities when they were transferred to a structured entity as part of a securitisation programme, which is considered to be a controlled entity under IFRS 10 *Consolidated Financial Statements*.

How we see it

IFRS 1 contains no specific exceptions and exemptions to retrospective application of IFRS 10 except for those for non-controlling interests (see section 4.8 below). Accordingly, its consolidation requirements are applied fully retrospectively by first-time adopters.

Therefore, in this case, those assets and liabilities will be re-recognised on transition to IFRS accounting standards by way of the application of IFRS 10 rather than through application of IFRS 9. Of course, if the structured entity itself then subsequently achieved derecognition of those assets and liabilities under the entity's previous GAAP (other than by transfer to another structured entity or member of the entity's group), then the items remain derecognised on transition.

4.4 Hedge accounting: general

Extract from IFRS 1

Hedge accounting

- B4** As required by IFRS 9, at the date of transition to IFRSs an entity shall:
- (a) measure all derivatives at fair value; and
 - (b) eliminate all deferred losses and gains arising on derivatives that were reported in accordance with previous GAAP as if they were assets or liabilities.
- B5** An entity shall not reflect in its opening IFRS statement of financial position a hedging relationship of a type that does not qualify for hedge accounting in accordance with IFRS 9 (for example, many hedging relationships where the hedging instrument is a stand-alone written option or a net written option; or where the hedged item is a net position in a cash flow hedge for another risk than foreign currency risk) (see paragraph 6.4.1(a) of IFRS 9). However, if an entity designated a net position as a hedged item in accordance with previous GAAP, it may designate as a hedged item in accordance with IFRSs an individual item within that net position, or a net position if that meets the requirements in paragraph 6.6.1 of IFRS 9, provided that it does so no later than the date of transition to IFRSs.
- B6** If, before the date of transition to IFRSs, an entity had designated a transaction as a hedge but the hedge does not meet the qualifying criteria for hedge accounting in paragraph 6.4.1(b)-(c) of IFRS 9, the entity shall apply paragraphs 6.5.6 and 6.5.7 of IFRS 9 to discontinue hedge accounting. Transactions entered into before the date of transition to IFRSs shall not be retrospectively designated as hedges.

The Annual improvements to IFRS accounting standards issued in July 2024 added a cross-reference to IFRS 9.6.4.1(a) from IFRS 1.B5 to clarify that the phrase ‘hedging relationship of a type that does not qualify for hedge accounting’ in paragraph B5 of IFRS 1 relates only to the ‘eligibility’ of a hedging relationship (i.e., there are eligible hedging instruments and eligible hedged items). Also, the phrase ‘conditions for hedge accounting’ previously used in IFRS 1.B6 was replaced with ‘qualifying criteria for hedge accounting in IFRS 9.6.4.1(b)-(c)’. The amendments to IFRS 1 (which are reflected in the extract above) must be applied for annual reporting periods beginning on or after 1 January 2026, with early application permitted. [IFRS 1.B5, IFRS 1.B6, IFRS 9.6.4.1]

In sections 4.4 to 4.7 below, we discuss the hedge accounting treatment for first-time adopters under IFRS 9. [IFRS 1.B4, IFRS 1.B5, IFRS 1.B6].

First-time adoption issues relating to hedge accounting in the opening IFRS statement of financial position are discussed in section 4.5 below and subsequent measurement issues are discussed in section 4.6 below. Hedge accounting is dealt with comprehensively in Chapter 49.

Summary:

On transition:

- A first-time adopter separately accounts for all derivatives as assets or liabilities measured at fair value (regardless of the previous accounting treatment). [IFRS 1.B4(a)]. However, deferred losses and gains arising on derivatives that were reported in accordance with previous GAAP as if they were assets and liabilities are eliminated. [IFRS 1.B4(b)]. See section 4.5.1 below.
- A first-time adopter can only reflect a hedging relationship that still exists in its opening IFRS statement of financial position if it was designated as such on or before the date of transition to IFRS accounting standards (i.e., hedges cannot be designated retrospectively). [IFRS 1.B5, IFRS 1.B6, IFRS 1.IG60]. In our view, such designation could be made under previous GAAP or in anticipation of adoption of IFRS accounting standards. See section 4.5.2 below.
- A first-time adopter can only reflect a hedging relationship of a type that qualifies for hedge accounting in accordance with IFRS 9, which consists only of eligible hedging instruments and eligible hedged items as per IFRS 9.6.4.1(a). Previous GAAP hedge documentation and effectiveness assessments that were not fully compliant with the criteria in IFRS 9.6.4.1(b)-(c) do not preclude the hedging relationship from qualifying for hedge accounting under IFRS 9 (see section 4.4 below). [IFRS 1.B5, IFRS 9.6.4.1]. However, unless updated so that the qualifying criteria for hedge accounting are fully met on or before the date of transition to IFRS accounting standards, the entity will need to follow the hedge discontinuation requirements in IFRS 9.6.5.6-6.5.7 immediately after transition. [IFRS 1.B6, IFRS 9.6.5.6, IFRS 9.6.5.7, IFRS 1.IG60].

- If the hedging relationship is of a type that qualifies for hedge accounting under IFRS 9, the entity must reflect the hedge accounting under previous GAAP in the opening IFRS statement of financial position by applying the implementation guidance in IFRS 1 on fair value or cash flow hedges, as at the date of transition. [IFRS 1.IG60A, IFRS 1.IG60B]. See sections 4.5.3 to 4.5.6 below.
- If the hedging relationship is not of a type that qualifies for hedge accounting under IFRS 9, an entity is required to remove that relationship from its opening IFRS statement of financial position (except for the exception relating to certain net positions designated as a hedged item under previous GAAP - see section 4.5.2 below). [IFRS 1.B5, IFRS 9.6.4.1(a)]. Any adjustments to the carrying amounts of hedged items or deferrals of hedging gains or losses are, therefore, eliminated. See sections 4.5.1 and 4.5.2 below.

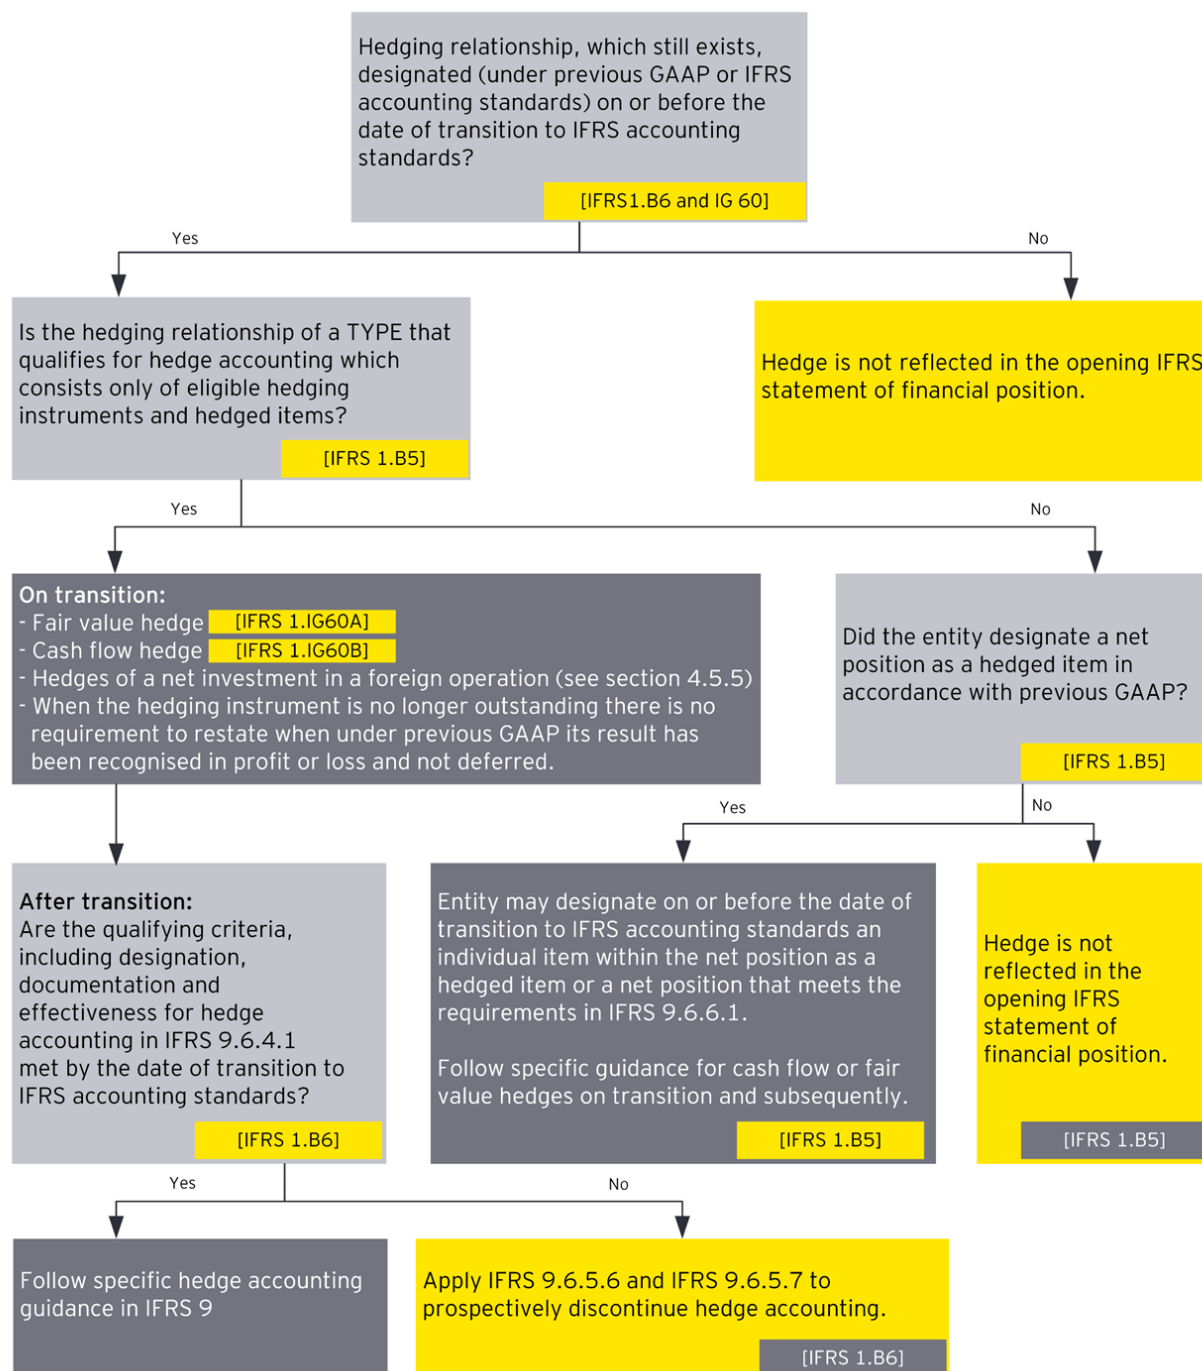

And

- When the hedging instrument is no longer outstanding at the date of transition to IFRS accounting standards and, under previous GAAP, the entity had already recognised its result in profit or loss without amortisation, no restatement is required. See Figure 4-2 below.

Subsequent accounting:

- Immediately after transition (i.e., after the date of the opening IFRS statement of financial position), the entity follows the normal hedge accounting provisions of IFRS 9 prospectively. If the hedge reflected in the opening statement of financial position does not fully comply with the qualifying criteria for hedge accounting in IFRS 9 (including hedge documentation and hedge effectiveness) the entity applies IFRS 9.6.5.6-6.5.7 to discontinue hedge accounting prospectively. [IFRS 1.IG60, IFRS 1.B6, IFRS 9.6.4.1, IFRS 9.6.5.6, IFRS 9.6.5.7]. See section 4.6 below.

Figure 4-2 below sets out a decision chart for the treatment of hedge accounting in the opening IFRS statement of financial position and subsequent periods. Hedge accounting in the opening IFRS statement of financial position is discussed in section 4.5 below and hedge accounting after transition to IFRS accounting standards is dealt with in section 4.6 below.

Figure 4-2: Treatment of hedge accounting in the first IFRS financial statements

4.4.1 Applicability of IAS 39 hedge requirements

A transition requirement of IFRS 9 for hedge accounting permits an entity already applying IFRS accounting standards to choose as its accounting policy to continue to apply the hedge accounting requirements of IAS 39 *Financial Instruments: Recognition and Measurement* to all of its hedging relationships instead of the requirements in Chapter 6 of IFRS 9. [IFRS 9.7.2.21]. First-time adopters do not have this choice because IFRS 1 prohibits first-time adopters from applying the transition provisions in other IFRS accounting standards, except as specified in Appendices B-E. [IFRS 1.9]. Further, IFRS 1.B4-B6 contain mandatory exceptions for hedge accounting which do not refer to the transition requirements of IFRS 9, and the basis for conclusion attached to IFRS 9 under the heading “Transition related to the hedge accounting requirements” states “The IASB decided not to change the requirements of IFRS 1 for hedge accounting. The IASB noted that a first-time adopter would need to look at the entire population of possible hedging relationships and assess which ones would meet the qualifying criteria of the new hedge accounting model.” [IFRS 9.BC7.52].

How we see it

Accordingly, a first-time adopter applies IFRS 9's requirements on hedge accounting. This is in contrast to an entity already applying IFRS accounting standards, who would be permitted to continue to apply IAS 39 hedge accounting. Nevertheless, in our view, first-time adopters are permitted to apply IAS 39 hedge accounting to a fair value hedge of the interest rate exposure of a portfolio of financial assets or financial liabilities (and only to such a hedge) (see Chapter 49). This is because this is permitted by Chapter 6 of IFRS 9, rather than being a transitional provision included in Chapter 7 of IFRS 9.

4.5 Hedge accounting in the opening IFRS statement of financial position

4.5.1 Measurement of derivatives and elimination of deferred gains and losses

Under its previous GAAP, an entity's accounting policies might have included a number of accounting treatments for derivatives that formed part of a hedging relationship. For example, accounting policies might have included those where the derivative was:

- Not explicitly recognised as an asset or liability (e.g., in the case of a forward contract used to hedge an expected but uncontracted future transaction)
- Recognised as an asset or liability but at an amount different from its fair value (e.g., a purchased option recognised at its original cost, perhaps less amortisation; or an interest rate swap accounted for by accruing the periodic interest payments and receipts)

Or

- Subsumed within the accounting for another asset or liability (e.g., a foreign currency denominated monetary item and a matching forward contract or swap accounted for as a 'synthetic' functional currency denominated monetary item)

Whatever the previous accounting treatment, a first-time adopter must account for derivatives in the opening IFRS statement of financial position as assets or liabilities measured at fair value in accordance with IFRS 9 (for the treatment of embedded derivatives, see section 4.1.1 below). [IFRS 1.B4(a)].

All derivatives are measured at fair value through profit or loss, other than those that are financial guarantee contracts, a commitment to provide a loan at a below-market interest rate, a loan commitment that is subject to the impairment requirements of IFRS 9, or those that are designated and effective as hedging instruments. Accordingly, the difference between the previous carrying amount of these derivatives (which may have been zero) and their fair value is recognised as an adjustment of the balance of retained earnings at the date of transition to IFRS accounting standards. [IFRS 1.IG58A]. If an entity is unable to determine whether a particular portion of an adjustment is a transition adjustment (i.e., a change in accounting policy) or a change in estimate, it must treat that portion as a change in accounting estimate, with the appropriate disclosures in accordance with IAS 8. [IFRS 1.IG58B, IAS 8.36, IAS 8.37, IAS 8.39, IAS 8.40]. The distinction between changes in accounting policies and changes in accounting estimates is discussed in detail in Chapter 3.

Hedge accounting policies under an entity's previous GAAP might also have included one or both of the following accounting treatments:

- Derivatives were measured at fair value but, to the extent they were regarded as hedging future transactions, the gain (or loss) arising was reported as a liability (or asset) such as deferred (or accrued) income.
- Realised gains or losses arising on the termination of a previously unrecognised derivative used in a hedging relationship (such as an interest rate swap hedging a borrowing) were included in the statement of financial position as deferred or accrued income and amortised over the remaining term of the hedged exposure.

In all cases, an entity is required to eliminate deferred gains and losses arising on derivatives that were reported in accordance with previous GAAP as if they were assets or liabilities. [IFRS 1.B4(b)]. In contrast to adjustments made to restate derivatives at fair value, IFRS 1's implementation guidance does not specify in general terms how to deal with adjustments to eliminate deferred gains or losses, i.e., whether they are taken to retained earnings or a separate component of equity.

How we see it

We believe that the requirement to eliminate deferred gains and losses does not extend to those that have been included in the carrying amount of other assets or liabilities that will continue to be recognised under IFRS accounting standards. For example, under an entity's previous GAAP, the carrying amount of non-financial assets such as inventories or property, plant and equipment might have included the equivalent of a basis adjustment (i.e., hedging gains or losses were considered an integral part of the asset's cost). Of course, entities also need to consider any other provisions of IFRS 1 that apply to those hedged items, e.g., whether any of the exemptions such as those for business combinations (see section 5.2 below) or deemed cost (see section 5.4 below) will be used.

4.5.2 Hedging relationships reflected in the opening IFRS statement of financial position

IFRS 1 states that a first-time adopter must not reflect a hedging relationship in its opening IFRS statement of financial position if that hedging relationship is of a type that does not qualify for hedge accounting under IFRS 9 (see section 4.4 above). [IFRS 9.6.4.1(a)]. As examples of this, IFRS 1 cites many hedging relationships where the hedging instrument is a stand-alone written option or a net written option; or where the hedged item is a net position in a cash flow hedge for another risk than foreign currency risk. [IFRS 1.B5]. Previous GAAP hedge documentation and effectiveness that were not fully compliant with the criteria in IFRS 9.6.4.1(b)-(c) do not mean that the hedging relationship is of a type that does not qualify for hedge accounting under IFRS 9. [IFRS 9.6.4.1(b), IFRS 9.6.4.1(c)]. (See section 4.6 below for requirements for post-transition date hedge accounting).

However, if an entity designated a net position as a hedged item under its previous GAAP, it could designate as a hedged item under IFRS accounting standards an individual item within that net position, or a net position that meets the requirements in IFRS 9.6.6.1, provided that it does so no later than the date of transition to IFRS accounting standards. [IFRS 1.B5, IFRS 9.6.6.1]. In other words, such designation would allow the hedging relationship to be reflected in the opening IFRS statement of financial position.

On the other hand, a hedging relationship designated under an entity's previous GAAP is reflected in its opening IFRS statement of financial position if that hedging relationship consists of eligible hedging instruments and eligible hedged items in IFRS 9.6.4.1(a), regardless of whether or not the hedge designation, documentation and effectiveness criteria for hedge accounting under IFRS 9.6.4.1(b)-(c) are met on the date of transition. [IFRS 1.B5, IFRS 9.6.4.1].

4.5.2.A Prohibition on retrospective designation

A first-time adopter is not permitted to designate hedges retrospectively in relation to transactions entered into before the date of transition to IFRS accounting standards. [IFRS 1.B6]. Instead, it must apply the requirements prospectively.

In the Basis for Conclusions, it is explained that:

"... it is unlikely that most entities would have adopted IAS 39's criteria for (a) documenting hedges at their inception and (b) testing the hedges for effectiveness, even if they intended to continue the same hedging strategies after adopting IAS 39. Furthermore, retrospective designation of hedges (or retrospective reversal of their designation) could lead to selective designation of some hedges to report a particular result." [IFRS 1.BC75].

While this paragraph refers to IAS 39's criteria, the IASB has since reinforced the above basis for conclusion when it issued IFRS 9, which says the following in its Basis for Conclusions:

"To the extent that an entity wants to apply hedge accounting, those hedging relationships should be documented on or before the transition date. This is consistent with the transition requirements for existing users of IFRS and the existing transition requirements of IFRS 1 ...". [IFRS 9.BC7.52].

4.5.2.B Designation in anticipation of adoption of IFRS accounting standards

If a first-time adopter, in anticipation of the adoption of IFRS accounting standards, decides to designate a transaction as a hedge under IFRS 9 and completes the required documentation sometime before the date of transition to IFRS accounting standards, some have questioned whether upon adoption of IFRS accounting standards, hedge accounting is applied prior to the date of transition.

How we see it

In our view, as long as the hedge is properly designated and documented in accordance with IFRS 9.6.4.1 prior to the date of transition, the first-time adopter applies hedge accounting from the date that it met the requirements. As explained in section 4.5.2.A above, a first-time adopter cannot designate a transaction retrospectively as a hedge under IFRS accounting standards.

4.5.3 Reflecting cash flow hedges in the opening IFRS statement of financial position

A first-time adopter could have deferred gains and losses on a cash flow hedge of a forecast transaction under its previous GAAP. If, at the date of transition to IFRS accounting standards, the hedged forecast transaction is not highly probable, but is expected to occur, the entire deferred gain or loss is recognised in the cash flow hedge reserve within equity. [IFRS 1.IG60B]. This is consistent with the treatment required for deferred gains or losses on cash flow hedges applicable after the transition to IFRS accounting standards (see Chapter 49). [IFRS 9.6.5.11(d), IFRS 9.6.5.12(a)].

How we see it

The standard is not explicit as to how an entity deals with such a hedge if, at the date of transition to IFRS accounting standards, the forecast transaction is highly probable. However, it would make no sense if the hedge of a transaction that is no longer highly probable but is still expected to occur were required to be reflected in the cash flow hedge reserve within equity in the opening IFRS statement of financial position as described above, but the hedge of the highly probable forecast transaction were not. Therefore, a cash flow hedge is reflected in the opening IFRS statement of financial position in the way set out above if the hedged item is a forecast transaction that is highly probable (see Illustration 4-2 below).

It also follows that a cash flow hedge of the variability in cash flows attributable to a particular risk associated with a recognised asset or liability (such as all or some future interest payments on variable rate debt) is reflected in the opening IFRS statement of financial position. To do otherwise would allow an entity to choose not to designate (in accordance with IFRS 9) certain cash flow hedges, say those that are in a loss position, until one day after its date of transition, thereby allowing associated hedging losses to bypass profit or loss completely. However, this would effectively result in the retrospective de-designation of hedges to achieve a desired result, thereby breaching the general principle of IFRS 1 (i.e., a first-time adopter cannot designate a hedging relationship retrospectively).

If, at the date of transition to IFRS accounting standards, the forecast transaction was not expected to occur, consistent with the requirements of IFRS 9.6.5.6-6.5.7 and IFRS 9.6.5.12(b), a first-time adopter reclassifies any related deferred gains and losses that are not expected to be recovered into retained earnings. [IFRS 1.IG60B, IFRS 9.6.5.6, IFRS 9.6.5.7, IFRS 9.6.5.12(b)].

Illustration 4-2: Unrecognised gains and losses on existing cash flow hedge

Entity A has the euro (€) as its functional currency. In September 20X1, it entered into a forward currency contract to sell US dollars (US\$) for euros in twelve months to hedge US\$ denominated sales that it forecasts are highly probable to occur in September 20X2. Entity A prepares its first IFRS financial statements and its date of transition to IFRS accounting standards is 1 January 20X2. The historical cost of the forward contract is €nil and at the date of transition to IFRS accounting standards it had a positive fair value of €100.

Case 1: Gains and losses deferred

Under Entity A's previous GAAP, until the sales occurred the forward contract was recognised in the statement of financial position at its fair value and the resulting gain or loss was deferred in the statement of financial position as a liability or an asset. When the sale occurred, any deferred gain or loss was recognised in profit or loss as an adjustment to the revenue recognised on the hedged sale.

This relationship must be reflected in Entity A's opening IFRS statement of financial position whether or not the hedge designation, documentation and effectiveness criteria for hedge accounting under IFRS 9.6.4.1(b)-(c) are met on the date of transition to IFRS accounting standards: the deferred gain is reclassified to the cash flow hedge reserve within equity and there is no adjustment to the carrying amount of the forward contract. [IFRS 1.IG60B].

Case 2: Gains and losses unrecognised

Under Entity A's previous GAAP, the contract was not recognised in the statement of financial position. When the sale occurred, any unrecognised gain or loss was recognised in profit or loss as an offset to the revenue recognised on the hedged sale.

How we see it

Although Case 2 is more problematic, we consider that it is accounted for in the same way as Case 1. The difference between the previous carrying amount of a derivative and its fair value would be recognised in the cash flow hedge reserve within equity.

Many existing hedging relationships that were acceptable under previous GAAP do not meet the full hedge accounting requirements of IFRS 9.6.4.1 although the hedging relationships are of a type that qualify for hedge accounting under IFRS 9.6.4.1(a) and are therefore reflected in the opening IFRS statement of financial position. Also, in many such cases hedge ineffectiveness has not previously been assessed or separately recognised in profit or loss. For cash flow hedges, ineffectiveness is not recognised in opening retained earnings but is deferred, as part of the cash flow hedge reserve within equity. As noted above, the entire unrecognised portion of the fair value of the hedging instrument is recognised in the cash flow hedge reserve in equity in the opening IFRS statement of financial position. There is no reference to the effective portion. [IFRS 1.IG60B].

4.5.4 Reflecting fair value hedges in the opening IFRS statement of financial position

If a first-time adopter has, under its previous GAAP, deferred or not recognised gains and losses on a fair value hedge of a hedged item that is not measured at fair value, the entity adjusts the carrying amount of the hedged item at the date of transition to IFRS accounting standards. The adjustment, which is essentially the effective part of the hedge that was not recognised in the carrying amount of the hedged item under the previous GAAP, is calculated as the lower of: [IFRS 1.IG60A]

- (a) That portion of the cumulative change in the fair value of the hedged item that was not recognised under previous GAAP
- And
- (b) That portion of the cumulative change in the fair value of the hedging instrument which, under previous GAAP, was either (i) not recognised or (ii) deferred in the statement of financial position as an asset or liability

Therefore, an entity could be required to recognise some ineffectiveness in retained earnings in the opening statement of financial position for fair value hedges, if the cumulative change in the fair value of the hedged item is lower than the unrecognised cumulative change in fair value of the hedging instrument. However, if the hedged item fair value adjustment on the date of transition to IFRS accounting standards is restricted by the change in fair value of the hedging instrument (i.e., where the cumulative change in the fair value of the hedged item is higher than the cumulative change in fair value of the hedging instrument), any ineffectiveness is not recognised on the date of transition.

4.5.5 Reflecting foreign currency net investment hedges in the opening IFRS statement of financial position

IFRS 1 does not provide explicit guidance on reflecting foreign currency net investment hedges in the opening IFRS statement of financial position.

How we see it

Since IFRS 9 requires that ongoing IFRS reporting entities account for foreign currency net investment hedges similarly to cash flow hedges, it follows that the first-time adoption provisions regarding cash flow hedges (see section 4.5.3 above) also apply to hedges of foreign currency net investments.

Specifically, the entire deferred or unrecognised gain or loss on the hedging instrument is recognised in the currency translation adjustment on transition. This will result in some previously deferred or unrecognised gains or losses on hedging instruments not being recognised in profit or loss until the foreign operation is disposed of.

IFRS 1 allows a first-time adopter to apply the exemption to reset the cumulative translation difference for all foreign operations to zero (see section 5.6 below); however, the standard does not explicitly state that this exemption extends to the gain or loss on the hedging instruments for net investment hedges.

How we see it

We believe that the requirement to reset the cumulative translation differences also applies to related gains and losses on hedging instruments (see section 5.6.1 below). Therefore, a first-time adopter that applies the exemption to reset cumulative translation differences to zero recognises those pre-transition gains and losses on the hedging instruments in the opening balance of retained earnings to avoid a disparity between the treatment of the gains and losses on the hedged item and the hedging instrument. Those pre-transition gains and losses on the hedging instruments that were recognised in retained earnings will not be reclassified to profit or loss upon disposal of a foreign operation.

4.5.6 'Costs of hedging' (where excluded from the hedging relationship under previous GAAP)

The time value of options, forward points of forward contracts and foreign currency basis spreads (collectively referred to as 'costs of hedging') might not have been accounted for in the manner permitted by IFRS 9. For instance, they might have been amortised under previous GAAP, regardless of whether there was a transaction-related or a time-period related hedged item. Also, the amount deferred under previous GAAP might not represent the 'aligned' value of 'costs of hedging' if the critical terms of the hedging instrument are not fully aligned with those of the hedged item (see Chapter 49).

By separately accruing the option time value or forward points, for example, under previous GAAP and only locking in the intrinsic or spot value of the hedged item, an entity has made a clear intention that only the intrinsic or spot value forms part of the hedge. Therefore, the special cash flow hedging rules in IFRS 1.IG60B (see section 4.5.3 above) apply purely to the full unrecognised intrinsic or spot value.

[IFRS 1.IG60B]. Similarly, if the 'costs of hedging' had been excluded from a fair value hedging relationship, they would not form part of the adjustment to the hedging instrument taken to retained earnings required by IFRS 1.IG60A (see section 4.5.4 above). [IFRS 1.IG60A].

How we see it

IFRS 1 does not provide specific guidance on how to account for 'costs of hedging' excluded from a hedging relationship on transition to IFRS accounting standards. In our view, the same approach as applied to cash flow hedges (i.e., IFRS 1.IG60B) is also applied to the 'costs of hedging'.

Accordingly, any previously unrecognised amount of the fair value of the option time value, forward points or foreign currency basis spread would be recognised in a separate component of equity recognised at the date of transition. Therefore, the 'costs of hedging' excluded from the hedging relationship under previous GAAP are neither recognised in the cash flow hedge reserve nor in retained earnings. The same accounting applies to 'costs of hedging' excluded from cash flow and fair value hedging relationships.

In many cases, the amount of 'costs of hedging' that was amortised or deferred under previous GAAP and is recognised as a separate component of equity on transition includes accumulated differences due to the different accounting treatments under previous GAAP compared to IFRS 9 (rather than, say, representing only the aligned time value of the option, forward element or foreign currency basis spread). Any such accumulated differences are included in the amount deferred under previous GAAP and recognised in equity.

If the 'costs of hedging' were not excluded from the hedging relationship under previous GAAP, the above accounting does not apply but instead they give rise to ineffectiveness. The treatment of ineffectiveness for cash flow hedges, fair value hedges and foreign currency net investment hedges in the opening IFRS statement of financial position is explained in sections 4.5.3 to 4.5.5 above.

4.6 Hedge accounting: subsequent treatment

IFRS 1's implementation guidance explains that hedge accounting can be applied prospectively only from the date the hedging relationship is fully designated and documented. In other words, after the date of transition to IFRS accounting standards, hedge accounting under IFRS 9 can be applied only if the qualifying criteria in IFRS 9.6.4.1 are met. [IFRS 9.6.4.1, IFRS 9.6.5.1]. Therefore, if the hedging instrument is still held at the date of transition to IFRS accounting standards, the designation and documentation of the hedging relationship must be completed (and the effectiveness requirements met) on or before that date if the hedging relationship is to qualify for hedge accounting from that date. [IFRS 1.IG60]. For further discussion on measuring ineffectiveness, see Chapter 49.

4.6.1 Discontinuation of a hedging relationship

Before the date of transition to IFRS accounting standards an entity might have designated as a hedge a transaction under previous GAAP that is of a type that qualifies for hedge accounting under IFRS 9, which consists only of eligible hedging instruments and eligible hedged items in IFRS 9.6.4.1(a), but does not meet other qualifying criteria in IFRS 9 (i.e., IFRS 9.6.4.1 (b)-(c)) at the date of transition to IFRS accounting standards. [IFRS 9.6.4.1]. In this case, the entity follows the general requirements in IFRS 9.6.5.6-6.5.7 for discontinuing hedge accounting subsequent to the date of transition to IFRS accounting standards - these are dealt with in Chapter 49. [IFRS 1.B6, IFRS 9.6.5.6, IFRS 9.6.5.7].

For cash flow hedges, any net cumulative gain or loss that was reclassified to the cash flow hedge reserve on the date of transition to IFRS accounting standards (see section 4.5.3 above) remains there until: [IFRS 1.IG60B]

- (a) The forecast transaction subsequently results in the recognition of a non-financial asset or non-financial liability
 - (b) The forecast transaction affects profit or loss
- Or
- (c) Subsequently, circumstances change and the forecast transaction is no longer expected to occur, in which case any related net cumulative gain or loss that had been reclassified to the cash flow hedge reserve on the date of transition to IFRS accounting standards is reclassified to profit or loss

The requirements above do little more than reiterate the general requirements of IFRS 9, i.e., that hedge accounting can only be applied prospectively if the qualifying criteria are met, and entities are expected to experience few interpretative problems in dealing with this aspect of the hedge accounting requirements.

4.6.2 Ineffectiveness of cash flow and foreign currency net investment hedges in continuing hedging relationships

Hedge accounting in accordance with IFRS 9 is applied prospectively from the date the hedge accounting is fully designated and documented. [IFRS 1.IG60]. Accounting for ongoing cash flow hedges and foreign currency net investment hedges is discussed in more detail in Chapter 49.

As noted in sections 4.5.3 and 4.5.5 above, ineffectiveness relating to cash flow and foreign currency net investment hedges reflected in the opening statement of financial position is not recognised in the opening retained earnings but is deferred, as part of the cash flow hedge reserve (or cumulative translation reserve) within equity. The entity does not recognise any past ineffectiveness deferred in equity on transition in profit or loss as ineffectiveness in subsequent periods. Rather, the entity measures ineffectiveness in subsequent periods by reference to cumulative changes in the fair value of the hedging instrument and hedged item subsequent to the date of transition (if that is the date from which the hedging relationship qualifies under IFRS 9). In order to capture the appropriate cumulative change in fair value of the hedged item, where a hypothetical derivative is used to measure ineffectiveness, the ineffectiveness recognised in profit or loss on the continuing hedging relationship is determined by reference to the hypothetical derivative where terms were set at inception of the hedging relationship, rather than on the date of transition to IFRS accounting standards. This means that the fair value movements arising on the hedged item which are used in calculating the ongoing adjustments required to the cash flow hedge reserve derive from the hypothetical derivative whose terms were set at the inception of the hedging relationship (designated under previous GAAP).

Any ineffectiveness deferred in equity on transition (as part of, say, the cash flow hedge reserve) will remain in equity until (a) the forecast transaction subsequently results in the recognition of a non-financial asset or non-financial liability (when the amount deferred in equity is included directly in the initial cost or other carrying amount of the asset or liability), (b) the forecast transaction affects profit or loss, or (c) subsequently circumstances change and the forecast transaction is no longer expected to occur, in which case the amount is reclassified from equity to profit or loss.

How we see it

This deferral of ineffectiveness on transition implies a discrepancy between the profit or loss impact of the hedged item and the amounts reclassified from cash flow hedge reserves under IFRS 9.6.5.11(d) and IFRS 9.6.5.12. Therefore, when the hedged item affects several periods (e.g., a hedge of variable interest on a debt instrument), it is necessary to recognise this mismatch appropriately over the hedging period. For a net investment hedge, the amounts accumulated in the cumulative translation reserve are only reclassified to profit or loss on disposal or, in certain circumstances, partial disposal of the foreign operation in accordance with IAS 21 (see Chapter 16 and Chapter 49).

In certain cases, no deferral of ineffectiveness will occur, (e.g., where on transition the change in fair value of the hedged item exceeds the change in fair value of the hedging instrument). In those circumstances, subsequent changes in fair value of the hedging instrument that are effective are deferred in the cash flow hedge reserve or for a foreign currency net investment hedge, the cumulative translation reserve.

4.6.3 Ineffectiveness of fair value hedges in continuing hedging relationships

Hedge accounting in accordance with IFRS 9 is applied prospectively from the date the hedge accounting is fully designated and documented. [IFRS 1.IG60]. Accounting for ongoing fair value hedges is discussed in more detail in Chapter 49.

As noted in section 4.5.4 above, if the cumulative change in the fair value of the hedged item is lower than the unrecognised cumulative change in fair value of the hedging instrument, ineffectiveness relating to fair value hedges is recognised in retained earnings on transition. However, if the hedged item's fair value adjustment on transition is restricted by the change in fair value of the hedging instrument (i.e., where the cumulative change in the fair value of the hedged item is higher than the cumulative change in fair value of the hedging instrument), any ineffectiveness is not recognised on transition.

How we see it

The ineffectiveness on a fair value hedge not recognised on transition is not subsequently recognised in profit or loss through the next revaluation of the hedged item. Illustration 4-3 below demonstrates how an entity treats the ineffectiveness not recognised on transition subsequently.

Illustration 4-3: Ineffectiveness of fair value hedge on transition

At the date of transition to IFRS accounting standards, the cumulative change in the fair value of the hedged item is CU100,000 whereas the cumulative change in fair value of the hedging instrument is CU80,000 (and therefore, the fair value adjustment to the hedged item is restricted to the change in fair value of the hedging instrument, i.e., CU80,000). Following the date from when the hedging relationship is designated under IFRS 9, subsequent changes in the fair value of the hedged item attributable to the hedged risk and changes in the fair value of the hedging instrument would be recognised in profit or loss (without reference to the adjustment made to the hedged item on transition. See also Case 1 in Illustration 4-5 in section 4.7 below for an example of adjustments required on transition for fair value hedges). [IFRS 9.6.5.8].

As time passes, the mechanics of fair value hedge accounting would normally result in an automatic unwinding of 100% of the cumulative fair value changes attributable to the hedged risk so that the carrying amount of the hedged item would, at any point in time, reflect fair value adjustments attributable to the hedged risk that are consistent with the remaining term of the hedging relationship. However, because at the date of transition, some of the cumulative changes in the fair value of the hedged item were not recognised, total fair value changes unwound, at any point in time, would outpace the cumulative adjustments applied to the hedged item up to that point. In this example, the hedged item carrying amount at maturity would differ from its nominal amount by CU20,000 since the original adjustment on transition was CU80,000 but the subsequent cumulative net change in fair value that would be recognised in profit or loss would be CU100,000. In order to deal with this difference, the CU20,000 would need to be amortised over the term of the hedge in profit or loss. For interest-bearing hedged items, this would typically be achieved using the effective interest rate method. [IFRS 9.6.5.10].

4.6.4 'Costs of hedging' (where excluded from the hedging relationship under previous GAAP)

As explained in section 4.5.6 above, 'costs of hedging' that were amortised or deferred under previous GAAP, are recognised as a separate component of equity rather than retained earnings on transition, including any accumulated difference in the amount deferred under previous GAAP and the amount in accordance with IFRS accounting standards.

IFRS 1 does not provide specific guidance on how to account for 'costs of hedging', including the difference arising on transition in subsequent periods.

How we see it

In our view, the same approach as that described earlier for cash flow hedges (see section 4.6.2 above) is applied to the 'costs of hedging'. In cases where there is a transaction-related hedged item, any amount of 'costs of hedging' on transition deferred in equity will be: (a) included directly in the initial cost or other carrying amount of a non-financial asset or a non-financial liability on its initial recognition, or (b) reclassified to profit or loss as a reclassification adjustment in the same period or periods during which the hedged expected future cash flows affect profit or loss, depending on whether the hedged item results in a non-financial item or not. If there is a time-period related hedged item, the difference will be amortised on a systematic and rational basis over the remaining hedging periods.

If the first-time adopter excludes 'costs of hedging' from the designation of the hedging relationship prospectively under IFRS 9, and the entity is required (in the case of time value of options) or chooses (in the case of the forward element of forward contracts and foreign currency basis spreads) to apply the 'costs of hedging' guidance in IFRS 9, the 'costs of hedging' will subsequently be accounted for in accordance with IFRS 9.6.5.15 and IFRS 9.6.5.16 and IFRS 9.B6.5.29-B6.5.39. [IFRS 9.6.5.15, IFRS 9.6.5.16, IFRS 9.B6.5.29-B6.5.39]. If the first-time adopter chooses not to apply the 'costs of hedging' guidance to the forward element of forward contracts or foreign currency basis spread, movements in the fair value of the forward element or foreign currency basis spread are recognised in profit or loss.

If the first-time adopter does not exclude the 'costs of hedging' from the designation of the hedging relationship prospectively under IFRS 9, normal hedge accounting is applied but this designation will give rise to ineffectiveness to be accounted for in profit or loss. Any amounts deferred in equity for 'costs of hedging' at the date of transition (see section 4.5.6 above) will be accounted for as described in the 'How we see it' above.

See Chapter 49 for further discussion of accounting for 'cost of hedging' under IFRS 9.

4.7 Hedge accounting: Illustrations

Illustrations 4-4 and 4-5 below demonstrate the guidance considered in sections 4.5 to 4.6 above.

Illustration 4-4: Pre-transition cash flow hedges

Case 1: All hedge accounting qualifying criteria met from date of transition and thereafter

In 20X0, Entity A borrowed CU10m from a bank. The terms of the loan provide that a floating rate coupon (based on a specified index) plus 2% is payable quarterly in arrears and the principal is repayable after 10 years. In 20X3, Entity A decided to 'fix' its coupon payments for the remainder of the term of the loan by entering into a seven-year pay-fixed, receive-floating interest rate swap. The swap has a notional amount of CU10m and the floating leg resets quarterly based on the same floating rate index as the loan.

In Entity A's final financial statements prepared under its previous GAAP, the swap was clearly identified as a hedging instrument in a hedge of the loan and was accounted for as such. The fair value of the swap was not recognised in Entity A's statement of financial position and the periodic interest settlements were accrued and recognised as an adjustment to the loan interest expense. On 1 January 20X7, Entity A's date of transition to IFRS accounting standards, the loan and the swap were still in place and the swap had a positive fair value of CU1m and a CUnil carrying amount. In addition, Entity A met all the qualifying criteria in IFRS 9 to permit the use of hedge accounting for this arrangement throughout 20X7 and 20X8.

In its opening IFRS statement of financial position Entity A would:

- Recognise the interest rate swap as an asset at its fair value of CU1m
- Credit CU1m to a separate component of equity, to be reclassified to profit or loss as the hedged transactions (future interest payments on the loan) affect profit or loss

In addition, hedge accounting would be applied throughout 20X7 and 20X8.

Case 2: Hedge terminated prior to date of transition

The facts are as in Case 1 except that in April 20X6 Entity A decided to terminate the hedge and the interest rate swap was settled for its then positive fair value of CU1.5m. Under its previous GAAP, Entity A's stated accounting policy in respect of terminated hedges was to defer any realised gain or loss on terminated hedging instruments where the hedged exposure remained. These gains or losses would be recognised in profit or loss at the same time as gains or losses on the hedged exposure. At the end of December 20X6, Entity A's statement of financial position included a liability (unamortised gain) of CU1.4m.

In its opening IFRS statement of financial position Entity A would:

- Remove the deferred gain of CU1.4m from the statement of financial position
- Credit CU1.4m to a separate component of equity, to be reclassified to profit or loss as the hedged transactions (future interest payments on the loan) affect profit or loss

How we see it

IFRS 1 does not explicitly address hedges terminated prior to the date of transition to IFRS accounting standards. In our view, because the terminated hedge relates to a transaction that has an ongoing risk exposure, the provisions of IFRS 9 on hedge discontinuance are applied to this relationship.

Illustration 4-5: Existing fair value hedges**Case 1: All hedge accounting qualifying criteria met from date of transition and thereafter**

On 15 November 20X1, Entity B entered into a forward contract to sell 50,000 barrels of crude oil to hedge all changes in the fair value of certain inventory. Entity B prepares its first IFRS financial statements and its date of transition to IFRS accounting standards is 1 January 20X2. The historical cost of the forward contract is CUnil and at the date of transition to IFRS accounting standards the forward had a negative fair value of CU50.

In Entity B's final financial statements prepared under its previous GAAP, the forward contract was clearly identified as a hedging instrument in a hedge of the inventory and was accounted for as such. The contract was recognised in the statement of financial position as a liability at its fair value and the resulting loss was deferred in the statement of financial position as an asset. In the period between 15 November 20X1 and 1 January 20X2, the fair value of the inventory increased by CU47. In addition, Entity B met all the qualifying criteria in IFRS 9 to permit the use of hedge accounting for this arrangement throughout 20X2 until the forward expired.

In its opening IFRS statement of financial position Entity B would:

- Continue to recognise the forward contract as a liability at its fair value of CU50
- Derecognise the CU50 deferred loss asset on the forward contract
- Recognise the crude oil inventory at its historical cost plus CU47 (the lower of the change in fair value of the crude oil inventory, CU47, and that of the forward contract, CU50)
- Record the net adjustment of CU3 in retained earnings

In addition, hedge accounting would be applied throughout 20X2 until the forward contract expired.

Case 2: All hedge accounting qualifying criteria met from date of transition and thereafter

In 20X0 Entity C borrowed CU10m from a bank. The terms of the loan provide that a coupon of 8% is payable quarterly in arrears and the principal is repayable after 10 years. In 20X3, Entity C decided to alter its coupon payments for the remainder of the term of the loan by entering into a seven-year pay-floating, receive-fixed interest rate swap. The swap has a notional amount of CU10m and the floating leg resets quarterly based on a specified index.

In Entity C's final financial statements prepared under its previous GAAP, the swap was clearly identified as a hedging instrument in a hedge of the loan and accounted for as such. The fair value of the swap was not recognised in Entity C's statement of financial position and the periodic interest settlements on the swap were accrued and recognised as an adjustment to the loan interest expense.

On 1 January 20X7, Entity C's date of transition to IFRS accounting standards, the loan and the swap were still in place and the swap had a negative fair value of CU1m and a CUnil carrying amount. The cumulative change in the fair value of the loan attributable to changes in the floating interest rate was CU1.1m, although this change was not recognised in Entity C's statement of financial position because the loan was accounted for at amortised cost. In addition, Entity C met all the qualifying criteria in IFRS 9 to permit the use of hedge accounting for this arrangement throughout 20X7 and 20X8.

In its opening IFRS statement of financial position Entity C would:

- Recognise the interest rate swap as a liability at its fair value of CU1m
- Reduce the carrying amount of the loan by CU1m (the lower of the change in its fair value attributable to the hedged risk, CU1.1m, and that of the interest rate swap, CU1m) to CU9m

In addition, hedge accounting would be applied throughout 20X7 and 20X8.

Case 3: Hedge terminated prior to date of transition

The facts are as in Case 2 above except that, in April 20X6, Entity C decided to terminate the fair value hedge and the interest rate swap was settled for its then negative fair value of CU1.5m. Under its previous GAAP, Entity C's stated accounting policy in respect of terminated hedges was to defer any gain or loss on the hedging instrument as a liability or an asset where the hedged exposure remained and this gain or loss was recognised in profit or loss at the same time as the hedged exposure. At the end of December 20X6 the unamortised loss recognised as an asset in Entity C's statement of financial position was CU1.4m. The cumulative change through April 20X6 in the fair value of the loan attributable to changes in the floating interest rate that had not been recognised was CU1.6m.

In its opening IFRS statement of financial position, Entity C would:

- Remove the deferred loss asset of CU1.4m from the statement of financial position
- Reduce the carrying amount of the loan by CU1.4m (the lower of the change in its fair value attributable to the hedged risk, CU1.6m, and the change in value of the interest rate swap that was deferred in the statement of financial position, CU1.4m)

The CU1.4m adjustment to the loan would be amortised to profit or loss over its remaining term.

Case 4: Documentation completed after the date of transition

The facts are as in Case 2 above except that, at the date of transition, Entity C had not prepared documentation that would allow it to apply hedge accounting under IFRS 9. Hedge documentation was subsequently prepared as a result of which the hedge qualified for hedge accounting with effect from the beginning of July 20X7 and through 20X8.

As in Case 2, in its opening IFRS statement of financial position Entity C would:

- Recognise the interest rate swap as a liability at its fair value of CU1m

Reduce the carrying amount of the loan by CU1m (the lower of the change in its fair value attributable to the hedged risk, CU1.1m, and that of the interest rate swap, CU1m), because the loan was clearly identified as a hedged item

For the period from January 20X7 to June 20X7, hedge accounting would not be available. Accordingly, the interest rate swap would be remeasured to its fair value and any gain or loss would be recognised in profit or loss with no offset from remeasuring the loan. The CU1m adjustment to the loan would be amortised to profit or loss over its remaining term (the amortisation could begin as soon as an adjustment exists and must begin no later than when the hedged item ceases to be adjusted for hedging gains and losses). With effect from July 20X7 hedge accounting would be applied prospectively.

4.8 Non-controlling interests

A first-time adopter must apply IFRS 10 retrospectively, except for the following requirements that apply prospectively from its date of transition to IFRS accounting standards: [IFRS 1.B7]

- (a) The requirement that total comprehensive income is attributed to the owners of the parent and to the non-controlling interests even if this results in the non-controlling interests having a deficit balance [IFRS 10.B94]
 - (b) The requirements on accounting for changes in the parent's ownership interest in a subsidiary that do not result in a loss of control [IFRS 10.23, IFRS 10.B96]
- And
- (c) The requirements on accounting for a loss of control over a subsidiary, and the related requirements in IFRS 5 *Non-current Assets Held for Sale and Discontinued Operations* to classify all assets and liabilities of that subsidiary as held for sale [IFRS 10.B97, IFRS 10.B98, IFRS 10.B99, IFRS 5.8A]

However, if a first-time adopter restates any business combination that occurred prior to its date of transition to comply with IFRS 3 *Business Combinations* it must also apply IFRS 10, including the above requirements, from that date onwards (see section 5.2.2 below). [IFRS 1.C1].

4.9 Classification and measurement of financial instruments

4.9.1 Classification of financial assets

IFRS 9 requires a financial asset to be measured at amortised cost if it meets two tests that deal with the nature of the business model that holds the financial asset and the contractual cash flow characteristics of the financial asset. [IFRS 9.4.1.2]. Also, the standard requires a financial asset to be measured at fair value through other comprehensive income if certain conditions are met. [IFRS 9.4.1.2A]. These conditions for classification of financial assets are described in detail in Chapter 44.

IFRS 1.B8 requires a first-time adopter to assess whether a financial asset meets the conditions on the basis of the facts and circumstances that exist at the date of transition to IFRS accounting standards. [IFRS 1.B8]. The resulting classifications are applied retrospectively. [IFRS 1.IG56].

4.9.1.A Assessment of a modified time value of money element

If it is impracticable to assess a modified time value of money element under IFRS 9.B4.1.9B-B4.1.9D on the basis of the facts and circumstances that exist at the date of transition to IFRS accounting standards, the first-time adopter is required to assess the contractual cash flow characteristics of that financial asset on the basis of the facts and circumstances that existed at that date of transition without taking into account the requirements related to the modification of the time value of money element in IFRS 9.B4.1.9B-B4.1.9D.

In this case, the entity also applies IFRS 7.42R and discloses the carrying amount at the reporting date of the financial assets - whose contractual cash flow characteristics have been assessed based on the facts and circumstances that existed at the date of transition without taking into account the requirements related to the modification of the time value of money element in IFRS 9.B4.1.9B-B4.1.9D - until those financial assets are derecognised (see section 6.4.2 below). [IFRS 1.B8A, IFRS 7.42R, IFRS 9.B4.1.9B, IFRS 9.B4.1.9C, IFRS 9.B4.1.9D].

4.9.1.B Assessment of whether the fair value of a prepayment feature is insignificant

Similarly, if it is impracticable to assess whether the fair value of a prepayment feature is insignificant under IFRS 9.B4.1.12(c) on the basis of the facts and circumstances that exist at the date of transition to IFRS accounting standards, IFRS 1.B8B requires an entity to assess the contractual cash flow characteristics of that financial asset on the basis of the facts and circumstances that existed at the date of transition without taking into account the exception for prepayment features in IFRS 9.B4.1.12 (see Chapter 44).

In this case, the entity also applies IFRS 7.42S and discloses the carrying amount at the reporting date of the financial assets - whose contractual cash flow characteristics have been assessed based on the facts and circumstances that existed at the date of transition without taking into account the exception for prepayment features in IFRS 9.B4.1.12 - until those financial assets are derecognised (see section 6.4.2 below). [IFRS 1.B8B, IFRS 7.42S, IFRS 9.B4.1.12].

4.9.2 Measurement of financial instruments measured at amortised cost

For those financial assets and financial liabilities measured at amortised cost in the opening IFRS statement of financial position, an entity determines the gross carrying amount of the financial assets and the amortised cost of the financial liabilities on the basis of circumstances existing when the assets and liabilities first satisfied the recognition criteria in IFRS 9. However, if the entity acquired those financial assets and financial liabilities in a past business combination to which the entity elects not to apply IFRS 3 retrospectively, their carrying amount in accordance with previous GAAP immediately following the business combination is their deemed cost in accordance with IFRS accounting standards at that date. [IFRS 1.C4(e), IFRS 1.IG57].

IFRS 1.B8C states that if it is impracticable (as defined in IAS 8) for an entity to apply retrospectively the effective interest method in IFRS 9, the fair value of the financial asset or the financial liability at the date of transition to IFRS accounting standards will be the new gross carrying amount of that financial asset or the new amortised cost of that financial liability at the date of transition. [IFRS 1.B8C, IAS 8.5].

4.9.3 Transition adjustments

An entity treats an adjustment to the carrying amount of a financial asset or financial liability as a transition adjustment to be recognised in the opening balance of retained earnings (or another component of equity, as appropriate) at the date of transition to IFRS accounting standards only to the extent that it results from adopting IFRS 9. [IFRS 1.IG58A]. If an entity is unable to determine whether a particular portion of the adjustment is a transition adjustment or a change in estimate, it treats that portion as a change in accounting estimate in accordance with IAS 8, with appropriate disclosures, [IFRS 1.IG58B], (see section 4.2 above).

If an investment had been measured at fair value under previous GAAP with revaluation gains recognised outside profit or loss but the investment is classified as at fair value through profit or loss under IFRS 9, the pre-IFRS 9 revaluation gain that had been recognised outside profit or loss is reclassified into retained earnings on initial application of IFRS 9. If, on initial application of IFRS 9, the investment is measured at fair value through other comprehensive income in accordance with IFRS 9.4.1.2A or is designated at fair value through other comprehensive income in accordance with IFRS 9.5.7.5, then the pre-IFRS 9 revaluation gain is recognised in a separate component of equity. Subsequently, the entity recognises gains and losses on these financial assets in accordance with IFRS 9. [IFRS 1.IG59, IFRS 9.4.1.2A, IFRS 9.5.7.5].

4.10 Impairment of financial assets

IFRS 1.B8D requires a first-time adopter to apply the impairment requirements in Section 5.5 of IFRS 9 retrospectively subject to IFRS 1.B8E-B8G. [IFRS 1.B8D, IFRS 1.B8E, IFRS 1.B8F, IFRS 1.B8G].

At the date of transition to IFRS accounting standards, IFRS 1.B8E requires a first-time adopter to use reasonable and supportable information that is available without undue cost or effort (see Chapter 47) to determine the credit risk at the date that the financial instruments were initially recognised (or, for loan commitments and financial guarantee contracts, the date that the entity became a party to the irrevocable commitment in accordance with IFRS 9.5.5.6) and compare that to the credit risk at the date of transition. IFRS 1.B8E references IFRS 9.B7.2.2-B7.2.3 which set out similar transitional rules on adoption of IFRS 9 for existing IFRS reporters. [IFRS 1.B8E, IFRS 9.5.5.6, IFRS 9.B7.2.2, IFRS 9.B7.2.3].

In order to determine the loss allowance on financial instruments initially recognised (or loan commitments or financial guarantee contracts to which the entity became a party to the contract) prior to the date of transition to IFRS accounting standards, both on the transition and until the derecognition of those items, an entity is required to consider information that is relevant in determining or approximating the credit risk at initial recognition. In order to determine or approximate the initial credit risk, an entity could consider internal and external information, including portfolio information, in accordance with IFRS 9.B5.5.1-B5.5.6 (see Chapter 47). [IFRS 9.B5.5.1-B5.5.6, IFRS 9.B7.2.3].

A first-time adopter is allowed to apply the following guidance to determine whether there has been a significant increase in credit risk since initial recognition: [IFRS 1.B8F]

- (a) The requirements (on financial instruments determined to have low credit risk) in IFRS 9.5.5.10 and IFRS 9.B5.5.22-B5.5.24 (see Chapter 47) [IFRS 9.5.5.10, IFRS 9.B5.5.22, IFRS 9.B5.5.23, IFRS 9.B5.5.24]
- (b) The rebuttable presumption in IFRS 9.5.5.11 (that there has been a significant increase in credit risk since initial recognition) for contractual payments that are more than 30 days past due if an entity will apply the impairment requirements by identifying significant increases in credit risk since initial recognition for those financial instruments on the basis of past due information (see Chapter 47) [IFRS 9.5.5.11]

A first-time adopter would not be required to determine whether there has been a significant increase in credit risk if that would require undue cost or effort. In such a case, IFRS 1.B8G requires a first-time adopter to recognise a loss allowance at an amount equal to lifetime expected credit losses at each reporting date until that financial instrument is derecognised (unless that financial asset is low credit risk at a reporting date, in which case, IFRS 1.B8F(a) applies and, consequently, the entity is allowed to assume that the credit risk has not increased significantly since initial recognition (see Chapter 47)). [IFRS 1.B8F(a), IFRS 1.B8G, IFRS 9.5.5.10, IFRS 9.B5.5.22-B5.5.24].

4.11 Embedded derivatives

When IFRS 9 requires an entity to separate an embedded derivative from a host contract, [IFRS 9.4.3.3], the initial carrying amounts of the components at the date the instrument first satisfied the recognition criteria in IFRS 9 must reflect circumstances that existed at that date. If the initial carrying amounts of the embedded derivative and host contract cannot be determined reliably, the entire combined contract is designated at fair value through profit or loss. [IFRS 1.IG55, IFRS 9.4.3.6].

IFRS 1.B9 requires a first-time adopter to assess whether an embedded derivative is required to be separated from the host contract and accounted for as a derivative based on conditions that existed at the later of the date it first became a party to the contract and the date a reassessment is required by IFRS 9.B4.3.11. [IFRS 1.B9, IFRS 9.B4.3.11]. It should be noted that IFRS 9 does not permit embedded derivatives to be separated from host contracts that are financial assets (see Chapter 42).

4.12 Government loans

It is common practice in certain countries for the government to grant loans to entities at below-market interest rates, for example, in order to promote economic development. A first-time adopter might not have recognised and measured such loans in its previous GAAP financial statements on a basis that complies with IFRS accounting standards. IAS 20 *Accounting for Government Grants and Disclosure of Government Assistance* requires such loans to be recognised initially at fair value with the effect of the below-market interest rate separately accounted for as a government grant (see Chapter 25). [IAS 20.10A].

The IASB has provided transition relief to first-time adopters in the form of an exception that requires the first-time adopter to classify government loans received as a financial liability or an equity instrument in accordance with IAS 32 *Financial Instruments: Presentation* and to apply the requirements in IFRS 9 and IAS 20 prospectively to government loans existing at the date of transition to IFRS accounting standards (except as permitted by IFRS 1.B11, which is discussed below). Therefore, a first-time adopter does not recognise the corresponding benefit of the government loan at a below-market rate of interest as a government grant. A first-time adopter that did not, under its previous GAAP, recognise and measure a government loan at a below-market rate of interest on a basis consistent with IFRS accounting standards requirements will instead use its previous GAAP carrying amount of the loan at the date of transition to IFRS accounting standards as the carrying amount of the loan in the opening IFRS statement of financial position and apply IFRS 9 to the measurement of such loans after the date of transition to IFRS accounting standards. [IFRS 1.B10].

Alternatively, IFRS 1.B11 allows an entity to apply the requirements in IFRS 9 and IAS 20 retrospectively to any government loan originated before the date of transition to IFRS accounting standards, provided the information needed to do so had been obtained when it initially accounted for the loan under previous GAAP. [IFRS 1.B11].

The requirements and guidance set out in IFRS 1.B10-B11 (which are discussed above) do not preclude an entity from using the exemptions in IFRS 1.D19-D19C to designate previously recognised financial instruments at fair value through profit or loss (see section 5.10 below). [IFRS 1.B12, IFRS 1.D19, IFRS 1.D19A, IFRS 1.D19B, IFRS 1.D19C].

Illustration 4-6 below demonstrates the accounting for a government loan with a below-market interest rate that is not restated from its previous GAAP amount. [IFRS 1.IG Example 12, IFRS 1.IG66].

Illustration 4-6: Government loan with below-market interest rate

A government provides loans at a below-market rate of interest to fund the purchase of manufacturing equipment.

Entity A's date of transition to IFRS accounting standards is 1 January 20X2.

In 20X0, Entity A received a loan of CU100,000 at a below-market rate of interest from the government.

Under its previous GAAP, Entity A accounted for the loan as equity and the carrying amount was CU100,000 at the date of transition. The amount repayable at 1 January 20X5 will be CU103,030.

No other payment is required under the terms of the loan and there are no future performance conditions attached to it. The information needed to measure the fair value of the loan was not obtained at the time it was initially accounted for.

The loan meets the definition of a financial liability in accordance with IAS 32. Entity A therefore reclassifies it from equity to liability. It also uses the previous GAAP carrying amount of the loan at the date of transition as the carrying amount of the loan in the opening IFRS statement of financial position. It calculates the effective interest rate starting at 1 January 20X2 as 1% based on the carrying amount of the loan at the date of transition and the amount repayable at maturity. The opening balance of CU100,000 will accrete to CU103,030 at 31 December 20X4 and interest of CU1,000, CU1,010 and CU1,020 will be charged to interest expense in each of the three years ended 31 December 20X2, 20X3 and 20X4.

4.13 Insurance contracts

An entity must apply the transition provisions in IFRS 17.C1-C24 and IFRS 17.C28 to contracts within the scope of IFRS 17 *Insurance Contracts* (see Chapter 51). The references in those paragraphs in IFRS 17 to 'the transition date' must be read as 'the date of transition to IFRS accounting standards'. [IFRS 1.B13].

This is because the Board saw no reason to give different transition approaches to first-time adopters of IFRS accounting standards from other entities. This means that the Board has amended IFRS 1 to require use of the modified retrospective approach or the fair value approach in IFRS 17 when retrospective application of IFRS 17 is impracticable, as defined by IAS 8. However, the Board decided not to give any additional relief on the restatement of comparative amounts from that already in IFRS 1. [IFRS 17.BC407].

4.14 Deferred tax related to leases and decommissioning, restoration and similar liabilities

IAS 12 *Income Taxes* provides an exception (known as the 'initial recognition exception') from recognising the deferred tax on temporary differences arising on initial recognition of an asset or liability in a transaction that (a) is not a business combination; (b) at the time of the transaction, affects neither accounting profit nor taxable profit (or tax loss); and (c) at the time of the transaction does not give rise to equal taxable and deductible temporary differences (see Chapter 29). [IAS 12.15, IAS 12.24].

For example, at the commencement date of a lease, a lessee typically recognises a lease liability and the corresponding amount as part of the cost of a right-of-use asset. Depending on the applicable tax law, equal taxable and deductible temporary differences could arise on initial recognition of the asset and liability in such a transaction. If so, the initial recognition exception does not apply and any resulting deferred tax liability and asset is recognised. [IAS 12.22A]. It is important to note that IAS 12.15(b)(iii) and IAS 12.24(c) refer to 'equal taxable and deductible temporary differences', rather than 'equal deferred tax assets and liabilities'. For example, the deferred tax assets and liabilities recognised could differ due to the application of different tax rates or because the deferred tax assets are not recoverable. [IAS 12.BC86, IAS 12.BC88].

Retrospective application would require entities to retrospectively assess whether each lease and decommissioning obligation gave rise to equal taxable and deductible temporary differences on initial recognition, which might have occurred many years before. Instead, first-time adopters are required to recognise deferred tax for all temporary differences associated with leases and decommissioning obligations existing at the date of transition to IFRS accounting standards. [IAS 12.BC95].

Therefore, notwithstanding the initial recognition exception in IAS 12.15 and IAS 12.24, at the date of transition to IFRS accounting standards, a first-time adopter must recognise a deferred tax asset (to the extent that it is probable that taxable profit will be available against which the deductible temporary difference can be utilised) and a deferred tax liability for all deductible and taxable temporary differences associated with: [IFRS 1.B14].

(a) Right-of-use assets and lease liabilities

And

(b) Decommissioning, restoration and similar liabilities and the corresponding amounts recognised as part of the cost of the related asset

However, the initial recognition exception still applies fully retrospectively to transactions other than leases and decommissioning obligations.

5 Optional exemptions from the requirements of certain IFRS accounting standards

5.1 Introduction

As noted in section 3.5 above, IFRS 1 grants limited optional exemptions from the general requirement of full retrospective application of the standards effective at the end of an entity's first IFRS reporting period. [IFRS 1.7, IFRS 1.12(b)]. Each of these exemptions, which are set out in Appendices C and D of IFRS 1, is explained in detail below.

5.2 Business combinations and acquisitions of associates and joint arrangements

The business combinations exemption in IFRS 1 is probably the single most important exemption in the standard, as it permits a first-time adopter not to restate business combinations that occurred prior to its date of transition to IFRS accounting standards. The detailed guidance on the application of the business combinations exemption is contained in Appendix C to IFRS 1 and is organised in the sections as follows:

[IFRS 1 Appendix C]

- (a) Scope of the business combinations exemption in IFRS 1 - and application of the exemption to acquisitions of associates and joint arrangements (see section 5.2.1 below)
- (b) Option to restate business combinations retrospectively (see section 5.2.2 below)
- (c) Classification of business combinations (see section 5.2.3 below)
- (d) Assets and liabilities to be recognised in the opening IFRS statement of financial position (see section 5.2.4 below)
- (e) Restatement of goodwill (see section 5.2.5 below)
- (f) Currency adjustments to goodwill (see section 5.2.6 below)
- (g) Previously unconsolidated subsidiaries (see section 5.2.7 below)
- (h) Previously consolidated entities that are not subsidiaries (see section 5.2.8 below)
- (i) Measurement of deferred taxes and non-controlling interests (see section 5.2.9 below)
- And
- (j) Transition accounting for contingent consideration (see section 5.2.10 below)

How we see it

In our view, the business combinations exemption applies only to business combinations that occurred before the date of transition to IFRS accounting standards and only to business combinations as defined under IFRS 3 (see section 5.2.1 below). Therefore, it does not apply to a transaction that, for example, IFRS accounting standards treat as an acquisition of an asset (see section 5.2.1.A below).

5.2.1 Scope of the business combinations exemption in IFRS 1

As noted above, the business combinations exemption applies only to business combinations as defined under IFRS 3. Therefore, a first-time adopter needs to consider whether past transactions would qualify as business combinations under IFRS 3 which defines a business combination as:

"A transaction or other event in which an **acquirer** obtains control of one or more **businesses**. Transactions sometimes referred to as 'true mergers' or 'mergers of equals' are also **business combinations** as that term is used in this IFRS." [IFRS 3 Appendix A].

The definition of a business is "An integrated set of activities and assets that is capable of being conducted and managed for the purpose of providing goods or services to customers, generating investment income (such as dividends or interest) or generating other income from ordinary activities." [IFRS 3 Appendix A]. In addition, IFRS 3.3 states that "**If the assets acquired are not a business, the reporting entity shall account for the transaction or other event as an asset acquisition.**" (See section 5.2.1.A below). [IFRS 3.3]. Distinguishing a business combination from an asset acquisition is described in detail in Chapter 10.

In October 2012, the IASB issued *Investment Entities: Amendments to IFRS 10, IFRS 12 and IAS 27* (see section 5.8.5 below). Amongst other changes, the amendment also stated that Appendix C of IFRS 1, which deals with the business combinations exemption, is applied only to business combinations within the scope of IFRS 3. [IFRS 1 Appendix C, IFRS 3.2A].

How we see it

In our view, the purpose of this change was to preclude the application of Appendix C to the acquisition by an investment entity, as defined in IFRS 10, of an investment in subsidiary that is required to be measured at fair value through profit or loss.

Therefore, we believe that the exemption is still available to transactions that meet the definition of a business combination under IFRS 3, even if the business combination is outside the scope of IFRS 3 (such as a combination of entities or businesses under common control).

However, the business combinations exemption does not apply to transactions which are not 'business combinations' as defined in IFRS 3 (even if the transactions were accounted for as business combinations under previous GAAP). Examples of transactions that are not business combinations would include asset acquisitions (see section 5.2.1.A below) or continuations (such as where a new holding company is inserted above an existing group). A first-time adopter which had such transactions under previous GAAP retrospectively applies IFRS accounting standards applicable to those transactions. If transactions which are not business combinations as defined in IFRS 3 are combinations of entities under common control, there is no specific guidance under IFRS accounting standards on accounting for them. We discuss this issue in Chapter 11.

5.2.1.A Asset acquisitions

Because IFRS 3 provides such a specific definition of a business combination (as described in Chapter 10), it is possible that under some national GAAPs, transactions that are not business combinations under IFRS 3, e.g., asset acquisitions, could have been accounted for as if they were business combinations. If so, a first-time adopter will need to restate such transactions, as discussed in Illustration 5-1 below.

Illustration 5-1: Acquisition of assets

Entity A acquired a company that held a single asset at the time of acquisition. That company had no employees and the asset itself was not in use at the date of acquisition. Entity A accounted for the transaction under its previous GAAP using the purchase method, which resulted in goodwill. Can Entity A apply the business combinations exemption to the acquisition of this asset?

If Entity A concludes that the asset is not a business as defined in IFRS 3, it will not be able to apply the business combinations exemption. Instead, Entity A accounts for such transaction as an asset acquisition (see Chapter 10). Entity A could consider applying other applicable optional exemptions under IFRS 1.

How we see it

If, in Illustration 5-1 above, the entity had accounted for the transaction as an asset acquisition rather than a business combination under previous GAAP, it would need to determine whether the transaction meets the definition of a business combination in IFRS 3 in order to qualify for use of the exemption.

5.2.1.B Associates and joint arrangements

Extract from IFRS 1

C5 The exemption for past business combinations also applies to past acquisitions of investments in associates, interests in joint ventures and interests in joint operations in which the activity of the joint operation constitutes a business, as defined in IFRS 3. Furthermore, the date selected for paragraph C1 applies equally for all such acquisitions.

IFRS 1 extends the exemption for past business combinations to past acquisitions of investments in associates, interests in joint ventures and interests in joint operations (in which the activity of the joint operation constitutes a business, as defined in IFRS 3). The date selected for the first restatement of business combinations will also be applied to the restatement of these other acquisitions. [IFRS 1.C5].

5.2.2 Option to restate business combinations retrospectively

Extract from IFRS 1

C1 A first-time adopter may elect not to apply IFRS 3 retrospectively to past business combinations (business combinations that occurred before the date of transition to IFRSs). However, if a first-time adopter restates any business combination to comply with IFRS 3, it shall restate all later business combinations and shall also apply IFRS 10 from that same date. For example, if a first-time adopter elects to restate a business combination that occurred on 30 June 20X6, it shall restate all business combinations that occurred between 30 June 20X6 and the date of transition to IFRSs, and it shall also apply IFRS 10 from 30 June 20X6.

A first-time adopter must account for business combinations occurring after its date of transition to IFRS accounting standards under IFRS 3, i.e., any business combinations during the comparative periods presented need to be restated in accordance with IFRS 3. An entity accounts for a business combination under common control based on its accounting policy as determined under IFRS accounting standards (see Chapter 11). This is because such transactions are outside the scope of IFRS 3. [IFRS 3.2(c)].

A first-time adopter is allowed to elect not to apply IFRS 3 retrospectively to business combinations occurring before the date of transition to IFRS accounting standards. However, if a first-time adopter does restate a business combination occurring prior to its date of transition to IFRS accounting standards to comply with IFRS 3 it must also restate any subsequent business combinations under IFRS 3 and apply IFRS 10 from that date onwards. [IFRS 1.C1]. In other words, as shown on the timeline at Figure 5-1 below, a first-time adopter is allowed to choose any date in the past from which it wants to account for all business combinations under IFRS 3 and would not restate business combinations that occurred prior to such date. It must be noted that a first-time adopter availing itself of this option is required to apply the version of IFRS 3 effective at the end of its first IFRS reporting period to any retrospectively restated business combinations. [IFRS 1.7].

Appendix C to IFRS 1 sets out the accounting consequences for business combinations not restated in accordance with IFRS 3 (see sections 5.2.3 to 5.2.10 below). [IFRS 1.C2, IFRS 1.C3, IFRS 1.C4]. However, the exemptions set out in IFRS 1.C2-C3 from applying IAS 21 to goodwill and fair value adjustments are also available for business combinations that are restated in accordance with IFRS 3. [IFRS 1.C2, IFRS 1.C3]. The various options for applying IAS 21 to goodwill and fair value adjustments are explained further in section 5.2.6 below.

If any pre-transition business combinations are restated, the first-time adopter must also apply IFRS 10's requirements on: the attribution of total comprehensive income to the owners of the parent and to the non-controlling interests; accounting for changes in the parent's ownership interest in a subsidiary without loss of control; and accounting for a loss of control of a subsidiary (and the related IFRS 5 requirements on classification of the disposal group as 'held for sale') from the date of the earliest business combination that is restated (see section 4.8 above). [IFRS 1.B7, IFRS 1.C1].

Figure 5-1: Application of the optional business combination exemption

Even if a first-time adopter elects not to restate certain business combinations, it might still need to restate the carrying amounts of the acquired assets and assumed liabilities, as described in section 5.2.4 below.

How we see it

Although there is no restriction that prevents retrospective application by a first-time adopter of IFRS 3 to all past business combinations, in our view, a first-time adopter does not restate business combinations under IFRS 3 that occurred before the date of transition to IFRS accounting standards when this would require use of hindsight.

Practical example 5-1 below and Practical example 6-1 in section 6.3 below are examples of disclosures made by entities that opted not to restate business combinations that occurred before their date of transition to IFRS accounting standards, while Practical example 5-2 below illustrates disclosures by an entity that chose to restate certain business combinations that occurred prior to its date of transition to IFRS accounting standards.

Practical example 5-1: Husky Energy Inc. (2011)
Canada
Consolidated Financial Statements [extract]
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS [extract]
Note 26 First-Time Adoption of International Financial Reporting Standards [extract]
Key First-Time Adoption Exemptions Applied

IFRS 1, "First-Time Adoption of International Financial Reporting Standards," allows first-time adopters certain exemptions from retrospective application of certain IFRSs.

The Company applied the following exemptions:

- IFRS 3, "Business Combinations," was not applied to acquisitions of subsidiaries or interests in joint ventures that occurred before January 1, 2010.

...

Notes to the Reconciliations of Equity and Comprehensive Income from Canadian GAAP to IFRS [extract]
i) IFRS 3 Adjustments – Business Combinations

Given that the Company elected to apply the IFRS 1 exemption which permits no adjustments to amounts recorded for acquisitions that occurred prior to January 1, 2010, no retrospective adjustments were required. The Company acquired the remaining interest in the Lloydminster Upgrader from the Government of Alberta in 1995 and is required to make payments to Natural Resources Canada and Alberta Department of Energy from 1995 to 2014 based on average differentials between heavy crude oil feedstock and the price of synthetic crude oil sales. Under IFRS, the Company is required to recognize this contingent consideration at its fair value as part of the acquisition and record a corresponding liability. Under Canadian GAAP, any contingent consideration was not required to be recognized unless amounts were resolved and payable on the date of acquisition. On transition to IFRS, Husky recognized a liability of \$85 million, based on the fair value of remaining upside interest payments, with an adjustment to opening retained earnings. For the year ended December 31, 2010, the Company recognized pre-tax accretion of \$9 million in finance expenses under IFRS. Changes in forecast differentials used to determine the fair value of the remaining upside interest payments resulted in the recognition of a pre-tax gain of \$41 million for the year ended December 31, 2010.

The total impact of this change decreased (increased) retained earnings as follows:

<i>Consolidated Statement of Comprehensive Income (\$ millions)</i>	2010
Increase in finance expenses	9
Decrease in other – net	(41)
Adjustment before income taxes	(32)

<i>Consolidated Balance Sheets (\$ millions)</i>	January 1, 2010	December 31, 2010
Increase in other long-term liabilities	85	53
Decrease in retained earnings	85	53

Practical example 5-2: The Toronto-Dominion Bank (2011)

Canada

2011 CONSOLIDATED FINANCIAL STATEMENTS AND NOTES [extract]**Notes to Consolidated Financial Statements [extract]****NOTE 34 TRANSITION TO IFRS [extract]****DESCRIPTION OF SIGNIFICANT MEASUREMENT AND PRESENTATION DIFFERENCES BETWEEN CANADIAN GAAP AND IFRS [extract]****(d) Business Combinations: Elective Exemption**

As permitted under IFRS transition rules, the Bank has applied IFRS 3, *Business Combinations* (IFRS 3) to all business combinations occurring on or after January 1, 2007. Certain differences exist between IFRS and Canadian GAAP in the determination of the purchase price allocation. The most significant differences are described below.

Under Canadian GAAP, an investment in a subsidiary which is acquired through two or more purchases is commonly referred to as a “step acquisition”. Each transaction is accounted for as a step-by-step purchase, and is recognized at the fair value of the net assets acquired at each step. Under IFRS, the accounting for step acquisitions differs depending on whether a change in control occurs. If change in control occurs, the acquirer remeasures any previously held equity investment at its acquisition-date fair value and recognizes any resulting gain or loss in the Consolidated Statement of Income. Any transactions subsequent to obtaining control are recognized as equity transactions.

Under Canadian GAAP, shares issued as consideration are measured at the market price over a reasonable time period before and after the date the terms of the business combination are agreed upon and announced. Under IFRS, shares issued as consideration are measured at their market price on the closing date of the acquisition.

Under Canadian GAAP, an acquirer’s restructuring costs to exit an activity or to involuntarily terminate or relocate employees are recognized as a liability in the purchase price allocation. Under IFRS, these costs are generally expensed as incurred and not included in the purchase price allocation.

Under Canadian GAAP, costs directly related to the acquisition (i.e., finder fees, advisory, legal, etc.) are included in the purchase price allocation, while under IFRS these costs are expensed as incurred and not included in the purchase price allocation.

Under Canadian GAAP, contingent consideration is recorded when the amount can be reasonably estimated at the date of acquisition and the outcome is determinable beyond reasonable doubt, while under IFRS contingent consideration is recognized immediately in the purchase price equation at fair value and marked to market as events and circumstances change in the Consolidated Statement of Income.

The impact of the differences between Canadian GAAP and IFRS to the Bank’s IFRS opening Consolidated Balance Sheet is disclosed in the table below.

Business Combinations: Elective Exemption

(millions of Canadian dollars)

	As at Nov. 1, 2010
Increase/(decrease) in assets:	
Available-for-sale securities	\$ (1)
Goodwill	(2,147)
Loans – residential mortgages	22
Loans – consumer instalment and other personal	–
Loans – business and government	–
Intangibles	(289)
Land, buildings and equipment and other depreciable assets	2
Deferred tax assets	(12)
Other assets	104
(Increase)/decrease in liabilities:	
Deferred tax liabilities	102
Other liabilities	37
Subordinated notes and debentures	2
Increase/(decrease) in equity	\$ (2,180)

The total impact of business combination elections to the Bank’s IFRS opening equity was a decrease of \$2,180 million, comprised of a decrease to common shares of \$926 million, a decrease to contributed surplus of \$85 million and a decrease to retained earnings of \$1,169 million.

5.2.3 Classification of business combinations

IFRS 3 mandates a business combination to be accounted for either as an acquisition or reverse acquisition. [IFRS 3.4, IFRS 3.5(a), IFRS 3.6, IFRS 3.B19]. An entity’s previous GAAP could be based on a different definition of, for example, a business combination, an acquisition, a uniting of interests (or merger) or a reverse acquisition.

An important benefit of the exemption not to apply IFRS 3 retrospectively to pre-transition business combinations is that a first-time adopter keeps the same classification (as in its previous GAAP financial statements) for business combinations not restated under IFRS 3, [IFRS 1.C4(a)]. For example, a business combination that was accounted for as a merger (or uniting of interests) using the pooling of interests method under an entity’s previous GAAP is not reclassified and accounted for under the acquisition method. Similarly, a business combination that was accounted for as an acquisition by the legal acquirer under the entity’s previous GAAP continues to be classified as such even if it would be accounted for as a reverse acquisition by the acquiree under IFRS 3.

However, an entity could still elect to restate pre-transition business combinations retrospectively in accordance with IFRS 3, if it so wishes without using hindsight (see section 5.2.2 above). [IFRS 1.C1].

5.2.3.A Business combinations under common control

As discussed in section 5.2.1 above, we believe that Appendix C of IFRS 1 applies to a business combination under common control, provided it meets the definition of a business combination under IFRS 3, even though it is outside of the scope of IFRS 3. [IFRS 1 Appendix C, IFRS 3.B1]. Therefore, a first-time adopter could use the exemption to not restate a business combination under common control occurring before the date of transition to IFRS accounting standards retrospectively. If a first-time adopter does not apply the exemption, it accounts for a business combination under common control based on its IFRS accounting policy, as discussed in Chapter 11.

Illustration 5-2: Business combination under common control

Entity B, which is a first-time adopter under IFRS accounting standards, acquired Entity C in a business combination under common control that it accounted for as a pooling of interests under its previous GAAP prior to the date of transition to IFRS accounting standards. Entity B has the option to elect to use the business combinations exemption.

Case 1: Entity B uses the business combinations exemption

Entity B is required to apply the same classification as in its previous GAAP financial statements in accordance with IFRS 1.C4(a). [IFRS 1.C4(a)]. Entity B must also follow all of the other provisions of IFRS 1.C4. [IFRS 1.C4].

Case 2: Entity B does not use the business combinations exemption

Entity B accounts for the business combination applying the accounting policy it has chosen for such business combinations under IFRS accounting standards. If Entity B applies the acquisition method to business combinations involving entities under common control (where the transaction has substance - see Chapter 11), the business combination would be retrospectively restated in accordance with IFRS 3. Conversely, if the Entity B's accounting policy for such business combinations is to use the pooling of interests method, the business combination would be retrospectively restated if there were differences between the accounting treatment under previous GAAP compared to the accounting policy adopted under IFRS accounting standards in applying the pooling of interests method.

5.2.4 Assets and liabilities to be recognised in the opening IFRS statement of financial position

Extract from IFRS 1

- C4 If a first-time adopter does not apply IFRS 3 retrospectively to a past business combination, this has the following consequences for that business combination:
- (a) ...
 - (b) The first-time adopter shall recognise all its assets and liabilities at the date of transition to IFRSs that were acquired or assumed in a past business combination, other than:
 - (i) some financial assets and financial liabilities derecognised in accordance with previous GAAP (see paragraph B2); and
 - (ii) assets, including goodwill, and liabilities that were not recognised in the acquirer's consolidated statement of financial position in accordance with previous GAAP and also would not qualify for recognition in accordance with IFRSs in the separate statement of financial position of the acquiree (see (f)-(i) below).

The first-time adopter shall recognise any resulting change by adjusting retained earnings (or, if appropriate, another category of equity), unless the change results from the recognition of an intangible asset that was previously subsumed within goodwill (see (g)(i) below).
 - (c) ...

In its opening IFRS statement of financial position, a first-time adopter is required to recognise all assets acquired and liabilities assumed in a past business combination, with the exception of: [IFRS 1.C4(b)]

- Certain financial assets and liabilities that were derecognised in accordance with previous GAAP and that fall under the derecognition exception (see section 4.3 above) [IFRS 1.B2]
- Assets (including goodwill) and liabilities that were not recognised in the acquirer's consolidated statement of financial position under its previous GAAP and that also would not qualify for recognition under IFRS accounting standards in the separate statement of financial position of the acquiree (see section 5.2.4.B and Illustration 5-4 below) [IFRS 1.C4(f), IFRS 1.C4(g), IFRS 1.C4(h), IFRS 1.C4(i)]

The entity must exclude items it recognised under its previous GAAP that do not qualify for recognition as an asset or liability under IFRS accounting standards (see section 5.2.4.A and Illustration 5-3 below).

5.2.4.A Assets and liabilities to be excluded

Extract from IFRS 1

- C4 If a first-time adopter does not apply IFRS 3 retrospectively to a past business combination, this has the following consequences for that business combination:
- (a) ...
 - (c) The first-time adopter shall exclude from its opening IFRS statement of financial position any item recognised in accordance with previous GAAP that does not qualify for recognition as an asset or liability under IFRSs. The first-time adopter shall account for the resulting change as follows:
 - (i) the first-time adopter may have classified a past business combination as an acquisition and recognised as an intangible asset an item that does not qualify for recognition as an asset in accordance with IAS 38 *Intangible Assets*. It shall reclassify that item (and, if any, the related deferred tax and non-controlling interests) as part of goodwill (unless it deducted goodwill directly from equity in accordance with previous GAAP, see (g)(i) and (i) below).
 - (ii) the first-time adopter shall recognise all other resulting changes in retained earnings.²
 - (d) ...

² Such changes include reclassifications from or to intangible assets if goodwill was not recognised in accordance with previous GAAP as an asset. This arises if, in accordance with previous GAAP, the entity (a) deducted goodwill directly from equity or (b) did not treat the business combination as an acquisition.

If the first-time adopter recognised under its previous GAAP items that do not qualify for recognition under IFRS accounting standards, these must be excluded from the opening IFRS statement of financial position.

An intangible asset, acquired as part of a business combination, that does not qualify for recognition as an asset under IAS 38 is required to be derecognised along with the related deferred tax and non-controlling interests (if any), with an offsetting change to goodwill, unless the entity previously deducted goodwill directly from equity under its previous GAAP (see section 5.2.5 below).

All other changes resulting from derecognition of such assets and liabilities are accounted for as adjustments of retained earnings or another category of equity, if appropriate. [IFRS 1.C4(c)]. For example:

- Any restructuring provisions recognised under previous GAAP and which remain at the date of transition to IFRS accounting standards will need to be assessed against the IFRS recognition criteria. If the criteria are not met, then the provisions must be reversed against retained earnings.
- If an entity has deferred transaction costs (for which the services were received) relating to a business combination that has not been finalised under previous GAAP at the date of transition to IFRS accounting standards, these deferred transaction costs would need to be recognised in retained earnings as they do not qualify for deferral under IFRS accounting standards.

And

- Assets and liabilities of a structured entity required to be consolidated under previous GAAP but that does not qualify for consolidation under IFRS 10 would be deconsolidated.

Illustration 5-3 below, which is based on one within the implementation guidance in IFRS 1, illustrates the exclusion of a restructuring provision that did not comply with IFRS accounting standards from the opening statement of financial position. [IFRS 1.IG Example 3].

Illustration 5-3: Restructuring provision

Background

Entity D's first IFRS financial statements are for a period that ends on 31 December 20X3 and include comparative information for 20X2 only. It chooses not to restate previous business combinations under IFRS 3. On 1 July 20X1, Entity D acquired 100% of Entity E. Under its previous GAAP, Entity D recognised an (undiscounted) restructuring provision of CU100 that would not have qualified as an identifiable liability under IFRS 3. The recognition of this restructuring provision increased goodwill by CU100. At 1 January 20X2 (date of transition to IFRS accounting standards), Entity D:

- (a) Had paid restructuring costs of CU60
- (b) Estimated that it would pay further costs of CU40 in 20X2 and that the effects of discounting were immaterial. At 1 January 20X2, those further costs did not qualify for recognition as a provision under IAS 37.

This Illustration ignores any income tax effects of the adjustments.

Application of requirements

In its opening IFRS statement of financial position, Entity D:

- (a) Does not recognise a restructuring provision in respect of the outstanding CU40 provision under previous GAAP. The adjustment is recognised in retained earnings. [IFRS 1.C4(c)].
- (b) Does not adjust the amount assigned to goodwill. However, Entity D tests the goodwill for impairment under IAS 36 and recognises any resulting impairment loss as an adjustment to retained earnings. [IFRS 1.C4(g)].

5.2.4.B Recognition of assets and liabilities

Extract from IFRS 1

- C4 If a first-time adopter does not apply IFRS 3 retrospectively to a past business combination, this has the following consequences for that business combination:
- (a) ...
 - (f) If an asset acquired, or liability assumed, in a past business combination was not recognised in accordance with previous GAAP, it does not have a deemed cost of zero in the opening IFRS statement of financial position. Instead, the acquirer shall recognise and measure it in its consolidated statement of financial position on the basis that IFRSs would require in the statement of financial position of the acquiree. ...
 - (g) ...

For example, if the acquirer had not recognised an assumed provision under its previous GAAP that still exists at the date of transition to IFRS accounting standards, the acquirer recognises that provision at that date unless IAS 37 would prohibit its recognition in the financial statements of the acquiree. [IFRS 1.C4(f), IAS 37.27].

The change resulting from the recognition of such assets and liabilities is accounted for as an adjustment of retained earnings or another category of equity, if appropriate. However, if the change results from the recognition of an intangible asset that was previously subsumed within goodwill, it is accounted for as an adjustment of that goodwill (and of the related deferred tax and non-controlling interests, if any) (see section 5.2.5 below). [IFRS 1.C4(b), IFRS 1.C4(g)(i), IFRS 1.C4(k)].

How we see it

Intangible assets acquired as part of a business combination that were not recognised under a first-time adopter's previous GAAP will rarely be recognised in the opening IFRS statement of financial position because either: (1) they cannot be capitalised in the acquiree's own statement of financial position under IAS 38; or (2) capitalisation would require the use of hindsight which is not permitted under IAS 38 (see section 7.14 below).

Illustration 5-4 below discusses some examples in which certain assets were not recognised under previous GAAP.

Illustration 5-4: Items not recognised under previous GAAP

Entity F acquired Entity G but did not recognise Entity G's right-of-use assets and internally generated customer lists under its previous GAAP.

Upon first-time adoption of IFRS accounting standards, Entity F recognises the right-of-use assets in its opening IFRS statement of financial position using the amounts that Entity G would recognise in its separate statement of financial position. The resulting adjustment to the net assets at the date of transition is reflected in retained earnings; goodwill is not restated to reflect the net assets that would have been recognised at the date of acquisition (see section 5.2.5 below). However, Entity F does not recognise the customer lists in its opening IFRS statement of financial position, because Entity G is not permitted to capitalise internally generated customer lists under IAS 38. Any value that might have been attributable to the customer lists would remain subsumed in goodwill in Entity F's opening IFRS statement of financial position. [IFRS 1.C4(b)(ii), IFRS 1.C4(f)].

Entity H acquired Entity I but did not recognise Entity I's brand name as a separate intangible asset under its previous GAAP.

Upon first-time adoption of IFRS accounting standards, Entity H will not recognise Entity I's brand name in its opening IFRS statement of financial position because Entity I would not have been permitted under IAS 38 to recognise it as an asset in its own separate statement of financial position. Again, any value that might have been attributable to the brand name would remain subsumed in goodwill in Entity H's opening IFRS statement of financial position. [IFRS 1.C4(b)(ii), IFRS 1.C4(f)].

Illustration 5-5 below, which is based on one within the implementation guidance in IFRS 1, illustrates the capitalisation of leases that would be required under IFRS 16 *Leases*, but were not capitalised under the previous GAAP. [IFRS 1.IG Example 7].

Illustration 5-5: Lease in which the acquiree was a lessee not capitalised in accordance with previous GAAP

Entity J's date of transition to IFRS accounting standards is 1 January 20X2. Entity J acquired Entity K on 15 January 20X0 and did not capitalise leases in which Entity K was a lessee. If Entity K prepared financial statements in accordance with IFRS accounting standards, it would recognise lease liabilities of CU300,000 and right-of-use assets of CU250,000 at 1 January 20X2. This Illustration ignores any income tax effects of the adjustments.

Entity J has elected not to apply the transition reliefs in IFRS 1.D9 and IFRS 1.D9B to D9E. [IFRS 1.D9, IFRS 1.D9B, IFRS 1.D9C, IFRS 1.D9D, IFRS 1.D9E]. In its consolidated opening IFRS statement of financial position, Entity J recognises lease liabilities of CU300,000 and right-of-use assets of CU250,000, and charges CU50,000 to retained earnings. [IFRS 1.C4(b)(ii), IFRS 1.C4(f)].

5.2.4.C Previous GAAP carrying amount as deemed cost

Extract from IFRS 1

- C4 If a first-time adopter does not apply IFRS 3 retrospectively to a past business combination, this has the following consequences for that business combination:
- (a) ...
 - (e) Immediately after the business combination, the carrying amount in accordance with previous GAAP of assets acquired and liabilities assumed in that business combination shall be their deemed cost in accordance with IFRSs at that date. If IFRSs require a cost-based measurement of those assets and liabilities at a later date, that deemed cost shall be the basis for cost-based depreciation or amortisation from the date of the business combination.
 - (f) ...

IFRS 1 does not specifically define 'immediately after the business combination', but it is commonly understood that this takes account of the final determination of the purchase price allocation and final completion of purchase accounting. In other words, a first-time adopter would not use the provisionally determined fair values of assets acquired and liabilities assumed in applying the business combinations exemption, as explained in Illustration 5-6 below. [IFRS 1.C4(e)].

Illustration 5-6: Provisionally determined fair values

Entity L acquired Entity M in August 20X1 and made a provisional assessment of Entity M's identifiable net assets in its 31 December 20X1 consolidated financial statements under its previous GAAP. In its 31 December 20X2 consolidated financial statements - its last financial statements under previous GAAP - Entity L completed the initial accounting for the business combination and adjusted the provisional values of the identifiable net assets and the corresponding goodwill. Upon first-time adoption of IFRS accounting standards, Entity L elects not to restate past business combinations in accordance with IFRS 3.

In preparing its opening IFRS statement of financial position as of 1 January 20X2, Entity L uses the adjusted carrying amounts of the identifiable net assets as determined in its 20X2 financial statements as the deemed cost at the date of the business combination rather than the provisional carrying amounts of the identifiable net assets and goodwill shown in the 20X1 financial statements.

IFRS 1 is silent as to whether the relevant carrying amounts of the identifiable net assets and goodwill are those that appeared in the financial statements drawn up immediately before the date of transition to IFRS accounting standards or any restated balance appearing in a later set of previous GAAP accounts.

How we see it

Since the adjustments that were made to provisional fair values of the identifiable net assets and goodwill under previous GAAP effectively resulted in a restatement of the balances at the date of transition to IFRS accounting standards in a manner that is consistent with the approach permitted by IFRS accounting standards, it is, in our view, appropriate to reflect those adjustments in the opening IFRS statement of financial position. Moreover, this remains the case even if such adjustments to goodwill and the identifiable net assets at the acquisition date would have been made prospectively under previous GAAP rather than restating prior periods as would be required under IFRS 3.

Since the adjustments are effectively made as at the date of transition to IFRS accounting standards, it is also appropriate to use the window period permitted by previous GAAP provided that this does not extend into the first IFRS reporting period. This is because any restatements in that period can only be made in accordance with IFRS 3. In effect, the phrase 'immediately after the business combination' in IFRS 1.C4(e) is interpreted as including a window period allowed by the previous GAAP that ends at the earlier of the end of the window period and the beginning of the first IFRS reporting period.

Although the use of cost-based measurements under previous GAAP might be considered inconsistent with the requirements of IFRS accounting standards for assets and liabilities that were not acquired in a business combination, the IASB did not identify any situations in a business combination in which it would not be acceptable to bring forward cost-based measurements made under previous GAAP. [IFRS 1.BC36]. For example, assume an entity that adopts IFRS accounting standards with a date of transition to IFRS accounting standards of 1 January 20X2 and, as required, applies IFRS 3 to business combinations occurring on or after 1 January 20X2. Under the entity's previous GAAP, it acquired a business in 20X0 and the purchase accounting resulted in negative goodwill. At that time, the negative goodwill was eliminated by reducing the amounts assigned to long-lived assets (PP&E and intangible assets) on a *pro rata* basis. In this situation, the negative goodwill adjustment to PP&E and intangible assets is 'grandfathered' and is not adjusted in the opening IFRS statement of financial position. The negative goodwill adjustment to PP&E and intangible assets was part of the original purchase accounting and is not a subsequent measurement difference between completing the purchase price allocation and 1 January 20X2 and therefore the adjustment forms part of the deemed cost of PP&E and intangible assets.

By contrast, if under previous GAAP, the entity had recognised amortisation of intangible assets from the date of acquisition in a way that was not in compliance with IAS 38, it is not 'grandfathered' under the business combination exemption. The amortisation therefore is amended to the amount that complies with IFRS accounting standards on transition, as explained in Illustration 5-7 below (note that the adjusted carrying amount is also required to be tested for impairment if there are impairment indicators pursuant to the requirements of IAS 36 at the date of transition; see section 7.12 below). [IFRS 1.C4(c), IFRS 1.BC37].

Illustration 5-7: Items measured on a cost basis

Entity N applies the business combination exemption under IFRS 1. In a business combination Entity N acquired property, plant and equipment, inventory and accounts receivable. Under its previous GAAP, Entity N initially measured these assets at cost (i.e., their fair values at the date originally acquired).

Upon adoption of IFRS accounting standards, Entity N determines that its accounting policy for these assets under its previous GAAP complied with the requirements of IFRS accounting standards. Therefore, property, plant and equipment, inventory and accounts receivable are not adjusted but recognised in the opening IFRS statement of financial position at their carrying amounts under the previous GAAP.

In addition to the above, Entity N recognised a brand name as an intangible asset acquired in the business combination under its previous GAAP. Entity N initially measured the intangible asset at its cost of CU100 and amortised it over a period of 10 years (being the maximum period of amortisation under previous GAAP). The intangible asset had a carrying amount of CU80 at the date of transition to IFRS accounting standards under its previous GAAP. The intangible asset is not amortised in accordance with IAS 38, as it was concluded that it has an indefinite useful life. There are no indicators of impairment and the intangible asset's recoverable amount exceeds CU100.

Entity N recognises the intangible asset at its original cost under its previous GAAP of CU100 in the opening IFRS statement of financial position (reflecting the fact that under IAS 38, the intangible asset would not have been amortised since it had an indefinite life). The subsequent measurement not in accordance with IFRS accounting standards is not reflected.

5.2.4.D In-process research and development

IFRS 1 makes it clear that in-process research and development (IPR&D) that was included within goodwill under an entity's previous GAAP is not recognised separately upon transition to IFRS accounting standards unless it qualifies for recognition under IAS 38 in the statement of financial position of the acquiree.

[IFRS 1.C4(h)(i)]. However, IFRS 1 is silent on the treatment of IPR&D that was identified separately by an entity under the business combinations accounting standard of its previous GAAP, but which was immediately written off to profit or loss.

There are two possible scenarios as follows:

- (a) If previous GAAP required IPR&D to be written off as an integral part of the business combination accounting under that GAAP then the carrying amount of IPR&D 'immediately after the business combination' would be zero.
- (b) If that write-off was not an integral part of the business combination accounting (e.g., the previous GAAP merely required accelerated amortisation) then the carrying amount 'immediately after the business combination' would be the amount allocated to IPR&D by the business combinations standard under previous GAAP.

How we see it

While we understand that there could be different views, it is our view that IFRS 1 does not allow reinstatement of the amount of IPR&D previously written off, where previous GAAP required IPR&D to be written off as an integral part of the business combination accounting (scenario (a) above).

On the other hand, where the write-off of IPR&D under previous GAAP was not an integral part of the business combination (scenario (b) above), we believe that reinstatement of the amount of IPR&D that was written off is appropriate.

The above distinction could be largely irrelevant if the business combination took place several years before the transition to IFRS accounting standards because, in practice, the IPR&D could have been amortised fully or impaired before the date of transition.

5.2.4.E Subsequent measurement under IFRS accounting standards not based on cost

IFRS accounting standards require subsequent measurement of some assets and liabilities on a basis other than original cost, such as fair value for certain financial instruments or on specific measurement bases for share-based payments (IFRS 2) and employee benefits (IAS 19). Even if a first-time adopter does not apply IFRS 3 retrospectively to a business combination, such assets and liabilities must be measured on that other basis in its opening IFRS statement of financial position. Any change in the carrying amount of those assets and liabilities is accounted for as an adjustment of retained earnings, or other appropriate category of equity, rather than as an adjustment of goodwill. [IFRS 1.C4(d)]. Illustration 5-8 below discusses the treatment of assets measured at fair value under IFRS accounting standards.

Illustration 5-8: Items not measured at original cost

Entity O acquired in a business combination a trading portfolio of equity securities and a number of investment properties. Under its previous GAAP, Entity O initially measured these assets at historical cost (i.e., at their fair values at the date of original acquisition).

Upon adoption of IFRS accounting standards, Entity O measures the trading portfolio of equity securities and the investment properties at fair value in its opening IFRS statement of financial position. The resulting adjustment to these assets at the date of transition is reflected in retained earnings.

5.2.4.F Illustration of recognition and measurement requirements

Illustration 5-9 below, which is based on one within the implementation guidance in IFRS 1, demonstrates many of the requirements discussed above. [IFRS 1.IG Example 2].

Illustration 5-9: Business combination example**Background**

Entity P's first IFRS financial statements are for a reporting period that ends on 31 December 20X3 and include comparative information for 20X2 only. On 1 July 20X0, Entity P acquired 100% of Entity Q. Under its previous GAAP, Entity P:

- (a) Classified the business combination as an acquisition by Entity P
- (b) Measured the assets acquired and liabilities assumed at the following amounts under previous GAAP at 1 January 20X2 (date of transition to IFRS accounting standards)
 - (i) Identifiable assets less liabilities for which IFRS accounting standards require cost-based measurement at a date after the business combination: CU200 (with a tax base of CU150 and an applicable tax rate of 30%)
 - (ii) Pension liability (for which the present value of the defined benefit obligation measured under IAS 19 is CU130 and the fair value of plan assets is CU100): CUnil (because Entity P used a pay-as-you-go cash method of accounting for pensions under its previous GAAP). The tax base of the pension liability is also CUnil
 - (iii) Goodwill: CU180
- (c) Did not, at the date of acquisition, recognise deferred tax arising from temporary differences associated with the identifiable assets acquired and liabilities assumed

Application of requirements

In its opening (consolidated) IFRS statement of financial position, Entity P decides to apply the business combination exemption and as a result:

- (i) Classifies the business combination as an acquisition by Entity P even if the business combination would have qualified under IFRS 3 as a reverse acquisition by Entity Q. [IFRS 1.C4(a)].
- (ii) Does not adjust the accumulated amortisation of goodwill. Entity P tests the goodwill for impairment under IAS 36 and recognises any resulting impairment loss, based on conditions that existed at the date of transition to IFRS accounting standards. If no impairment exists, the carrying amount of the goodwill remains at CU180. [IFRS 1.C4(g)].
- (iii) For those net identifiable assets acquired for which IFRS accounting standards require cost-based measurement at a date after the business combination, treats their carrying amount under previous GAAP immediately after the business combination as their deemed cost at that date. [IFRS 1.C4(e)].
- (iv) Does not restate the accumulated depreciation and amortisation of the net identifiable assets in (iii) above, unless the depreciation methods and rates under previous GAAP result in amounts that differ materially from those required under IFRS accounting standards (for example, if they were adopted solely for tax purposes and do not reflect a reasonable estimate of the asset's useful life under IFRS accounting standards). If no such restatement is made, the carrying amount of those assets in the opening IFRS statement of financial position equals their carrying amount under previous GAAP at the date of transition to IFRS accounting standards (CU200). [IFRS 1.IG7].
- (v) If there is any indication that identifiable assets are impaired, tests those assets for impairment, under IAS 36, based on conditions that existed at the date of transition to IFRS accounting standards (see section 7.12 below).
- (vi) Recognises the pension liability, and measures it, at the present value of the defined benefit obligation (CU130) less the fair value of the plan assets (CU100), giving a carrying amount of CU30, with a corresponding debit of CU30 to retained earnings. [IFRS 1.C4(d)].

(vii) Recognises a net deferred tax liability of CU6 (CU20 at 30%) arising from:

(a) The taxable temporary difference of CU50 (CU200 less CU150) associated with the identifiable assets acquired and non-pension liabilities assumed

Less

(b) The deductible temporary difference of CU30 (CU30 less CUnil) associated with the pension liability

Entity P recognises the resulting increase in the deferred tax liability as a deduction from retained earnings. [IFRS 1.C4(b), IFRS 1.C4(k)]. If a taxable temporary difference arises from the initial recognition of the goodwill, Entity P does not recognise the resulting deferred tax liability. [IAS 12.15(a)].

5.2.5 Restatement of goodwill

Under the business combinations exemption, a first-time adopter takes the carrying amount of goodwill under its previous GAAP at the date of transition to IFRS accounting standards as a starting point and only adjusts it as follows: [IFRS 1.C4(g)]

- (a) Goodwill is increased by the carrying amount of any intangible asset acquired in a business combination under its previous GAAP (less any related deferred tax and non-controlling interests) that does not meet the recognition criteria under IFRS accounting standards. The first-time adopter accounts for the change in classification prospectively and does not, for example, reverse the cumulative amortisation on the item that it recognised as an intangible asset under its previous GAAP (see section 5.2.4.A above). [IFRS 1.C4(c)(i), IFRS 1.C4(k)].
- (b) Goodwill is decreased if a first-time adopter is required to recognise an intangible asset under IFRS accounting standards that was subsumed in goodwill under its previous GAAP. It adjusts deferred tax and non-controlling interests accordingly (see section 5.2.4.B above). [IFRS 1.C4(b)(ii), IFRS 1.C4(f), IFRS 1.C4(k)].
- (c) Goodwill must be tested for impairment at the date of transition to IFRS accounting standards in accordance with IAS 36 regardless of whether there is any indication that the goodwill could be impaired (see Chapter 21); any resulting impairment loss is recognised in retained earnings unless IAS 36 requires it to be recognised in a revaluation surplus (see Chapter 21). The impairment test must be based on conditions at the date of transition to IFRS accounting standards.

Application of the above guidance can sometimes be more complicated than expected as is shown in Illustration 5-10 below.

Illustration 5-10: Recognition and derecognition of acquired intangible assets

Before its date of transition to IFRS accounting standards, Entity R acquired an online retailer, Entity S. Under its previous GAAP, Entity R recognised an intangible asset of CU1,200 related to 'deferred marketing costs', which does not meet the recognition criteria under IFRS accounting standards. Entity R also acquired customer relationships with a fair value of CU900 that do meet the recognition criteria under IFRS 3, but which it did not recognise as an intangible asset under its previous GAAP.

Upon adoption of IFRS accounting standards, Entity R is required to derecognise the 'deferred marketing costs' intangible asset and increase the carrying amount of goodwill for a corresponding amount. It also adjusts deferred tax and non-controlling interests accordingly (with a corresponding adjustment to goodwill). [IFRS 1.C4(c)(i), IFRS 1.C4(g)(i), IFRS 1.C4(k)]. Nevertheless, the customer relationship intangible asset that is subsumed in goodwill cannot be recognised as its carrying amount in the statement of financial position of the acquiree, Entity S, would have been nil under IFRS accounting standards and therefore remains subsumed within goodwill. [IFRS 1.C4(b)(ii), IFRS 1.C4(g)(i), IFRS 1.C4(f)].

In economic terms it might be contended that the 'deferred marketing costs' intangible asset in the Illustration above comprises the value that would have been attributable under IFRS accounting standards to the acquired customer relationships. However, unless Entity R concluded that not recognising the customer relationship intangible asset was an error under its previous GAAP, it would not be able to recognise the customer relationship intangible asset upon adoption of IFRS accounting standards.

Under IFRS 1, assets acquired and liabilities assumed in a business combination prior to the date of transition to IFRS accounting standards are not necessarily valued on a basis that is consistent with IFRS accounting standards. This can lead to 'double counting' in the carrying amount of assets and goodwill as is shown in Illustration 5-11 below.

Illustration 5-11: Impairment testing of goodwill on first-time adoption

Entity T acquired a business before its date of transition to IFRS accounting standards. The cost of acquisition was CU530 and Entity T allocated the purchase price as follows:

	CU
Properties, at carry-over cost	450
Liabilities, at amortised cost	(180)
Goodwill	260
Purchase price	530

The goodwill under Entity T's previous GAAP relates entirely to the properties that had a fair value at the date of acquisition that was significantly in excess of their value on a carry-over cost basis. In Entity T's opening IFRS statement of financial position the same assets, liabilities and goodwill are valued as follows:

	CU
Properties, at fair value	750
Liabilities, at amortised cost	(180)
Provisional IFRS goodwill (before impairment test)	260
Total carrying amount	830

Entity T used the option to measure the properties at fair value at its date of transition in its opening IFRS statement of financial position. [IFRS 1.D5]. However, IFRS 1 does not permit goodwill to be adjusted to reflect the extent to which the increase in fair value relates to other assets recognised at the time of the acquisition. The total carrying amount of the acquired net assets including goodwill of CU830 might now exceed the recoverable amount. When Entity T tests the 'provisional IFRS goodwill' for impairment on first-time adoption of IFRS accounting standards, the recoverable amount of the business is determined to be CU620. Accordingly, it will have to recognise an impairment of goodwill of CU210 and disclose this impairment under IFRS 1. [IFRS 1.C4(g)(ii), IFRS 1.24(c)].

In some cases, the write-off will completely eliminate the goodwill and thereby any 'double counting'. However, in this particular case, the remaining goodwill of CU50 in truth represents goodwill that was internally generated between the date of acquisition and the date of transition to IFRS accounting standards.

The IASB accepted that IFRS 1 does not prevent the implicit recognition of internally generated goodwill that arose after the date of the business combination. It concluded that attempts to exclude such internally generated goodwill would be costly and lead to arbitrary results. [IFRS 1.BC39].

The business combinations exemption also applies to associates, interests in joint ventures and interests in joint operations (in which the activity of the joint operation constitutes a business, as defined in IFRS 3) (see section 5.2.1.B above). [IFRS 1.C5].

However, IAS 28 *Investments in Associates and Joint Ventures* states the goodwill that forms part of the carrying amount of the net investment in an associate or interest in a joint venture is not tested for impairment separately by applying the requirements for impairment testing goodwill in IAS 36. Instead, the entire carrying amount of the investment is tested for impairment in accordance with IAS 36 as a single asset. [IAS 28.42].

How we see it

In our view, investments in associates and joint arrangements are tested for impairment as at the date of transition to IFRS accounting standards if they include an element of goodwill. However, the goodwill embedded in the amount of an investment in an associate or an interest in a joint venture will not be subject to a separate impairment test. Rather the entire carrying amount of the investment is tested for impairment following the requirements of IAS 36.

In some cases, there might have been an impairment of an investment in an associate or joint venture accounted using the equity method under previous GAAP.

How we see it

In testing the investment in an associate or joint venture for impairment as at the date of transition to IFRS accounting standards, in our view, an investor does not reverse a previous GAAP impairment that was recognised separately on the notional goodwill element embedded in the investment. However, if the previous GAAP impairment had been recognised as a reduction of the entire investment (without attribution to any particular embedded goodwill element), the first-time adopter is able to reverse such impairment if it is assessed to no longer be necessary.

This is discussed in the two scenarios set out in Illustration 5-12 below:

Illustration 5-12: Previous GAAP impairment of goodwill embedded in equity method investment in associate or joint venture

Scenario 1 - Impairment was recognised on the notional goodwill element embedded in the investment under previous GAAP

On 1 January 20X0, Entity U acquired an investment in Entity V, which it accounts for using the equity method (the investment would qualify as an associate under IFRS accounting standards). The cost of investment was CU1,500 compared to V's identifiable net assets of CU500; therefore, notional goodwill of CU1,000 was included in the carrying value of the investment at that time. The previous GAAP required the entity to:

- Amortise the notional goodwill of the associate on a straight-line basis over 10 years.
- Test the investment accounted using the equity method for impairment at the investment level.
- Allocate and recognise the impairment loss (if any) against notional goodwill.
- Not reverse goodwill impairments (including those on notional goodwill). Consequently, goodwill impairments recognised under previous GAAP affected future amortisation of goodwill.

Therefore, under its previous GAAP, Entity U tested its investment in Entity V for impairment and recognised an impairment loss of CU400 in the year ended 31 December 20X1 after amortisation of CU200 was recognised. This reduced the notional goodwill to CU400, which Entity U amortises over the remaining 8 years (CU50 annually). By its date of transition to IFRS accounting standards, 1 January 20X4, the notional goodwill had been amortised by a further 2 years × CU50 (CU100), reducing the notional goodwill to CU300. Net assets are unchanged since acquisition, leaving the investment with a carrying value of CU800.

Entity U applies the exemption from retrospective restatement for past acquisitions of investments in associates. [IFRS 1.C5]. Therefore, at 1 January 20X4, its date of transition, Entity U also tests the investment for impairment in accordance with IAS 36. At 1 January 20X4, the value of the investment in Entity V has recovered, and is CU1,500 based on its current listed share price. Under this scenario, the previous impairment to notional goodwill is not reversed, since the use of the business combination exemption as it applies to associates means that the goodwill determined under the previous GAAP acquisition accounting together with the subsequent accounting up to the date of transition is effectively grandfathered in a similar way to a subsidiary's goodwill under the business combinations exemption. [IFRS 1.C4(g), IFRS 1.C4(h)]. Therefore, the carrying value of the notional goodwill as determined under previous GAAP becomes the embedded notional goodwill at transition unless specifically required to be adjusted.

Scenario 2 - Impairment was recognised at the investment level under previous GAAP

The same as Scenario 1, except that Entity U's previous GAAP impairment test was performed at the investment level, using a test similar to that required under IAS 36. Because of applying this approach, when Entity U recognised an impairment loss of CU400 in the year ended 31 December 20X1, the carrying amount of the investment was CU900. Similar to Scenario 1, at 1 January 20X4, the value of the investment in Entity V has recovered and is CU1,500 based on its current listed share price.

Under this scenario, the previous impairment of notional goodwill, which is embedded in the full amount of the investment, is reversed. However, the impairment can only be reversed up to the pre-impairment investment carrying amount (using the equity method) that results from the application of the business combination exemption.

5.2.5.A Prohibition of other adjustments to goodwill

IFRS 1 prohibits restatement of goodwill for most other adjustments reflected in the opening IFRS statement of financial position. Therefore, a first-time adopter electing not to apply IFRS 3 retrospectively is not permitted to make any adjustments to goodwill other than those described in section 5.2.5 above. [IFRS 1.C4(h)]. For example, a first-time adopter cannot restate the carrying amount of goodwill:

- (i) To exclude in-process research and development acquired in that business combination (unless the related intangible asset would qualify for recognition under IAS 38 in the statement of financial position of the acquiree)
 - (ii) To adjust previous amortisation of goodwill
- Or
- (iii) To reverse adjustments to goodwill that IFRS 3 would not permit, but were made under previous GAAP because of adjustments to assets and liabilities between the date of the business combination and the date of transition to IFRS accounting standards

Differences between the goodwill amount in the opening IFRS statement of financial position and that in the financial statements under previous GAAP can arise, for example, because:

- (a) Goodwill needs to be restated as a result of a retrospective application of IAS 21 (see section 5.2.6 below)
- (b) Goodwill in relation to previously unconsolidated subsidiaries will have to be recognised (see section 5.2.7 below)
- (c) Goodwill in relation to transactions that do not qualify as business combinations under IFRS accounting standards must be derecognised (see section 5.2.1 above)

And

- (d) 'Negative goodwill' that had been included within goodwill under previous GAAP is derecognised under IFRS accounting standards (see section 5.2.5.B below)

Illustration 5-13 below demonstrates the adjustments required to goodwill, where applicable, for certain items.

Illustration 5-13: Adjusting goodwill

Entity W acquired Entity X but under its previous GAAP it did not recognise the following items:

- Entity X's customer lists which had a fair value of CU1,100 at the date of the acquisition and CU1,500 at the date of transition to IFRS accounting standards.
- Deferred tax liabilities related to the fair value adjustment of Entity X's property, plant and equipment, which amounted to CU9,500 at the date of the acquisition and CU7,800 at the date of transition to IFRS accounting standards.

What adjustment does Entity W make to goodwill to account for the customer lists and deferred tax liabilities at its date of transition to IFRS accounting standards, if the business combination exemption is taken?

As explained in section 5.2.4.B above, Entity W cannot recognise the customer lists (internally generated intangible assets of acquiree) when it uses the business combinations exemption. Accordingly, Entity W does not adjust goodwill for the customer lists. [IFRS 1.C4(b)(ii), IFRS 1.C4(f)].

Entity W must recognise, under IAS 12, the deferred tax liability at its date of transition to IFRS accounting standards because there is no exemption from recognising deferred taxes under IFRS 1. However, Entity W is not permitted to adjust goodwill for the deferred tax liability that would have been recognised at the date of acquisition. Instead, Entity W recognises the deferred tax liability of CU7,800 with a corresponding charge to retained earnings or other category of equity, if appropriate. [IFRS 1.C4(b), IFRS 1.C4(h), IFRS 1.C4(k)].

5.2.5.B Derecognition of negative goodwill

IFRS 1 does not specifically address accounting for negative goodwill recognised under a previous GAAP.

How we see it

We believe negative goodwill is derecognised by a first-time adopter because it is not permitted to recognise items as assets or liabilities if IFRS accounting standards do not permit such recognition.

Negative goodwill clearly does not meet the definition of a liability under the IASB's *Conceptual Framework*, [CF 4.26], and its recognition is not permitted under IFRS 3. While not directly applicable to a first-time adopter, the transitional provisions of IFRS 3 specifically required that any negative goodwill is derecognised upon adoption of IFRS 3. [IFRS 3.B69(e)].

5.2.5.C Goodwill previously deducted from equity

If a first-time adopter deducted goodwill from equity under its previous GAAP then it does not recognise that goodwill in its opening IFRS statement of financial position. Also, it does not reclassify that goodwill to profit or loss if it disposes of the subsidiary or if the investment in the subsidiary becomes impaired. [IFRS 1.C4(i)(i)]. Effectively, under IFRS accounting standards such goodwill ceases to exist, as is shown in Illustration 5-14 below, which is based on the implementation guidance in IFRS 1. [IFRS 1.IG Example 5].

Illustration 5-14: Goodwill deducted from equity and treatment of related intangible assets

Entity Y acquired a subsidiary before the date of transition to IFRS accounting standards. Under its previous GAAP, Entity Y:

- (a) Recognised goodwill as an immediate deduction from equity
- (b) Recognised an intangible asset of the subsidiary that does not qualify for recognition as an asset under IAS 38
- (c) Did not recognise an intangible asset of the subsidiary that would qualify under IAS 38 for recognition as an asset in the financial statements of the subsidiary. The subsidiary held the asset at the date of its acquisition by Entity Y and at the date of transition to IFRS accounting standards.

In its opening IFRS statement of financial position, Entity Y:

- (a) Does not recognise the goodwill, as it did not recognise the goodwill as an asset under previous GAAP [IFRS 1.C4(i)]
- (b) Does not recognise the intangible asset that does not qualify for recognition as an asset under IAS 38. Because Entity Y deducted goodwill from equity under its previous GAAP, the elimination of this intangible asset (and, if applicable, any related adjustments to deferred tax and non-controlling interests) reduces retained earnings (see section 5.2.4.A above) [IFRS 1.C4(c)(ii), IFRS 1.C4(k)]

And

- (c) Recognises the intangible asset that qualifies under IAS 38 for recognition as an asset in the financial statements of the subsidiary, even though the amount assigned to it under previous GAAP in Entity Y's consolidated financial statements was nil (see section 5.2.4.B above). [IFRS 1.C4(b)(ii), IFRS 1.C4(f)]. The recognition criteria in IAS 38 include the availability of a reliable measurement of cost, [IAS 38.21, IFRS 1.IG45-48], and Entity Y measures the asset at cost less accumulated depreciation and less any accumulated impairment losses identified under IAS 36 (see section 7.12 below). Because Entity Y deducted goodwill from equity under its previous GAAP, the recognition of this intangible asset (and, if applicable, any related adjustments to deferred tax and non-controlling interests) increases retained earnings. [IFRS 1.C4(c)(ii), IFRS 1.C4(k)]. However, if this intangible asset had been subsumed in goodwill recognised as an asset under previous GAAP, Entity Y would have decreased the carrying amount of that goodwill accordingly (and, if applicable, adjusted deferred tax and non-controlling interests) (see section 5.2.5 above). [IFRS 1.C4(b), IFRS 1.C4(f), IFRS 1.C4(g)(i), IFRS 1.C4(k)].

The prohibition on reinstating goodwill that was deducted from equity could have a significant impact on first-time adopters that hedge their foreign net investments, as demonstrated in Illustration 5-15 below.

Illustration 5-15: Goodwill related to foreign net investments

Entity Z, which uses the euro (€) as its functional currency, acquired a subsidiary in the United States whose functional currency is the US dollar (\$). The goodwill on the acquisition of \$2,100 was deducted from equity. Under its previous GAAP, Entity Z hedged the currency exposure on the goodwill because it would be required to recognise the goodwill as an expense upon disposal of the subsidiary.

IFRS 1 does not permit reinstatement of goodwill deducted from equity nor does it permit transfer of such goodwill to profit or loss upon disposal of the investment in the subsidiary. [IFRS 1.C4(i)(i)]. Under IFRS accounting standards, goodwill deducted from equity ceases to exist and Entity Z can no longer hedge the currency exposure on that goodwill. Therefore, exchange gains and losses relating to the hedge will no longer be classified in currency translation difference but will be recognised in profit and loss after adoption of IFRS accounting standards.

If a first-time adopter deducted goodwill from equity under its previous GAAP, adjustments resulting from the subsequent resolution of a contingency affecting the purchase consideration, at or before the date of transition to IFRS accounting standards, are required to be recognised in retained earnings. [IFRS 1.C4(i)(ii)].

Effectively, the adjustment is being accounted for in the same way as the original goodwill that arose on the acquisition, rather than having to be accounted for in accordance with IFRS 3. This requirement could affect, for example, the way a first-time adopter accounts for provisional amounts relating to business combinations prior to its date of transition to IFRS accounting standards, as shown in Illustration 5-16 below.

Illustration 5-16: Adjustments made during measurement period to provisional amounts

Entity A acquired Entity B on 30 September 20X1. Entity A sought an independent valuation for an item of property, plant and equipment acquired in the combination. However, the valuation was not completed by the date of transition to IFRS accounting standards (1 January 20X2). Under Entity A's previous GAAP, any goodwill was written off against equity as incurred. Five months after the acquisition date (and after the date of transition), Entity A received the independent valuation.

In preparing its opening IFRS statement of financial position, Entity A uses the adjusted carrying amounts of the identifiable net assets (see section 5.2.4.C above) with the corresponding adjustment being recognised in retained earnings.

5.2.6 Currency adjustments to goodwill

A first-time adopter need not apply IAS 21 retrospectively to fair value adjustments and goodwill arising in business combinations that occurred before the date of transition to IFRS accounting standards. [IFRS 1.C2, IFRS 1.G21A]. This exemption is different from the 'cumulative translation differences' exemption, which is discussed in section 5.6 below.

IAS 21 requires any goodwill arising on the acquisition of a foreign operation and any fair value adjustments to the carrying amounts of assets and liabilities arising on the acquisition of that foreign operation to be treated as assets and liabilities of the foreign operation. Thus, they are expressed in the functional currency of the foreign operation and are translated at the closing rate in accordance with the requirements discussed in Chapter 16. [IAS 21.47]. For a first-time adopter it might be impracticable, especially after a corporate restructuring, to determine retrospectively the currency denomination of the goodwill and fair value adjustments required by IAS 21.

If IAS 21 is not applied retrospectively, a first-time adopter instead treats such fair value adjustments and goodwill as assets and liabilities of the entity rather than as assets and liabilities of the acquiree. As a result, those goodwill and fair value adjustments are either already expressed in the entity's functional currency or are non-monetary foreign currency items that are reported using the exchange rate applied in accordance with previous GAAP. [IFRS 1.C2].

However, a first-time adopter is allowed to choose to apply IAS 21 retrospectively to fair value adjustments and goodwill arising in either: [IFRS 1.C1, IFRS 1.C3]

(a) All business combinations that occurred before the date of transition to IFRS accounting standards
Or

(b) All business combinations that the entity elects to restate to comply with IFRS 3

In practice, the exemption might be of limited use for a number of reasons:

First, the exemption permits 'goodwill and fair value adjustments' to be treated as assets and liabilities of the entity rather than as assets and liabilities of the acquiree, but does not clarify whether or not the exemption, if taken, must be applied to both goodwill and fair value adjustments.

How we see it

We believe that implicit in the exemption is the requirement to treat both the goodwill and the fair value adjustments consistently, as the exemption requires to treat them as assets and liabilities of the entity if the entity does not apply IAS 21 retrospectively to those fair value adjustments and goodwill.

However, the IASB apparently did not consider that many first-time adopters, under their previous GAAPs, will have treated fair value adjustments as assets or liabilities of the acquiree (so expressed in the foreign operation's functional currency), while at the same time treating goodwill as an asset of the acquirer (so expressed in the entity's functional currency). As noted above, we believe that the exemption requires the same treatment for both the goodwill and the fair value adjustments. In such cases, this means that the first-time adopter needs to use one of the following approaches:

- (i) *Goodwill and fair value adjustments treated as assets of the acquired foreign operation (i.e., in the foreign operation's functional currency)*

The goodwill (which was previously expressed as an asset of the first-time adopter) is treated as an asset of the foreign operation from the date of acquisition. Therefore, the goodwill and fair value adjustments are measured, both initially and subsequently, in the foreign operation's functional currency, and are reported in the opening IFRS statement of financial position using the exchange rate at the date of transition to IFRS accounting standards.

- (ii) *Goodwill and fair value adjustments treated as separate assets of the first-time adopter*

The fair value adjustments (which were previously expressed in the functional currency of the foreign operation acquired) are treated as separate assets (and liabilities) of the first-time adopter from the date of acquisition. Therefore, the goodwill and fair value adjustments are measured, both initially and subsequently, in the first-time adopter's functional currency, and are consistently expressed in that currency. If the presentation currency of the first-time adopter differs from its functional currency the recomputed functional currency amounts are then translated to the presentation currency of the first-time adopter.

As the exemption under IFRS 1 did not foresee this particular situation, those first-time adopters will need to restate either their goodwill or fair value adjustments. In many cases, restatement of goodwill is less onerous than restatement of fair value adjustments.

Secondly, the paragraphs in IFRS 1 that introduce the exemption were drafted at a later date than the rest of the Appendix of which they form part. Instead of referring to 'first-time adopter' these paragraphs refer to 'entity'.

How we see it

In our view, it is clear from the context that 'entity' is read as 'first-time adopter'. This means that the exemption only permits goodwill and fair value adjustments to be treated as assets and liabilities of the first-time adopter (i.e., the ultimate parent in the reporting group).

In practice, many groups have treated goodwill and fair value adjustments as assets and liabilities of an intermediate parent in the reporting group. Where the intermediate parent has a functional currency that is different from that of the ultimate parent who is the first-time adopter or the acquiree, it will be necessary to restate goodwill and fair value adjustments.

The decision to treat goodwill and fair value adjustments as either items denominated in the parent's or the acquiree's functional currency will also affect the extent to which the net investment in those foreign subsidiaries can be hedged (see also section 4.5.5 above).

5.2.7 Previously unconsolidated subsidiaries

A first-time adopter which did not consolidate a subsidiary acquired in a past business combination under previous GAAP, when applying the business combinations exemption, measures the carrying amounts of the subsidiary's assets and liabilities in its consolidated financial statements at the date of transition to IFRS accounting standards at either: [IFRS 1.1627(a)]

- (a) If the subsidiary has adopted IFRS accounting standards - the same carrying amounts as in the IFRS financial statements of the subsidiary, after adjusting for consolidation procedures and for the effects of the business combination in which it acquired the subsidiary. [IFRS 1.1617].

Or

- (b) If the subsidiary has not adopted IFRS accounting standards - the carrying amounts that IFRS accounting standards would require in the subsidiary's statement of financial position. [IFRS 1.164(j)].

The deemed cost of goodwill is the difference at the date of transition between: [IFRS 1.164(j)]

- (i) The parent's interest in those adjusted carrying amounts

And

- (ii) The cost in the parent's separate financial statements of its investment in the subsidiary

How we see it

The cost of an investment in a subsidiary in the parent's separate financial statements will depend on which option the parent has taken to measure the cost under IFRS 1 (see section 5.7.2 below).

A parent can elect to measure its investment in a subsidiary at one of the following amounts as the cost in its separate opening IFRS statement of financial position: [IFRS 1.D15]

(a) Cost determined in accordance with IAS 27 *Separate Financial Statements*

Or

(b) Deemed cost, which is its:

(i) Fair value at the entity's date of transition to IFRS accounting standards in its separate financial statements

Or

(ii) Previous GAAP carrying amount at that date

A first-time adopter using the business combinations exemption not to apply IFRS 3 retrospectively is precluded from calculating what the goodwill would have been at the date of the original acquisition. The deemed cost of goodwill is capitalised in the opening IFRS statement of financial position. Illustration 5-17 below, which is based on one within the implementation guidance in IFRS 1, demonstrates this requirement. [IFRS 1.IG Example 6].

Illustration 5-17: Subsidiary not consolidated under previous GAAP

Background

Entity C's date of transition to IFRS accounting standards is 1 January 20X2. Under its previous GAAP, Entity C did not consolidate its 75% interest in Entity D, which it acquired in a business combination on 15 July 20X0. On 1 January 20X2:

- (a) The cost of Entity C's investment in Entity D is CU180
- (b) Under IFRS accounting standards, Entity D would measure its assets at CU500 and its liabilities (including deferred tax under IAS 12) at CU300. On this basis, Entity D's net assets are CU200 under IFRS accounting standards.

Application of requirements

Entity C consolidates Entity D. The consolidated statement of financial position at 1 January 20X2 includes:

- (a) Entity D's assets at CU500 and liabilities at CU300
- (b) Non-controlling interests of CU50 (25% of [CU500 - CU300])
- (c) Goodwill of CU30 (cost of CU180 less 75% of [CU500 - CU300]). [IFRS 1.C4(j)]. Entity C tests the goodwill for impairment under IAS 36 (see section 7.12 below) and recognises any resulting impairment loss, based on conditions that existed at the date of transition to IFRS accounting standards. [IFRS 1.C4(g)(ii)].

If the cost of the subsidiary (as measured under IFRS 1, see section 5.7.2 below) is lower than the proportionate share of net asset value at the date of transition to IFRS accounting standards, the difference is taken to retained earnings, or other category of equity, if appropriate.

Slightly different rules apply to all other subsidiaries (i.e., those not acquired in a business combination but created) that an entity did not consolidate under its previous GAAP, the main difference being that goodwill is not recognised in relation to those subsidiaries. [IFRS 1.IG27(c)].

How we see it

Note that this exemption requires the use of the cost of the investment in the separate financial statements of the parent prepared using IAS 27. Therefore, if a first-time adopter, in its separate financial statements, does not opt to measure its cost of investment in a subsidiary at deemed cost (i.e., its fair value or previous GAAP carrying amount at the date of transition), it is required to calculate the deemed cost of the goodwill by comparing the cost of the investment (as determined in accordance with IAS 27) to its share of the carrying amount of the net assets determined on a different date.

In the case of a highly profitable subsidiary this could give rise to the following anomaly, as shown in Illustration 5-18 below:

Illustration 5-18: Calculation of deemed cost of goodwill

Entity E acquired Entity F before the date of transition to IFRS accounting standards for CU500. The net assets of Entity F would have been CU220 under IFRS accounting standards at the date of acquisition. Entity F makes on average an annual net profit of CU60, which it does not distribute to Entity E.

At the date of transition to IFRS accounting standards, the cost of Entity E's investment in Entity F is still CU500. However, the net assets of Entity F have increased to CU460. Therefore, under IFRS 1, the deemed cost of goodwill is CU40. [IFRS 1.C4(j)].

The deemed cost of goodwill is much lower than the goodwill that was paid at the date of acquisition because Entity F did not distribute its profits. In fact, if Entity F had distributed a dividend to its parent just before its date of transition to IFRS accounting standards, the deemed cost of goodwill would have been significantly higher.

5.2.8 Previously consolidated entities that are not subsidiaries

A first-time adopter might have consolidated an investment under its previous GAAP that does not meet the definition of a subsidiary under IFRS accounting standards. In this case the entity first determines the appropriate classification of the investment under IFRS accounting standards and then applies the first-time adoption rules in IFRS 1. Generally, such a previously consolidated investment is accounted for as either:

- *An associate, a joint venture or a joint operation:*
First-time adopters applying the business combinations exemption must also apply that exemption to past acquisitions of investments in associates, interests in joint ventures or interests in joint operations in which the activity of the joint operation constitutes a business, as defined in IFRS 3. [IFRS 1.C5]. If the business combinations exemption is not applicable or the entity did not acquire (i.e., the entity created) the investment in the associate or joint venture, IAS 28 is applied retrospectively unless the entity applies the joint arrangements exemption. [IFRS 1.D31]. (See section 5.17 below).
- *An investment under IFRS 9* (see section 5.10 below).
Or
- *An executory contract or service concession arrangement:*
There are no first-time adoption exemptions that apply; therefore, IFRS accounting standards are applied retrospectively. However, a practical relief is provided for a service concession arrangement if retrospective application is impracticable (see section 5.13 below). [IFRS 1.D22].

5.2.9 Measurement of deferred taxes and non-controlling interests

Deferred tax is calculated based on the difference between the carrying amounts of assets and liabilities and their respective tax bases. Therefore, deferred taxes are recalculated after all assets acquired and liabilities assumed have been adjusted under IFRS 1. [IFRS 1.C4(k)].

IFRS 10 defines non-controlling interest as the "Equity in a **subsidiary** not attributable, directly or indirectly, to a **parent**." [IFRS 10 Appendix A]. This definition is discussed in Chapter 8. Non-controlling interests are calculated after all assets acquired, liabilities assumed and deferred taxes have been adjusted under IFRS 1. [IFRS 1.C4(k)].

Any resulting changes in the carrying amount of deferred taxes and non-controlling interests are recognised by adjusting retained earnings (or, if appropriate, another category of equity), unless they relate to adjustments to intangible assets that are adjusted against goodwill. See Illustration 5-19 below. [IFRS 1.IG Example 4].

In terms of the treatment of deferred tax in relation to recognised intangible assets, there is a difference depending on whether the first-time adopter previously recognised acquired intangible assets in accordance with its previous GAAP or whether it had subsumed the intangible asset into goodwill (in both cases, a deferred tax liability was not recognised under its previous GAAP but is required to be recognised under IFRS accounting standards). In the first case, the first-time adopter must recognise a deferred tax liability and adjust non-controlling interests and opening reserves accordingly. [IFRS 1.C4(b), IFRS 1.C4(k), IAS 12.15(b)]. By contrast, in the second case it would have to decrease the carrying amount of goodwill, recognise the intangible assets and a deferred tax liability and adjust non-controlling interests as necessary, as discussed in section 5.2.5 above. [IFRS 1.C4(b), IFRS 1.C4(f), IFRS 1.C4(g)(i), IFRS 1.C4(k), IAS 12.15(b)]. The IASB discussed this issue in October 2005, but decided not to propose an amendment to address this inconsistency, i.e., the difference in the treatment of deferred tax depending on whether acquired intangible assets were recognised separately or subsumed within goodwill under previous GAAP.⁵

⁵ [IASB Update](#), October 2005, available on the IFRS Foundation's website.

Illustration 5-19 below illustrates how to account for restatement of intangible assets, deferred tax and non-controlling interests where previous GAAP requires deferred tax to be recognised. [IFRS 1.IG Example 4].

Illustration 5-19: Restatement of intangible assets, deferred tax and non-controlling interests

Entity G's first IFRS financial statements are for a period that ends on 31 December 20X3 and include comparative information for 20X2 only. On 1 July 20X0, Entity G acquired 75% of subsidiary H. Under its previous GAAP, Entity G assigned an initial carrying amount of CU200 to intangible assets that would not have qualified for recognition under IAS 38. The tax base of the intangible assets was CUnil, giving rise to a deferred tax liability (at 30%) of CU60. Entity G measured non-controlling interests as their share of the fair value of the identifiable net assets acquired. Goodwill arising on the acquisition was capitalised as an asset in Entity G's consolidated financial statements.

On 1 January 20X2 (the date of transition to IFRS accounting standards), the carrying amount of the intangible assets under previous GAAP was CU160, and the carrying amount of the related deferred tax liability was CU48 (30% of CU160).

Under IFRS 1, Entity G derecognises intangible assets that do not qualify for recognition as separate assets under IAS 38, together with the related deferred tax liability of CU48 and non-controlling interests, with a corresponding increase in goodwill (see section 5.2.5 above). The related non-controlling interests amount to CU28 (25% of CU112 (CU160-CU48)). Entity G makes the following adjustment in its opening IFRS statement of financial position: [IFRS 1.C4(g)(i)]

Dr	Goodwill	CU84	
Dr	Deferred tax liability	CU48	
Dr	Non-controlling interests	CU28	
	Cr	Intangible assets	CU160

Entity G tests the goodwill for impairment under IAS 36 and recognises any resulting impairment loss, based on conditions that existed at the date of transition to IFRS accounting standards. [IFRS 1.C4(g)(ii)].

5.2.10 Transition accounting for contingent consideration

IFRS 1 is silent on accounting for contingent consideration that relates to transactions that are within the scope of the business combinations exemption.

How we see it

The business combination exemption does not extend to contingent consideration that arose from a transaction that occurred before the date of transition to IFRS accounting standards, even if the acquisition itself is not restated due to the use of the exemption. Therefore, such contingent consideration, other than that classified as equity under IAS 32, is recognised at its fair value at the date of transition to IFRS accounting standards, regardless of the accounting under previous GAAP.

If the contingent consideration was not recognised at fair value at the date of transition to IFRS accounting standards under previous GAAP, the resulting adjustment is recognised in retained earnings or other category of equity, if appropriate. Subsequent adjustments will be recognised following the provisions of IFRS 3. [IFRS 3.40, IFRS 3.58].

5.3 Share-based payment transactions

IFRS 2 applies to accounting for the acquisition of goods or services in equity-settled share-based payment transactions, cash-settled share-based payment transactions and transactions in which the entity or the counterparty has the option to choose between settlement in cash or equity. There is no exemption from recognising share-based payment transactions that have not yet vested at the date of transition to IFRS accounting standards. The exemptions in IFRS 1 clarify that a first-time adopter is not required to apply IFRS 2 fully retrospectively to equity-settled share-based payment transactions that have already vested at the date of transition to IFRS accounting standards.

IFRS 1 contains the following exemptions and requirements regarding share-based payment transactions:

- (a) Only if a first-time adopter has disclosed publicly the fair value of its equity instruments, determined at the measurement date, as defined in IFRS 2, then it is encouraged to apply IFRS 2 to: *[IFRS 1.D2]*
 - (i) Equity instruments that were granted on or before 7 November 2002 (i.e., the date the IASB issued ED 2 *Share-based Payment*)
 - (ii) Equity instruments that were granted after 7 November 2002 but vested before the date of transition to IFRS accounting standards.

Many first-time adopters that did not use fair value-based share-based payment accounting under previous GAAP will not have published the fair value of equity instruments granted and are, therefore, not allowed to apply IFRS 2 retrospectively to those share-based payment transactions.

- (b) For all grants of equity instruments to which IFRS 2 has not been applied, a first-time adopter must still make the disclosures relating to the nature and extent of share-based payments required by IFRS 2.44-45. *[IFRS 1.D2, IFRS 2.44, IFRS 2.45]*.
- (c) If a first-time adopter modifies the terms or conditions of a grant of equity instruments to which IFRS 2 has not been applied, the entity is not required to apply the requirements of IFRS 2.26-29 if the modification occurred before the date of transition to IFRS accounting standards. *[IFRS 1.D2, IFRS 2.26, IFRS 2.27, IFRS 2.28, IFRS 2.28A, IFRS 2.29]*.

And

- (d) A first-time adopter is encouraged, but not required, to apply IFRS 2 to liabilities arising from share-based payment transactions that were settled before the date of transition to IFRS accounting standards. *[IFRS 1.D3]*.

There are a number of interpretation issues concerning these exemptions and requirements:

- *Meaning of 'disclosed publicly' under (a) above*

IFRS 1 only permits retrospective application of IFRS 2 if the entity has 'disclosed publicly' the fair value of the equity instruments concerned, but IFRS accounting standards do not define what is meant by 'disclosed publicly'.

How we see it

While IFRS 1 does not specifically require public disclosure of the fair value of an entity's share-based payment transactions in its previous financial statements, it is clear that IFRS 1 requires fair value to have been published contemporaneously. In addition, the requirements in IFRS 1 to disclose publicly the fair value of share-based payment transactions can be met even if the fair value is only disclosed in aggregate rather than for individual awards.

- *First-time adopters encouraged to apply IFRS 2 under (a) and (d) above*

The 'date of transition to IFRS accounting standards' to which those exemptions refer is the first day of the earliest comparative period presented in a first-time adopter's first IFRS financial statements.

How we see it

This effectively means that an entity could accelerate the vesting of an award that was otherwise due to vest after the date of transition to IFRS accounting standards in order to avoid applying IFRS 2 to that award.

- *Whether a consistent selection of the exemptions under (a) and (d) above is required*

How we see it

A first-time adopter can choose which of the exemptions under (a) and (d) it wants to apply, i.e., there is no specific requirement to select the exemptions in a consistent manner.

- *Meaning of 'encouraged' under (a) and (d) above*

Under IFRS 1, a first-time adopter is encouraged, but not required, to apply IFRS 2 to certain categories of share-based payment transactions (see (a) and (d) above). IFRS 1 does not specifically prohibit a literal reading of 'encouraged', which could, for example, allow a first-time adopter to decide to apply IFRS 2 only to some share-based payment transactions granted before 7 November 2002.

How we see it

We believe that it would generally be acceptable for a first-time adopter to apply IFRS 2 only to share-based payment transactions:

- (1) After an earlier date chosen by the entity (e.g., 1 January 2001), while not applying it to earlier transactions
- (2) For which fair values were disclosed publicly

- *Treatment of modifications, cancellations and settlements under (c) above*

There is a slight ambiguity concerning the interpretation of the exemption under (c) above, because IFRS 1.D2 refers only to the modification of awards. This could allow a literal argument that IFRS 1 does not prescribe any specific treatment when an entity cancels or settles, as opposed to modifying, an award to which IFRS 2 has not been applied. However, IFRS 1.D2 also requires an entity to apply IFRS 2.26-29 to 'modified' awards. These paragraphs deal not only with modification but also with cancellation and settlement (see Chapter 30); indeed IFRS 2.28-29 are not relevant to modifications at all.

How we see it

Given the reference to IFRS 2.26-29 in IFRS 1.D2, it is clear that the IASB intended IFRS 2 to be applied not only to modifications, but also to any cancellation or settlement of an award to which IFRS 2 has not been applied, unless the modification, cancellation or settlement occurs before the date of transition to IFRS accounting standards.

- *Transactions where the counterparty has a choice of settlement method*

These are not specifically addressed in the first-time adoption rules.

How we see it

It therefore appears that, where such transactions give rise to recognition of both an equity component and a liability component, the equity component is subject to the transitional rules for equity-settled transactions and the liability component to those for cash-settled transactions. This could well mean that the liability component of such a transaction is recognised in the financial statements, whilst the equity component is not.

- *Application of IFRS 2 to cash-settled transactions settled before the date of transition to IFRS accounting standards under (d) above*

How we see it

It is not entirely clear what lies behind the exemption under (d) above, since a first-time adopter would never be required to report a share-based payment transaction (or indeed any transaction) settled before the date of transition.

In Practical example 5-3 below, Manulife Financial Corporation (Manulife) made use of the exemption not to apply IFRS 2 to share-based payment transactions that were fully vested at the date of transition to IFRS accounting standards. The Practical example also illustrates that the share-based payment exemption does not apply for awards that were granted after 7 November 2002 and that were still vesting at the date of transition to IFRS accounting standards.

Practical example 5-3: Manulife Financial Corporation (2011)

Canada

2011 Annual Report [extract]

Notes to Consolidated Financial Statements [extract]

Note 25 First-time Adoption of IFRS

As outlined in note 1, the Company has adopted IFRS as a replacement of previous Canadian GAAP effective January 1, 2011. References to Canadian GAAP throughout this note relate to Canadian GAAP prior to the adoption of IFRS. The Company's opening Consolidated Statement of Financial Position was prepared at January 1, 2010, the Company's date of transition to IFRS (the "Transition Date") in accordance with the requirements of IFRS 1 "First-Time Adoption of International Financial Reporting Standards". This note explains the principal adjustments made by the Company in preparing the opening IFRS Consolidated Statement of Financial Position as at January 1, 2010 compared to the Consolidated Balance Sheet as at December 31, 2009 under Canadian GAAP and the required adjustments between IFRS and previous Canadian GAAP to total equity and total comprehensive income for the 2010 comparative year.

IFRS has been applied retrospectively, except for certain optional and mandatory exemptions from full retrospective application provided for under IFRS 1, as detailed below.

(a) First-time adoption elections [extract]

Optional exemptions [extract]

Share-based payment transactions – The Company elected to apply IFRS 2 "Share-based Payments" to all equity instruments granted after November 7, 2002 that had not vested by the Transition Date. The Company applied IFRS 2 for all liabilities arising from share-based payment transactions that existed at the Transition Date.

5.3.1 Use of previously published fair values

There is no explicit requirement in IFRS 1 or IFRS 2 that any voluntary retrospective application of IFRS 2 must be based on the fair value previously published. This might appear to allow a first-time adopter the flexibility of using a different valuation for IFRS 2 purposes than that previously used for disclosure purposes.

How we see it

The requirements of IFRS 1 in relation to estimates under previous GAAP (see section 4.2 above) mean that the assumptions used, when retrospectively applying IFRS 2, must be consistent with those used in the originally disclosed valuation. In our view, the entity will also need to consider the implications of the assertion, in effect, that there is more than one fair value for the same transaction.

5.3.2 Restatement of costs recognised under previous GAAP

A first-time adopter could elect to take advantage of the transition exemption in IFRS 1 which allows it not to apply IFRS 2 to equity-settled share-based payment transactions that were vested before the date of transition to IFRS accounting standards, despite having recognised a cost for those transactions in accordance with its previous GAAP. Neither IFRS 1 nor IFRS 2 clearly indicates the appropriate treatment of the costs of share-based payment transactions that were recognised under the previous GAAP.

How we see it

There are mixed views on this issue in different jurisdictions, some of which are being driven by local regulatory expectations. In practice, either of the following approaches is considered acceptable, provided that the treatment chosen is disclosed in the financial statements if the previously recognised costs are material:

- *Not to change expense previously recognised under previous GAAP for equity instruments subject to transitional relief under IFRS 1*

This approach is consistent with the approach for cash-settled share-based payment transactions that are settled prior to the date of transition to IFRS accounting standards, since the entity must reflect the reduction in cash that was actually paid (and therefore the reduction in retained earnings) in the first IFRS financial statements.

Or

- *To derecognise share-based payment expense under previous GAAP for equity instruments subject to transitional relief under IFRS 1*

In other words, reverse cumulative amounts recognised in the retained earnings and equity accounts of the opening IFRS statement of financial position.

5.4 Deemed cost

IFRS 1 requires full retrospective application of IFRS accounting standards effective at the end of a first-time adopter's first IFRS reporting period. [IFRS 1.7]. Therefore, in the absence of the deemed cost exemption, the requirements of, for example, IAS 16, IAS 38, IAS 40 *Investment Property* and IFRS 6 *Exploration for and Evaluation of Mineral Resources* would have to be applied as if the first-time adopter had always applied these standards. This could be quite onerous because:

- These items are long-lived which means that accounting records from the time of acquisition might not be available anymore. In the case of formerly state-owned businesses, the required accounting records possibly never even existed
 - The entity might have revalued the items in the past as a matter of accounting policy or because this was required under national law
- Or
- Even if the items were carried at depreciated cost, the accounting policy for recognition and depreciation might not have been compliant with IFRS accounting standards

Given the significance of items like property, plant and equipment in the statement of financial position of most first-time adopters and the sheer number of transactions affecting property, plant and equipment, restatement is not only difficult but would often also involve huge cost and effort. Therefore, the IASB decided to introduce the notion of a 'deemed cost' that is not the 'true' cost basis of an asset (as required by IFRS accounting standards), but a surrogate that is deemed to be a suitable starting point.

There are seven separate deemed cost exemptions in IFRS 1:

- (a) Fair value or revaluation as deemed cost (see section 5.4.1 below)
- (b) Event-driven fair value measurement as deemed cost (see section 5.4.2 below)
- (c) Deemed cost for oil and gas assets (see section 5.4.3 below)
- (d) Deemed cost for assets used (or previously used) in operations subject to rate regulation (see section 5.4.4 below)
- (e) Deemed cost for assets acquired, liabilities assumed and goodwill in a business combination not restated under IFRS accounting standards (see section 5.2 above)
- (f) Deemed cost for a right-of-use asset for a lessee based on certain exemptions in IFRS 1 (see section 5.5 below)

And

- (g) Deemed cost in determining the cost of an investment in a subsidiary, joint venture or associate in separate financial statements (see section 5.7.2 below)

5.4.1 Fair value or revaluation as deemed cost

To deal with the problem of restatement of long-lived assets upon first-time adoption of IFRS accounting standards, IFRS 1 permits a first-time adopter - for the categories of assets listed below - to measure an item in its opening IFRS statement of financial position using an amount that is based on its deemed cost (see section 5.4.1.A below): [IFRS 1.D5, IFRS 1.D6, IFRS 1.D7]

- Property, plant and equipment, including bearer plants (see section 7.4 below) [IFRS 1.D5, IFRS 1.D6]
- Investment property, if an entity elects to use the cost model in IAS 40. [IFRS 1.D7(a)]. The fact that the exemption can only be applied to investment property accounted for under the cost model will not pose any problems in practice as the fair value model under IAS 40 requires an entity to measure its investment property at fair value at its date of transition to IFRS accounting standards.

Right-of-use assets under IFRS 16 [IFRS 1.D7(aa)]

And

- Intangible assets (see section 7.14 below) that meet: [IFRS 1.D7(b)]
 - The recognition criteria in IAS 38 (including reliable measurement of original cost)
- And
 - The criteria in IAS 38 for revaluation (including the existence of an active market)

A first-time adopter cannot use this deemed cost approach by analogy for any other assets or for liabilities. [IFRS 1.D7].

The use of fair value or revaluation as deemed cost for intangible assets will be very limited in practice because of the definition of an 'active market' in IFRS 13. An active market is defined as: "A market in which transactions for the asset or liability take place with sufficient frequency and volume to provide pricing information on an ongoing basis." [IFRS 13 Appendix A]. It is therefore unlikely that a first-time adopter will be able to apply this exemption to any intangible assets (see Chapter 18).

It is important to note that this exemption does not take classes or categories of assets as its unit of measure, but refers to "an item of property, plant and equipment", and similarly for investment property, right-of-use assets under IFRS 16 and intangible assets. [IFRS 1.D5, IFRS 1.D6, IFRS 1.D7].

How we see it

A first-time adopter is allowed to apply the deemed cost exemption to only some of its assets. For example, it could apply the exemption only to:

- A selection of properties
 - Part of a factory
- Or
- Some of the right-of-use asset leased under a single lease agreement

This is because IFRS 1.IG12 states that "IAS 16 does not prescribe the unit of measure for recognition of an asset, i.e., what constitutes an item of property, plant and equipment. Thus, judgement is required in applying the recognition criteria to an entity's specific circumstances" (see Chapter 19).

The IASB argued that it is not necessary to restrict application of the exemption to classes of assets to prevent arbitrarily selective revaluations, because IAS 36 "requires an impairment test if there is any indication that an asset is impaired. Thus, if an entity uses fair value as deemed cost for assets whose fair value is above cost, it cannot ignore indications that the recoverable amount of other assets may have fallen below their carrying amount. Therefore, the IFRS does not restrict the use of fair value as deemed cost to entire classes of asset." [IFRS 1.BC45].

How we see it

In our view, it is doubtful that the quality of financial information would benefit from a revaluation of a haphazard selection of items of property, plant and equipment as deemed cost. Therefore, a first-time adopter needs to exercise judgement in selecting the items to which it believes it is appropriate to apply the exemption.

Practical examples 5-4 and 5-5 below refer to the use of the 'fair value or revaluation as deemed cost' exemption.

Practical example 5-4: Suncor Energy Inc. (2011)

Canada

2011 ANNUAL REPORT [extract]

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS [extract]

6. FIRST-TIME ADOPTION OF IFRS [extract]

Explanation of Significant Adjustments [extract]

(9) Fair Value as Deemed Cost

The company has applied the IFRS 1 election to record certain assets of property, plant and equipment at fair value on the Transition Date. The exemption has been applied to refinery assets located in Eastern Canada and certain natural gas assets in Western Canada. When estimating fair value, market information for similar assets was used, and where market information was not available, management relied on internally generated cash flow models using discount rates specific to the asset and long-term forecasts of commodity prices and refining margins. The aggregate of these fair values was \$1.370 billion, resulting in a reduction of the carrying amount of property, plant and equipment as at January 1, 2010. Under Previous GAAP, impairment losses were recorded in the third quarter of 2010 for certain of these natural gas properties. There were no impairment losses recognized during 2010 under IFRS, as these properties were adjusted to fair value at the Transition Date. The impacts on the financial statements were as follows:

(\$ millions)	As at and for the year ended Dec 31, 2010	As at Jan 1, 2010
Property, plant and equipment, net	(527)	(906)
Retained earnings	(527)	(906)
Depreciation, depletion, amortization and impairment	(379)	—

Practical example 5-5: Nexen Inc. (2011)

2011 ANNUAL REPORT [extract]

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS [extract]

26. TRANSITION TO IFRS [extract]

**Elected Exemptions from
Full Retrospective Application**

In preparing these Consolidated Financial Statements in accordance with IFRS 1 First-time Adoption of International Financial Reporting Standards (IFRS 1), we applied the following optional exemptions from full retrospective application of IFRS.

...

(II) FAIR VALUE OR REVALUATION AS DEEMED COST

We elected to measure certain producing oil and gas properties at fair value as at the transition date and use that amount as its deemed cost in the opening IFRS balance sheet.

5.4.1.A Determining deemed cost

IFRS 1 sets out the following options for deemed cost of an item of property, plant and equipment. [IFRS 1.D5, IFRS 1.D6]. As noted in section 5.4.1 above, the same options are available for certain other assets. [IFRS 1.D7].

Extract from IFRS 1

- D5 An entity may elect to measure an item of property, plant and equipment at the date of transition to IFRSs at its fair value and use that fair value as its deemed cost at that date.
- D6 A first-time adopter may elect to use a previous GAAP revaluation of an item of property, plant and equipment at, or before, the date of transition to IFRSs as deemed cost at the date of the revaluation, if the revaluation was, at the date of the revaluation, broadly comparable to:
- (a) fair value; or
 - (b) cost or depreciated cost in accordance with IFRSs, adjusted to reflect, for example, changes in a general or specific price index.

The 'previous GAAP revaluations' referred to in IFRS 1.D6 need only be "broadly comparable to fair value or reflect an index applied to a cost that is broadly comparable to cost determined in accordance with IFRSs". [IFRS 1.BC47, IFRS 1.D6]. It appears that in the interest of practicality the IASB is allowing a good deal of flexibility in this matter. The IASB explains in the Basis for Conclusions that "It may not always be clear whether a previous revaluation was intended as a measure of fair value or differs materially from fair value. The flexibility in this area permits a cost-effective solution for the unique problem of transition to IFRSs. It allows a first-time adopter to establish a deemed cost using a measurement that is already available and is a reasonable starting point for a cost-based measurement." [IFRS 1.BC47].

How we see it

IFRS 1 describes the deemed cost in IFRS 1.D6 as a 'previous GAAP revaluation'. Therefore, in our view, a revaluation can be used as the basis for deemed cost only if it was recognised in the first-time adopter's previous GAAP financial statements. In some circumstances, as discussed below, a previous GAAP impairment (or its reversal) could represent a 'previous GAAP revaluation'.

A previous GAAP impairment (or reversal of an impairment) that resulted in the recognition of the related assets at fair value in the previous GAAP financial statements is allowed to be recognised as a previous GAAP revaluation for the purposes of applying this exemption only if it is broadly comparable to the fair value under IFRS 13 or cost (or depreciated cost) in accordance with IFRS accounting standards, adjusted to reflect, for example, changes in a general or specific price index and not another measure such as fair value less costs of disposal.

Moreover, when the previous GAAP impairment was determined for a group of impaired assets (e.g., a cash generating unit as defined in IAS 36, see Chapter 21), the recognised value of an individual asset needs to be broadly comparable to the specific asset's fair value under IFRS 13 or cost (or depreciated cost) in accordance with IFRS accounting standards, adjusted to reflect, for example, changes in a general or specific price index and not another measure such as fair value less costs of disposal or an allocation thereof for the purposes of this exemption. [IFRS 1.D6].

If revaluations under previous GAAP did not satisfy the criteria in IFRS 1.D6 (as discussed above) or IFRS 1.D8 (see section 5.4.2 below), a first-time adopter measures the revalued assets within the scope of IAS 16 in its opening IFRS statement of financial position on one of the following bases: [IFRS 1.D5, IFRS 1.D6, IFRS 1.D8, IFRS 1.IG11]

- (a) Cost (or deemed cost) less any accumulated depreciation and any accumulated impairment losses under the cost model in IAS 16
 - (b) Deemed cost, being the fair value at the date of transition to IFRS accounting standards
- Or
- (c) Revalued amount, if the entity adopts the revaluation model in IAS 16 as its accounting policy under IFRS accounting standards for all items of property, plant and equipment in the same class

The elections in IFRS 1.D6 or IFRS 1.D8 are also available for use for investment property (measured under the cost model), right-of-use assets, and intangible assets meeting certain criteria (see section 5.4.1 above). [IFRS 1.D7]. If the elections in IFRS 1.D6 or IFRS 1.D8 are not permitted for such assets, a first-time adopter measures the asset in its opening IFRS statement of financial position on one of the bases above, i.e., applying the cost model, deemed cost or a revalued amount in accordance with relevant IFRS accounting standards. [IFRS 1.D5, IFRS 1.D6, IFRS 1.D7, IFRS 1.D8]. A right-of-use asset recognised by a lessee under IFRS 16 could also be measured at a carrying amount based on certain exemptions in IFRS 1 (see section 5.5 below).

A first-time adopter that uses fair value as deemed cost is required to disclose the resulting IFRS 1 adjustment separately (see section 6.5.1 below). [IFRS 1.30].

5.4.1.B Deemed cost determined before the date of transition to IFRS accounting standards

If the deemed cost of an asset was determined before the date of transition to IFRS accounting standards, then an IFRS accounting policy needs to be applied to that deemed cost in the intervening period to determine what the carrying amount of the asset is in the opening IFRS statement of financial position. This means that a first-time adopter that uses previous GAAP revaluation as the deemed cost of an item of property, plant and equipment will need to start depreciating the item from the date when the entity established the previous GAAP revaluation and not from its date of transition. [IFRS 1.IG9]. Illustration 5-20 below demonstrates the application of this requirement.

Illustration 5-20: Deemed cost of property, plant and equipment

Entity A used to revalue items of property, plant and equipment to fair value under its previous GAAP, but changed its accounting policy on 1 January 20X0 when it adopted a different accounting policy. Under that accounting policy, Entity A did not depreciate the asset and only recognised the maintenance costs as an expense. Entity A's date of transition to IFRS accounting standards is 1 January 20X2.

In its balance sheet under previous GAAP the carrying amount of the asset is CU80,000 at the date of transition, which is equal to the last revaluation. Entity A can use the last revalued amount as the deemed cost of the asset on 1 January 20X0. [IFRS 1.D6]. However, Entity A will need to apply IAS 16 to the period after 1 January 20X0 because the accounting policy under its previous GAAP is not permitted under IFRS accounting standards. Assuming that the economic life of the asset is 40 years from 20X0 and that the residual value is nil, Entity A would account for the asset at CU76,000 in its opening IFRS statement of financial position, which represents the deemed cost minus 2 years of depreciation. [IFRS 1.IG9].

5.4.2 Event-driven fair value measurement as deemed cost

A first-time adopter is allowed to use fair value measurements that arose from an event such as a privatisation or initial public offering as deemed cost for IFRS accounting standards at the date of that measurement. [IFRS 1.D8].

Extract from IFRS 1

- D8 A first-time adopter may have established a deemed cost in accordance with previous GAAP for some or all of its assets and liabilities by measuring them at their fair value at one particular date because of an event such as a privatisation or initial public offering.
- (a) If the measurement date is *at or before* the date of transition to IFRSs, the entity may use such event-driven fair value measurements as deemed cost for IFRSs at the date of that measurement.
 - (b) If the measurement date is *after* the date of transition to IFRSs, but during the period covered by the first IFRS financial statements, the event-driven fair value measurements may be used as deemed cost when the event occurs. An entity shall recognise the resulting adjustments directly in retained earnings (or if appropriate, another category of equity) at the measurement date. At the date of transition to IFRSs, the entity shall either establish the deemed cost by applying the criteria in paragraphs D5-D7 or measure assets and liabilities in accordance with the other requirements in this IFRS.

IFRS 1 describes these revaluations as 'deemed cost in accordance with previous GAAP'. Therefore, to the extent that they related to an event that occurred prior to its date of transition to IFRS accounting standards, they can be used as the basis for deemed cost only if they were recognised in the first-time adopter's previous GAAP financial statements. As discussed in section 5.4.2.C below, a first-time adopter is also allowed to use event-driven fair values resulting from such events that occurred subsequent to the first-time adopter's date of transition to IFRS accounting standards, but during the period covered by the first IFRS financial statements.

How we see it

The 'fair value or revaluation as deemed cost' exemption discussed in section 5.4.1 above only applies to items of property, plant and equipment, investment property, right-of-use assets and certain intangible assets. The event-driven deemed cost exemption, however, is broader in scope because it specifies that when a first-time adopter established a deemed cost in accordance with previous GAAP *for some or all of its assets and liabilities* by measuring them at their fair value at one particular date because of an event such as a privatisation or initial public offering, the entity is allowed to use such event-driven fair value measurements as deemed cost for IFRS accounting standards at the date of that measurement. Certain limitations in the scope of the exemption are described below.

Although a first-time adopter could use an event-driven fair value measurement as deemed cost for any asset or liability, it does not have to use them for all assets and liabilities that were revalued as a result of the event.

There are two important limitations in the scope of this exemption:

- While it applies, in principle, to all assets and liabilities of an entity, it does not override the recognition criteria in IFRS accounting standards (see section 3.2 above). [IFRS 1.10]. Consequently, a first-time adopter derecognises goodwill, assets (e.g., certain intangible assets such as brand names and research) and liabilities that do not qualify for recognition under IFRS accounting standards in the statement of financial position of the entity. [IFRS 1.1650].
- It cannot be used if the event-driven revaluation did not result in a re-measurement to full fair value (i.e., it cannot be used in the case of a partial step-up towards fair value).

If revaluations under previous GAAP did not satisfy the criteria in IFRS 1.D6 (see section 5.4.1.A above) or IFRS 1.D8 (see above), the accounting options available for those previously revalued assets that are property, plant and equipment, right-of-use assets, intangible assets and investment property accounted using cost model are the same as those explained in section 5.4.1.A above.

5.4.2.A 'Push down' accounting

Under some previous GAAPs, an entity might have prepared its financial statements using 'push down' accounting, that is, the carrying amount of its assets and liabilities is based on their fair value at the date it became a subsidiary of its parent. If such a subsidiary subsequently adopts IFRS accounting standards, it will often require a very significant effort to determine the carrying amount of those assets and liabilities on a historical cost basis at the date of transition.

The event-driven deemed cost exemption (see section 5.4.2 above) applies to events 'such as a privatisation or initial public offering.' [IFRS 1.D8]. This list of events is clearly not meant to be exhaustive, but rather describes events that result in re-measurement of some or all assets and liabilities at their fair value.

How we see it

An acquisition that results in an entity becoming a subsidiary is a 'change of control event' similar to a privatisation or an initial public offering. In our view, the application of 'push down' accounting results in event-driven fair value measurements that could be used as deemed cost for IFRS accounting standards at the date of that measurement.

The exemption can only be used, however, if 'push down' accounting resulted in the recognition of the related assets and liabilities at their fair value. For example, previous GAAP might not have required remeasurement to full fair value in the case of a partial acquisition or a step-acquisition, or if there was a bargain purchase that was allocated, for example, to reduce the fair values of long-lived assets.

How we see it

In these cases, the entity would not qualify for the event-driven deemed cost exemption, since the event did not result in the measurement of its assets and liabilities at their fair value.

5.4.2.B 'Fresh start' accounting

Some previous GAAPs require an entity that emerges from bankruptcy or undertakes a legal reorganisation to apply 'fresh start' accounting, which involves recognition of assets and liabilities at their fair value at that date.

How we see it

In our view, the application of 'fresh start' accounting results in an event-driven fair value measurement (see section 5.4.2 above) that could be used as deemed cost for IFRS accounting standards at the date of that measurement. The use of the exemption is limited to instances that resulted in the recognition of the related assets and liabilities at their full fair value (i.e., it cannot be used in the case of a partial step-up towards fair value).

5.4.2.C Exemption for event-driven revaluations after the date of transition

The event-driven revaluation exemption allows a first-time adopter to recognise in its first IFRS financial statements fair values arising from events whose measurement date is after the date of transition to IFRS accounting standards but during the periods covered by the first IFRS financial statements. The event-driven fair value measurements are recognised as deemed cost at the date that the event occurs. An entity recognises the resulting adjustments directly in retained earnings (or if appropriate, another category of equity) at the measurement date. [IFRS 1.D8(b)].

The Board explicitly considered whether to allow a first-time adopter that uses a revaluation subsequent to the date of transition to 'work back' to the deemed cost on the date of transition to IFRS accounting standards by adjusting the revaluation amounts to exclude any depreciation, amortisation or impairment between the date of transition to IFRS accounting standards and the date of that measurement. The Board rejected this approach "because making such adjustments would require hindsight and the computed carrying amounts on the date of transition to IFRSs would be neither the historical costs of the revalued assets nor their fair values on that date". [IFRS 1.BC46B]. Accordingly, at the date of transition to IFRS accounting standards, the entity either establishes the deemed cost by applying the criteria in IFRS 1.D5-D7 (see section 5.4.1 above) or measures assets and liabilities under the other requirements in IFRS 1. [IFRS 1.D8(b)].

5.4.3 Deemed cost for oil and gas assets

It is common practice in some countries to account for exploration and development costs for oil and gas properties in development or production phases in cost centres that include all properties in a large geographical area, e.g., under the 'full cost accounting' method. However, this method of accounting generally uses a unit of account that is much larger than that which is acceptable under IFRS accounting standards. Applying IFRS accounting standards fully retrospectively would pose significant problems for first-time adopters because it would also require amortisation at the unit of account level (determined in accordance with IFRS accounting standards) to be calculated (on a unit of production basis) for each year, using a reserves base that has changed over time because of changes in factors such as geological understanding and prices for oil and gas. In many cases, particularly for older assets, this information may not be available. Even when such information is available, the effort and cost to determine the opening balances at the date of transition would usually be very high. [IFRS 1.BC47A].

For these entities, use of the fair value as deemed cost exemption (see section 5.4.1 above) was not considered to be suitable because: [IFRS 1.BC47B]

"Determining the fair value of oil and gas assets is a complex process that begins with the difficult task of estimating the volume of reserves and resources. When the fair value amounts must be audited, determining significant inputs to the estimates generally requires the use of qualified external experts. For entities with many oil and gas assets, the use of this fair value as deemed cost alternative would not meet the Board's stated intention of avoiding excessive cost ...".

The IASB therefore decided to grant an exemption for a first-time adopter that accounted under its previous GAAP for "exploration and development costs for oil and gas properties in the development or production phases ... in cost centres that include all properties in a large geographical area". [IFRS 1.D8A]. Under the exemption, a first-time adopter could elect to measure oil and gas assets at the date of transition to IFRS accounting standards on the following basis: [IFRS 1.D8A]

- (a) Exploration and evaluation assets at the amount determined under the entity's previous GAAP.
- (b) Assets in the development or production phases at the amount determined for the cost centre under the entity's previous GAAP. This amount must be allocated to the cost centre's underlying assets *pro rata* using reserve volumes or reserve values as of that date.

For this purpose, 'oil and gas assets' comprise only those assets used in the exploration, evaluation, development or production of oil and gas. [IFRS 1.D8A].

A first-time adopter that uses the exemption under (b) above discloses that fact and the basis on which carrying amounts determined under previous GAAP were allocated (see section 6.5.3 below). [IFRS 1.31A].

To avoid the use of deemed costs resulting in an oil and gas asset being measured at more than its recoverable amount, the Board also decided that oil and gas assets that were valued using this exemption must be tested for impairment at the date of transition to IFRS accounting standards as follows: [IFRS 1.D8A, IFRS 1.BC47D]

- Exploration and evaluation assets must be tested for impairment under IFRS 6
- Assets in the development and production phases must be tested for impairment under IAS 36

The deemed cost amounts are reduced to take account of any impairment charge. [IFRS 1.D8A].

Finally, a first-time adopter that applies the deemed cost exemption for oil and gas assets in the development or production phases in (b) above must also apply IFRS 1.D21A to the related decommissioning and restoration obligation (see section 5.12.2 below). This is required instead of applying IFRS 1.D21 (see section 5.12.1 below) or IFRIC 1 *Changes in Existing Decommissioning, Restoration and Similar Liabilities*. [IFRS 1.D21A].

Practical example 5-6 below presents disclosure of the use of the 'deemed cost for oil and gas assets' exemption.

Practical example 5-6: Zargon Oil & Gas Ltd. (2011)

Canada

2011 ANNUAL FINANCIAL REPORT [extract]

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS [extract]

27. RECONCILIATION OF TRANSITION FROM CANADIAN GAAP TO IFRS [extract]

Explanatory notes [extract]

- (b) The Company elected under IFRS 1 to deem the Canadian GAAP carrying value of its oil and gas assets accounted for under the full cost method as at January 1, 2010 as their deemed cost under IFRS as at that date. As such, the Canadian GAAP full cost pool was reallocated upon transition to IFRS and the 2010 comparatives were restated to reflect the new IFRS accounting policies as follows:
- i. In accordance with IAS 16, IAS 38 and IFRS 6 on January 1, 2010 the Company reallocated costs of \$24.37 million relating to unproved properties from property, plant and equipment to exploration and evaluation assets.
 - ii. Under Canadian GAAP, all costs incurred prior to having obtained licence rights and lease expiries were included within property, plant and equipment. Under IFRS, such expenditures are expensed as incurred. There was no impact on adoption of IFRS due to the full cost as deemed cost exemption. However, the comparative 2010 balances were restated at December 31, 2010 resulting in a reduction in property, plant and equipment and retained earnings of \$2.81 million, and an increase in exploration and evaluation expenses for the year of the same amounts.
 - iii. The remaining full cost pool was allocated to the developed and producing assets pro rata using reserve values.
 - iv. Under IFRS, impairment tests must be performed at a more lower reporting level than was required under Canadian GAAP. The Canadian GAAP "ceiling test" incorporated a 2-step approach for testing impairment, while IFRS uses a 1-step approach. Under Canadian GAAP, a discounted cash flow analysis was not required if the undiscounted cash flows from proved reserves exceeded the carrying amount (step 1). If the carrying amount exceeded the undiscounted future cash flows, then a prescribed discounted cash flow test was performed (step 2). Under IFRS, impairment testing is based on discounted cash flows and is calculated at the CGU level. Impairment tests are required to be performed at the transition date, and as at January 1, 2010 no impairment was identified. At December 31, 2010 an impairment test was performed and four of the Company's CGUs were found to have impairment.
- (c) Upon transition to IFRS, the Company adopted a policy of depleting oil and natural gas interests on a "units of production" basis over proved plus probable reserves on a field by field basis. The depletion policy under Canadian GAAP was units of production over proved reserves on a country by country basis. The December 31, 2010 effect was increases in property, plant and equipment and retained earnings and a decrease to depletion expense of \$17.21 million.
- (d) Under IFRS, impairment losses previously recorded are reversed if there has been an improvement in the estimates used to determine recoverable amount, except for goodwill. The reversal of impairment losses was not permitted under Canadian GAAP. This had no impact on adoption to IFRS at January 1, 2010 due to the full cost as deemed cost exemption. There were no impairment loss reversals from the transition date to December 31, 2010.

...

- (j) As stated in Note (b), the Company has elected to utilize the full cost as deemed cost exemption, thereby requiring that the Company measure its asset retirement obligation as at the date of transition in accordance with IAS 37 and recognize the difference between Canadian GAAP and IFRS in retained earnings. As such, the Company has re-measured the provision as at January 1, 2010 under IAS 37 and estimated the amount to be recognized in retained earnings by discounting the liability to the date at which the liability first arose. This further resulted in a decrease in retained earnings and increase in the asset retirement obligation of \$45.15 million at January 1, 2010. This resulted in an increase in the asset retirement obligation and property, plant and equipment of \$53.42 million for the year ended December 31, 2010 primarily due to a change in the discount rate applied from a credit-adjusted rate required by Canadian GAAP, to a pre-tax rate that reflects current market assessments of the time value of money and the risks specific to the obligation as well as restatement of the entire obligation using the current period discount rate rather than only applying the current period discount rate to upward revisions in the future costs estimates as was required under Canadian GAAP.

5.4.4 Deemed cost for assets used (or previously used) in operations subject to rate regulation

Entities that hold items of property, plant and equipment, right-of-use assets under IFRS 16, or intangible assets that are used, or were previously used, in operations subject to rate regulation might have capitalised, as part of the carrying amounts, amounts that do not qualify for capitalisation in accordance with IFRS accounting standards. The Basis for Conclusions to IFRS 1 notes that “For example, when setting rates regulators often permit entities to capitalise, ..., an allowance for the cost of financing the asset’s acquisition, construction or production. This allowance typically includes an imputed cost of equity. IFRSs do not permit an entity to capitalise an imputed cost of equity.” [IFRS 1.BC47F].

The IASB decided to permit a first-time adopter with operations subject to rate regulation to elect to use the previous GAAP carrying amount of such an item at the date of transition to IFRS accounting standards as deemed cost. [IFRS 1.D8B]. In the Board’s view, this exemption is consistent with other exemptions in IFRS 1 in that it “avoids excessive costs while meeting the objectives of the IFRS”. [IFRS 1.BC47I].

Operations are subject to rate regulation if they are governed by a framework for establishing the prices that can be charged to customers for goods or services and that framework is subject to oversight and/or approval by a rate regulator (as defined in IFRS 14). [IFRS 1.D8B, IFRS 14 Appendix A].

Extract from IFRS 1

D8B Some entities hold items of property, plant and equipment, right-of-use assets or intangible assets that are used, or were previously used, in operations subject to rate regulation. The carrying amount of such items might include amounts that were determined under previous GAAP but do not qualify for capitalisation in accordance with IFRSs. If this is the case, a first-time adopter may elect to use the previous GAAP carrying amount of such an item at the date of transition to IFRSs as deemed cost. If an entity applies this exemption to an item, it need not apply it to all items. At the date of transition to IFRSs, an entity shall test for impairment in accordance with IAS 36 each item for which this exemption is used. For the purposes of this paragraph, operations are subject to rate regulation if they are governed by a framework for establishing the prices that can be charged to customers for goods or services and that framework is subject to oversight and/or approval by a rate regulator (as defined in IFRS 14 *Regulatory Deferral Accounts*).

Without this exemption, a first-time adopter with operations subject to rate regulation would have had either to restate those items retrospectively to remove the non-qualifying amounts, or to use fair value as deemed cost (see section 5.4.1 above). Both alternatives, the Board reasoned, pose significant practical challenges, the cost of which can outweigh the benefits. [IFRS 1.BC47G]. Typically, once amounts are included in the total cost of an item of property, plant and equipment, they are no longer tracked separately. Therefore, their removal would require historical information that, given the typical age of some of the assets involved, is probably no longer available and would be difficult to estimate. For many of these assets, it might be impractical to use the exemption to use a deemed cost equal to transition-date fair value (IFRS 1.D5) as such information may not be readily available. [IFRS 1.BC47H].

A first-time adopter that applies this exemption to an item need not apply it to all items. At the date of transition to IFRS accounting standards, the first-time adopter must test for impairment in accordance with IAS 36 each item for which it used the exemption. [IFRS 1.D8B].

If a first-time adopter uses the exemption for assets used in operations subject to rate regulation, it must disclose that fact and the basis on which carrying amounts were determined under previous GAAP (see section 6.5.4 below). [IFRS 1.31B].

Practical example 5-7 below illustrates disclosure of the use of the deemed cost exemption for property, plant and equipment and intangible assets used in operations subject to rate regulation although IFRS 14 is not applied.

Practical example 5-7: Enersource Corporation (2012)

Canada

Consolidated Financial Statements [extract]

Notes to Consolidated Financial Statements [extract]

5. First Time Adoption of IFRS: [extract]

(a) Previous Canadian GAAP carrying amount as deemed costs for PP&E and intangible assets.

Entities with operations subject to rate regulations may hold items of PP&E or intangible assets where the carrying amount of such items might include amounts that were determined under previous Canadian GAAP but do not qualify for capitalization in accordance with IFRS. If this is the case, a first-time adopter may elect to use the previous Canadian GAAP carrying amount of such an item at the date of transition to IFRS as deemed cost. An entity shall apply this exemption for annual periods beginning on or after 1 January 2011, but earlier application is permitted.

Entities are subject to rate regulation if they provide goods or services to customers at prices (i.e. rates) established by an authorized body empowered to establish rates that bind the customers and that are designed to recover the specific costs the entity incurs in providing the regulated goods or services and to earn a specified return.

Under this exemption the deemed cost at the date of transition becomes the new IFRS cost basis. The accumulated amortization recognized under previous Canadian GAAP prior to the transition date has been included as part of the deemed cost so that the net book values will not be affected.

At the date of transition to IFRS, an entity shall also test for impairment, each item for which this exemption is used.

This exemption does not only apply to individual entities with rate regulated activities but also to the consolidated financial statements of their parent companies.

Based on the definition above, the Corporation qualifies for this IFRS 1 exemption as Enersource Hydro is subject to rate regulations and accordingly the Corporation elected to use the deemed cost election for opening balance sheet values for its PP&E and intangible assets.

At the date of transition, the Corporation's gross book value, accumulated depreciation and net book value for PP&E was \$872,359, \$422,992 and \$449,367 respectively. The gross book value, accumulated amortization and net book value for intangible assets was \$18,389, \$2,806 and \$15,583 respectively.

The Corporation reviewed the additional requirements against the information provided in IAS 36 Impairment of Assets and determined that no impairments would be recorded.

While the current exemption in IFRS 1.D8B provides a one-time relief to determine the transition-date balances of the eligible property, plant and equipment, right-of-use assets and intangible assets, IFRS 14 is wider in scope (see section 5.22 below).

5.4.5 Summary

At its date of transition to IFRS accounting standards, a first-time adopter is allowed under IFRS 1 to measure the following assets and liabilities using a deemed cost:

- (a) An item of property, plant and equipment, an investment property, a right-of-use asset and an intangible asset meeting certain criteria:
 - (i) At fair value at the date of transition (see section 5.4.1 above) [IFRS 1.D5, IFRS 1.D7]
 - (ii) Using a previous GAAP revaluation amount (at or before the date of transition) that is broadly comparable to (see section 5.4.1 above): [IFRS 1.D6]
 - Fair value at the date of revaluation
 - Or
 - Cost or depreciated cost under IFRS accounting standards adjusted to reflect, for example, changes in a general or specific price index as a deemed cost as at the date of the revaluation
 - (b) Some or all of its assets and liabilities, based on a previous GAAP measure of deemed cost at one particular date that arose from an event-driven fair value, for example, at the date of an initial public offering or privatisation (see section 5.4.2 above) [IFRS 1.D8]
 - (c) Certain oil and gas assets at a deemed cost at the date of transition based on the previous GAAP carrying amount and tested for impairment as at the date of transition (see section 5.4.3 above) [IFRS 1.D8A]
 - (d) Certain assets used or previously used in operations subject to rate regulation, at a deemed cost at the date of transition based on the previous GAAP carrying amount and tested for impairment as at the date of transition (see section 5.4.4 above) [IFRS 1.D8B]
 - (e) Assets acquired, liabilities assumed and goodwill in a business combination not restated under IFRS 3 (see section 5.2 above):
 - (i) Using a deemed cost, as at the date of the business combination, equal to the carrying amount under previous GAAP immediately after that business combination [IFRS 1.C4(e)]
 - (ii) If the item was not recognised under previous GAAP, using the carrying amount at the date of transition on the basis that IFRS accounting standards would require in the separate statement of financial position of the acquiree [IFRS 1.C4(b)(ii), IFRS 1.C4(f)]
 - (iii) Goodwill for an unconsolidated subsidiary under previous GAAP which was acquired in a past business combination at the difference at the date of transition between the parent's interest in those adjusted carrying amounts and the cost in the parent's separate financial statements of its investment in the subsidiary [IFRS 1.C4(j)]
 - (f) A right-of-use asset for a lessee, at a carrying amount based on certain exemptions in IFRS 1 (see section 5.5 below) [IFRS 1.D9, IFRS 1.D9B, IFRS 1.D9C, IFRS 1.D9D, IFRS 1.D9E]
- And
- (g) An investment in a subsidiary, joint venture or associate in separate financial statements (see section 5.7.2 below) [IFRS 1.D15(b)]

The fact that IFRS 1 offers so many different bases for measurement does not disturb the IASB as it reasons that "cost is generally equivalent to fair value at the date of acquisition. Therefore, the use of fair value as the deemed cost of an asset means that an entity will report the same cost data as if it had acquired an asset with the same remaining service potential at the date of transition to IFRSs. If there is any lack of comparability, it arises from the aggregation of costs incurred at different dates, rather than from the targeted use of fair value as deemed cost for some assets. The Board regarded this approach as justified to solve the unique problem of introducing IFRSs in a cost-effective way without damaging transparency." [IFRS 1.BC43]. Although this is valid, it still means that an individual first-time adopter can greatly influence its future reported performance by carefully making decisions on whether to apply these exemptions for the valuation of its assets. Users of the financial statements of a first-time adopter are encouraged therefore to be mindful that historical trends under the previous GAAP might no longer be present in an entity's IFRS financial statements.

Where IFRS accounting standards require subsequent measurement of an asset or liability on a basis that is not based on original cost, for example, fair value, the asset or liability must be measured on that basis as at the date of transition to IFRS accounting standards. [IFRS 1.7]. This does not mean that a deemed cost could not be used. For example, where a class of property, plant and equipment is measured using the revaluation model, its carrying amount reflects the revalued amount under IAS 16 but the revaluation surplus is based on the difference between the revalued amount and the deemed cost (or historical cost) as at the date of transition to IFRS accounting standards (see section 7.4.3 below).

5.5 Leases

IFRS 1 (paragraphs D9-D9E) provide first-time adopters with some exemptions from full retrospective application of IFRS 16. [IFRS 1.D9, IFRS 1.D9B, IFRS 1.D9C, IFRS 1.D9D, IFRS 1.D9E].

Firstly, a first-time adopter is allowed to assess whether a contract existing at the date of transition to IFRS accounting standards contains a lease by applying IFRS 16.9-11 to these contracts on the basis of facts and circumstances existing at that date. [IFRS 1.D9, IFRS 16.9, IFRS 16.10, IFRS 16.11]. Illustration 5-21 below demonstrates how a first-time adopter determines whether a contractual arrangement contains a lease.

Illustration 5-21: Determining whether an arrangement contains a lease

Entity A's first IFRS financial statements are for a period that ends on 31 December 20X3 and include comparative information for 20X2 only. Its date of transition to IFRS accounting standards is 1 January 20X2. On 1 January 20X0, Entity A entered into a take-or-pay arrangement to supply gas. On 1 January 20X1, there was a change in the contractual terms of the arrangement.

On 1 January 20X2, Entity A could determine whether the arrangement contains a lease under IFRS 16 on the basis of facts and circumstances existing on that date. Alternatively, Entity A could apply the criteria in IFRS 16 on the basis of facts and circumstances existing on 1 January 20X0 but will need to reassess the arrangement on 1 January 20X1 in respect of the changes made on that date. [IFRS 16.11].

IFRS 1 allows a first-time adopter that is a lessee to apply the following approach to all of its leases (subject to the practical expedients described in IFRS 1.D9D, which are discussed further below). [IFRS 1.D9B, IFRS 1.D9C, IFRS 1.D9D].

Extract from IFRS 1

- D9B When a first-time adopter that is a lessee recognises lease liabilities and right-of-use assets, it may apply the following approach to all of its leases (subject to the practical expedients described in paragraph D9D):
- (a) measure a lease liability at the date of transition to IFRSs. A lessee following this approach shall measure that lease liability at the present value of the remaining lease payments (see paragraph D9E), discounted using the lessee's incremental borrowing rate (see paragraph D9E) at the date of transition to IFRSs.
 - (b) measure a right-of-use asset at the date of transition to IFRSs. The lessee shall choose, on a lease-by-lease basis, to measure that right-of-use asset at either:
 - (i) its carrying amount as if IFRS 16 had been applied since the commencement date of the lease (see paragraph D9E), but discounted using the lessee's incremental borrowing rate at the date of transition to IFRSs; or
 - (ii) an amount equal to the lease liability, adjusted by the amount of any prepaid or accrued lease payments relating to that lease recognised in the statement of financial position immediately before the date of transition to IFRSs.
 - (c) apply IAS 36 to right-of-use assets at the date of transition to IFRSs.
- D9C Notwithstanding the requirements in paragraph D9B, a first-time adopter that is a lessee shall measure the right-of-use asset at fair value at the date of transition to IFRSs for leases that meet the definition of investment property in IAS 40 and are measured using the fair value model in IAS 40 from the date of transition to IFRSs.

Additionally, a first-time adopter that is a lessee is allowed to use one or more of the following practical expedients at the date of transition to IFRS accounting standards (applied on a lease-by-lease basis): [IFRS 1.D9D]

- (a) Apply a single discount rate to a portfolio of leases with reasonably similar characteristics (e.g., a similar remaining lease term for a similar class of underlying asset in a similar economic environment).
- (b) Elect not to apply IFRS 1.D9B to leases for which the lease term ends within 12 months of the date of transition. Instead, the entity must account for (including giving disclosure of information about) these leases as if they were short-term leases accounted for under IFRS 16.6. [IFRS 1.D9B, IFRS 16.6].
- (c) Elect not to apply IFRS 1.D9B to leases for which the underlying asset is of low value (as described in IFRS 16.B3-B8). Instead, the entity must account for (including giving disclosure of information about) these leases under IFRS 16.6. (see Chapter 24). [IFRS 1.D9B, IFRS 16.6, IFRS 16.B3-B8].
- (d) Exclude initial direct costs from the measurement of the right-of-use asset at the date of transition to IFRS accounting standards.

And

- (e) Use hindsight, such as in determining the lease term if the contract contains options to extend or terminate the lease.

Lease payments, lessee, lessee's incremental borrowing rate, commencement date of the lease, initial direct costs and lease term are defined in IFRS 16 and are used in IFRS 1 with the same meaning (see Chapter 24). [IFRS 1.D9E, IFRS 16 Appendix A].

5.6 Cumulative translation differences

IAS 21 requires that an entity recognise some translation differences in other comprehensive income and accumulate these in a separate component of equity. On disposal of a foreign operation, the cumulative amount of the exchange differences deferred in the separate component of equity relating to that foreign operation (which includes, for example, the cumulative translation difference for that foreign operation, the exchange differences arising on certain translations to a different presentation currency and any gains and losses on related hedges) must be reclassified to profit or loss when the gain or loss on disposal is recognised. This also applies to exchange differences arising on monetary items that form part of a reporting entity's net investment in a foreign operation in its consolidated financial statements. [IAS 21.32, IAS 21.39, IAS 21.48, IFRS 1.D12].

Full retrospective application of IAS 21 would require a first-time adopter to restate all financial statements of its foreign operations to IFRS accounting standards from their date of inception or later acquisition onwards, and then determine the cumulative translation differences arising in relation to each of these foreign operations. A first-time adopter need not comply with these requirements for cumulative translation differences that existed at the date of transition to IFRS accounting standards. If it uses this exemption: [IFRS 1.D13]

- (a) The cumulative translation differences for all foreign operations are deemed to be zero at the date of transition to IFRS accounting standards

And

- (b) The gain or loss on a subsequent disposal of any foreign operation must exclude translation differences that arose before the date of transition to IFRS accounting standards but must include later translation differences

How we see it

If a first-time adopter chooses to use this exemption, it must apply it to all foreign operations at its date of transition to IFRS accounting standards, which include any foreign operations that became first-time adopters before their parent notwithstanding that IFRS 1.D17 is applied (see section 5.8.2 below). Any existing separate component of the first-time adopter's equity relating to such translation differences would be transferred to retained earnings at the date of transition.

A subsidiary, an associate or a joint venture which becomes a first-time adopter later than its parent (or investor or venturer) is also allowed to use this exemption even if IFRS 1.D16(a) is applied (see section 5.8.1 below) but has a further option in IFRS 1.D13A as described in section 5.8.1.A below.

An entity is allowed to present its financial statements in a presentation currency that differs from its functional currency. IFRS 1 is silent on whether the cumulative translation differences exemption is applied to all translation differences or possibly separately to differences between the parent's functional currency and the presentation currency.

How we see it

In our view, IAS 21 does not distinguish between the translation differences arising on translation of subsidiaries into the functional currency of the parent and those arising on the translation from the parent's functional currency to the presentation currency, therefore, the exemption is applied consistently to both types of translation differences.

Since there is no requirement to justify the use of the exemption on grounds of impracticality or undue cost or effort, [IFRS 1.BC55], an entity that already has a separate component of equity and the necessary information to determine how much of it relates to each foreign operation in accordance with IAS 21 (or can do so without much effort) is still able to use the exemption. Accordingly, an entity that has cumulative exchange losses in respect of foreign operations could consider it advantageous to use the exemption if it wishes to avoid having to recognise these losses in profit or loss if the foreign operation is sold at some time in the future.

Practical example 5-8 below illustrates disclosure of the use of this exemption.

Practical example 5-8: Sony Group Corporation (2022)	Japan										
<p>Form 20-F [extract]</p> <p>Notes to Consolidated Financial Statements [extract]</p> <p>34. First-time adoption [extract]</p> <p>(1) Exemption under IFRS 1 [extract]</p> <p><u>Exchange differences on translating foreign operations</u></p> <p>First-time adopters may choose to deem the cumulative exchange differences on translating foreign operations as zero at the date of transition to IFRS. Sony has chosen to apply this exemption and deemed all cumulative exchange differences on translating foreign operations as zero at the date of transition to IFRS.</p> <p>(4) Notes to reconciliation [extract]</p> <p><u>Recognition and measurement differences</u></p> <p>A. Exchange differences on translating foreign operations</p> <p>Under IFRS 1, first-time adopters may choose to deem the cumulative exchange differences on translating foreign operations as zero at the date of transition to IFRS. Sony has chosen to apply this exemption and transferred all cumulative exchange differences on translating foreign operations into retained earnings at the date of transition to IFRS.</p> <p>The impact of this change is as follows:</p> <table data-bbox="239 1164 1372 1366"> <tr> <th colspan="2">Yen in millions</th></tr> <tr> <th>April 1, 2020</th><th>March 31, 2021</th></tr> <tr> <td>(Consolidated Statements of Financial Position)</td><td></td></tr> <tr> <td>Accumulated other comprehensive income</td><td>(509,872) (510,091)</td></tr> <tr> <td>Adjustment to retained earnings</td><td>(509,872) (510,091)</td></tr> </table> <p style="text-align: center;">...</p>		Yen in millions		April 1, 2020	March 31, 2021	(Consolidated Statements of Financial Position)		Accumulated other comprehensive income	(509,872) (510,091)	Adjustment to retained earnings	(509,872) (510,091)

April 1, 2020	March 31, 2021										
(Consolidated Statements of Financial Position)											
Accumulated other comprehensive income	(509,872) (510,091)										
Adjustment to retained earnings	(509,872) (510,091)										

5.6.1 Gains and losses arising on related hedges

IFRS 1 is not entirely clear whether this exemption extends to similar gains and losses arising on related hedges. Paragraph D13, which contains the exemption, explains that a first-time adopter need not comply with 'these requirements.' [IFRS 1.D13]. The requirements referred to are those summarised in IFRS 1.D12 which explain that IAS 21 requires an entity: [IFRS 1.D12]

- (a) To recognise some translation differences in other comprehensive income and accumulate these in a separate component of equity
- And
- (b) On disposal of a foreign operation, to reclassify the cumulative translation difference for that foreign operation (including, if applicable, gains and losses on related hedges) from equity to profit or loss as part of the gain or loss on disposal

The problem arises because IFRS 1.D12 does not refer to the recognition of hedging gains or losses in other comprehensive income and accumulation in a separate component of equity (only the subsequent reclassification thereof). Accordingly, a very literal reading of the standard might suggest that an entity is required to identify historical gains and losses on such hedges. However, even if this position is accepted, the basis on which this might be done is not at all clear.

How we see it

We believe it is entirely appropriate for this exemption to be applied to net investment hedges as well as the underlying gains and losses. It is clear that the reasons cited by the IASB for including this exemption, apply as much to related hedges as they do to the underlying exchange differences.

5.7 Investments in subsidiaries, joint ventures and associates

5.7.1 Consolidated financial statements: subsidiaries and structured entities

A first-time adopter must consolidate all subsidiaries (as defined in IFRS 10) unless IFRS 10 requires otherwise. [IFRS 1.IG26]. First-time adoption of IFRS accounting standards could therefore result in the consolidation for the first time of a subsidiary not consolidated under previous GAAP, either because the subsidiary was not regarded as such before, or because the parent did not prepare consolidated financial statements. If a first-time adopter did not consolidate a subsidiary under its previous GAAP, it must recognise the assets and liabilities of that subsidiary in its consolidated financial statements at the date of transition to IFRS accounting standards at either: [IFRS 1.IG27(a)]

- (a) If the subsidiary has adopted IFRS accounting standards, the same carrying amounts as in the IFRS financial statements of the subsidiary, after adjusting for consolidation procedures and for the effects of the business combination in which it acquired the subsidiary [IFRS 1.D17]

Or

- (b) If the subsidiary has not adopted IFRS accounting standards, the carrying amounts that IFRS accounting standards would require in the subsidiary's statement of financial position [IFRS 1.C4(j)]

If the newly-consolidated subsidiary was acquired in a business combination before the date of the parent's transition to IFRS accounting standards, goodwill is the difference between the parent's interest in the carrying amount determined under either (a) or (b) above and the cost in the parent's separate financial statements of its investment in the subsidiary. This is no more than a pragmatic 'plug' that facilitates the consolidation process but does not represent the true goodwill that might have been recorded if IFRS accounting standards had been applied to the original business combination (see section 5.2.7 above).

[IFRS 1.C4(j), IFRS 1.IG27(b)].

How we see it

If the first-time adopter accounted for the investment as an associate under its previous GAAP, it cannot use the notional goodwill previously calculated under the equity method as the basis for goodwill under IFRS accounting standards.

If the parent did not acquire the subsidiary, but established it, it does not recognise goodwill. [IFRS 1.IG27(c)]. Any difference between the cost of investment in the subsidiary in the parent's separate financial statements and the parent's interest in the identifiable net assets as determined in (a) or (b) above would be treated as an adjustment to retained earnings, representing the accumulated profits or losses attributable to the parent that would have been recognised as if the subsidiary had always been consolidated.

The adjustment of the carrying amounts of assets and liabilities of a first-time adopter's subsidiaries might affect non-controlling interests and deferred tax, as discussed in section 5.2.9 above. [IFRS 1.C4(k), IFRS 1.IG28].

5.7.2 Separate financial statements: Cost of an investment in a subsidiary, joint venture or associate

When an entity prepares separate financial statements, IAS 27 requires a first-time adopter to account for its investments in subsidiaries, joint ventures and associates either: [IFRS 1.D14]

- At cost
 - In accordance with IFRS 9
- Or
- Using the equity method as described in IAS 28 (see Chapter 9)

However, if a first-time adopter measures such an investment at cost then it can elect to measure that investment at one of the following amounts in its separate opening IFRS statement of financial position: *[IFRS 1.D15]*

(a) Cost determined in accordance with IAS 27

Or

(b) Deemed cost, which is its:

(i) Fair value at the entity's date of transition to IFRS accounting standards in its separate financial statements

Or

(ii) Previous GAAP carrying amount at that date

A first-time adopter is permitted to choose to use either of these bases to measure its investment in each subsidiary, joint venture or associate where it elects to use a deemed cost. *[IFRS 1.D15]*.

A first-time adopter that applies the exemption discloses certain additional information in its financial statements (see section 6.5.2 below). *[IFRS 1.31]*.

For a first-time adopter that chooses to account for such an investment using the equity method procedures in accordance with IAS 28: *[IFRS 1.D15A]*

(a) The first-time adopter applies the exemption for past business combinations in IFRS 1 (Appendix C) to the acquisition of the investment (see section 5.2 above) *[IFRS 1 Appendix C]*

(b) If the entity becomes a first-time adopter for its separate financial statements earlier than for its consolidated financial statements and:

(i) Later than its parent, the entity would apply IFRS 1.D16 in its separate financial statements (see section 5.8.1 below). *[IFRS 1.D16]*.

(ii) Later than its subsidiary, the entity would apply IFRS 1.D17 in its separate financial statements (see section 5.8.2 below). *[IFRS 1.D17]*.

5.8 Assets and liabilities of subsidiaries, associates and joint ventures

Within groups, some subsidiaries, associates and joint ventures could have a different date of transition to IFRS accounting standards than the parent, investor or venturer, for example, because national legislation required the use of IFRS accounting standards after, or prohibited the use of IFRS accounting standards at, the date of transition of the parent, investor or venturer. As this could have resulted in permanent differences between the carrying amounts reported under IFRS accounting standards in a subsidiary's own financial statements and those it reports to its parent, the IASB introduced a special exemption regarding the assets and liabilities of subsidiaries, associates and joint ventures.

IFRS 1 contains detailed guidance on the approach to be adopted when a parent adopts IFRS accounting standards before its subsidiary (see section 5.8.1 below) and when a subsidiary adopts IFRS accounting standards before its parent (see section 5.8.2 below).

These provisions also apply when IFRS accounting standards are adopted at different dates by an investor in an associate and the associate, or by a venturer in a joint venture and the joint venture. *[IFRS 1.D16, IFRS 1.D17]*. In the discussion that follows 'parent' includes an investor in an associate or a venturer in a joint venture, and 'subsidiary' includes an associate or a joint venture. References to consolidation adjustments include similar adjustments made when applying equity accounting. IFRS 1 also addresses the requirements for a parent that adopts IFRS accounting standards at different dates for the purposes of its consolidated and its separate financial statements (see section 5.8.4 below).

5.8.1 Subsidiary becomes a first-time adopter later than its parent

Extract from IFRS 1

- D16 If a subsidiary becomes a first-time adopter later than its parent, the subsidiary shall, in its financial statements, measure its assets and liabilities at either:
- (a) the carrying amounts that would be included in the parent's consolidated financial statements, based on the parent's date of transition to IFRSs, if no adjustments were made for consolidation procedures and for the effects of the business combination in which the parent acquired the subsidiary (this election is not available to a subsidiary of an investment entity, as defined in IFRS 10, that is required to be measured at fair value through profit or loss); or
 - (b) the carrying amounts required by the rest of this IFRS, based on the subsidiary's date of transition to IFRSs. These carrying amounts could differ from those described in (a):
 - (i) when the exemptions in this IFRS result in measurements that depend on the date of transition to IFRSs.
 - (ii) when the accounting policies used in the subsidiary's financial statements differ from those in the consolidated financial statements. For example, the subsidiary may use as its accounting policy the cost model in IAS 16 *Property, Plant and Equipment*, whereas the group may use the revaluation model.

A similar election is available to an associate or joint venture that becomes a first-time adopter later than an entity that has significant influence or joint control over it.

A subsidiary that becomes a first-time adopter later than its parent therefore has the option to measure its assets and liabilities at the carrying amounts included in the parent's consolidated financial statements if no adjustments were made for consolidation procedures and for the effects of the business combination in which the parent acquired the subsidiary. [IFRS 1.D16(a)]. The Board provided this exemption so that a subsidiary would not have to keep two parallel sets of accounting records based on different dates of transition to IFRS accounting standards. [IFRS 1.BC55A]. If a subsidiary does not take advantage of the exemption, it applies IFRS 1, based on its own date of transition to IFRS accounting standards. [IFRS 1.D16(b)]. A subsidiary applying IFRS 1.D16(b) would prepare its own IFRS financial statements, completely ignoring the IFRS 1 elections that its parent used when it adopted IFRS accounting standards for its consolidated financial statements.

How we see it

IFRS 1 does not elaborate on exactly what constitutes 'consolidation procedures', for the purposes of IFRS 1.D16(a) but, in our view, it would encompass adjustments required in order to harmonise a subsidiary's accounting policies with those of the group, as well as purely 'mechanical' consolidation adjustments such as the elimination of intragroup balances, profits and losses.

Illustration 5-22 below, which is based on the implementation guidance in IFRS 1, demonstrates how an entity applies these requirements. [IFRS 1.IG Example 8].

Illustration 5-22: Parent adopts IFRS accounting standards before subsidiary

Entity A presents its (consolidated) first IFRS financial statements in 20X0. Its foreign subsidiary B, wholly owned by Entity A since formation, prepares information under IFRS accounting standards for internal consolidation purposes from that date, but Subsidiary B will not present its first IFRS financial statements until 20X3.

If Subsidiary B applies IFRS 1.D16(a), the carrying amounts of its assets and liabilities are the same in both its opening IFRS statement of financial position at 1 January 20X2 and Entity A's consolidated statement of financial position (except for adjustments for consolidation procedures) and are based on Entity A's date of transition to IFRS accounting standards.

Alternatively, Subsidiary B is allowed to apply IFRS 1.D16(b) and measure all its assets or liabilities based on its own date of transition to IFRS accounting standards (1 January 20X2). However, the fact that Subsidiary B becomes a first-time adopter in 20X3 does not change the carrying amounts of its assets and liabilities in Entity A's consolidated financial statements.

Under IFRS 1.D16(a), the numbers in a subsidiary's IFRS financial statements will be as close to those used by its parent as possible. However, differences other than those arising from business combinations will still exist in many cases, for example:

- A subsidiary might have hedged an exposure by entering into a transaction with a fellow subsidiary. Such a transaction could qualify for hedge accounting in the subsidiary's own financial statements but not in the group's consolidated financial statements.

Or

- A pension plan might have to be classified as a defined contribution plan from the subsidiary's point of view, but is accounted for as a defined benefit plan in the group's consolidated financial statements.

The IASB seems content with the fact that the exemption will ease some practical problems, [IFRS 1.BC62], though it will rarely succeed in achieving more than a moderate reduction of the number of reconciling differences between a subsidiary's own reporting and the numbers used by its parent.

How we see it

Importantly, the choice of IFRS 1.D16(a) prevents the subsidiary from electing to apply any of the other voluntary exemptions offered by IFRS 1, since the parent had already made the choices for the group at its date of transition. Therefore, use of IFRS 1.D16(a) might not be appropriate for a subsidiary that prefers to use a different exemption (e.g., fair value as deemed cost) for property, plant and equipment due, for example, to a tax reporting advantage. However, in our view, application of IFRS 1.D16(a) would allow the subsidiary to adopt a new IFRS accounting standard that becomes effective during any of the periods presented in the same manner it was adopted by the parent.

Illustration 5-23 below explains the interaction between IFRS 1.D16(a) and the business combination exemptions in Appendix C of IFRS 1 applied by its parent.

Illustration 5-23: Interaction between IFRS 1.D16(a) and the business combination exemptions applied by its parent

Entity D has been a subsidiary of Entity C since 20X0. Entity E was acquired by Entity D in 20X2 and Entity D accounted for the acquisition under its previous GAAP. Entity C transitioned from previous GAAP to IFRS accounting standards with a date of transition of 1 January 20X3 and decided to apply the business combination exemption in Appendix C of IFRS 1 to this acquisition. Entity D adopted IFRS accounting standards from its date of transition of 1 January 20X6 and chose to apply IFRS 1.D16(a).

Can Entity D apply IFRS 3 retrospectively to the acquisition of Entity E in its first IFRS financial statements?

How we see it

In our view, Entity D cannot apply IFRS 3 to the acquisition of Entity E because, applying IFRS 1.D16(a), a subsidiary which becomes a first-time adopter later than its parent measures its assets and liabilities at the carrying amounts that would be included in the parent's consolidated financial statements, based on the parent's date of transition to IFRS accounting standards. Therefore, Entity D cannot apply IFRS 3 retrospectively, meeting the primary objective of using the IFRS 1.D16(a) election in keeping one set of books.

A subsidiary might become a first-time adopter later than its parent, because it previously prepared a reporting package under IFRS accounting standards for consolidation purposes but did not present a full set of financial statements under IFRS accounting standards. In such circumstances, IFRS 1.D16 still applies. The above election of IFRS 1.D16(a) could be relevant not only when a subsidiary's reporting package complies fully with the recognition and measurement requirements of IFRS accounting standards, but also when it is adjusted centrally for matters such as review of events after the reporting period and central allocation of pension costs. Adjustments made centrally to an unpublished reporting package are not considered to be corrections of errors for the purposes of the disclosure requirements in IFRS 1. [IFRS 1.26]. However, a subsidiary is not permitted to ignore misstatements that are immaterial to the consolidated financial statements of the group but material to its own financial statements. [IFRS 1.IG31].

How we see it

If a subsidiary was acquired after the parent's date of transition to IFRS accounting standards then it cannot apply IFRS 1.D16(a) because there are no carrying amounts included in the parent's consolidated financial statements, based on the parent's date of transition. Therefore, the subsidiary is unable to use the values recognised in the parent's consolidated financial statements when it was acquired, since push-down of the group's purchase accounting values is not allowed in the subsidiary's financial statements. However, if the subsidiary had recognised those amounts in its previous GAAP financial statements, it could use the same amounts as deemed costs under IFRS accounting standards pursuant to the 'event-driven' deemed cost exemption (see section 5.4.2 above).

Implementation difficulties in applying IFRS 1.D16(a) might arise if the parent and its subsidiary have different financial years, as explained below.

How we see it

Application of IFRS 1.D16(a) is more difficult when a parent and its subsidiary have different financial years. In that case, IFRS 1 would seem to require the carrying amounts of the subsidiary's assets and liabilities under IFRS accounting standards to be based on the parent's date of transition to IFRS accounting standards, which might not even coincide with an interim reporting date of the subsidiary; the same applies to any joint venture or associate.

The exemption is also available to associates and joint ventures. This means that in many cases an associate or joint venture that wants to apply IFRS 1.D16(a) will need to choose which shareholder it considers its 'parent' for IFRS 1 purposes if more than one investor/joint venturer have already applied IFRS accounting standards. The associate or joint venture will determine the carrying amount of its assets and liabilities under IFRS accounting standards by reference to that 'parent's' date of transition to IFRS accounting standards.

A subsidiary that adopts IFRS accounting standards after its investment entity parent is not permitted to use IFRS 1.D16(a) (see section 5.8.5.A below).

5.8.1.A Cumulative translation differences

IFRS 1.D13A permits a subsidiary that applies IFRS 1.D16(a) to measure cumulative translation differences for all foreign operations at the carrying amount that would be included in its parent's consolidated financial statements, based on the parent's date of transition to IFRS accounting standards (if no adjustments were made for consolidation procedures and for the effects of the business combination in which the parent acquired the subsidiary). A similar election is available to an associate or joint venture that uses the exemption in IFRS 1.D16(a). [IFRS 1.D13A, IFRS 1.D16(a)]. The subsidiary still has the option to apply IAS 21 retrospectively or apply IFRS 1.D13 and deem the cumulative translation differences for all foreign operations to be zero at its own date of transition to IFRS accounting standards (see section 5.6 above). [IFRS 1.D12, IFRS 1.D13, IFRS 1.D13A, IFRS 1.BC55C].

5.8.2 Parent becomes a first-time adopter later than its subsidiary

Paragraph D17 of IFRS 1 addresses the situation where a parent becomes a first-time adopter later than its subsidiary. [IFRS 1.D17].

Extract from IFRS 1

D17 However, if an entity becomes a first-time adopter later than its subsidiary (or associate or joint venture) the entity shall, in its consolidated financial statements, measure the assets and liabilities of the subsidiary (or associate or joint venture) at the same carrying amounts as in the financial statements of the subsidiary (or associate or joint venture), after adjusting for consolidation and equity accounting adjustments and for the effects of the business combination in which the entity acquired the subsidiary. Notwithstanding this requirement, a non-investment entity parent shall not apply the exception to consolidation that is used by any investment entity subsidiaries. Similarly, if a parent becomes a first-time adopter for its separate financial statements earlier or later than for its consolidated financial statements, it shall measure its assets and liabilities at the same amounts in both financial statements, except for consolidation adjustments.

Unlike other first-time adoption exemptions, this exemption does not offer a choice between different accounting alternatives. [IFRS 1.D17]. In fact, while a subsidiary that adopts IFRS accounting standards later than its parent can choose to prepare its first IFRS financial statements by reference to its own date of transition to IFRS accounting standards or that of its parent, the parent itself must use the measurements of the assets and liabilities already used in the subsidiary's IFRS financial statements, adjusted as appropriate for consolidation procedures and the effects of the business combination in which it acquired the subsidiary. [IFRS 1.BC63]. However, this exemption does not preclude the parent from adjusting the subsidiary's assets and liabilities for a different accounting policy, e.g., cost model or revaluation model for accounting for property, plant and equipment.

The case where a non-investment entity parent adopts IFRS accounting standards after its investment entity subsidiary is discussed in section 5.8.5.B below.

Illustration 5-24 below, which is based on the implementation guidance in IFRS 1, demonstrates how an entity applies these requirements. [IFRS 1.IG Example 9].

Illustration 5-24: Subsidiary adopts IFRS accounting standards before parent

Entity F presents its (consolidated) first IFRS financial statements in 20X3. Its foreign subsidiary G, wholly owned by Entity F since formation, presented its first IFRS financial statements in 20X0. Until 20X3, Subsidiary G prepared information for internal consolidation purposes under Entity F's previous GAAP. The carrying amounts of Subsidiary G's assets and liabilities at 1 January 20X2 (date of transition to IFRS accounting standards for Entity F) are the same in both Entity F's (consolidated) opening IFRS statement of financial position and Subsidiary G's own financial statements (except for adjustments for consolidation procedures) and are based on Subsidiary G's date of transition to IFRS accounting standards. The fact that Entity F becomes a first-time adopter in 20X3 does not change those carrying amounts. [IFRS 1.D17].

How we see it

When a subsidiary adopts IFRS accounting standards before its parent, this will limit the parent's ability to choose first-time adoption exemptions in IFRS 1 freely as related to that subsidiary, as shown in Illustration 5-25 below.

However, this does not mean that the parent's ability to choose first-time adoption exemptions will always be limited. For example, a parent could still deem a subsidiary's cumulative translation differences to be zero because IFRS 1 specifically states that under the option "the cumulative translation differences for *all* foreign operations are deemed to be zero at the date of transition to IFRSs" (emphasis added). For a discussion of the various options in respect of cumulative translation differences, see sections 5.6 and 5.8.1.A above.

Illustration 5-25: Limited ability to choose first-time adoption exemptions

Entity H will adopt IFRS accounting standards for the first time in 20X6 and its date of transition to IFRS accounting standards is 1 January 20X5. Subsidiary I adopted IFRS accounting standards in 20X1 and its date of transition to IFRS accounting standards was 1 January 20X0:

- (a) *Subsidiary I and Entity H both account for their property, plant and equipment at historical cost under IAS 16*
Upon first-time adoption, Entity H is only allowed to adjust carrying amounts of Subsidiary I's assets and liabilities for the effects of consolidation and the business combination in which Subsidiary I was acquired. Entity H can therefore not apply the exemption to use fair value as deemed cost for Subsidiary I's property, plant and equipment as at its own date of transition to IFRS accounting standards (1 January 20X5).
- (b) *Subsidiary I accounts for its property, plant and equipment at revalued amounts under IAS 16, while Entity H accounts for its property, plant and equipment at historical cost under IAS 16*
In this case, Entity H would not be allowed to apply the exemption to use fair value as deemed cost of Subsidiary I's property, plant and equipment because IFRS 1.D17 would only permit adjustments for the effects of consolidation and the business combination in which Subsidiary I was acquired. Although a consolidation adjustment would be necessary, this would only be to adjust Subsidiary I's revalued amounts to figures based on historical cost.
- (c) *Subsidiary I deemed the cumulative translation difference for all its foreign subsidiaries to be zero at its date of transition to IFRS accounting standards (i.e., 1 January 20X0)*
When Entity H adopts IFRS accounting standards it can deem Subsidiary I's cumulative translation differences to be zero at its date of transition (1 January 20X5). This is because those cumulative translation differences result from translation of Subsidiary I's financial statements into Entity H's presentation currency.

5.8.3 Implementation guidance on accounting for assets and liabilities of subsidiaries, associates and joint ventures

The requirements of IFRS 1 for a parent and subsidiary with different dates of transition to IFRS accounting standards do not override the following requirements of IFRS 1: [IFRS 1.IG30]

- The parent's election to use the business combinations exemption in Appendix C discussed in section 5.2 above, which applies to assets and liabilities of a subsidiary acquired in a business combination that occurred before the parent's date of transition to IFRS accounting standards. However, the rules in IFRS 1.D17, [IFRS 1.D17], summarised in section 5.8.2 above (parent adopting IFRS accounting standards after subsidiary) apply to assets acquired and liabilities assumed by the subsidiary after the business combination and still held and owned by it at the parent's date of transition to IFRS accounting standards.
- To apply the requirements in IFRS 1 in measuring items in the financial statements for which the provisions in IFRS 1.D16 and D17 are not relevant. [IFRS 1.D16, IFRS 1.D17]. For example, the use of the exemption in IFRS 1.D16(a) to measure assets and liabilities at the carrying amounts in the parent's consolidated financial statements does not affect the use of the exemption in IFRS 1.D13 to deem the cumulative translation differences for all foreign operations are zero at its date of transition, discussed in section 5.6 above, since this is neither an asset nor a liability. However, the subsidiary also has an option to measure the cumulative translation differences at the carrying amount that would be included in its parent's consolidated financial statements, based on the parent's date of transition to IFRS accounting standards (if no adjustments were made for consolidation procedures and for the effects of the business combination in which the parent acquired the subsidiary). See section 5.8.1.A above. [IFRS 1.D12, IFRS 1.D13, IFRS 1.D13A].
And
- A first-time adopter must give all the disclosures required by IFRS 1 as of its own date of transition to IFRS accounting standards - see section 6 below.

Section 6.8 below discusses the disclosures required where IFRS 19 *Subsidiaries without Public Accountability: Disclosures* is applied.⁶

5.8.4 Adoption of IFRS accounting standards on different dates in separate and consolidated financial statements

Sometimes, an entity becomes a first-time adopter for its separate financial statements earlier or later than for its consolidated financial statements. Such a situation could arise, for example, when a parent avails itself of the exemption under IFRS 10.4 from preparing consolidated financial statements and prepares its separate financial statements under IFRS accounting standards (see Chapter 7). [IFRS 10.4]. Subsequently, if the parent ceases to be entitled to the exemption or chooses not to use it, the parent would be required to apply IFRS 1 in its first IFRS consolidated financial statements.

Another example might be that, under local law, an entity is required to prepare its consolidated financial statements under IFRS accounting standards, but is required (or permitted) to prepare its separate financial statements under local GAAP. Subsequently, the parent chooses, or is required, to prepare its separate financial statements under IFRS accounting standards.

If a parent becomes a first-time adopter for its separate financial statements earlier or later than for its consolidated financial statements, it must measure its assets and liabilities at the same amounts in both financial statements, except for consolidation adjustments. [IFRS 1.D17].

How we see it

The requirement is merely that the 'same' amounts be used in the first-time adopter's separate and consolidated financial statements under IFRS accounting standards, without being explicit as to which set of financial statements is used as the benchmark. However, we believe that it is clear from the context that the IASB intends that the measurement basis used in whichever set of financial statements first comply with IFRS accounting standards must also be used when IFRS accounting standards are subsequently adopted in the other set.

⁶ IFRS 19 *Subsidiaries without Public Accountability: Disclosures* was issued by the IASB in May 2024 to simplify the preparation of financial statements by eligible subsidiaries. Eligible subsidiaries that elect to apply IFRS 19 are allowed to provide reduced disclosures while still applying the recognition, measurement and presentation requirements in other IFRS accounting standards. IFRS 19 is effective for annual reporting periods beginning on or after 1 January 2027, with earlier application permitted (subject to jurisdictional endorsement). Amendments to IFRS 19 *Subsidiaries without Public Accountability: Disclosures* were issued in August 2025 (with the same effective date). See Chapter 4 for further details on the requirements of IFRS 19.

5.8.5 Application to investment entities under IFRS 10

IFRS 10 requires a parent that is an 'investment entity' as defined in the standard (see Chapter 7) to account for most of its subsidiaries at fair value through profit or loss in its consolidated financial statements rather than through consolidation. [IFRS 10.31, IFRS 10 Appendix A]. This exception from normal consolidation procedures does not apply to:

A parent entity that owns a subsidiary which is an investment entity but the parent itself is not an investment entity [IFRS 10.33]

Or

- A parent that is an investment entity in accounting for a subsidiary that is not itself an investment entity and whose main purpose and activities are providing services that relate to the investment entity's investment activities [IFRS 10.32]

In IFRS 1, there are provisions relating to a parent adopting IFRS accounting standards earlier or later than its subsidiary. Below, we deal with situations where:

- A subsidiary that is required to be measured at fair value through profit or loss adopts IFRS accounting standards after its parent which is an investment entity (see section 5.8.5.A below)

Or

- A parent that is not an investment entity adopts IFRS accounting standards after a subsidiary which is an investment entity (see section 5.8.5.B below)

5.8.5.A Subsidiary adopts IFRS accounting standards after investment entity parent

In this case, the subsidiary that is required to be measured at fair value through profit or loss must measure its assets and liabilities under the general provisions of IFRS 1, based on its own date of transition to IFRS accounting standards (i.e., IFRS 1.D16(b) - see section 5.8.1 above), [IFRS 1.D16(b)], rather than (as would generally be permitted under IFRS 1.D16(a) - see section 5.8.1 above) by reference to the carrying amounts of its assets and liabilities in the IFRS consolidated financial statements of its parent, which are based on the fair value of the investment in the subsidiary. [IFRS 1.D16(a)]. This effectively prevents the accounting anomaly of the subsidiary measuring its net assets at the fair value of its own equity on transition to IFRS accounting standards.

5.8.5.B Non-investment entity parent adopts IFRS accounting standards after investment entity subsidiary

In this case, the parent is required to consolidate its subsidiaries and is not able to use the exception to consolidation in IFRS 10 (used by its investment entity subsidiaries). [IFRS 1.D17].

If the provisions in section 5.8.2 above were to be applied, the effect would be that the parent would bring any investments in subsidiaries accounted for at fair value through profit or loss by the subsidiary into the parent's IFRS consolidated statement of financial position at their fair value. This would be contrary to the intention of the investment entities concept that such an accounting treatment is applied only by a parent that is itself an investment entity and IFRS 1.D17 specifically prohibits this.

5.9 Compound financial instruments

IAS 32 requires compound financial instruments (e.g., many convertible bonds) to be split at inception into separate equity and liability components on the basis of facts and circumstances existing when the instrument was issued. [IAS 32.15, IAS 32.28]. If the liability component is no longer outstanding at the date of transition to IFRS accounting standards, a full retrospective application of IAS 32 would involve identifying two components, one representing the original equity component and the other (retained earnings) representing the cumulative interest accreted on the liability component, both of which are accounted for in equity (See Chapter 43). A first-time adopter does not need to make this possibly complex allocation if the liability component is no longer outstanding at the date of transition to IFRS accounting standards. [IFRS 1.D18]. For example, in the case of a convertible bond that has been converted into equity, it is not necessary to make this split.

However, if the liability component of the compound instrument is still outstanding at the date of transition to IFRS accounting standards then a split is required to be made (see Chapter 43). [IFRS 1.IG35, IFRS 1.IG36].

5.10 Designation of previously recognised financial instruments

The following discusses the application of the exemptions in IFRS 1.D19-D19C regarding designation of previously recognised financial instruments to certain financial assets and financial liabilities.

5.10.1 Designation of financial asset as measured at fair value through profit or loss

IFRS 9 permits a financial asset to be designated as measured at fair value through profit or loss if the entity meets the criteria in IFRS 9.4.1.5 at the date the entity becomes a party to the financial instrument (see Chapter 44). [IFRS 9.4.1.5].

IFRS 1.D19A allows a first-time adopter to designate a financial asset as measured at fair value through profit or loss in accordance with IFRS 9.4.1.5 on the basis of the facts and circumstances that exist at the date of transition to IFRS accounting standards. [IFRS 1.D19A]. If this exemption is used, IFRS 1 requires certain additional disclosures (see section 6.4.1 below). [IFRS 1.29].

IFRS 7 *Financial Instruments: Disclosures* also requires an entity which designates a financial asset at fair value through profit or loss to disclose the cumulative change in the fair value of the financial asset attributable to changes in the credit risk of the financial asset. [IFRS 7.9(c)]. However, IFRS 1 and IFRS 7 do not describe how a first-time adopter calculates the cumulative change for this disclosure, i.e., which date the cumulative change is calculated from, that of initial recognition or initial designation. See section 5.10.2 below for further discussion.

5.10.2 Designation of financial liability at fair value through profit or loss

IFRS 9 permits a financial liability to be designated as a financial liability at fair value through profit or loss if the entity meets the criteria in IFRS 9.4.2.2 at the date the entity becomes a party to the financial instrument (see Chapter 44). [IFRS 9.4.2.2].

IFRS 1.D19 allows a first-time adopter to designate, at the date of transition to IFRS accounting standards, a financial liability as measured at fair value through profit or loss provided the liability meets the criteria in IFRS 9.4.2.2 at that date. [IFRS 1.D19]. If this exemption is used, IFRS 1 requires certain additional disclosures (see section 6.4.1 below). [IFRS 1.29A].

IFRS 7 also requires an entity which designates a financial liability at fair value through profit or loss to disclose the cumulative change in the fair value attributable to changes in the credit risk of the financial liability. [IFRS 7.10(a), IFRS 7.10A(a)]. However, IFRS 1 and IFRS 7 do not describe how a first-time adopter calculates the cumulative change for this disclosure, i.e., which date the cumulative change is calculated from, that of initial recognition or initial designation. As noted in section 5.10.1 above, there is a similar disclosure required for financial assets designated at fair value through profit or loss. [IFRS 7.9(c)].

How we see it

We believe that the cumulative change in fair value of a financial liability or financial asset designated at fair value through profit or loss is calculated from the date of initial recognition of the financial instrument. For a financial asset, the date of origination by the entity or purchase from another entity is the initial recognition date. For a financial liability, the initial recognition date is the issuance date. The intention of the required disclosures in IFRS 7 for the cumulative change in credit risk for those financial liabilities and financial assets designated at fair value through profit or loss, is to assist users of financial statements to understand the portion of the change in fair value attributable to changes in credit risk. Since the carrying amount of the instrument reflects the entire fair value movement since initial recognition, the corresponding disclosure is intended to reflect the cumulative movement in credit risk since initial recognition.

Where a financial liability is designated at fair value through profit or loss, the first-time adopter is also required to determine whether the accounting required by IFRS 9.5.7.7 would create or enlarge an accounting mismatch in profit or loss on the basis of the facts and circumstances that exist at the date of transition to IFRS accounting standards (see section 5.10.4 below). [IFRS 1.D19C, IFRS 9.5.7.7, IFRS 9.5.7.8].

5.10.3 Designation of investment in an equity instrument

At initial recognition, an entity might make an irrevocable election to designate an investment in an equity instrument (that is neither held for trading nor contingent consideration recognised by an acquirer in a business combination to which IFRS 3 applies) as at fair value through other comprehensive income in accordance with IFRS 9 (see Chapter 44). *[IFRS 9.5.7.5]*.

IFRS 1.D19B allows a first-time adopter to designate an investment in such an equity instrument as at fair value through other comprehensive income in accordance with IFRS 9.5.7.5 on the basis of the facts and circumstances that exist at the date of transition to IFRS accounting standards. *[IFRS 1.D19B]*.

5.10.4 Determination of an accounting mismatch for presenting a gain or loss on financial liability

IFRS 9 requires a gain or loss on a financial liability that is designated as at fair value through profit or loss to be presented as follows (unless this presentation creates or enlarges an accounting mismatch in profit or loss): *[IFRS 9.5.7.7, IFRS 9.5.7.8]*

- The amount of change in the fair value of the financial liability that is attributable to changes in the credit risk of that liability must be presented in other comprehensive income.
- And
- The remaining amount of change in the fair value of the liability must be presented in profit or loss.

IFRS 1.D19C requires a first-time adopter to determine whether the treatment in IFRS 9.5.7.7 would create or enlarge an accounting mismatch in profit or loss on the basis of the facts and circumstances that exist at the date of transition to IFRS accounting standards (see Chapter 44 and Chapter 46). *[IFRS 1.D19C]*.

5.11 Fair value measurement of financial assets or financial liabilities at initial recognition

First-time adopters are granted similar transition relief in respect of the 'day 1' gain or loss recognition requirements of IFRS 9 as is available to existing IFRS reporters in response to concerns raised by constituents that retrospective application of the requirements would be difficult and expensive to implement, and might require subjective assumptions about what was observable and what was not. *[IFRS 1.BC83A]*.

Consequently, first-time adopters may apply the requirements of IFRS 9.B5.1.2A(b) about a deferral of the 'day 1' gain/loss prospectively to transactions entered into on or after the date of transition to IFRS accounting standards (see Chapter 45). *[IFRS 1.D20, IFRS 9.B5.1.2A(b)]*.

5.12 Decommissioning liabilities included in the cost of property, plant and equipment

5.12.1 IFRIC 1 exemption

Under IAS 16, the cost of an item of property, plant and equipment includes "the initial estimate of the costs of dismantling and removing the item and restoring the site on which it is located, the obligation for which an entity incurs either when the item is acquired or as a consequence of having used the item during a particular period for purposes other than to produce inventories during that period." *[IAS 16.16(c)]*.

Therefore, a first-time adopter needs to ensure that property, plant and equipment cost includes an item representing the decommissioning provision as determined under IAS 37. IAS 37 requires the liability, both initially and subsequently, to be measured at the amount required to settle the present obligation at the end of the reporting period, reflecting a current market-based discount rate. *[IAS 37.45, IAS 37.47, IFRS 1.IG201]*.

An entity applies IAS 16 in determining the amount to be included in the cost of the asset, before recognising depreciation and impairment losses which cause differences between the carrying amount of the decommissioning liability and the amount related to decommissioning costs to be included in the carrying amount of the asset. *[IFRS 1.IG13]*.

An entity accounts for changes in decommissioning provisions in accordance with IFRIC 1 which requires that, subject to specified conditions, changes in an existing decommissioning, restoration or similar liability are added to or deducted from the cost of the related asset. The resulting depreciable amount of the asset is depreciated over its useful life, and the periodic unwinding of the discount on the liability is recognised in profit or loss as it occurs. [IFRS 1.IG202]. However, IFRS 1.D21 provides an exemption for changes in such liabilities that occurred before the date of transition to IFRS accounting standards and prescribes an alternative treatment if the exemption is used. [IFRS 1.D21, IFRS 1.IG203, IFRIC 1].

In such cases, a first-time adopter must: [IFRS 1.D21]

- (a) Measure the decommissioning liability as at the date of transition to IFRS accounting standards in accordance with IAS 37
- (b) To the extent that the liability is within the scope of IFRIC 1, estimate the amount that would have been included in the cost of the related asset when the liability first arose, by discounting the liability to that date using its best estimate of the historical risk-adjusted discount rate(s) that would have applied for that liability over the intervening period
And
- (c) Calculate the accumulated depreciation on that amount, as at the date of transition to IFRS accounting standards, on the basis of the current estimate of the useful life of the asset, using the entity's IFRS depreciation policy

Illustration 5-26 below demonstrates the determination of the amount of decommissioning liability and the property, plant and equipment related to that decommissioning liability, when using this exemption.

Illustration 5-26: Decommissioning component in property, plant and equipment

Entity A's date of transition to IFRS accounting standards is 1 January 20X5 and the end of its first IFRS reporting period is 31 December 20X6. Entity A built a factory that was completed and ready for use on 1 January 20X0. Under its previous GAAP, Entity A accrued a decommissioning provision over the expected life of the factory. The facts can be summarised as follows:

Cost of the factory	CU1,400
Residual value	CU200
Economic life	20 years
Original estimate of decommissioning cost in year 20	CU175
Revised estimate on 1 January 20X2 of decommissioning cost in year 20	CU300
Discount rate applicable to decommissioning liability (the discount rate is assumed to be constant)	5.65%
Discounted value of original decommissioning liability on 1 January 20X0	CU58
Discounted value on 1 January 20X0 of revised decommissioning liability	CU100
Discounted value on 1 January 20X5 of revised decommissioning liability	CU131

If Entity A applies the exemption from full retrospective application, what are the carrying amounts of the factory and the decommissioning liability in Entity A's opening IFRS statement of financial position?

The tables below show how Entity A accounts for the decommissioning liability and the factory under its previous GAAP, under IFRS 1 using the exemption and under IFRS 1 applying IFRIC 1 retrospectively.

Decommissioning liability			
	<i>Previous GAAP</i>	<i>IFRS 1 Exemption</i>	<i>Retrospective application of IFRIC 1</i>
	CU	CU	CU
1 January 20X0		100	58
Decommissioning costs $\text{CU}175 \div 20 \text{ years} \times 2 =$	17.5		
Decommissioning costs $\text{CU}100 \times (1.0565^2 - 1) =$		12	
Decommissioning costs $\text{CU}58 \times (1.0565^2 - 1) =$			7
1 January 20X2	17.5	112	65
Revised estimate of decommissioning provision	12.5		47
1 January 20X2	30	112	112
Decommissioning costs $\text{CU}300 \div 20 \text{ years} \times 3 =$	45		
Decommissioning costs $\text{CU}112 \times (1.0565^3 - 1) =$		19	
Decommissioning costs $\text{CU}112 \times (1.0565^3 - 1) =$			19
1 January 20X5	75	131	131
Decommissioning costs $\text{CU}300 \div 20 \text{ years} \times 2 =$	30		
Decommissioning costs $\text{CU}131 \times (1.0565^2 - 1) =$		16	
Decommissioning costs $\text{CU}131 \times (1.0565^2 - 1) =$			16
31 December 20X6	105	147	147

In calculating the decommissioning provision, it makes no difference whether Entity A goes back in time and tracks the history of the decommissioning provision or whether it just calculates the decommissioning provision at its date of transition to IFRS accounting standards. This is not the case for the calculation of the related asset, as can be seen below.

Factory			
	<i>Previous GAAP</i>	<i>IFRS 1 Exemption</i>	<i>Retrospective application of IFRIC 1</i>
	CU	CU	CU
1 January 20X0	1,400	1,500	1,458
Depreciation $(\text{CU}1,400 - \text{CU}200) \div 20 \text{ years} \times 2 =$	(120)		
Depreciation $(\text{CU}1,500 - \text{CU}200) \div 20 \text{ years} \times 2 =$		(130)	
Depreciation $(\text{CU}1,458 - \text{CU}200) \div 20 \text{ years} \times 2 =$			(126)
1 January 20X2			1,332
Revised estimate of decommissioning provision			47
1 January 20X2			1,379
Depreciation $(\text{CU}1,400 - \text{CU}200) \div 20 \text{ years} \times 3 =$	(180)		
Depreciation $(\text{CU}1,500 - \text{CU}200) \div 20 \text{ years} \times 3 =$		(195)	
Depreciation $(\text{CU}1,379 - \text{CU}200) \div 18 \text{ years} \times 3 =$			(197)
1 January 20X5	1,100	1,175	1,182
Depreciation $(\text{CU}1,400 - \text{CU}200) \div 20 \text{ years} \times 2 =$	(120)		
Depreciation $(\text{CU}1,500 - \text{CU}200) \div 20 \text{ years} \times 2 =$		(130)	
Depreciation $(\text{CU}1,379 - \text{CU}200) \div 18 \text{ years} \times 2 =$			(131)
31 December 20X6	980	1,045	1,051

As can be seen above, a full retrospective application of IFRIC 1 would require an entity to go back in time and account for each revision of the decommissioning provision in accordance with IFRIC 1. In the case of a long-lived asset there could be a significant number of revisions that a first-time adopter would need to account for. It can be noted that despite the significant revision of the decommissioning costs, the impact on the carrying amount of the factory in many cases might not be significant.

At its date of transition to IFRS accounting standards (1 January 20X5), Entity A makes the following adjustments:

- The decommissioning liability is increased by CU56 (i.e., CU131 - CU75) to reflect the difference in accounting policy, irrespective of whether Entity A applies the exemption or not.
- If Entity A applies the exemption, this increases the carrying amount of the factory by CU75.
- If Entity A applies IFRIC 1 retrospectively, this increases the carrying amount of the factory by CU82.

It is important to note that in both cases the decommissioning component of the factory's carrying amount will be significantly lower than the decommissioning liability itself.

From the above example, it is clear that the exemption reduces the amount of effort required to restate items of property, plant and equipment with a decommissioning component. In many cases the difference between the two methods will be insignificant, except where an entity had to make major adjustments to the estimate of the decommissioning costs near the end of the life of the related assets.

It is important for a first-time adopter that elects the deemed cost approaches discussed in section 5.4 above and elects to use the IFRIC 1 exemption to recognise its decommissioning obligation to be aware of the interaction between these exemptions that could lead to a potential overstatement of the underlying asset.

How we see it

In determining the deemed cost of the asset equal to fair value, the first-time adopter would need to make sure that the fair value of the asset has taken the decommissioning into account to avoid the potential overstatement of the value of the asset that might result from the application of the IFRIC 1 exemption.

5.12.2 IFRIC 1 exemption for oil and gas assets at deemed cost

A first-time adopter that applies the deemed cost exemption for oil and gas assets in the development or production phases accounted for in cost centres that include all properties in a large geographical area under previous GAAP (see section 5.4.3 above) must not apply the IFRIC 1 exemption (see section 5.12.1 above) or IFRIC 1 itself, but instead is required to: [IFRS 1.D8A(b), IFRS 1.D21A]

- (a) Measure decommissioning, restoration, and similar liabilities as at the date of transition to IFRS accounting standards in accordance with IAS 37
And
- (b) Recognise directly in retained earnings any difference between that amount and the carrying amount of those liabilities at the date of transition determined under previous GAAP

The IASB introduced this requirement because it believed that the existing IFRIC 1 exemption would require detailed calculations that would not be practicable for entities that apply the deemed cost exemption for oil and gas assets. [IFRS 1.BC63CA].

5.13 Financial assets or intangible assets accounted for in accordance with IFRIC 12

Service concession arrangements are contracts between the public and private sector to attract private sector participation in the development, financing, operation and maintenance of public infrastructure (e.g., roads, bridges, tunnels, prisons, hospitals, airports, water distribution facilities, energy supply and telecommunication networks). [IFRIC 12.1, IFRIC 12.2].

IFRS 1 allows a first-time adopter to apply the transitional provision in IFRIC 12. [IFRS 1.D22]. IFRIC 12 requires retrospective application unless it is, for any particular service concession arrangement, impracticable for the operator to apply IFRIC 12 retrospectively at the start of the earliest period presented, in which case it must: [IFRIC 12.29, IFRIC 12.30]

- (a) Recognise financial assets and intangible assets that existed at the start of the earliest period presented, which will be the date of transition to IFRS accounting standards for a first-time adopter
- (b) Use the previous carrying amounts of those financial and intangible assets (however previously classified) as their carrying amounts as at that date

And

- (c) Test financial and intangible assets recognised at that date for impairment, unless this is not practicable, in which case the amounts must be tested for impairment at the start of the current period, which will be the beginning of the first IFRS reporting period for a first-time adopter

This exemption was used by many Brazilian companies with service concession arrangements and a disclosure of the use of the exemption is given in Practical example 5-9 below from the financial statements of Centrais Elétricas Brasileiras S.A. - Eletrobras:

Practical example 5-9:	Centrais Elétricas Brasileiras S.A. - Eletrobras (2010)	Brazil
FORM 20-F [extract]		
Explanatory Notes to the Consolidated Financial Statements [extract]		
6 Transition to IFRS [extract]		
6.1 Basis of transition to IFRS [extract]		
6.1.2 Exemptions of full retrospective application adopted by the Company [extract]		
(d)	Exemption for initial treatment of IFRIC 12 The Company has chosen to apply the exemption provided for in IFRS 1 related to the infrastructure of assets classified as concession assets on the transition date and made the corresponding reclassifications based on the residual book value on January 1, 2009, due to the concession contracts of the Company being substantially old without any possibility to perform a retrospective adjustment.	

5.14 Borrowing costs

5.14.1 Borrowing cost exemption

For many first-time adopters, full retrospective application of IAS 23 *Borrowing Costs* would be problematic as the adjustment would be required in respect of any asset held that had, at any point in the past, satisfied the criteria for capitalisation of borrowing costs. To avoid this problem, IFRS 1 allows a modified form of the transitional provisions set out in IAS 23, which means that the first-time adopter can elect to apply the requirements of IAS 23 from the date of transition to IFRS accounting standards or from an earlier date as permitted by IAS 23.28. [IFRS 1.D23, IAS 23.28].

Extract from IFRS 1	
D23	A first-time adopter can elect to apply the requirements of IAS 23 from the date of transition or from an earlier date as permitted by paragraph 28 of IAS 23. From the date on which an entity that applies this exemption begins to apply IAS 23, the entity: <ul style="list-style-type: none"> (a) shall not restate the borrowing cost component that was capitalised under previous GAAP and that was included in the carrying amount of assets at that date; and (b) shall account for borrowing costs incurred on or after that date in accordance with IAS 23, including those borrowing costs incurred on or after that date on qualifying assets already under construction.

IAS 23 applies to borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset, as defined in IAS 23. [IAS 23.1, IAS 23.5]. If a first-time adopter established a deemed cost for an asset (see section 5.4 above) then it cannot capitalise borrowing costs incurred before the measurement date of the deemed cost (see section 5.14.2 below). [IFRS 1.IG23]. IAS 23 requires disclosure of interest capitalised during the period. Neither IAS 23 nor IFRS 1 requires disclosure of the cumulative amount capitalised. [IFRS 1.IG24, IAS 23.26].

5.14.2 Interaction with other exemptions

There are limitations imposed on capitalised amounts under IAS 23. IAS 23 states that when the carrying amount of a qualifying asset exceeds its recoverable amount or net realisable value, the carrying amount is written down or written off in accordance with the requirement of other standards. [IAS 23.16].

How we see it

Once an entity uses the 'fair value as deemed cost exemption' described in section 5.4 above and has recognised an asset at fair value, in our view, the entity does not increase that value to capitalise interest incurred before the fair value measurement date. Interest incurred subsequent to the date of transition could be capitalised on a qualifying asset, subject to the requirements of IAS 23 (see Chapter 22).

5.15 Extinguishing financial liabilities with equity instruments

IFRIC 19 *Extinguishing Financial Liabilities with Equity Instruments* deals with accounting for transactions whereby a debtor and creditor might renegotiate the terms of a financial liability with the result that the debtor extinguishes the liability fully or partially by issuing equity instruments to the creditor (see Chapter 43). [IFRIC 19.2]. However, an entity does not apply IFRIC 19 to transactions in situations where: [IFRIC 19.3]

- (a) The creditor is also a direct or indirect shareholder and is acting in its capacity as a direct or indirect existing shareholder
- (b) The creditor and the entity are controlled by the same party or parties before and after the transaction and the substance of the transaction includes an equity distribution by, or contribution to, the entity
Or
- (c) Extinguishing the financial liability by issuing equity shares is in accordance with the original terms of the financial liability

The transitional provisions of IFRIC 19 require retrospective application only from the beginning of the earliest comparative period presented. [IFRIC 19.13]. The IFRS IC concluded that application to earlier periods would result only in a reclassification of amounts within equity. [IFRIC 19.BC33].

The Board provided similar transition relief to first-time adopters, effectively requiring application of IFRIC 19 from the date of transition to IFRS accounting standards. [IFRS 1.D25].

5.16 Severe hyperinflation

Extract from IFRS 1

D26 If an entity has a functional currency that was, or is, the currency of a hyperinflationary economy, it shall determine whether it was subject to severe hyperinflation before the date of transition to IFRSs. This applies to entities that are adopting IFRSs for the first time, as well as entities that have previously applied IFRSs.

If an entity has a functional currency that was, or is, the currency of a hyperinflationary economy, it must determine whether it was subject to severe hyperinflation before the date of transition to IFRS accounting standards. [IFRS 1.D26]. A currency of a hyperinflationary economy is subject to severe hyperinflation if it has both of the following characteristics: [IFRS 1.D27]

- (a) A reliable general price index is not available to all entities with transactions and balances in the currency.
And
- (b) The currency is not exchangeable into a relatively stable foreign currency. Exchangeability is assessed in accordance with IAS 21.

The functional currency of an entity ceases to be subject to severe hyperinflation on the 'functional currency normalisation date', when the functional currency no longer has either, or both, of these characteristics, or when there is a change in the entity's functional currency to a currency that is not subject to severe hyperinflation. [IFRS 1.D28].

If the date of transition to IFRS accounting standards is on, or after, the functional currency normalisation date, the first-time adopter is allowed to elect to measure all assets and liabilities held before the functional currency normalisation date at fair value on the date of transition to IFRS accounting standards and use that fair value as the deemed cost in the opening IFRS statement of financial position. [IFRS 1.D29].

Preparation of information in accordance with IFRS accounting standards for periods before the functional currency normalisation date might not be possible. Therefore, entities are allowed to prepare financial statements for a comparative period of less than 12 months if the functional currency normalisation date falls within a 12-month comparative period, provided that a complete set of financial statements is prepared, as required by IAS 1.10 (IFRS 18.10), for that shorter period. [IFRS 1.D30, IAS 1.10, IFRS 18.10]. The Board suggested that entities consider disclosure of non-IFRS comparative information and historical summaries if they would provide useful information to users of financial statements (see section 6.2 below). [IFRS 1.22]. The Board further noted that an entity should clearly explain the transition to IFRS accounting standards in accordance with IFRS 1's disclosure requirements in IFRS 1.23-28. [IFRS 1.BC63J, IFRS 1.23-28].

If an entity elects to measure assets and liabilities at fair value and to use that fair value as the deemed cost in its opening IFRS statement of financial position because of severe hyperinflation, the entity must disclose an explanation of how, and why, the entity had, and then ceased to have, a functional currency that is subject to severe hyperinflation (see section 6.5.5 below). [IFRS 1.D26, IFRS 1.D27, IFRS 1.D28, IFRS 1.D29, IFRS 1.D30, IFRS 1.31C].

See Chapter 17 regarding accounting during periods of hyperinflation and Chapter 16 for assessment of exchangeability.

5.17 Joint arrangements

A first-time adopter is allowed to apply the transitional provisions in Appendix C of IFRS 11 *Joint Arrangements* with the following exceptions: [IFRS 1.D31, IFRS 11 Appendix C]

- (a) A first-time adopter must apply these transitional provisions at the date of transition to IFRS accounting standards.
And
- (b) When changing from proportionate consolidation to the equity method, a first-time adopter must test the investment for impairment in accordance with IAS 36 as at the date of transition to IFRS accounting standards, regardless of whether there is any indication that it might be impaired. Any resulting impairment must be recognised as an adjustment to retained earnings at the date of transition to IFRS accounting standards.

5.18 Stripping costs in the production phase of a surface mine

In surface mining operations, entities might need to remove mine waste materials ('overburden') to gain access to mineral ore deposits. This waste removal activity is known as 'stripping'. [IFRIC 20.1]. A mining entity might continue to remove overburden and to incur stripping costs during the production phase of the mine. [IFRIC 20.3]. IFRIC 20 *Stripping Costs in the Production Phase of a Surface Mine* considers when and how to account separately for the benefits arising from a surface mine stripping activity, as well as how to measure these benefits both on initial recognition and subsequently (see Chapter 39). [IFRIC 20.5].

First-time adopters are allowed to apply the transitional provisions set out in IFRIC 20, [IFRIC 20 Appendix A], except that the effective date is deemed to be the beginning of the first IFRS reporting period. [IFRS 1.D32].

5.19 Designation of contracts to buy or sell a non-financial item

IFRS 9 allows some contracts to buy or sell a non-financial item to be designated at inception as measured at fair value through profit or loss (see Chapter 41). [IFRS 9.2.5]. Despite this requirement, IFRS 1.D33 allows an entity to designate, at the date of transition to IFRS accounting standards, contracts that already exist on that date as measured at fair value through profit or loss but only if they meet the requirements of IFRS 9.2.5 at that date and the entity designates all similar contracts at fair value through profit or loss. [IFRS 1.D33].

5.20 Revenue from contracts with customers

IFRS 1 includes the following exemptions in relation to IFRS 15 *Revenue from Contracts with Customers*. The requirements of IFRS 15 are discussed in Chapter 28.

Extract from IFRS 1

Revenue

- D34 A first-time adopter may apply the transition provisions in paragraph C5 of IFRS 15. In those paragraphs references to the 'date of initial application' shall be interpreted as the beginning of the first IFRS reporting period. If a first-time adopter decides to apply those transition provisions, it shall also apply paragraph C6 of IFRS 15.
- D35 A first-time adopter is not required to restate contracts that were completed before the earliest period presented. A completed contract is a contract for which the entity has transferred all of the goods or services identified in accordance with previous GAAP.

Under the full retrospective method, entities had to apply IFRS 15 as if it had been applied since the inception of all its contracts with customers that are presented in the financial statements. However, to ease the potential burden of applying it on a fully retrospective basis, the IASB provided the optional practical expedients included in IFRS 15.C5 to a first-time adopter. A first-time adopter is permitted to use one or more of the following practical expedients when applying IFRS 15 retrospectively and not to restate contracts that were completed before the earliest period presented (i.e., the date of transition to IFRS accounting standards) (see section 5.20.1 below). [IFRS 1.D34, IFRS 1.D35].

Here are the practical expedients in IFRS 15.C5 as applied to a first-time adopter: [IFRS 15.C5, IFRS 1.D34]

- (a) For completed contracts, an entity need not restate contracts that:
- (i) Begin and end within the same annual comparative reporting period
 - Or
 - (ii) Are completed contracts at the date of transition to IFRS accounting standards. [IFRS 1.D35].
- (b) For completed contracts that have variable consideration, an entity is allowed to use the transaction price at the date the contract was completed rather than estimating variable consideration amounts in the comparative reporting periods.
- (c) For contracts that were modified before the date of transition to IFRS accounting standards, an entity need not retrospectively restate the contract for those contract modifications in accordance with IFRS 15.20-21 (see Chapter 28). Instead, an entity must reflect the aggregate effect of all of the modifications that occur before the date of transition to IFRS accounting standards when: [IFRS 15.20, IFRS 15.21]
- (i) Identifying the satisfied and unsatisfied performance obligations
 - (ii) Determining the transaction price
 - And
 - (iii) Allocating the transaction price to the satisfied and unsatisfied performance obligations.
 - And
- (d) For all reporting periods presented before the beginning of the first IFRS reporting period, an entity need not disclose the amount of the transaction price allocated to the remaining performance obligations and an explanation of when the entity expects to recognise that amount as revenue (see IFRS 15.120). [IFRS 15.120].

For the purposes of IFRS 15, IFRS 1.D35 defines a 'completed contract' as "a contract for which the entity has transferred all of the goods or services identified in accordance with previous GAAP." [IFRS 1.D35].

A first-time adopter is allowed to elect to apply one, some, or all of these expedients. However, if an entity elects to use any of them, it must apply that expedient consistently to all contracts within all reporting periods presented. In addition, an entity is required to disclose the following information: [IFRS 15.C6, IFRS 1.D34]

- (a) The expedients that have been used
- And
- (b) To the extent reasonably possible, a qualitative assessment of the estimated effect of applying each of those expedients

How we see it

Although IFRS 1 provides the practical expedients, adoption of IFRS 15 by a first-time adopter could be challenging. For example, a first-time adopter might find the determination of completed contracts challenging if its previous GAAP was not clear about when the goods or services had been transferred (see sections 5.20.1 and 5.20.2 below for discussion on the definition of a completed contract). Other application issues are discussed further later in this section.

While the practical expedients provide some relief, first-time adopters will still need to use judgement and make estimates. For example, first-time adopters will need to use judgement in estimating stand-alone selling prices if there has been a wide range of selling prices and when allocating the transaction price to satisfied and unsatisfied performance obligations if there have been several performance obligations or contract modifications over an extended period. Furthermore, if a first-time adopter applies the practical expedient for contract modifications, it will still have to apply IFRS 15's contract modification requirements (see Chapter 28) to modifications made after the date of transition to IFRS accounting standards.

Illustration 5-27 below demonstrates the practical expedient for contract modifications.

Illustration 5-27: Transition practical expedient for contract modifications

Entity A entered into a contract with a customer to sell equipment for CU1 million and provide services for five years for CU20,000 annually.

The equipment was delivered on 1 January 20X0 and the service contract commenced at that time. The equipment and the service contract are separate performance obligations.

In 20X2, the contract was modified to extend it by five years and to provide an additional piece of equipment for CU1 million. The additional equipment will be delivered during 20X5 and is a separate performance obligation.

Entity A adopts IFRS accounting standards on 1 January 20X5 and, as part of adopting IFRS 15, it applies the practical expedient on contract modifications in accordance with IFRS 15.C5(c). [IFRS 1.D34, IFRS 1.D35, IFRS 15.C5(c)].

The total transaction price for the modified contract is CU2,200,000 (CU1 million (equipment) + CU1 million (equipment) + (10 years × CU20,000 (service))), which is allocated to the two products and the service contract based on the relative stand-alone selling price of each performance obligation. See Chapter 28 for discussion on allocating the transaction price to performance obligations.

The transaction price allocated to the second piece of equipment and the remaining unperformed services would be recognised when or as they are transferred to the customer.

When adopting IFRS 15 as part of its transition to IFRS accounting standards, a first-time adopter needs to analyse each of its contracts to determine the appropriate timing and pattern of recognition, considering the specific criteria and requirements of the standard. In some instances, this could result in a change in the timing and/or pattern of revenue recognition compared to its previous GAAP. An example of such a change in the timing of revenue recognition would be a contract manufacturer that produces goods designed to a customer's unique specifications where the goods do not have an alternative use. If the manufacturer also has an enforceable right to payment for performance completed to date, the third criterion in IFRS 15 to recognise revenue over time would be met, [IFRS 15.35(c)], (see Chapter 28 for further discussion), even though the manufacturer might have recognised revenue at a point in time under its previous GAAP (e.g., based on the number of units produced or units delivered).

Other application issues that could make adopting IFRS 15 as part of transitioning to IFRS accounting standards difficult and/or time-consuming, include the following:

- A first-time adopter will have to perform an allocation of the transaction price because of changes to the identified deliverables, the transaction price or both.
If its previous GAAP required a method that is similar to the requirements in IFRS 15, this step might be straightforward. Regardless, a first-time adopter is required to determine the stand-alone selling price of each performance obligation as at inception of the contract. Depending on the age of the contract, this information might not be readily available and the prices could differ significantly from current stand-alone selling prices. While the practical expedients in IFRS 15.C5 are clear about when it is acceptable to use hindsight in respect of variable consideration to determine the transaction price (see Chapter 28 for a discussion on variable consideration), the practical expedients are silent on whether the use of hindsight is acceptable for other aspects of the model (e.g., for the purpose of allocating the transaction price) or whether it is acceptable to use current pricing information if that were the only information available.
And
- Estimating variable consideration for all contracts for prior periods is likely to require significant judgement.
The standard is clear that hindsight cannot be used for contracts that are not completed. As a result, entities must make this estimate based only on information that was available at contract inception. Contemporaneous documentation clarifying what information was available to management, and when it was available, is likely to be needed to support these estimates. In addition to estimating variable consideration using the expected value or a most likely amount method, a first-time adopter has to make conclusions about whether such variable consideration is subject to the constraint (see Chapter 28 for further discussion).

Finally, a first-time adopter needs to consider a number of other issues as it prepares to adopt IFRS 15 as part of its adoption of IFRS accounting standards. For example, a first-time adopter with significant deferred revenue balances under its previous GAAP could experience what some refer to as 'lost revenue' if those amounts were deferred at the date of transition to IFRS accounting standards and, ultimately, are reflected in the restated prior periods or as part of the cumulative adjustment upon transition, but are never reported as revenue in a current period within the financial statements.

5.20.1 Definition of a completed contract

For the purposes of IFRS 1, a 'completed contract' is a contract for which the entity has transferred all of the goods or services identified in accordance with previous GAAP. [IFRS 1.D35].

Depending on the practical expedients a first-time adopter chooses to apply, it need not apply IFRS 15 to contracts if it has completed performance before the earliest period presented, i.e., the date of transition to IFRS accounting standards, even if it has not yet received the consideration and that consideration is still subject to variability.

The IASB noted in the Basis for Conclusions that 'transferred all of the goods or services' is not meant to imply that an entity would apply the 'transfer of control' notion in IFRS 15 to goods or services that have been identified in accordance with previous GAAP. Rather it is performance in accordance with previous GAAP. [IFRS 15.BC441]. For example, if the previous GAAP has similar requirements to legacy revenue requirements in IFRS accounting standards (i.e., IAS 11 *Construction Contracts*, IAS 18 *Revenue* and related Interpretations), in many situations the term 'transferred' would mean 'delivered' within the context of contracts for the sale of goods and 'performed' within the context of contracts for rendering services and construction contracts. In some situations, the entity would use judgement when determining whether it has transferred goods or services to the customer. [IFRS 15.BC445D].

As discussed in section 5.20 above, determining which contracts were completed before the date of transition to IFRS accounting standards might require significant judgement, particularly if a first-time adopter's previous GAAP did not provide detailed requirements that indicated when goods had been delivered or services performed.

5.20.2 Implementation questions on definition of a completed contract

5.20.2.A Elements in a contract to be considered

When determining whether a contract meets the definition of a completed contract, a first-time adopter must consider all of the elements (or components) in a contract that give rise to revenue in its previous GAAP. It does not consider the elements of a contract that do not result in recognition of revenue when assessing whether a contract is completed.

For example, under its previous GAAP, an entity might have accounted for a financing component (i.e., separating the interest income or expense from the revenue). Doing so effectively splits the contract into a revenue component and a financing component.

How we see it

In our view, the financing component generally would not be considered in determining whether the goods or services have transferred to the customer (i.e., it would generally not affect the assessment of whether the contract meets the definition of a completed contract). In addition, income elements that are not within the scope of IFRS 15 need not be considered even if they were covered by revenue requirements in previous GAAP.

None of the following, for example, would be considered when determining whether a contract meets the definition of a completed contract because they are within the scope of IFRS 9, not IFRS 15:

- Dividends (see Chapter 46) [IFRS 9.5.7.1A, IFRS 9.5.7.6]
- Fees integral to the issuance of a financial instrument (see Chapter 46) [IFRS 9.B5.4.1, IFRS 9.B5.4.2, IFRS 9.B5.4.3]
- Or
- Interest income that is accounted for in accordance with the effective interest method (see Chapter 46) [IFRS 9 Appendix A, IFRS 9.5.4.1, IFRS 9.B5.4.1-B5.4.7]

5.20.2.B Identification of a contract under previous GAAP

When determining whether a contract is completed, a first-time adopter considers the requirements of its previous GAAP and not IFRS 15.

How we see it

In order to determine whether a contract is completed, a first-time adopter needs to determine the boundaries of a contract, including the term of the contract, whether it was combined with other contracts, whether it was modified, etc. That is, a first-time adopter must identify what is the contract in order to assess if it meets the definition of a completed contract as discussed further below.

IFRS 15 provides detailed requirements to assist entities in identifying a contract, including determining the contract duration. Considering the requirements of IFRS 15 could lead to different outcomes from previous GAAP (e.g., an entity might conclude a contract is of a shorter duration than the stated contractual term in certain circumstances under IFRS 15. See Chapter 28 for further discussion).

While a first-time adopter's previous GAAP might not have provided detailed requirements for identifying the contract, its accounting policies and past practice might be informative in identifying the contract, including determining: (a) what the first-time adopter considered the contract to be (e.g., master supply agreement or individual purchase orders); and (b) the contract duration (i.e., the stated contractual term or a shorter period). Consider the examples in Illustration 5-28 below.

Illustration 5-28: Definition of completed contract: contract duration

Scenario 1

On 30 June 20X1, Entity B entered into a contract with a customer to provide services for 24 months. The customer was required to pay a fixed monthly fee of CU150, which remained constant during the contract term of 24 months, regardless of the time needed to provide the services or the actual usage from the customer each day. The customer could cancel the contract at any time without penalty by giving Entity B one month's notice. Entity B had not received any cancellation notice up to 1 January 20X2 and, based on past experience, Entity B did not expect customers to cancel within the first year. For this contract, Entity B had concluded that the contract duration under its previous GAAP was the stated contractual term of 24 months.

Entity B's accounting policy for these types of contracts under its previous GAAP stated that revenue from providing monthly services to customers was recognised over the service period, on a monthly basis. While not explicitly stated in its accounting policy, Entity B had typically treated the stated contractual term as the duration of the contract (unless the customer cancelled or the contract was modified), and considered this to be the period over which the contractual rights and obligations were enforceable.

Assume that Entity B adopts IFRS accounting standards for the first time for the year ended 31 December 20X3. Entity B uses the practical expedient in IFRS 15.C5(a)(ii) not to restate contracts that are completed contracts at the date of transition to IFRS accounting standards (i.e., 1 January 20X2; Entity B presents one comparative period only) (see section 5.20 above). [IFRS 1.D34, IFRS 1.D35, IFRS 15.C5(a)(ii)].

Under IFRS 15, Entity B is likely to conclude that the contract is a month-to-month contract. However, when determining whether the contract is completed, Entity B only considers the requirements of its previous GAAP. Entity B might have noted that its previous accounting policy did not focus on the identification of contract duration and, therefore, perhaps the contract is neither a 24-month contract nor a month-to-month contract. Entity B had accounted for this type of service contract based on monthly invoicing and, arguably, that accounting treatment is similar to the accounting treatment of a month-to-month contract. However, while not explicitly stated, Entity B had generally viewed the stated contractual term as the period over which the rights and obligations are enforceable.

Furthermore, Entity B cannot cancel the contract with the customer and is obliged to render services for the entire contract period of 24 months, unless a termination notice is provided by the customer which would limit Entity B's obligation to provide services for the next 30 days from the notification date. Since no cancellation notice had been submitted by the customer at least one month before 1 January 20X2, approximately 18 months of services still had to be provided as at the date of transition to IFRS accounting standards (i.e., 1 January 20X2). Therefore, Entity B concludes that the contract does not meet the definition of a completed contract and would need to be transitioned to IFRS 15.

Scenario 2

Assume the same facts as Scenario 1, with the exception that the customer submitted an early termination notice on 30 November 20X1.

Similar to Scenario 1, the contract duration under previous GAAP would have been the stated contractual term of 24 months. However, in this scenario, the customer has submitted the termination notice on 30 November 20X1. Therefore, Entity B concludes that the term of the contract ceased on 31 December 20X1.

Entity B cannot cancel the contract with the customer and is obliged to render services for the entire contract period of 24 months, unless a termination notice is provided by the customer which limits Entity B's obligation to provide service to the next 30 days from the notification date. Since Entity B had provided all services prior to 31 December 20X1, Entity B concludes that the contract is a completed contract. Entity B continues to apply its previous accounting policy to any remaining consideration still to be recognised.

Scenario 3

Assume the same facts as Scenario 1, with the exception that the customer was required to pay a non-refundable upfront fee of CU50 at commencement of the contract (in addition to the monthly fixed fee). The customer can cancel the contract at any time without penalty, with a month's notice period. The customer cancelled the contract on 30 November 20X1.

In its financial statements, Entity B's accounting policy for these types of contracts under its previous GAAP stated that revenues from non-refundable upfront fees were deferred over the average customer retention period. The customer retention period was estimated to be two years, and the deferred revenue was recognised as revenue on a straight-line basis over the next 24 months.

Similar to Scenario 2, the contract duration under its previous GAAP would have been the stated contractual term of 24 months. However, the customer had submitted the termination notice on 30 November 20X1 and, therefore, Entity B concludes that the term of the contract ceases on 31 December 20X1.

Entity B's previous accounting policy for the non-refundable upfront fee referred to recognition of deferred income over the average customer retention period, not the contractual term. The definition of a completed contract is not dependent on all revenue being recognised, but rather on all goods and services being transferred to the customer. Furthermore, the period over which revenue is recognised does not affect the contract duration. As such, recognition of this upfront fee is not relevant in determining whether the contract is a completed contract. All previously contracted services had been provided to the customer up to the date of cancellation. Therefore, the contract is a completed contract.

Entity B continues applying its previous accounting policy to any remaining consideration still to be recognised. However, given that the customer has terminated the contract early, Entity B needs to reassess, in line with the requirements of its previous GAAP, the period over which this remaining revenue arising from the non-refundable upfront fee would be recognised.

5.20.2.C Some or all of revenue has not been recognised under previous GAAP

If some or all of revenue has not been recognised under a first-time adopter's previous GAAP, this could possibly prevent the contract from being completed.

How we see it

The definition of a completed contract is not dependent on a first-time adopter having recognised all related revenue. However, the requirements in its previous GAAP with respect to the timing of recognition might provide an indication of whether the goods or services have been transferred.

For example, previous GAAP might, like IAS 18, have required an entity to have transferred to the buyer the significant risks and rewards of ownership of the goods as the most crucial of criteria which needed to be satisfied in order to recognise revenue from the sale of goods. In the following four examples of situations which were listed in IAS 18.16, an entity might have retained the significant risks and rewards of ownership and, consequently, revenue might not have been recognised:

- When the entity retained an obligation for unsatisfactory performance not covered by normal warranty provisions
- When the receipt of the revenue from a particular sale was contingent on the derivation of revenue by the buyer from its sale of the goods
- When the goods were shipped subject to installation and the installation was a significant part of the contract which had not yet been completed by the entity

Or

- When the buyer had the right to rescind the purchase for a reason specified in the sales contract and the entity was uncertain about the probability of return

Understanding the reasons for the accounting treatment under previous GAAP might, therefore, assist a first-time adopter in determining whether the goods or services have been transferred and the completed contract definition has been met. However, judgement might be needed in respect of some goods or services. Assume, for example, that a first-time adopter sells products, but cannot recognise revenue immediately. The delayed recognition of revenue might be because of factors related to the timing of transfer, such as a bill-and-hold arrangement, or because the goods or services have been transferred, but not all of the criteria for recognition have been met.

5.20.2.D Accounting for completed contracts excluded from transition

Depending on the practical expedients a first-time adopter applies, it might exclude contracts that meet the definition of a completed contract from the population of contracts to be transitioned to IFRS 15 (i.e., it would not need to restate those contracts) (see Illustration 5-28 in section 5.20.2.B above).

IFRS 15 clarifies that if a first-time adopter chooses not to apply IFRS 15 to completed contracts, it would continue to account for the completed contracts in accordance with its accounting policies based on its previous GAAP. [IFRS 1.D34, IFRS 1.D35, IFRS 15.BC445E, IFRS 15.BC509].

Therefore, if a first-time adopter applies IFRS 1.D35 (or the practical expedient in IFRS 15.C5(a)(ii)) not to restate contracts that are completed contracts before the earliest period presented (i.e., the date of transition to IFRS accounting standards), the first-time adopter also would not record an asset for incremental costs to obtain contracts under IFRS 15 (see Chapter 28) that meet the definition of a completed contract as at the date of transition to IFRS accounting standards if it did not recognise the costs as assets under its previous GAAP. Furthermore, any assets or liabilities related to completed contracts that are on the balance sheet prior to the date of transition to IFRS accounting standards would continue to be accounted for under its previous accounting policy after the adoption of IFRS accounting standards.

[IFRS 1.D34, IFRS 1.D35, IFRS 15.C5(a)(ii)].

5.21 Foreign currency transactions and advance consideration

IFRIC 22 *Foreign Currency Transactions and Advance Consideration* applies (with certain exceptions) to a foreign currency transaction (or part of it) when an entity recognises a non-monetary asset or non-monetary liability arising from the payment or receipt of advance consideration before the entity recognises the related asset, expense or income (or part of it). [IFRIC 22.4]. IFRIC 22 addresses how to determine 'the date of the transaction' for the purpose of determining the exchange rate to use on initial recognition of the related asset, expense or income (or part of it) on the derecognition of a non-monetary asset or non-monetary liability arising from the payment or receipt of advance consideration in a foreign currency. [IFRIC 22.7].

IFRIC 22 explains that the date of the transaction for this purpose is the date on which an entity initially recognises the non-monetary asset or non-monetary liability arising from the payment or receipt of advance consideration. If there are multiple payments or receipts in advance, a date of transaction is determined for each payment or receipt of advance consideration (see Chapter 16). [IFRIC 22.8, IFRIC 22.9].

A first-time adopter need not apply IFRIC 22 to assets, expense and income in the scope of the Interpretation that were initially recognised before the date of transition to IFRS accounting standards. [IFRS 1.D36].

5.22 Regulatory deferral accounts

IFRS 14 specifies the financial reporting requirements for regulatory deferral account balances that arise when an entity provides goods or services to customers at a price or rate that is subject to rate regulation (see definitions in section 5.22.1 below). [IFRS 14.1].

The standard gives a first-time adopter that is a rate-regulated entity the option to continue with the recognition of rate-regulated assets and liabilities under previous GAAP on transition to IFRS accounting standards, subject to certain limited changes to previous GAAP accounting policies for regulatory deferral account balances (mainly impacting presentation) and certain disclosures (see section 5.22.6 and section 5.22.7 below). [IFRS 14.2, IFRS 14.3].

IFRS 14 provides entities with some exceptions to and exemptions from compliance with other IFRS accounting standards and the conceptual framework on first-time adoption and subsequent reporting periods, until the comprehensive project on rate regulation is completed (see section 5.22.9 below). First-time adopters, whose previous GAAP prohibited the recognition of rate-regulated assets and liabilities, will not be allowed to apply IFRS 14 on transition to IFRS accounting standards. [IFRS 14.5]. We discuss the requirements of IFRS 14 in detail below.

5.22.1 Defined terms in IFRS 14

IFRS 14 defines the following terms in connection with regulatory deferral accounts. [IFRS 14 Appendix A].

Extract from IFRS 14

Appendix A

Defined terms

rate-regulated activities	An entity's activities that are subject to rate regulation .
rate regulation	A framework for establishing the prices that can be charged to customers for goods or services and that framework is subject to oversight and/or approval by a rate regulator .
rate regulator	An authorised body that is empowered by statute or regulation to establish the rate or a range of rates that bind an entity. The rate regulator may be a third-party body or a related party of the entity, including the entity's own governing board, if that body is required by statute or regulation to set rates both in the interest of the customers and to ensure the overall financial viability of the entity.
regulatory deferral account balance	The balance of any expense (or income) account that would not be recognised as an asset or a liability in accordance with other Standards, but that qualifies for deferral because it is included, or is expected to be included, by the rate regulator in establishing the rate(s) that can be charged to customers.

5.22.2 Scope

Extract from IFRS 14

- 5 An entity is permitted to apply the requirements of this Standard in its *first IFRS financial statements* if and only if it:
- (a) conducts *rate-regulated activities*; and
 - (b) recognised amounts that qualify as regulatory deferral account balances in its financial statements in accordance with its previous GAAP.
- 6 An entity shall apply the requirements of this Standard in its financial statements for subsequent periods if and only if, in its first IFRS financial statements, it recognised regulatory deferral account balances by electing to apply the requirements of this Standard.
- ...
- 8 An entity that is within the scope of, and that elects to apply, this Standard shall apply all of its requirements to all regulatory deferral account balances that arise from all of the entity's rate-regulated activities.

An entity is permitted to apply IFRS 14 in its first IFRS financial statements, if and only if the entity conducts rate-regulated activities and recognised amounts that qualify as regulatory deferral account balances in its financial statements under its previous GAAP. [IFRS 14.5]. IFRS 14 applies only to the rate-regulated activities that are subject to statutory or regulatory restrictions through the actions of a rate regulator. [IFRS 14.B1]. IFRS 14 “does not allow entities to recognise regulatory deferral account balances if those entities have a dominant position in a market and decide to self-regulate to avoid the potential government intervention that might occur if it were perceived to be abusing its dominant position. Instead, it requires there to be a formal rate regulator involved to ensure that the rate-regulatory mechanism in place is supported by statute or regulation and that the regulatory mechanism binds the entity.” [IFRS 14.BC22]. Therefore, an entity cannot apply IFRS 14 to activities that are self-regulated, i.e., activities that are not subject to a pricing framework that is overseen and/or approved by a rate regulator. This does not prevent the entity from being eligible to apply IFRS 14 when: [IFRS 14.B2, IFRS 14.BC23]

- (a) The entity's own governing body or a related party establishes rates both in the interest of the customers and to ensure the overall financial viability of the entity within a specified pricing framework
And
- (b) The framework is subject to oversight and/or approval by an authorised body that is empowered by statute or regulation

An entity that is within the scope of, and that elects to apply, IFRS 14 must apply all of its requirements to all regulatory deferral account balances that arise from all of the entity's rate-regulated activities. [IFRS 14.8].

An entity that elected to apply IFRS 14 in its first IFRS financial statements and recognised regulatory deferral account balances must apply IFRS 14 also in its financial statements for subsequent periods. An entity must not apply IFRS 14 in subsequent periods if it did not apply the standard when first adopting IFRS accounting standards. [IFRS 14.6].

5.22.3 Continuation of previous GAAP accounting policies (temporary exemption from IAS 8.11)

In some cases, other IFRS accounting standards explicitly prohibit an entity from recognising, in the statement of financial position, regulatory deferral account balances that might be recognised, either separately or included within other line items such as property, plant and equipment, in accordance with previous GAAP accounting policies. [IFRS 14.B4].

However, an entity that elects to apply IFRS 14 in its first IFRS financial statements applies the exemption from IAS 8.11 (see Chapter 3) to its accounting policies for the recognition, measurement, impairment and derecognition of regulatory deferral account balances. [IFRS 14.10, IFRS 14.B4, IAS 8.11]. The IASB decided that an entity must continue to follow those previous GAAP accounting policies, provided that they satisfy the requirements of IAS 8.10 and IAS 8.12 (see Chapter 3). [IFRS 14.9, IFRS 14.11, IFRS 14.B4, IAS 8.10, IAS 8.12].

IFRS 14 introduces certain constraints over changes in accounting policies (see section 5.22.5 below) and presentation requirements for regulatory deferral account balances (see section 5.22.6 below). [IFRS 14.11].

This approach should help to ensure that those policies are generally accepted in the local jurisdiction, either because the local GAAP allows the use of another standard-setter's pronouncement or because of accepted industry practice. [IFRS 14.BC32].

Extract from IFRS 14

- 11** On initial application of this Standard, an entity shall continue to apply its previous GAAP accounting policies for the recognition, measurement, impairment and derecognition of regulatory deferral account balances, except for any changes permitted by paragraphs 13-15. However, the presentation of such amounts shall comply with the presentation requirements of this Standard, which may require changes to the entity's previous GAAP presentation policies (see paragraphs 18-19).

Such previous GAAP accounting policies might include, for example, the following practices: [IFRS 14.B4]

- Recognising a regulatory deferral account debit balance when the entity has the right, as a result of the actual or expected actions of the rate regulator, to increase rates in future periods in order to recover its allowable costs (i.e., the costs for which the regulated rate(s) is intended to provide recovery)
 - Recognising, as a regulatory deferral account debit or credit balance, an amount that is equivalent to any loss or gain on the disposal or retirement of both items of property, plant and equipment and of intangible assets, which is expected to be recovered or reversed through future rates
 - Recognising a regulatory deferral account credit balance when the entity is required, as a result of the actual or expected actions of the rate regulator, to decrease rates in future periods in order to reverse over-recoveries of allowable costs (i.e., amounts in excess of the recoverable amount specified by the rate regulator)
- And
- Measuring regulatory deferral account balances on an undiscounted basis or on a discounted basis that uses an interest or discount rate specified by the rate regulator

The accounting policy for the regulatory deferral account balances, as explained above, must, of course, be consistent from period to period unless there is an appropriate change in accounting policies (see section 5.22.5 below). [IFRS 14.12, IFRS 14.13, IFRS 14.14, IFRS 14.15].

5.22.4 Recognition of regulatory deferral account balances

Extract from IFRS 14

regulatory deferral account balance	The balance of any expense (or income) account that would not be recognised as an asset or a liability in accordance with other Standards, but that qualifies for deferral because it is included, or is expected to be included, by the rate regulator in establishing the rate(s) that can be charged to customers.
--	--

The regulatory deferral account balances to be recognised are restricted to the incremental amounts that qualify for deferral (because they are included, or expected to be included, by the rate regulator in establishing the rate(s) that can be charged to customers) from what are permitted or required to be recognised as assets and liabilities under other IFRS accounting standards. [IFRS 14.7, IFRS 14.B3, IFRS 14 Appendix A, IFRS 14.BC27].

Therefore, the measurement of these balances effectively entails a two-step process:

- (a) An entity would first determine the carrying amounts of its assets and liabilities under IFRS accounting standards, excluding IFRS 14.
- (b) These amounts would then be compared with the assets and liabilities determined under the entity's previous GAAP (i.e., its rate-regulated balances).

The differences would represent the regulatory deferral account debit or credit balances to be recognised by the entity under IFRS 14.

Some items of expense (income) might be outside the regulated rate(s) because, for example, the amounts are not expected to be accepted by the rate regulator or because they are not within the scope of the rate regulation. Consequently, such an item is recognised as income when earned or expense as incurred, unless another IFRS accounting standard permits or requires it to be included in the carrying amount of an asset or liability. [IFRS 14.B3].

The following are examples of the types of costs that rate regulators might allow in rate-setting decisions and that an entity might, therefore, recognise in regulatory deferral account balances: [IFRS 14.B5]

- Volume or purchase price variances
- Costs of approved 'green energy' initiatives (in excess of amounts that are capitalised as part of the cost of property, plant and equipment in accordance with IAS 16)
- Non-directly-attributable overhead costs that are treated as capital costs for rate regulation purposes (but are not permitted, in accordance with IAS 16, to be included in the cost of an item of property, plant and equipment)
- Project cancellation costs
- Storm damage costs
- And
- Deemed interest (including amounts allowed for funds that are used during construction that provide the entity with a return on the owner's equity capital as well as borrowings)

5.22.5 Changes in accounting policies

Extract from IFRS 14

13 An entity shall not change its accounting policies in order to start to recognise regulatory deferral account balances. An entity may only change its accounting policies for the recognition, measurement, impairment and derecognition of regulatory deferral account balances if the change makes the financial statements more relevant to the economic decision-making needs of users and no less reliable¹, or more reliable and no less relevant to those needs. An entity shall judge relevance and reliability using the criteria in paragraph 10 of IAS 8.

¹ In 2010, the IASB replaced the IASC's *Framework for the Preparation and Presentation of Financial Statements* adopted by the IASB in 2001 (*Framework*) with the *Conceptual Framework for Financial Reporting* (*Conceptual Framework*). The term "faithful representation", which was used in the *Conceptual Framework* issued in 2010 and is also used in the revised version of the *Conceptual Framework* issued in 2018, encompasses the main characteristics that the *Framework* called "reliability". The requirement in paragraph 13 of this Standard is based on the requirements of IAS 8, which retains the term "reliable".

IFRS 14 does not exempt entities from applying IAS 8.10 and IAS 8.12 when developing their accounting policies. [IFRS 14.9, IAS 8.10, IAS 8.12]. Moreover, IFRS 14 does not exempt entities from applying IAS 8.10 or IAS 8.14-15 (see Chapter 3) to changes in accounting policy. Consequently, an entity needs to demonstrate that the change brings its financial statements closer to meeting the IAS 8.10 criteria but need not achieve full compliance with those criteria for the recognition, measurement, impairment and derecognition of regulatory deferral account balances. [IFRS 14.13, IFRS 14.14, IAS 8.10, IAS 8.14, IAS 8.15]. These requirements apply both to changes in accounting policies made on initial application of IFRS 14 and to changes made in subsequent reporting periods. [IFRS 14.15].

The application guidance in IFRS 14 clarifies that regulatory deferral account balances usually represent timing differences between the recognition of items of income or expenses for regulatory purposes and the recognition of those items for financial reporting purposes. When an entity changes an accounting policy on the first-time adoption of IFRS accounting standards or on the initial application of a new or revised IFRS accounting standard, new or revised timing differences may arise that create new or revised regulatory deferral account balances. The prohibition in IFRS 14.13 that prevents an entity from changing its accounting policy in order to start to recognise regulatory deferral account balances does not prohibit the recognition of the new or revised regulatory deferral account balances that are created because of other changes in accounting policies required by IFRS accounting standards. This is because the recognition of regulatory deferral account balances for such timing differences would be consistent with the existing recognition policy and would not represent the introduction of a new accounting policy. Similarly, IFRS 14.13 does not prohibit the recognition of regulatory deferral account balances arising from timing differences that did not exist immediately prior to the date of transition to IFRS accounting standards but are consistent with the entity's accounting policies established in accordance with IFRS 14.11 (see section 5.22.3 above), for example, storm damage costs. [IFRS 14.11, IFRS 14.13, IFRS 14.B6].

5.22.6 Presentation

IFRS 14 requires an entity to present (1) the total of all regulatory deferral account debit balances and (2) the total of all regulatory deferral account credit balances as separate line items in the statement of financial position. The totals of regulatory deferral account balances must not be classified as current or non-current. The separate line items for (1) and (2) above presented in the statement of financial position must instead be distinguished from other items that are presented under other IFRS accounting standards by the use of sub-totals, which are drawn before the regulatory deferral account balances are presented.

[IFRS 14.20, IFRS 14.21, IFRS 14.IE1].

Similarly, IFRS 14 requires an entity to present the net movement in all regulatory deferral account balances as separate line items in the statement(s) of profit or loss and other comprehensive income. The net movement in all regulatory deferral account balances for the reporting period that relate to items recognised in other comprehensive income must be presented in the other comprehensive income section of the statement of profit or loss and other comprehensive income, giving separate lines for the net movement related to items that, in accordance with other IFRS accounting standards, (a) will not or (b) will be reclassified subsequently to profit or loss when specific conditions are met. [IFRS 14.22, IFRS 14.IE1]. The remaining net movement in all regulatory deferral balances (excluding movements not reflected in profit or loss, such as amounts acquired) is presented as a separate line item in the profit or loss section of the statement of profit or loss and other comprehensive income (or in the separate statement of profit or loss). This is distinguished from the income and expenses that are presented in accordance with other IFRS accounting standards by the use of a sub-total drawn before that line item. [IFRS 14.23, IFRS 14.IE1].

See Illustration 5-29 in section 5.22.6.D below for an example of the presentation of regulatory deferral balances.

5.22.6.A Presentation of deferred tax balances

In relation to a deferred tax asset or deferred tax liability that is recognised as a result of recognising regulatory deferral account balances (see section 5.22.8.B below), the entity must not include that deferred tax amount within the total deferred tax asset (liability) balances. Instead, an entity is required to present the deferred tax asset or liability either: [IFRS 14.24, IFRS 14.B11]

- (a) With the line items that are presented for the regulatory deferral account debit balances and credit balances
Or
- (b) As a separate line item alongside the related regulatory deferral account debit balances and credit balances

Similarly, when an entity recognises the movement in a deferred tax asset (liability) that arises as a result of recognising regulatory deferral account balances, the entity must not include the movement in that deferred tax amount within the tax expense (income) line item that is presented in the statement(s) of profit or loss and other comprehensive income under IAS 12. Instead, the entity must present the movement either: [IFRS 14.24, IFRS 14.B12]

- (a) With the line items that are presented in the statement(s) of profit or loss and other comprehensive income for the movements in regulatory deferral account balances
Or
- (b) As a separate line item alongside the related line items that are presented in the statement(s) of profit or loss and other comprehensive income for the movements in regulatory deferral account balances

5.22.6.B Presentation of earnings per share amounts

IFRS 14 requires additional earnings per share amounts to be presented. When an entity presents earnings per share in accordance with IAS 33 *Earnings per Share* (see Chapter 33), the entity must present additional basic and diluted earnings per share calculated using the earnings amounts required by IAS 33 but excluding the movements in regulatory deferral account balances. This additional measure is required for each earnings per share amount presented. Furthermore, this earnings per share amount required by IFRS 14.26 has to be presented with equal prominence to the earnings per share required by IAS 33 for all periods presented. [IFRS 14.26, IFRS 14.B14].

5.22.6.C Presentation of discontinued operations and disposal groups

When an entity applying IFRS 14 presents a discontinued operation, the movement in regulatory deferral account balances that arose from the rate-regulated activities of the discontinued operation must be excluded from the line items for discontinued operations required by IFRS 5.33 (see Chapter 5). [IFRS 5.33]. Instead, the movement must be presented either: [IFRS 14.25, IFRS 14.B20, IFRS 14.IE Example 2]

(a) Within the line item that is presented for movements in the regulatory deferral account balances related to profit or loss

Or

(b) As a separate line item alongside the related line item that is presented for movements in the regulatory deferral account balances related to profit or loss

Similarly, notwithstanding the requirements of IFRS 5.38 (see Chapter 5), when an entity presents a disposal group in the statement of financial position, the total of the regulatory deferral account debit balances and credit balances that are part of the disposal group are presented either: [IFRS 14.25, IFRS 14.B21, IFRS 14.IE Example 2]

(a) Within the line items that are presented for the regulatory deferral account debit balances and credit balances

Or

(b) As separate line items alongside the other regulatory deferral account debit balances and credit balances

If an entity chooses to include the regulatory deferral account balances and movements in those balances that are related to the disposal group or discontinued operation within the related regulated deferral account line items, it might be necessary to disclose them separately as part of the analysis of the regulatory deferral account line items described by IFRS 14.33 (see section 5.22.7.B below). [IFRS 14.33, IFRS 14.B22, IFRS 14.IE Example 2].

5.22.6.D Illustrative presentation of financial statements

Illustration 5-29 below, which sets out Illustrative Example 1 which accompanied IFRS 14, [IFRS 14.IE Example 1], illustrates how the requirements in sections 5.22.6 to 5.22.6.C above might be met, but is not intended to illustrate all aspects of IFRS 14 or IFRS accounting standards more generally. [IFRS 14.IE1]. Note that in this case, the deferred tax amounts are included within the separate line items for regulatory deferral account balances (see section 5.22.6.A above).

Illustration 5-29: Illustrative presentation of financial statements for regulatory deferral account balances

XYZ GROUP - STATEMENT OF FINANCIAL POSITION AS AT 31 DECEMBER 20X7		
	20X7	20X6
	CU	CU
ASSETS		
Non-current assets		
Property, plant and equipment	350,700	360,020
Goodwill	80,800	91,200
Other intangible assets	227,470	227,470
Investments in associates	100,150	110,770
Investments in equity instruments	129,790	146,460
	<u>888,910</u>	<u>935,920</u>
Current assets		
Inventories	135,230	132,500
Trade receivables	91,600	110,800
Other current assets	25,650	12,540
Cash and cash equivalents	212,160	220,570
	<u>464,640</u>	<u>476,410</u>
Total assets	1,353,550	1,412,330
Regulatory deferral account debit balances and related deferred tax asset	112,950	111,870
Total assets and regulatory deferral account debit balances	1,466,500	1,524,200

Note: The aggregated total that is presented for regulatory deferral account debit balances and the related deferred tax asset includes the sum of the regulatory deferral account debit balances of CU100,240 (20X6 - CU102,330) plus the deferred tax asset that is related to the recognition of regulatory deferral account balances of CU12,710 (20X6 - CU9,540). This aggregated presentation is permitted by IFRS 14.24 and IFRS 14.B11. [IFRS 14.24, IFRS 14.B11].

XYZ GROUP - STATEMENT OF FINANCIAL POSITION AS AT 31 DECEMBER 20X7
(Continued)

	20X7 CU	20X6 CU
EQUITY AND LIABILITIES		
Equity attributable to owners of the parent		
Share capital	650,000	600,000
Retained earnings	243,500	164,500
Other components of equity	10,200	21,200
	<u>903,700</u>	<u>785,700</u>
Non-controlling interests	70,050	45,800
Total equity	<u>973,750</u>	<u>831,500</u>
Non-current liabilities		
Long-term borrowings	120,000	160,000
Deferred tax	28,800	26,040
Long-term provisions	28,850	52,240
	<u>177,650</u>	<u>238,280</u>
Current liabilities		
Trade and other payables	87,140	111,150
Short-term borrowings	80,000	200,000
Current portion of long-term borrowings	10,000	20,000
Current tax payable	35,000	42,000
Short-term provisions	5,000	4,800
	<u>217,140</u>	<u>377,950</u>
Total liabilities	<u>394,790</u>	<u>616,230</u>
Total equity and liabilities	<u>1,368,540</u>	<u>1,447,730</u>
Regulatory deferral account credit balances	97,960	76,470
Total equity, liabilities and regulatory deferral account credit balances	<u>1,466,500</u>	<u>1,524,200</u>

Note: Regulatory deferral account balances are not described as assets or liabilities for the purposes of IFRS 14. The sub-totals described as 'Total assets' and 'Total liabilities' are comparable to those that would be presented if the regulatory deferral account balances were not recognised. The difference between these two sub-totals represents the net balance of all regulatory deferral account balances recognised and any related deferred tax asset (liability) that arises as a result of recognising regulatory deferral account balances, which would otherwise be recognised within retained earnings or other components of equity.

XYZ Group - Statement of profit or loss and other comprehensive income for the year ended 31 December 20X7⁷

(illustrating the presentation of profit or loss and other comprehensive income in one statement and the classification of expenses within profit or loss by function)

	20X7	20X6
	CU	CU
Revenue	390,000	358,784
Cost of sales	(237,062)	(230,000)
Gross profit	152,938	128,784
Other income	44,247	16,220
Distribution costs	(9,000)	(13,700)
Administrative expenses	(20,000)	(31,500)
Other expenses	(2,100)	(1,200)
Finance costs	(8,000)	(7,500)
Share of profit of associates	35,100	15,100
Profit before tax	193,185	106,204
Income tax expense	(43,587)	(44,320)
Profit for the year before net movements in regulatory deferral account balances	149,598	61,884
Net movement in regulatory deferral account balances related to profit or loss and the related deferred tax movement	(27,550)	3,193
Profit for the year and net movements in regulatory deferral account balances	122,048	65,077
Other comprehensive income: Items that will not be reclassified to profit or loss		
Remeasurements of defined benefit pension plans	(7,938)	(3,784)
Net movement in regulatory deferral account balances related to other comprehensive income	7,140	4,207
Other comprehensive income for the year, net of income tax	(798)	423
TOTAL COMPREHENSIVE INCOME FOR THE YEAR	121,250	65,500
Profit and net movements in regulatory deferral account balances attributable to		
Owners of the parent	97,798	51,977
Non-controlling interests	24,250	13,100
	122,048	65,077
Total comprehensive income attributable to:		
Owners of the parent	97,000	52,400
Non-controlling interests	24,250	13,100
	121,250	65,500
Earnings per share (in CU):		
Basic and diluted	0.61	0.35
Basic and diluted including net movement in regulatory deferral account balances	0.46	0.30

⁷ The Illustration of statement of profit or loss and other comprehensive income is based on requirements of IAS 1.

Notes:

- (1) To simplify the example, it is assumed that all regulatory deferral account balances relate to activities that are carried out in wholly-owned subsidiaries and thus no amounts are attributable to non-controlling interests.
- (2) The aggregated total that is presented for the net movement in regulatory deferral account balances related to profit or loss and the related deferred tax movement includes the net movement in regulatory deferral account balances of CU30,720 (20X6 - CU9,127) and the movement in the related deferred tax asset that is related to the recognition of regulatory deferral account balances, which is CU3,170 (20X6 - CU12,320). This aggregated presentation is permitted by IFRS 14.24 and IFRS 14.B12. [IFRS 14.24, IFRS 14.B12].

The Illustrative Examples to IFRS 14 also illustrate a situation where the entity has a rate-regulated subsidiary presented as a disposal group and discontinued operation. In that example (which is not included in this chapter), the entity has instead chosen to present the regulatory deferral account balances included in the disposal group and the related deferred tax asset balance (and movement therein) as separate line items (see sections 5.22.6.A and 5.22.6.C above). [IFRS 14.IE Example 2].

5.22.7 Disclosures

IFRS 14 requires an entity to disclose information that enables users to assess: [IFRS 14.27]

- (a) The nature of, and the risks associated with, the rate regulation that establishes the price(s) that the entity can charge customers for the goods or services it provides
And
- (b) The effects of that rate regulation on the entity's financial position, financial performance and cash flows

Any of the disclosure requirements set out in sections 5.22.7.A and 5.22.7.B below can be omitted if not considered relevant to meet the disclosure objective above. Where those disclosures are insufficient to meet the disclosure objective, an entity provides additional information necessary to meet the disclosure objective. [IFRS 14.28].

To meet the disclosure objective, an entity must consider all of the following: [IFRS 14.29]

- (a) The level of detail that is necessary to satisfy the disclosure requirements
(b) How much emphasis to place on each of the various requirements
(c) How much aggregation or disaggregation to undertake
And
- (d) Whether users of financial statements need additional information to evaluate the quantitative information disclosed

5.22.7.A Explanation of activities subject to rate regulation

In order to help users of the financial statements assess the nature of, and the risks associated with, an entity's rate-regulated activities, an entity is required to disclose the following for each type of rate-regulated activity: [IFRS 14.30]

- (a) A brief description of the nature and extent of the rate-regulated activity and the nature of the regulatory rate-setting process
(b) The identity of the rate regulator(s). If the rate regulator is a related party (as defined in IAS 24 *Related Party Disclosures* (see Chapter 35)), the entity must disclose that fact, together with an explanation of how it is related
And
- (c) How the future recovery of each class (i.e., each type of cost or income) of regulatory deferral account debit balance or reversal of each class of regulatory deferral account credit balance is affected by risks and uncertainty, for example:
- (i) Demand risk (e.g., changes in consumer attitudes, the availability of alternative sources of supply or the level of competition)
 - (ii) Regulatory risk (e.g., the submission or approval of a rate-setting application or the entity's assessment of the expected future regulatory actions)
And
 - (iii) Other risks (e.g., currency or other market risks)

These disclosures must be given in the notes to the financial statements or incorporated by cross-reference from the financial statements to some other statement (such as a management commentary or a risk report) that is available to users of the financial statements on the same terms as the financial statements and at the same time. [IFRS 14.31].

5.22.7.B Explanation of recognised amounts

IFRS 14 also requires entities to explain the basis on which regulatory deferral account balances are recognised and derecognised, and how they are measured initially and subsequently, including how regulatory deferral account balances are assessed for recoverability and how impairment losses are allocated. [IFRS 14.32].

Furthermore, for each type of rate-regulated activity, an entity is required to disclose the following information for each class of regulatory deferral account balance: [IFRS 14.33]

- (a) A reconciliation of the carrying amount at the beginning and the end of the period, in a table unless another format is more appropriate. The entity must apply judgement in deciding the level of detail necessary (see section 5.22.7 above, [IFRS 14.28, IFRS 14.29]) but the following components would usually be relevant:
 - (i) The amounts that have been recognised in the current period in the statement of financial position as regulatory deferral account balances
 - (ii) The amounts that have been recognised in the statement(s) of profit or loss and other comprehensive income relating to balances that have been recovered (sometimes described as amortised) or reversed in the current period
 - (iii) Other amounts, separately identified, that affected the regulatory deferral account balances, such as impairments, items acquired or assumed in a business combination, items disposed of, or the effects of changes in foreign exchange rates or discount rates
- (b) The rate of return or discount rate (including a zero rate or a range of rates, when applicable) used to reflect the time value of money that is applicable to each class of regulatory deferral account balance
And
- (c) The remaining periods over which the entity expects to recover (or amortise) the carrying amount of each class of regulatory deferral account debit balance or to reverse each class of regulatory deferral account credit balance

When rate regulation affects the amount and timing of an entity's income tax expense (income), the entity must disclose the impact of the rate regulation on the amounts of current and deferred tax recognised. In addition, the entity must separately disclose any regulatory deferral account balance that relates to taxation and the related movement in that balance. [IFRS 14.34].

In addition, when an entity provides disclosures in accordance with IFRS 12 *Disclosure of Interests in Other Entities* for an interest in a subsidiary, associate or joint venture (see Chapter 14) that has rate-regulated activities and for which regulatory deferral account balances are recognised in accordance with IFRS 14, the following disclosures are required: [IFRS 14.35]

- For each of the entity's subsidiaries with non-controlling interests that are material to the reporting entity, the net movement in regulatory deferral account balances that is included within the profit or loss allocated to non-controlling interests [IFRS 12.12(e), IFRS 14.B25]
- The total regulatory deferral account debit balance, the total regulatory credit balance and the net movements in those balances (split between amounts recognised in profit or loss and amounts recognised in other comprehensive income) for each entity for which IFRS 12 disclosures are required [IFRS 12.12, IFRS 12.21, IFRS 12.B10, IFRS 12.B12, IFRS 12.B13, IFRS 12.B16, IFRS 14.B26, IFRS 14.B27]
And
- In addition to the IFRS 12 disclosures concerning a gain or loss on losing control of a subsidiary during the reporting period, the portion of that gain or loss that is attributable to derecognising regulatory deferral account balances in the former subsidiary at the date when control is lost [IFRS 12.19, IFRS 14.B28]

When an entity concludes that a regulatory deferral account balance is no longer fully recoverable or reversible, it must disclose that fact, the reason why it is not recoverable or reversible and the amount by which the regulatory deferral account balance has been reduced. [IFRS 14.36].

The Illustrative Examples to IFRS 14 include an example of the reconciliation of movements in regulatory deferral account balances by class, as required at (a) above (not shown in this chapter), for the regulatory deferral account balances illustrated in Illustration 5-29 in section 5.22.6.D above. [IFRS 14.IE2].

5.22.8 Interaction with other IFRS accounting standards

Any specific exceptions, exemptions or additional requirements related to the interaction of IFRS 14 with other IFRS accounting standards are contained within IFRS 14. Otherwise, other IFRS accounting standards must apply to regulatory deferral account balances in the same way as they apply to assets, liabilities, income and expenses that are recognised in accordance with other IFRS accounting standards. [IFRS 14.16]. In some situations, another IFRS accounting standard might need to be applied to a regulatory deferral account balance that has been measured in accordance with an entity's accounting policies established under IFRS 14.11-12 (see section 5.22.3 above), [IFRS 14.11, IFRS 14.12], in order to reflect that balance appropriately in the financial statements. For example, the entity might have rate-regulated activities in a foreign country for which the transactions and regulatory deferral account balances are denominated in a currency that is not the functional currency of the reporting entity. The regulatory deferral account balances and the movements in those balances are translated by applying IAS 21 (see Chapter 16). [IFRS 14.17, IAS 21.21, IAS 21.23].

The following sections outline how some other IFRS accounting standards interact with the requirements of IFRS 14. In particular, the following sections clarify specific exceptions to, and exemptions from, other IFRS accounting standards and additional presentation and disclosure requirements that are expected to be applicable. [IFRS 14.16, IFRS 14.B7].

5.22.8.A Application of IAS 10

An entity might need to use estimates and assumptions in the recognition and measurement of its regulatory deferral account balances. For events that occur between the end of the reporting period and the date when the financial statements are authorised for issue, an entity has to apply IAS 10 to identify whether those estimates and assumptions need to be adjusted to reflect those events. [IFRS 14.B8, IAS 10.8, IAS 10.10].

5.22.8.B Application of IAS 12

Entities are required to apply the requirements of IAS 12 to rate-regulated activities, to identify the amount of income tax to be recognised. [IFRS 14.B9]. In some rate-regulatory schemes, rate regulators permit or require an entity to increase its future rates in order to recover some or all of the entity's income tax expense. In such circumstances, this might result in the entity recognising a regulatory deferral account balance in the statement of financial position related to income tax, in accordance with its accounting policies established in accordance with IFRS 14.11-12 (see section 5.22.3 above). [IFRS 14.11, IFRS 14.12]. The recognition of this regulatory deferral account balance that relates to income tax might itself create an additional temporary difference for which a further deferred tax amount would be recognised. [IFRS 14.B10].

5.22.8.C Application of IAS 36

As a rate-regulated entity is allowed to continue applying previous GAAP accounting policies (see section 5.22.3 above), the requirements under IAS 36 do not apply to the separate regulatory deferral account balances recognised. [IFRS 14.11, IFRS 14.12, IFRS 14.B15]. However, IAS 36 could require an entity to perform an impairment test on a CGU that includes regulatory deferral account balances. An impairment test would be required if: [IFRS 14.B16]

- The CGU contains goodwill
 - Or
 - One or more of the impairment indicators described in IAS 36 have been identified relating to the CGU
- In such situations, the requirements under IAS 36.74-79, for identifying the recoverable amount and the carrying amount of a CGU (see Chapter 21) must be applied to decide whether any of the regulatory deferral account balances recognised are included in the carrying amount of the CGU for the purpose of the impairment test. [IAS 36.75]. The remaining requirements of IAS 36 must then be applied to any impairment loss that is recognised as a result of this test (see Chapter 21). [IFRS 14.B16].

5.22.8.D Application of IFRS 3

If an entity acquires a business, IFRS 14.B18 provides an exception to the core principle of IFRS 3 (i.e., to recognise the assets acquired and liabilities assumed at their acquisition-date fair values) for the recognition and measurement of an acquiree's regulatory deferral account balances at the date of acquisition. In other words, the acquiree's regulatory deferral account balances are recognised in the consolidated financial statements of the acquirer in accordance with the acquirer's policies established in accordance with IFRS 14.11-12 for the recognition and measurement of regulatory deferral account balances, irrespective of whether the acquiree recognises those balances in its own financial statements. [IFRS 14.11, IFRS 14.12, IFRS 14.B17, IFRS 14.B18].

5.22.8.E Application of IFRS 5

Since a rate-regulated entity is allowed to continue applying previous GAAP accounting policies (see section 5.22.3 above), [IFRS 14.11, IFRS 14.12], the measurement requirements of IFRS 5 do not apply to the regulatory deferral account balances recognised. [IFRS 14.B19]. The presentation of discontinued operations and disposal groups for an entity applying IFRS 14 is discussed in section 5.22.6.C above.

5.22.8.F Application of IFRS 10 and IAS 28

If a parent entity recognises regulatory deferral account balances in its consolidated financial statements under IFRS 14, the same accounting policies must be applied to the regulatory deferral account balances arising in all of its subsidiaries. This requirement applies irrespective of whether the subsidiaries recognise those balances in their own financial statements. [IFRS 14.8, IFRS 14.B23, IFRS 10.19].

Similarly, accounting policies for the recognition, measurement, impairment and derecognition of regulatory deferral account balances of an associate or joint venture will have to conform to those of the investing entity in applying the equity method. [IFRS 14.8, IFRS 14.B24, IAS 28.35, IAS 28.36].

5.22.9 Future developments

In January 2021, the IASB issued an Exposure Draft (ED) *Regulatory Assets and Regulatory Liabilities*. The ED sets out proposals for the recognition, measurement, presentation and disclosure of regulatory assets, regulatory liabilities, regulatory income and regulatory expense. If adopted, these proposals would replace IFRS 14.

From 2022 to 2025, the IASB redeliberated the proposals in the ED.⁸ At the time of writing, it is expected that the new IFRS accounting standard will be issued in the first half of 2026.

⁸ IFRS Foundation work plan: [Rate-regulated Activities](#). Available on the IFRS Foundation's website (accessed on 12 August 2025).

6 Presentation and disclosure

An entity's first IFRS financial statements include at least three statements of financial position, two statements of profit or loss and other comprehensive income, two separate statements of profit or loss (if presented), two statements of cash flows and two statements of changes in equity and related notes, including comparative information for all statements presented. [IFRS 1.21].

A first-time adopter is required to present notes supporting its opening IFRS statement of financial position. This was clarified as a part of the *Annual Improvements to IFRSs 2009-2011 Cycle* issued in May 2012. The Board "noted that a first-time adopter should not be exempted from presenting three statements of financial position and related notes because it might not have presented this information previously on a basis consistent with IFRSs". [IFRS 1.BC89B].

IFRS 1 does not exempt a first-time adopter from any of the presentation and disclosure requirements in other IFRS accounting standards, [IFRS 1.20], with the exception of certain presentation requirements and disclosures regarding recognised regulatory deferral account balances under IFRS 14 (see section 5.22 above).

IFRS 18 *Presentation and Disclosure in Financial Statements*, which was issued in April 2024, will replace IAS 1. An entity is required to apply the Standard for annual reporting periods beginning on or after 1 January 2027 and earlier application is permitted. An entity that is a first-time adopter is able to apply IAS 1 rather than IFRS 18 in its first IFRS financial statements until the effective date of IFRS 18. It is important to note that the presentation and disclosure requirements are quite different in both standards. (See further discussion in Chapter 4).

The disclosure requirements for subsidiaries without public accountability applying IFRS 19 are addressed in section 6.8 below.

6.1 Comparative information

IAS 1 requires, except where an IFRS accounting standard or interpretation permits or requires otherwise, comparative information in respect of the previous period for all amounts reported in the current period's financial statements and comparative information for narrative and descriptive information when it is relevant to an understanding of the current period's financial statements. [IAS 1.38, IFRS 18.31].

6.2 Non-IFRS comparative information and historical summaries

Normally, IFRS accounting standards require comparative information that is prepared on the same basis as information relating to the current reporting period. However, if an entity presents historical summaries of selected data for periods before the first period for which it presents full comparative information under IFRS accounting standards, e.g., information prepared under its previous GAAP, IFRS 1 does not require such summaries to comply with the recognition and measurement requirements of IFRS accounting standards. Furthermore, some entities present comparative information under previous GAAP in addition to the comparative information required by IAS 1 (IFRS 18). [IFRS 1.22].

If an entity presents, in the IFRS financial statements, historical summaries or comparative information under its previous GAAP, it must: [IFRS 1.22]

- (a) Label the previous GAAP information prominently as not being prepared in accordance with IFRS accounting standards
And
- (b) Disclose the nature of the main adjustments that would make it comply with IFRS accounting standards. Those adjustments need not be quantified

How we see it

As an entity is only allowed to apply IFRS 1 in its first IFRS financial statements, a literal reading of IFRS 1 would seem to suggest that the above guidance is not available to an entity that prepares its second IFRS financial statements. In practice, this need not cause a significant problem because this type of information is generally presented outside the financial statements, where it is not covered by the requirements of IFRS accounting standards.

Although IFRS 1 does not specifically require disclosure of the information in (a) and (b) above when the historical summaries or comparative information are presented outside the financial statements, these explanations would clearly be of benefit to users.

6.3 Explanation of transition to IFRS accounting standards

A first-time adopter is required to explain how the transition from its previous GAAP to IFRS accounting standards affected its reported financial position, financial performance and cash flows. [IFRS 1.23]. The IASB decided “that such disclosures are essential, in the first (annual) IFRS financial statements as well as in interim financial reports (if any), because they help users understand the effect and implications of the transition to IFRSs and how they need to change their analytical models to make the best use of information presented using IFRSs.” [IFRS 1.BC91].

As discussed in sections 3.5 and 5 above, IFRS 1 offers a wide range of exemptions that a first-time adopter could elect to apply. However, perhaps surprisingly, the standard does not explicitly require an entity to disclose which exemptions it has applied and how it applied them. In the case of, for example, the exemption relating to cumulative translation differences, it will be rather obvious whether or not an entity has chosen to apply the exemption. In other cases, users will have to rely on a first-time adopter disclosing those transition accounting policies that are relevant to an understanding of the financial statements. IFRS 1 does not provide exemptions from the presentation and disclosure requirements in other IFRS accounting standards. [IFRS 1.20]. First-time adopters need to consider which disclosure information could help primary users understand the first financial statements, for example, applying IAS 1.31 (IFRS 18.20), which requires an entity to disclose additional information when it considers compliance with the specific requirements in IFRS accounting standards is insufficient. [IAS 1.31, IFRS 18.20]. In practice, most first-time adopters voluntarily disclose which IFRS 1 exemptions they elected to apply and which exceptions apply to them, as is illustrated by Practical example 6-1 below.

Practical example 6-1: Toyota Motor Corporation (2021)

Japan

FORM 20-F [extract]

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS [extract]

36. First-time adoption [extract]

(1) Transition to reporting in accordance with IFRS

TMC has prepared its consolidated financial statements in accordance with IFRS from the first quarter ended June 30, 2020.

Up to the fiscal year ended March 31, 2020, Toyota prepared its consolidated financial statements in accordance with U.S. GAAP. The Transition Date was April 1, 2019.

IFRS 1 stipulates that, in principle, the retrospective application of IFRS is required. However, it provides some voluntary and mandatory exemptions from full retrospective applications. TMC elected such exemptions with respect to the following items.

(i) Business combination

IFRS 3 “Business Combinations”, was not applied retrospectively to business combinations that occurred before the Transition Date.

(ii) Foreign currency translation adjustments of foreign operations

The cumulative foreign currency translation adjustments were reclassified from other comprehensive income to retained earnings as of the Transition Date.

(iii) Designation of equity financial assets

Equity financial assets recognized before the Transition Date were designated as financial assets measured at fair value through other comprehensive income based on the facts and circumstances that existed as of the Transition Date.

(iv) Deemed cost

IFRS 1 permits a first-time adopter to elect to use fair value at the Transition Date as deemed cost for items of property, plant and equipment. For some property, plant and equipment, the fair value at the Transition Date is used as deemed cost.

(v) Recognition of right of use assets and lease liabilities

When a first-time adopter that is a lessee recognizes right of use assets and lease liabilities, it is permitted to measure right of use assets and lease liabilities at the Transition Date under IFRS 1. Toyota measured all lease liabilities at the Transition Date, using the present value of the remaining lease payments discounted by the lessee's incremental borrowing rate at the Transition Date. Toyota measured right of use assets at the Transition Date, making them equal to the lease liabilities.

For leases for which the lease term ends within 12 months of the Transition Date, lease payments associated with those leases were recognized as profit or loss on a straight-line basis over the lease term.

If a first-time adopter did not present financial statements for previous periods, this fact must be disclosed. [IFRS 1.28]. The standard acknowledges that there are cases in which disclosure of how the transition to IFRS accounting standards affected the entity's reported financial position, financial performance and cash flows cannot be presented, because relevant comparative information under the entity's previous GAAP does not exist. In practice, this could apply to entities that did not prepare consolidated financial statements under their previous GAAPs or for a newly established entity.

How we see it

However, if a new entity is established by transferring a pre-existing business from a non-IFRS adopter to it and the new entity is determined to be a continuation of the pre-existing business, the entity would be expected to disclose the explanation of its transition to IFRS accounting standards.

6.3.1 Disclosure of reconciliations

A first-time adopter is required to present:

- (a) Reconciliations of its equity reported under previous GAAP to its equity under IFRS accounting standards at: [IFRS 1.24(a)]
 - (i) The date of transition to IFRS accounting standards
 - (ii) The end of the latest period presented in the entity's most recent annual financial statements under previous GAAP
- (b) A reconciliation to its total comprehensive income under IFRS accounting standards for the latest period in the entity's most recent annual financial statements. The starting point for that reconciliation is required to be total comprehensive income under previous GAAP for the same period or, if an entity did not report such a total, profit or loss under previous GAAP. [IFRS 1.24(b)].
And
- (c) An explanation of the material adjustments to the statement of cash flows, if it presented one under its previous GAAP. [IFRS 1.25].

The reconciliations in (a) and (b) above must be sufficiently detailed to enable users to understand the material adjustments to the statement of financial position, statement of profit or loss (if presented) and statement of profit or loss and other comprehensive income. [IFRS 1.25].

If a first-time adopter becomes aware of errors made under previous GAAP, it must distinguish the correction of errors from changes in accounting policies in those reconciliations. [IFRS 1.26]. This means that the adoption of IFRS accounting standards must not be used to mask the error.

While the standard does not prescribe a layout for these reconciliations, the implementation guidance contains an example of a line-by-line reconciliation of the statement of financial position, statement of profit or loss and other comprehensive income. [IFRS 1.IG Example 11]. This presentation could be particularly appropriate when a first-time adopter needs to make transition adjustments that affect a significant number of line items in the primary financial statements. If the adjustments are less pervasive, a straightforward reconciliation of equity, total comprehensive income and/or profit or loss could provide an equally effective explanation of how the adoption of IFRS accounting standards affects the reported financial position, financial performance and cash flows.

Illustration 6-1 below demonstrates how these requirements apply to an entity whose first IFRS financial statements are for the period ending on 31 December 20X3 and whose date of transition to IFRS accounting standards is 1 January 20X2.

Illustration 6-1: Reconciliations to be presented in first IFRS financial statements

Entity A's date of transition to IFRS accounting standards is 1 January 20X2 and the end of its first IFRS reporting period is 31 December 20X3. Entity A is required to present the following primary financial statements and reconciliations in its first IFRS financial statements.

	1 January 20X2	31 December 20X2	31 December 20X3
Statement of financial position	•	•	•
Reconciliation of equity	•	•	±
<i>For the period ending</i>			
Statement of profit or loss and other comprehensive income*		•	•
Statement of cash flows		•	•
Statement of changes in equity		•	•
Reconciliation of total comprehensive income [†]		•	±
Explanation of material adjustments to the statement of cash flows		•	±

* Alternatively, the entity presents two statements: a statement of profit or loss and a statement of comprehensive income.

† If an entity did not previously report total comprehensive income, then a reconciliation from profit or loss under previous GAAP to total comprehensive income under IFRS accounting standards is presented.

± A first-time adopter that ceases to publish financial statements under previous GAAP is not required to present reconciliations of equity and total comprehensive income at the end of the first IFRS reporting period. However, a first-time adopter that continues to publish previous GAAP financial statements might need to reconcile the equity and total comprehensive income and explain material cash flow adjustments as at the end of, and for, the first IFRS financial reporting period. See section 6.3.1.A below for further discussion.

First-time adopters do not apply the requirements of IAS 8 relating to the changes in accounting policies in their first IFRS financial statements. This is because that standard does not apply to the changes in accounting policies an entity makes when it adopts IFRS accounting standards or changes in those policies until after it presents its first IFRS financial statements (see section 7.2 below). [IFRS 1.27].

A first-time adopter must explain changes in accounting policies or in its use of exemptions during the period between its first IFRS interim financial report and its first IFRS annual financial statements (see section 6.6 below) and update the reconciliations of equity and total comprehensive income discussed above. [IFRS 1.27A]. This requirement is necessary in order to explain the transition to IFRS accounting standards, [IFRS 1.23], since the first-time adopter is exempt from the requirements of IAS 8 concerning reporting of such changes. [IFRS 1.BC97].

6.3.1.A Reconciliation by a first-time adopter that continues to publish previous GAAP financial statements

A first-time adopter that continues to publish financial statements under previous GAAP after adopting IFRS accounting standards must consider carefully the starting point of the reconciliations required by IFRS 1 in the first IFRS financial statements because the requirements to produce reconciliations do not consider this situation. IFRS 1.24 results in different applications depending on the timing of issuance of the previous GAAP financial statements in relation to the first-time adopter's first IFRS reporting period.

How we see it

We believe a first-time adopter, that continues to publish previous GAAP financial statements and has already issued those financial statements for the first IFRS reporting period prior to the issuance of the first IFRS financial statements, has a choice of presenting reconciliations of equity and total comprehensive income:

- (a) Respectively as at the end of, and for, the first IFRS reporting period
 - (b) Respectively as at the end of, and for, both the first IFRS reporting period, and the comparative period
- Or

- (c) Respectively as at the end of, and for, the comparative period

In each case above, the reconciliation of equity as at the date of transition to IFRS accounting standards must be disclosed.

However, if the first IFRS financial statements were issued prior to the previous GAAP financial statements for the period, then IFRS 1 can only mean the previous GAAP financial statements for the immediately preceding year.

6.3.2 Line-by-line reconciliations and detailed explanations

Practical example 6-2 below provides an example of an entity that not only provides summary reconciliations of equity and profit or loss, but also line-by-line reconciliations, as suggested by the implementation guidance in IFRS 1, and detailed explanations of the reconciling items. [IFRS 1.IG63, IFRS 1.IG Example 11].

Practical example 6-2: Yamaha Corporation (2020)	Japan
<p>Annual Report 2020 [extract]</p> <p>NOTES TO CONSOLIDATED FINANCIAL STATEMENTS [extract]</p> <p>37 First-time Adoption</p> <hr/> <p>The Group presents its consolidated financial statements in accordance with IFRS from the fiscal year ended March 31, 2020. The Group previously applied Japanese GAAP, and the most recent consolidated financial statements the Group prepared in accordance with Japanese GAAP were for the fiscal year ended March 31, 2019. The date of transition to IFRS was April 1, 2018.</p> <p>(1) IFRS 1 exemptions</p> <p>Companies adopting IFRS for the first time are, in principle, required to apply IFRS retrospectively to previous-year financial statements. However, IFRS 1 “First-time Adoption of International Financial Reporting Standards” (IFRS 1) allows certain exemptions in the preparation of financial statements applying IFRS retrospectively.</p> <p>The Group has applied the following exemptions in the transition from Japanese GAAP to IFRS.</p> <p>A) Business combinations</p> <p>The Group has not retrospectively applied IFRS 3 “Business Combinations” for business combinations that occurred before the date of transition to IFRS.</p> <p>B) Exchange differences on translation of foreign operations</p> <p>The Group has transferred cumulative exchange differences on translation of all foreign operations as of the date of transition to IFRS from other components of equity to retained earnings.</p> <p>C) Deemed cost</p> <p>The Group has reported the fair value of a portion of property, plant and equipment as of the date of transition to IFRS as deemed cost in accordance with IFRS.</p> <p>D) Recognizing previously designated financial instruments</p> <p>The Group has designated holdings of equity instruments measured at fair value through other comprehensive income based on certain conditions on the date of transition to IFRS.</p> <p>E) Leases</p> <p>The Group has assessed whether contracts contain leases based on events and conditions existing at the date of transition to IFRS.</p> <p>Lease liabilities other than assets that were categorized to finance leases prior to the date of transition to IFRS have been measured on the date of transition to IFRS and an equivalent amount has been recorded as right-of-use assets. Decisions whether to exempt recognition of underlying assets with low value or short-term leases were made based on conditions on the date of transition to IFRS.</p> <p>(2) IFRS 1 mandatory exceptions</p> <p>IFRS 1 prohibits retroactive application of IFRS to “estimates,” “derecognition of financial assets and liabilities,” “hedge accounting,” “non-controlling interests” and “classification and measurement of financial assets.” The Group applies IFRS to such items occurring after the date of transition to IFRS.</p> <p>(3) Reconciliation from Japanese GAAP to IFRS</p> <p>The changes in the Group’s financial position, operating results and cash flows due to the transition from Japanese GAAP to IFRS are as follows:</p> <p>The “Reclassification” column presents items that do not affect retained earnings and comprehensive income, and the “Difference in recognition and measurement” column presents items that affect retained earnings or comprehensive income.</p>

E) Notes to adjustments**(i) Reclassification**

- a Items such as sales and purchase discounts presented as non-operating income and non-operating expenses under Japanese GAAP are deducted from revenue and cost of sales, respectively, under IFRS.
- b Items (excluding sales and purchase discounts) presented as non-operating income, non-operating expenses, extraordinary income, and extraordinary loss under Japanese GAAP are presented as finance income and finance expenses for financial-related items and as other income, other expenses, or share of profit of associates accounted for using the equity method for other items under IFRS.
- c Time deposits with deposit periods longer than three months presented as “cash and deposits” under Japanese GAAP are presented as “other financial assets” under current assets under IFRS.
- d Long-term deposits presented as “other” under non-current liabilities under Japanese GAAP are presented as “other financial liabilities” in current liabilities under IFRS.
- e Other accounts receivable presented as “other” under current assets under Japanese GAAP are included in “trade and other receivables” under IFRS. Also, “accounts payable—other and accrued expenses” under Japanese GAAP are presented as “trade and other payables” under IFRS.
- f Land use rights included in “intangible assets” under Japanese GAAP are included in “right-of-use assets” assets under IFRS.

(ii) Differences in recognition and measurement

The Group made the following adjustments related to tax effect accounting and allocations to non-controlling interests.

- g Inventory valuation and unrealized gains or losses on consolidated internal transactions
The calculation method of unrealized gains or losses on inventories has been changed with the revaluation of inventories based on manufacturing costs under IFRS.
- h Valuation of property, plant and equipment
The cost model was used for valuation of property, plant and equipment on the date of transition to IFRS. As a result, the land revaluation under Japanese GAAP was reversed and it was valued at acquisition cost. Also, the Group applied the exemption provision for the first-time adoption of IFRS regarding certain property, plant and equipment and has valued the landholdings at deemed cost.
The book value of property, plant and equipment valued at deemed cost is ¥528 million under Japanese GAAP and their fair value is ¥2,558 million on the date of transition to IFRS.
- i Application of impairment accounting
Impairment losses were recorded on some items of property, plant and equipment as a result of evaluating the recoverability of non-current assets in accordance with IFRS on the date of transition to IFRS.
- j Lease transactions
Under Japanese GAAP, lease payments other than those associated with finance lease transactions are recorded as expenses at the time of occurrence. Under IFRS, the present value is measured based on the future lease payments at the commencement date of the lease transaction and accounted for as a right-of-use assets and lease liabilities. For a right-of-use asset, depreciation is applied to the leased item using the straight-line method over the projected lease period, and the lease liability is then adjusted for interest and recognized as a liability.
- k Measurement of financial instruments
Unlisted shares valued at acquisition cost under Japanese GAAP are valued at fair value through other comprehensive income under IFRS. Also, gain or loss on sales or impairment losses on equity instruments were recognized in net income under Japanese GAAP are classified as financial assets measured at fair value through other comprehensive income under IFRS and therefore gain or loss on sales or impairment losses are not recognized in profit or loss. When financial instruments are sold and are no longer recognized or when the fair value has declined substantially, the amount recognized in other comprehensive income is immediately reclassified to retained earnings.
- l Retirement benefit liabilities
There are differences in actuarial assumptions such as discount rates between Japanese GAAP and IFRS. Under Japanese GAAP, actuarial differences and past service costs are accounted for through other comprehensive income at the time of occurrence and accounted as an expense over a fixed number of years within the average remaining service period of employees at the time of occurrence. Under IFRS, actuarial differences are recognized as other comprehensive income at the time of occurrence and immediately reclassified to retained earnings; past service costs are recognized in profit or loss at the time of occurrence. Under IFRS, for interest cost, the amount calculated by multiplying net defined benefit assets or liabilities by a discount rate is recognized in profit or loss.

m Accounting for deferred tax assets

Under Japanese GAAP, the judgment of recoverability of deferred tax assets takes into account future temporary differences; under IFRS, the method of judgment of recoverability does not take into account future temporary differences. In addition, regarding the accounting for deferred tax assets associated with unrealized gains from internal transactions within the consolidated group, under Japanese GAAP, recoverability is judged based on taxable income of the selling company and the amount is recorded based on the effective tax rate of the selling company. Under IFRS, recoverability is determined based on taxable income in the future at the purchasing company and recorded using the effective tax rate at the purchasing company. This both increases and decreases the amounts of deferred tax assets and liabilities, but it also reduces the amount of assets and liabilities that be offset and ultimately leads to higher amounts recognized as deferred tax assets and liabilities.

n Accounting for levies

Under Japanese GAAP, tax levies were accounted for as liabilities when they were levied; under IFRS, tax levies are accounted for as liabilities at the time of assessment and determination.

o Unutilized paid leave

Unutilized paid leave that is not recognized under Japanese GAAP is recognized as a liability under IFRS.

p Government grants

Under Japanese GAAP, a grant related to an asset is collectively recognized as revenue when it was determined that it would be received; under IFRS, it is treated as deferred revenue and is regularly recognized as revenue over the period in which the corresponding cost for which the grant was provided is recognized as an expense.

q Restricted stock compensation

Under Japanese GAAP, restricted stock compensation is recognized as an increase in equity at the time the stock is granted; under IFRS, an increase in equity is recognized corresponding to the provision of services for which the stock is granted.

r Exchange differences on translation of foreign operations

The Group has adopted the exemption provision for the first-time adoption of IFRS, and cumulative exchange differences of foreign operations as of the date of transition to IFRS are reclassified from other components of equity to retained earnings.

F) Adjustment to retained earnings

	Millions of yen	
	Date of transition to IFRS (April 1, 2018)	As of March 31, 2019

r Exchange differences on translation of foreign operations	(23,862)	(23,862)
Other	79	105
Total	¥(31,276)	¥(31,594)

* "m Accounting for deferred tax assets" includes accounting for tax effects related to other categories.

G) Reconciliation to cash flows for the fiscal year ended March 31, 2019

Under Japanese GAAP, other than for finance leases, lease payments are classified as cash flows from operating activities; on the other hand, they are classified as cash flows from financing activities under IFRS since they are deemed as repayments of lease liabilities. As a result, net cash provided by operating activities increased by ¥5,577 million and net cash used in financing activities increased by the same amount.

6.3.3 Recognition and reversal of impairments

If a first-time adopter recognised or reversed any impairment losses on transition to IFRS accounting standards it must disclose the information that IAS 36 would have required if the entity had recognised those impairment losses or reversals in the period beginning with the date of transition to IFRS accounting standards (see Chapter 21). [IFRS 1.24(c)]. This provides transparency about impairment losses recognised on transition that might otherwise receive less attention than impairment losses recognised in earlier or later periods. [IFRS 1.BC94].

6.3.4 Inclusion of IFRS 1 reconciliations by cross reference

The reconciliation disclosures required by IFRS 1 are generally quite lengthy. While IFRS 1 allows an entity's first interim report under IAS 34 to give certain of these disclosures by way of cross-reference to another published document, [IFRS 1.32(b), IFRS 1.33], there is no corresponding exemption for disclosure in the entity's first annual IFRS financial statements. Therefore, a first-time adopter must include all disclosures required by IFRS 1 within its first annual IFRS financial statements in the same way it would need to include other lengthy disclosures such as those on business combinations, financial instruments and employee benefits. Any additional voluntary information regarding the conversion to IFRS accounting standards that was previously published but that is not specifically required by IFRS 1 need not be repeated in the first IFRS financial statements.

6.4 Disclosure of financial instruments

6.4.1 Designation of financial instruments

If, on transition, a first-time adopter designates a previously recognised financial asset or financial liability as a 'financial asset or financial liability at fair value through profit or loss' (see sections 5.10.1 and 5.10.2 above), it must disclose: [IFRS 1.29, IFRS 1.29A, IFRS 1.D19, IFRS 1.D19A]

(a) The fair value of financial assets and the fair value of financial liabilities so designated at the date of designation

And

(b) Their classification and carrying amounts in the previous GAAP financial statements

6.4.2 Classification of financial instruments

An entity must disclose the carrying amount at the reporting date of the financial assets - whose contractual cash flow characteristics have been assessed based on the facts and circumstances that existed at the date of transition to IFRS accounting standards without taking into account the requirements related to the modification of the time value of money element in IFRS 9.B4.1.9B-B4.1.9D - until those financial assets are derecognised. [IFRS 1.B8A, IFRS 7.42R, IFRS 9.B4.1.9B, IFRS 9.B4.1.9C, IFRS 9.B4.1.9D]. See section 4.9.1.A above.

An entity must also disclose the carrying amount at the reporting date of the financial assets - whose contractual cash flow characteristics have been assessed based on the facts and circumstances that existed at the date of transition to IFRS accounting standards without taking into account the exception for prepayment features in IFRS 9.B4.1.12 - until those financial assets are derecognised. [IFRS 1.B8B, IFRS 7.42S, IFRS 9.B4.1.12]. See section 4.9.1.B above.

6.5 Disclosures regarding deemed cost

6.5.1 Use of fair value as deemed cost

If a first-time adopter uses fair value as deemed cost for any item of property, plant and equipment, investment property, right-of-use asset or an intangible asset in its opening IFRS statement of financial position (see section 5.4.1 above), it must disclose for each line item in the opening IFRS statement of financial position: [IFRS 1.30, IFRS 1.D5, IFRS 1.D7]

(a) The aggregate of those fair values

And

(b) The aggregate adjustment to the carrying amounts reported under previous GAAP

This disclosure is illustrated in Practical example 5-4 in section 5.4.1 above.

6.5.2 Use of deemed cost for investments in subsidiaries, joint ventures and associates in separate financial statements

If a first-time adopter uses deemed cost in its opening IFRS statement of financial position for an investment in a subsidiary, joint venture or associate in its separate financial statements (see section 5.7.2 above), the entity's first IFRS separate financial statements must disclose: *[IFRS 1.31, IFRS 1.D15]*

- (a) The aggregate deemed cost of those investments for which deemed cost is their previous GAAP carrying amount
- (b) The aggregate deemed cost of those investments for which deemed cost is fair value
- And
- (c) The aggregate adjustment to the carrying amounts reported under previous GAAP

6.5.3 Use of deemed cost for oil and gas assets

If a first-time adopter uses the deemed cost exemption in IFRS 1.D8A(b) for oil and gas assets in the development or production phases (see section 5.4.3 above), it must disclose that fact and the basis on which carrying amounts determined under previous GAAP were allocated. *[IFRS 1.31A, IFRS 1.D8A(b)]*.

6.5.4 Use of deemed cost for assets used (or previously used) in operations subject to rate regulation

If a first-time adopter uses the exemption for assets used (or previously used) in operations subject to rate regulation (see section 5.4.4 above), it must disclose that fact and the basis on which carrying amounts were determined under previous GAAP. *[IFRS 1.31B, IFRS 1.D8B]*.

6.5.5 Use of deemed cost after severe hyperinflation

If a first-time adopter uses the exemption to elect fair value as the deemed cost in its opening IFRS statement of financial position for assets and liabilities because of severe hyperinflation (see section 5.16 above), it must disclose an explanation of how, and why, the first-time adopter had, and then ceased to have, a functional currency that is subject to severe hyperinflation. *[IFRS 1.31C, IFRS 1.D26, IFRS 1.D27, IFRS 1.D28, IFRS 1.D29, IFRS 1.D30]*.

6.6 Interim financial reports

6.6.1 Reconciliations in the interim financial reports

If a first-time adopter presents an interim financial report under IAS 34 for part of the period covered by its first IFRS financial statements:

- (a) Each such interim financial report must, if the entity presented an interim financial report for the comparable interim period of the immediately preceding financial year, include: *[IFRS 1.32(a)]*
 - (i) A reconciliation of its equity under previous GAAP at the end of that comparable interim period to its equity under IFRS accounting standards at that date
 - (ii) A reconciliation to its total comprehensive income under IFRS accounting standards for that comparable interim period (current and year to date). The starting point for that reconciliation is total comprehensive income under previous GAAP for that period or, if an entity did not report such a total, profit or loss under previous GAAP
- And
- (b) In addition, the entity's first interim financial report under IAS 34 for part of the period covered by its first IFRS financial statements must include the reconciliations (supplemented by the further details) described in section 6.3.1 above, *[IFRS 1.24(a), IFRS 1.24(b), IFRS 1.25, IFRS 1.26]*, or a cross-reference to another published document that includes these reconciliations. *[IFRS 1.32(b)]*.

For an entity presenting annual financial statements under IFRS accounting standards, it is not compulsory to prepare interim financial reports under IAS 34. Therefore, the above requirements only apply to first-time adopters that prepare interim reports under IAS 34 on a voluntary basis or that are required to do so by a regulator or other party. *[IFRS 1.IG37]*.

Illustrations 6-2 and 6-3 below show which reconciliations must be included in half-year reports and quarterly reports, respectively.

Illustration 6-2: Reconciliations to be presented in IFRS half-year reports

As in Illustration 6-1 in section 6.3.1 above, Entity A's date of transition to IFRS accounting standards is 1 January 20X2, the end of its first IFRS reporting period is 31 December 20X3 and it publishes a half-year report as at 30 June 20X3 under IAS 34. Which primary financial statements and reconciliations must Entity A present in its first IFRS half-year report?

	1 January 20X2	30 June 20X2	31 December 20X2	30 June 20X3
Statement of financial position			•	•
Reconciliation of equity	•‡	•	•‡	
<i>For the period ending</i>				
Statement of profit or loss and other comprehensive income*		•		•
Statement of cash flows		•		•
Statement of changes in equity		•		•
Reconciliation of total comprehensive income†		•	•‡	
Explanation of material adjustments to the statement of cash flows			•‡	

* Alternatively, the entity presents two statements: a statement of profit or loss and a statement of comprehensive income. [IAS 1.10A, IFRS 18.12].

† If an entity did not previously report total comprehensive income then a reconciliation from profit or loss under previous GAAP to total comprehensive income under IFRS accounting standards is presented. [IFRS 1.24(b), IFRS 1.32(a)(ii), IFRS 1.32(b)].

‡ These additional reconciliations are required under IFRS 1.24(a)-(b) and IFRS 1.25. These must be included in the first interim financial report for part of the period covered by the entity's first IFRS financial statements (or by way of a cross reference to another published document including these reconciliations). The reconciliations must distinguish corrections of errors from changes in accounting policies (see section 6.3.1 above). [IFRS 1.24(a), IFRS 1.24(b), IFRS 1.25, IFRS 1.26, IFRS 1.32(b)].

The IAS 34 requirements regarding the disclosure of primary financial statements in interim reports are discussed in Chapter 37.

As can be seen from the tables in Illustration 6-2 above, the additional reconciliations and explanations required under (b) above would be presented out of context without the statement of financial position, statement of profit or loss (if presented), statement of profit or loss and other comprehensive income and statement of cash flows to which they relate.

How we see it

In order to provide context, we believe a first-time adopter either (1) includes the primary financial statements to which these reconciliations relate or (2) refers to another published document that includes these primary financial statements.

Illustration 6-3 below, which is based on an Illustrative Example in IFRS 1, [IFRS 1.IG Example 10], shows the various reconciliations to be included in the financial statements of a first-time adopter:

Illustration 6-3: Reconciliations to be presented in IFRS quarterly reports

Entity B's date of transition to IFRS accounting standards is 1 January 20X2, the end of its first IFRS reporting period is 31 December 20X2 and it publishes quarterly reports under IAS 34. Which reconciliations must Entity B present in its 20X3 interim IFRS reports and in its first IFRS financial statements?

	Reconciliation of equity	Reconciliation of total comprehensive income or profit or loss [†]	Explanation of material adjustments to statement of cash flows
First quarter			
1 January 20X2	0		
31 December 20X2	0	0	0
31 March 20X2			
▪ 3 months ending	•	•	
Second quarter			
30 June 20X2			
▪ 3 months ending		•	
▪ 6 months ending	•	•	
Third quarter			
30 September 20X2			
▪ 3 months ending		•	
▪ 9 months ending	•	•	
First IFRS financial statements			
1 January 20X2	•		
31 December 20X2	•	•	•
o These reconciliations are only required to be presented in an entity's <i>first</i> interim financial report under IAS 34 and could be included by way of a cross-reference to another published document in which these reconciliations are presented. The reconciliations must distinguish corrections of errors from changes in accounting policies. [IFRS 1.24(a), IFRS 1.24(b), IFRS 1.25, IFRS 1.26, IFRS 1.32(b)].			
† If an entity did not previously report total comprehensive income, a reconciliation from profit or loss under previous GAAP to total comprehensive income under IFRS accounting standards must be presented. [IFRS 1.24(b), IFRS 1.32(a)(ii), IFRS 1.32(b)].			

If a first-time adopter issues an interim financial report in accordance with IAS 34 for part of the period covered by its first IFRS financial statements and changes its accounting policies or its use of exemptions contained in IFRS 1, the first-time adopter is required to explain the changes in each such interim financial report in accordance with IFRS 1.23, i.e., the disclosure objective to explain the transition (see section 6.3 above), and update the reconciliations at (a) and (b) above. [IFRS 1.23, IFRS 1.32(c)].

If a first-time adopter issues an interim financial report in accordance with IAS 34 for part of the period covered by its first IFRS financial statements and will be applying IFRS 18 in its first IFRS financial statements, the entity must present each heading it expects to use in applying IFRS 18 and the subtotals required by IFRS 18.69-74 (see Chapter 4) in those interim financial statements. After the entity has issued its first IFRS financial statements, an entity applies the usual requirements in IAS 34.10 for headings and subtotals in condensed financial statements (see Chapter 37) after it has issued its first IFRS financial statements prepared in accordance with IFRS 18. [IFRS 1(2027).32(za)].

6.6.2 Disclosures in the interim financial report

Interim financial reports under IAS 34 contain considerably less detail than annual financial statements because they assume that users of the interim financial report also have access to the most recent annual financial statements. However, they would be expected to provide disclosure relating to material events or transactions to allow users to understand the current interim period. Therefore, a first-time adopter needs to consider what disclosures required by IFRS accounting standards are material to an understanding of the current interim period. If the most recent annual financial statements under previous GAAP did not disclose information material to an understanding of the current interim period, the interim financial report must disclose that information (or include a cross reference to another published document that contains that information). [IFRS 1.33, IAS 34.15, IAS 34.15A].

How we see it

A full set of IFRS accounting policy disclosures and related significant judgements and estimates needs to be included in the first IFRS interim financial report as well as information on the IFRS 1 exemptions employed (or that report needs to contain a cross reference to another published document that includes this information (see Chapter 37)). In addition, consideration needs to be given to both new disclosures not previously required under previous GAAP, and disclosures made under previous GAAP but for which the amounts contained therein have changed significantly due to changes in accounting policies resulting from the adoption of IFRS accounting standards.

It is also important to note that such disclosures apply to balances in both the opening and comparative year-end statement of financial position, each of which could be included in the first IFRS interim financial report (see section 6.6.1 above). First-time adopters are expected to include significantly more information in their first IFRS interim financial report than would normally be included in an interim financial report (alternatively, the report could cross refer to another published document that includes such information). [IFRS 1.33].

Examples of additional annual disclosures under IFRS accounting standards to be included in the entity's first IAS 34 compliant interim financial report could include disclosures relating to retirement benefits, income taxes, goodwill and provisions, amongst other items that significantly differ from previous GAAP and those disclosures required under IFRS accounting standards that are more substantial than previous GAAP (see Chapter 37).

6.7 Disclosure of IFRS information before adoption of IFRS accounting standards

As the adoption of IFRS accounting standards might have a significant impact on their financial statements, many entities will want to provide information on its expected impact in advance of their first IFRS financial statements. There are certain difficulties that arise as a result of the application of IFRS 1 when an entity decides to quantify the impact of the adoption of IFRS accounting standards. In particular, IFRS 1 requires an entity to draw up an opening IFRS statement of financial position at its date of transition to IFRS accounting standards based on the standards that are effective at the end of its first IFRS reporting period. Therefore, it is not possible to prepare IFRS financial information - and assess the full impact of IFRS accounting standards - until an entity knows its date of transition to IFRS accounting standards and exactly which standards will be effective at the end of its first IFRS reporting period.

How we see it

If an entity wanted to quantify the impact of the adoption of IFRS accounting standards before its date of transition to IFRS accounting standards, it would not be able to do this in accordance with IFRS 1. While an entity would be able to select a date and apply by analogy the requirements of IFRS 1 to its previous GAAP financial information as of that date, it would not be able to claim that such additional information complied with IFRS accounting standards. Presentation of such additional information is to be avoided if there is a concern that the information, despite being clearly marked as not IFRS compliant, would be misleading or misunderstood.

If an entity wants to quantify the impact of the adoption of IFRS accounting standards in advance of the release of its first IFRS financial statements but after its date of transition to IFRS accounting standards, there could still be some uncertainty regarding the standards that apply. If so, an entity discloses the nature of the uncertainty and considers describing the information as 'preliminary' IFRS information.

6.8 Disclosure requirements for subsidiaries without public accountability (IFRS 19)

In May 2024, the IASB issued IFRS 19 which is applicable for annual reporting periods beginning on or after 1 January 2027. Earlier application is permitted.

An entity can elect to apply IFRS 19 for its consolidated, separate and individual statements if, and only if, at the end of the reporting period: *[IFRS 19.7]*

- (a) It is a subsidiary
- (b) It does not have public accountability
- And
- (c) It has an ultimate or intermediate parent that produces consolidated financial statements available for public use that comply with IFRS accounting standards.

An entity that elects to apply IFRS 19 in one reporting period may later revoke that election and an entity may elect to apply IFRS 19 more than once. *[IFRS 19.13]*.

An entity whose financial statements comply with IFRS accounting standards and the requirements in IFRS 19 must make an explicit and unreserved statement of such compliance in the notes, specifically stating that IFRS 19 has been applied as part of that statement. *[IFRS 19.20]*. (see Chapter 4)

6.8.1 Interaction with IFRS 1

IFRS 19 provides no exemption or exception for recognition, measurement and presentation requirements in IFRS accounting standards. Therefore, the requirements of IFRS 1 (except those relating to disclosures) apply in full in the first IFRS financial statements or when IFRS 1 is reapplied (see section 2.2.1 above).

[IFRS 19.2, IFRS 19.17, IFRS 1.4A].

It is important to note that electing or revoking an election to apply IFRS 19 does not, on its own, result in an entity meeting IFRS 1's definition of a first-time adopter of IFRS accounting standards. *[IFRS 19.18]*. If an entity provided, in the immediately preceding period, a statement of compliance with both IFRS accounting standards and IFRS 19, it does not apply IFRS 1 for the current reporting period even if the entity revokes the election to apply IFRS 19 for the current reporting period. *[IFRS 19.19]*. Conversely, an entity that gave a complete and unreserved statement of compliance with IFRS accounting standards but did not apply IFRS 19 in the immediately preceding period, does not apply IFRS 1 for the current reporting period if it elects to apply IFRS 19 in the current reporting period. *[IFRS 19.18]*.

See section 6.8.2 below in relation to the disclosures relating to transition to IFRS accounting standards.

IFRS 19 is an optional standard and therefore an eligible subsidiary (see section 6.8 above) choosing not to apply IFRS 19 must instead apply IFRS 1's disclosure requirements when it prepares its first IFRS financial statements (see section 6 above).

6.8.2 Disclosure requirements in IFRS 19 relating to the transition to IFRS accounting standards

An eligible subsidiary who chooses to apply IFRS 19 when it prepares its first IFRS financial statements is required to apply the disclosure requirements in IFRS 19 rather than those in other IFRS accounting standards, although some disclosure requirements in other IFRS accounting standards remain applicable, which are specified in IFRS 19 (see further details in Chapter 4). *[IFRS 19.2, IFRS 19.4]*.

An entity that applies IFRS 19 when it prepares its first IFRS financial statements must apply the disclosure requirements in IFRS 19.21-30 instead of the disclosure requirements in IFRS 1.23-33. *[IFRS 19.17]*. A first-time adopter applying IFRS 19 is required to make disclosures explaining the transition to IFRS accounting standards in its first IFRS financial statements. *[IFRS 19.21]*. These specifically cover requirements for:

- Disclosures when an entity reapplies IFRS accounting standards *[IFRS 19.22, IFRS 19.23]*
- Reconciliations *[IFRS 19.24, IFRS 19.25, IFRS 19.26, IFRS 19.27]*
- Interim financial reports *[IFRS 19.28, IFRS 19.29]*

These disclosures are similar to the corresponding requirements set out in IFRS 1 (see sections 2.2.1, 6.3, 6.3.1 and 6.6.1 above). There are some simplifications compared to the corresponding disclosures required under IFRS 1 by a first-time adopter. For example, even if the entity recognised or reversed impairment losses for the first time in preparing its opening IFRS statement of financial position, it is not required to give the disclosures that IAS 36 would have required (see section 6.3.3 above). *[IFRS 1.24(c)]*.

IFRS 19.30 further requires an entity who applies IFRS 19 to disclose specific information required by IFRS 2 when it applies IFRS 1.D2 (i.e., the same requirements as set out in IFRS 1.D2). *[IFRS 19.30]*. (see section 5.3 above and Chapter 30).

7 Accounting policies and practical application issues

The exceptions and exemptions of IFRS 1 are explained in sections 4 and 5 above, respectively. This section provides an overview of the detailed application guidance in IFRS 1 (to the extent that it is not covered in sections 4 and 5 above) and some of the practical application issues that are not directly related to any of the exceptions or exemptions. These issues are discussed by IFRS accounting standard as follows:

- IAS 7 *Statement of Cash Flows* (see section 7.1 below)
 - IAS 8 *Accounting Policies, Changes in Accounting Estimates and Errors* (see section 7.2 below)
 - IAS 12 *Income Taxes* (see section 7.3 below)
 - IAS 16 *Property, Plant and Equipment* and IAS 40 *Investment Property* (cost model) (see section 7.4 below)
 - IFRS 16 *Leases* (see section 7.5 below)
 - IFRS 15 *Revenue from Contracts with Customers* (see section 7.6 below)
 - IAS 19 *Employee Benefits* (see section 7.7 below)
 - IAS 21 *The Effects of Changes in Foreign Exchange Rates* (see section 7.8 below)
 - IAS 28 *Investments in Associates and Joint Ventures* (see section 7.9 below)
 - IAS 29 *Financial Reporting in Hyperinflationary Economies* (see section 7.10 below)
 - IFRS 11 *Joint Arrangements* (see section 7.11 below)
 - IAS 36 *Impairment of Assets* (see section 7.12 below)
 - IAS 37 *Provisions, Contingent Liabilities and Contingent Assets* (see section 7.13 below)
- And
- IAS 38 *Intangible Assets* (see section 7.14 below)

7.1 IAS 7 *Statement of Cash Flows*

A statement of cash flows prepared under IAS 7 could differ in the following ways from the one prepared under an entity's previous GAAP:

- The definition of 'cash and cash equivalents' under IAS 7 could well differ from the one used under previous GAAP. [IAS 7.6, IAS 7.7, IAS 7.8]. In particular, IAS 7 includes within cash and cash equivalents those bank overdrafts repayable on demand which form an integral part of an entity's cash management (see Chapter 36). [IAS 7.8].
 - The layout and definition of the categories of cash flows (i.e., operating, investing and financing) is often different from previous GAAP. [IAS 7.10]. In addition, IAS 7 contains specific requirements about the classification of interest, dividends and taxes (see Chapter 36). [IAS 7.31, IAS 7.35].
- And
- Differences in accounting policies between IFRS accounting standards and previous GAAP often have a consequential impact on the statement of cash flows.

IFRS 1 requires disclosure of an explanation of the material adjustments to the statement of cash flows, if a first-time adopter presented one under its previous GAAP (see section 6.3.1 above). [IFRS 1.25]. Practical example 7-1 below illustrates how the IFRS statement of cash flows differed from that presented under previous GAAP.

Practical example 7-1: Sony Group Corporation (2022)

Japan

Form 20-F [extract]**Notes to Consolidated Financial Statements [extract]****34. First-time adoption [extract]****(5) Reconciliation of consolidated statements of cash flows**

The main items causing the differences in the consolidated statements of cash flows are as follows:

	Yen in millions		
	Fiscal year ended March 31, 2021		
	Cash flows from operating activities	Cash flows from investing activities	Cash flows from financing activities
Consolidated statements of cash flows under U.S. GAAP	1,350,150	(1,781,516)	666,967
1. Principal payments for operating lease liabilities* ¹	72,098	—	(72,098)
2. Additions and disposals of content assets* ²	(34,751)	34,751	—
3. Changes in assets and liabilities in the Financial Services segment* ³			
(1) Investments and advances in the Financial Services segment	(1,181,744)	1,181,744	—
(2) Deposits from customers in the banking business	332,987	—	(332,987)
(3) Borrowings in the life insurance business and the banking business	463,783	—	(463,783)
(4) Future insurance policy benefits and other and policyholders' account in the life insurance business	134,299	—	(134,299)
4. Other	3,395	1,111	(2,333)
Total	(209,933)	1,217,606	(1,005,500)
Consolidated statements of cash flows under IFRS	1,140,217	(563,910)	(338,533)

***1 Principal payments for operating lease liabilities**

Under U.S. GAAP, lessees classify leases as either operating leases or finance leases, and the principal payments for the operating lease liabilities are classified as cash flows from operating activities in the consolidated statements of cash flows. Under IFRS, the distinction between operating leases and finance leases no longer exists for lessees, and all of the principal payments for lease liabilities are classified as cash flows from financing activities in the consolidated statements of cash flows.

***2 Additions and disposals of content assets**

Under U.S. GAAP, Sony classified the cash flows from the additions and disposals of film costs as cash flows from operating activities, and classified the cash flows from the additions and disposals of music catalogs, artist contracts, music distribution rights and other content assets as cash flows from investing activities in the consolidated statements of cash flows based on the nature of such transactions as additions and disposals of intangible assets. Under IFRS, Sony defines these intangible assets as content assets, and classifies the cash flows from the additions and disposals of content assets as cash flows from operating activities in the consolidated statements of cash flows except for additions and disposals of content assets from business combinations or business divestitures, because the additions and disposals of content assets are derived from the principal revenue-producing activities of Sony.

***3 Changes in assets and liabilities in the Financial Services segment**

Under U.S. GAAP, Sony classified cash flows from changes in investments and advances in the Financial Services segment and repurchase agreements in the Financial Services segment, deposits from customers in the banking business and policyholders' account in the life insurance business according to the nature of these transactions in the consolidated statements of cash flows. Under IFRS, Sony classifies cash flows from these transactions as cash flows from operating activities in the consolidated statements of cash flows as these transactions are viewed as integral to the principal revenue-producing activities of Sony.

7.2 IAS 8 Accounting Policies, Changes in Accounting Estimates and Errors

Normally when an entity that is already using IFRS accounting standards changes an accounting policy, it applies IAS 8 to such a change. IFRS 1 requires that a first-time adopter applies the same accounting policies in its opening IFRS statement of financial position and throughout all periods presented in its first IFRS financial statements. [IFRS 1.7]. Therefore, the change in accounting policies must be treated as a change in the entity's opening IFRS statement of financial position and the policy must be applied consistently in all periods presented in its first IFRS financial statements.

7.2.1 Changes in IFRS accounting policies during the first IFRS reporting period

A first-time adopter might find that it needs to change IFRS accounting policies after it has issued an IFRS interim report but before issuing its first IFRS financial statements. Such a change in accounting policies could relate either to the ongoing IFRS accounting policies or to the selection of IFRS 1 exemptions. IAS 8 does not apply to the changes in accounting policies an entity makes when it adopts IFRS accounting standards or to changes in those policies until after it presents its first IFRS financial statements. [IFRS 1.27]. Therefore, "if during the period covered by its first IFRS financial statements an entity changes its accounting policies or its use of the exemptions contained in this IFRS", it must explain the changes between its first IFRS interim financial report and its first IFRS financial statements in accordance with IFRS 1.23, i.e., the disclosure objective to explain the transition (see section 6.3 above) and update the reconciliations required by IFRS 1.24(a) and (b) (see section 6.3.1 above). [IFRS 1.23, IFRS 1.24(a), IFRS 1.24(b), IFRS 1.27A]. A similar requirement applies to the disclosures in a first-time adopter's interim financial reports (see section 6.6 above). [IFRS 1.23, IFRS 1.32(c)].

The distinction between changes in accounting policies and changes in accounting estimates is discussed in detail in Chapter 3.

7.2.2 Changes in estimates and correction of errors

An entity that adopts IFRS accounting standards needs to assess carefully the impact of information that has become available since it prepared its most recent previous GAAP financial statements because the new information might:

- Be a new estimate that must be accounted for prospectively (see section 4.2 above) [IFRS 1.14, IFRS 1.15, IFRS 1.16, IFRS 1.17]
- Or
- Expose an error in the previous GAAP financial statements due to mathematical mistakes, mistakes in applying accounting policies, oversights or misinterpretations of facts, and fraud. [IAS 8.5]. In the reconciliation from previous GAAP to IFRS accounting standards such errors must be disclosed separately from the effect of changes in accounting policies (see section 6.3.1 above). [IFRS 1.26].

7.3 IAS 12 Income Taxes

There are no particular provisions in IFRS 1 with regard to the first-time adoption of IAS 12, except for IFRS 1.B14 modifying the initial recognition exception of deferred tax assets and liabilities (see section 4.14 above). [IFRS 1.B14].

However, the implementation guidance notes that IAS 12 requires entities to provide for deferred tax on temporary differences measured by reference to enacted or substantively enacted legislation by the end of the reporting period. Therefore, entities need to account for the effect of changes in tax rates and tax laws when those changes are enacted or substantively enacted. [IFRS 1.IG5, IFRS 1.IG6].

The full retrospective application of IAS 12 (as modified by IFRS 1.B14) poses several problems that might not be immediately obvious. First, IAS 12 does not require an entity to account for all temporary differences. For example, an entity is not permitted under IAS 12 to recognise deferred tax on:

- Taxable temporary differences arising on the initial recognition of goodwill [IAS 12.15]
- Or
- Taxable and deductible temporary differences arising on the initial recognition of an asset or liability in a transaction that is not a business combination and that, at the time of the transaction, affects neither accounting profit nor taxable profit (tax loss) and, at the time of the transaction, does not give rise to equal taxable and deductible temporary differences [IAS 12.15, IAS 12.24]

However, IFRS 1.B14 requires a first-time adopter, at the date of transition to IFRS accounting standards, to recognise a deferred tax asset (to the extent that it is probable that taxable profit will be available against which the deductible temporary difference can be utilised) and a deferred tax liability for all deductible and taxable temporary differences associated with (1) right-of-use assets and lease liabilities; and (2) decommissioning, restoration and similar liabilities and the corresponding amounts recognised as part of the cost of the related asset (see section 4.14 above). [IFRS 1.B14].

In addition, a change in deferred tax must be accounted for in other comprehensive income or equity, instead of profit or loss, when the tax relates to an item that was originally accounted for in other comprehensive income or equity. [IAS 12.61A].

Therefore, full retrospective application of IAS 12 requires a first-time adopter to establish the history of the items that give rise to temporary differences because, depending on the type of transaction, deferred tax might or might not be recognised, or changes in the deferred tax might need to be accounted for in other comprehensive income or equity.

The main issue for many first-time adopters of IFRS accounting standards will be that their previous GAAPs either required no provision for deferred tax, or required provision under a timing difference approach. They also need to be aware that many of the other adjustments made to the statement of financial position at the date of transition to IFRS accounting standards will also have a deferred tax effect that must be accounted for - see, for example, the potential deferred tax consequences of recognising or derecognising intangible assets where an entity uses the business combinations exemption, described in sections 5.2.4.A, 5.2.4.B, 5.2.5 and 5.2.9 above. Entities that reported under US GAAP must also bear in mind that IAS 12, though derived from FASB's Accounting Standard Codification 740 *Income Taxes*, is different in a number of important respects.

7.3.1 Previous revaluation of plant, property and equipment treated as deemed cost on transition

In some cases, IFRS 1 allows an entity, on transition to IFRS accounting standards, to treat the carrying amount of plant, property or equipment revalued under its previous GAAP as its deemed cost as of the date of revaluation for the purposes of IFRS accounting standards (see section 5.4.1 above). [IFRS 1.D6].

Where an asset is carried at deemed cost on the date of transition to IFRS accounting standards but the tax base of the asset remains at original cost, or an amount based on original cost, the previous GAAP revaluation will give rise to a temporary difference which is typically a taxable temporary difference associated with the asset. IAS 12 requires deferred tax to be recognised on the date of transition to IFRS accounting standards on any such temporary difference (see Chapter 29).

If, after the date of transition to IFRS accounting standards, the deferred tax is required to be remeasured, e.g., because of a change in tax rate, or a re-basing of the asset for tax purposes, the entity elects the cost model of IAS 16 and the asset concerned was revalued outside profit or loss under previous GAAP, the question arises as to whether the resulting deferred tax income or expense is recognised in, or outside, profit or loss.

How we see it

In our view, either approach, i.e., recognising the deferred tax income or expense in profit or loss or in other comprehensive income, is acceptable, so long as it is applied consistently. See Chapter 29.

7.3.2 Share-based payment transactions subject to transitional provisions of IFRS 1

While IFRS 1 provides exemptions from applying IFRS 2 to share-based payment transactions that were fully vested prior to the date of transition to IFRS accounting standards, there are no corresponding exemptions from the provisions of IAS 12 relating to the tax effects of share-based payment transactions. Therefore, the provisions of IAS 12 relating to the tax effects of share-based payments apply to all share-based payment transactions, whether they are accounted for in accordance with IFRS 2 or not. [IAS 12.68A, IAS 12.68B, IAS 12.68C]. IAS 12 effectively considers the cumulative expense associated with share-based payment transactions as an asset that has been fully expensed in the financial statements in advance of being recognised for tax purposes, thus giving rise to a deductible temporary difference (see Chapter 29).

How we see it

This means that on transition to IFRS accounting standards, and subject to the restrictions on recognition of deferred tax assets, (see Chapter 29), a deferred tax asset is established for all share-based payment awards outstanding at that date, including those not accounted for under the IFRS 1 transition provisions.

Where such an asset is remeasured or recognised after transition to IFRS accounting standards, the general rule regarding the 'capping' of the amount of any tax relief recognised in profit or loss to the amount charged to the profit or loss applies (see Chapter 29). Therefore, if there was no profit or loss charge for share-based payment transactions under the previous GAAP, all tax effects of share-based payment transactions not accounted for under IFRS 2 are dealt with within equity.

7.3.3 Retrospective restatements or applications

The adjustments arising from different accounting policies under previous GAAP and IFRS accounting standards must be recognised directly in retained earnings (or, if appropriate, another category of equity) at the date of transition to IFRS accounting standards. [IFRS 1.11].

Because IAS 12 requires tax relating to an item that has been recognised outside profit or loss to be treated in the same way, any tax effect of a retrospective restatement or retrospective application on the opening comparative statement of financial position is dealt with as an adjustment to equity also. [IAS 12.61A]. This could be taken by some to mean that any subsequent remeasurement of tax originally recognised in equity as part of an adjustment at the date of transition to IFRS accounting standards must be accounted for in equity also.

How we see it

IAS 8 defines retrospective application as the application of "a new accounting policy to transactions, other events and conditions as if that policy had always been applied", and the treatment required by IFRS 1 is based on the fact that an entity is restating amounts that arise from events and transactions before the date of transition to IFRS accounting standards.

Accordingly, in our view, if the item that gave rise to the deferred tax would have been recognised in profit or loss in the normal course of events had the new accounting policies (or IFRS accounting standards) always been applied, the effect of subsequent re-measurement is also recognised in profit or loss.

An example is given in Illustration 7-1 below.

Illustration 7-1: Remeasurement of deferred tax asset recognised as at the date of transition to IFRS accounting standards

Entity A's date of transition to IFRS accounting standards was 1 January 20X2. After applying IAS 37, its opening IFRS statement of financial position shows an additional liability for environmental remediation costs of CU5 million as an adjustment to retained earnings, together with an associated deferred tax asset at 40% of CU2 million.

The environmental liability does not change substantially over the next accounting period, but during the year ended 31 December 20X3 the tax rate falls to 30%. This requires the deferred tax asset to be remeasured to CU1.5 million giving rise to tax expense of CU500,000. Is this expense recognised in profit or loss for the period or in retained earnings?

In the fact pattern, if IFRS accounting standards had always been applied, all the charge for environmental costs (and all the related deferred tax) would have been reflected in profit or loss in previous income statements. Therefore, the effect of the change in the tax rate is recognised in profit or loss.

Where the retrospective restatement giving rise to a deferred tax asset or liability directly in equity represented the cumulative total of amounts that would have been recognised ordinarily in other comprehensive income or directly in equity in previous periods if the new accounting policy had always been applied (e.g., deferred tax relating to the revaluation of property, plant, or equipment), any subsequent re-measurement of the deferred tax is also accounted for in the same manner, i.e., in other comprehensive income or directly in equity. Remeasurement of deferred tax relating to an asset that is measured at deemed cost on transition to IFRS accounting standards but where the tax base of the asset remains at original cost, or is an amount based on original cost is discussed in section 7.3.1 above.

Retrospective restatements or applications are discussed in detail in Chapter 29.

7.3.4 Defined benefit pension plans

IAS 19 requires an entity, in accounting for a post-employment defined benefit plan, to recognise actuarial gains and losses relating to the plan in other comprehensive income. At the same time, service cost and net interest on the net defined benefit liability (asset) is recognised in profit or loss.

In many jurisdictions, tax relief for post-employment benefits is given on the basis of cash contributions paid to the plan fund (or benefits paid when a plan is unfunded).

This significant difference between the ways in which defined benefit plans are treated for tax and financial reporting purposes can make the allocation of tax between profit or loss and other comprehensive income somewhat arbitrary.

How we see it

The issue is of particular importance when a first-time adopter has large funding shortfalls on its defined benefit schemes and at the same time can only recognise part of its deferred tax assets. In such a situation the method of allocation of tax could well affect the after-tax profit in a given year. In our view, this is an instance of the exceptional circumstances envisaged by IAS 12 when a strict allocation of tax between profit or loss and other comprehensive income is not possible. Accordingly, any reasonable method of allocation could be used, provided that it is applied on a consistent basis. See Chapter 29 for further discussion, including approaches to allocation.

7.4 IAS 16 *Property, Plant and Equipment* and IAS 40 *Investment Property* (cost model)

The implementation guidance discussed in this section applies to property, plant and equipment as well as investment properties that are accounted for under the cost model in IAS 40. [IFRS 1.IG62].

IFRS 1 requires an entity to use estimates made under its previous GAAP (after adjustment for different accounting policies), unless there is objective evidence those estimates are in error, [IFRS 1.14], but also recognises that an entity might need to make estimates in accordance with IFRS accounting standards at the date of transition to IFRS accounting standards that were not required at that date under previous GAAP. [IFRS 1.16] (see section 4.2 above). Errors made under previous GAAP are corrected retrospectively and separately disclosed in the reconciliations from previous GAAP to IFRS accounting standards (see section 6.3.1 above). [IFRS 1.26]. These general requirements are relevant where estimates or accounting policies differ under previous GAAP and IFRS accounting standards, as discussed further below.

7.4.1 Depreciation method and rate

If a first-time adopter's depreciation methods and rates under its previous GAAP are acceptable under IFRS accounting standards, then it accounts for any change in estimated useful life or depreciation pattern prospectively from when it makes that change in estimate (see section 4.2 above). [IFRS 1.14, IFRS 1.15, IAS 16.51, IAS 16.61]. However, if the depreciation methods and rates are not acceptable under IFRS accounting standards and the difference has a material impact on the financial statements, a first-time adopter adjusts the accumulated depreciation in its opening IFRS statement of financial position retrospectively. [IFRS 1.IG7]. Further differences could arise from the requirement in IAS 16 to review the residual value and the useful life of an asset at least at each financial year end, [IAS 16.51], which might not be required under a first-time adopter's previous GAAP (see section 7.4.2 below).

How we see it

If a restatement of the depreciation methods and rates would be too onerous, a first-time adopter could opt instead to use fair value as the deemed cost at the date of transition to IFRS accounting standards (see section 5.4.1 above). However, application of the deemed cost exemption is not always the only approach available. In practice, many first-time adopters have found that, other than buildings, there are generally few items of property, plant and equipment that still have a material carrying amount after more than 30 or 40 years of use. Therefore, the carrying value that results from a fully retrospective application of IAS 16 might not differ much from the carrying amount under an entity's previous GAAP.

7.4.2 Estimates of useful life and residual value

IAS 16 requires the entity to re-assess the remaining useful life and residual value at least each financial year-end and, if expectations differ from previous estimates, the change is accounted for as a change in an accounting estimate in accordance with IAS 8. [IAS 16.51].

Consider the following situations:

- An entity uses fair value as deemed cost for an item of property, plant and equipment still in use that it had depreciated to zero under its previous GAAP (i.e., the asset has already reached the end of its originally assessed economic life).
- An entity does not use fair value as deemed cost, but there were indicators in the past that the useful life or residual value had changed but those changes were not required to be recognised under previous GAAP.

How we see it

In the former case, we believe that the asset's deemed cost is required to be depreciated over its re-assessed economic life and taking into account its re-assessed residual value.

The same applies to the latter case, i.e., the IFRS carrying amount as of the date of transition to IFRS accounting standards needs to be determined by taking into account the re-assessed useful life and the re-assessed residual value. Often, this is difficult, as most entities would not have re-assessed the useful lives contemporaneously with the issuance of the previous GAAP financial statements. Accordingly, the fair value as deemed cost exemption might be the most logical choice.

However, if there were indicators in the past that the useful life or residual value had changed but the entity did not recognise such changes under the previous GAAP despite its previous GAAP requiring an entity to adjust for changes in useful life or residual value, then, this is an 'error', that the entity corrects through retrospective restatement, and distinguishes from the effects of changes in policies in the reconciliations required to explain the transition (see section 6.3.1 above). [IFRS 1.26].

7.4.3 Revaluation model

A first-time adopter that chooses to account for some or all classes of property, plant and equipment under the revaluation model needs to present the cumulative revaluation surplus as a separate component of equity. IFRS 1 requires that "The revaluation surplus at the date of transition to IFRSs is based on a comparison of the carrying amount of the asset at that date with its cost or deemed cost." [IFRS 1.IG10].

How we see it

A first-time adopter that uses fair value as the deemed cost for those classes of property, plant and equipment would be required to reset the cumulative revaluation surplus to zero. Therefore, any previous GAAP revaluation surplus related to assets valued at deemed cost cannot be used to offset a subsequent impairment or revaluation loss under IFRS accounting standards.

Illustration 7-2 below demonstrates the treatment of the revaluation reserve at the date of transition to IFRS accounting standards based on different deemed cost exemptions applied under IFRS 1.

Illustration 7-2: Determination of revaluation reserve under IAS 16 as at the date of transition to IFRS accounting standards

Entity A, with a date of transition to IFRS accounting standards of 1 January 20X2, has freehold land classified as property, plant and equipment. The land was measured under previous GAAP using a revaluation model that is comparable to that required by IAS 16. The previous GAAP carrying amount is CU185,000, being the revaluation last determined in April 20X1. The cost of the land under IFRS accounting standards as at 1 January 20X2 is CU90,000. The fair value of the land on 1 January 20X2 is CU200,000. The entity elects to apply the revaluation model under IAS 16 to the asset class that includes the land.

The revaluation reserve at the date of transition would depend on the exemption applied by the entity:

- If Entity A chooses to use the transition date fair value as deemed cost, the IFRS revaluation reserve is zero (CU200,000 - CU200,000).
- If Entity A chooses to use the previous GAAP revaluation as deemed cost, the IFRS revaluation reserve is CU15,000 (CU200,000 - CU185,000).
- If Entity A does not use the deemed cost exemption under IFRS 1, the IFRS revaluation reserve is CU110,000 (CU200,000 - CU90,000).

7.4.4 Parts approach

IAS 16 requires a 'parts approach' to the recognition of property, plant and equipment. Thus, a large item such as an aircraft is recognised as a series of 'parts' that could have different useful lives. An engine of an aircraft could be a part. IAS 16 does not prescribe the physical unit of measure (the 'part') for recognition i.e., what constitutes an item of property, plant and equipment. Instead, the standard relies on judgement in applying the recognition criteria to an entity's specific circumstances. [IAS 16.9, IFRS 1.IG12]. However, the standard does require an entity to:

- Apply a restrictive definition of maintenance costs or costs of day-to-day servicing which it describes as "primarily the costs of labour and consumables, and may include the cost of small parts. The purpose of these expenditures is often described as for the 'repairs and maintenance' of the item of property, plant and equipment" [IAS 16.12]

Derecognise the carrying amount of the parts that are replaced [IAS 16.13]

And

- Depreciate separately each part of an item of property, plant and equipment with a cost that is significant in relation to the total cost of the item [IAS 16.43]

Based on this, it is reasonable to surmise that parts can be relatively small units. Therefore, it is possible that even if a first-time adopter's depreciation methods and rates are acceptable under IFRS accounting standards, it might have to restate property, plant and equipment because its unit of measure under previous GAAP was based on physical units significantly larger than parts as described in IAS 16. Accounting for parts is described in detail in Chapter 19.

How we see it

In practice, however, there is seldom a need to account for every single part of an asset separately. Very often there is no significant difference in the reported amounts once all significant parts have been identified. Furthermore, as explained in Chapter 19, an entity might not actually need to identify the parts of an asset until it incurs the replacement expenditure.

7.5 IFRS 16 Leases

Other than the exemption in IFRS 1.D9 (concerning the assessment of whether a contract existing at the date of transition to IFRS accounting standards contains a lease - see section 5.5 above), there are no exemptions regarding lease accounting available to a first-time adopter that is a lessor.

Therefore, at the date of transition to IFRS accounting standards, a lessor classifies a lease as operating or financing on the basis of circumstances existing at the inception of the lease. Lease classification is reassessed only if there is a lease modification. [IFRS 16.66]. Changes in estimates (for example, changes in estimates of the economic life or the residual value of the underlying asset) or changes in circumstances (for example, default by the lessee) do not give rise to a new classification of a lease. [IFRS 1.IG14]. See Chapter 24 for further discussion about modifying lease terms under IFRS 16.

7.5.1 Straight-lining of lease payments including incentives by the lessor

A first-time adopter that elects either fair value or fair value as deemed cost under IFRS 1.D7 for investment property leased out under an operating lease, might have paid lease incentives to a lessee. [IFRS 1.D7].

IFRS 16 requires a lessor to recognise lease payments from operating leases, less any incentives provided by the lessor to the lessee, as income on either a straight-line basis or another systematic basis. [IFRS 16.81]. As there is no relief in IFRS 1 from full retrospective application of IFRS 16 by lessors, the lessor as first-time adopter would recognise an asset as a result of the recognition of the lease incentive on a straight-line basis or other basis.

However, the fair value of the investment property might include the effect of the lease incentive, as a market participant would take this into consideration when measuring fair value. Recognition of both assets by the spreading of lease incentives and investment property at fair value would therefore lead to 'double counting'. IAS 40 requires an entity which chooses the fair value model not to double-count assets or liabilities that are recognised as separate assets or liabilities, such as prepaid or accrued operating lease income. [IAS 40.50(c)].

How we see it

In our view, the entity would elect either of the following approaches in order to avoid double counting the effect on the straight-lining of lease payments on the fair value or fair value as deemed cost of investment property:

- (a) Assets or liabilities recognised as a result of straight-lining lease payments are not separately presented and are considered a component of investment property.
- Or
- (b) The fair value (or fair value as deemed cost) of the investment property is adjusted for the assets or liabilities presented separately.

When the entity uses approach (a) above, the component parts of investment property are adjusted to ensure the subsequent pattern of depreciation on the investment property is appropriate.

See Chapter 20 for detailed guidance (including an Illustration) on the situation where an entity subsequently accounts for the investment property using the fair value model in IAS 40.

7.6 IFRS 15 Revenue from Contracts with Customers

The exemptions in IFRS 1.D34-D35 allow a first-time adopter not to restate contracts that were completed before the earliest period presented (i.e., the date of transition to IFRS accounting standards) or completed contracts that begin and end within the same annual reporting period (see section 5.20 above). [IFRS 1.D34, IFRS 1.D35, IFRS 15.C5(a)].

However, where IFRS 15 is applied to a contract, a first-time adopter that has received amounts that do not yet qualify for recognition as revenue under IFRS 15 (e.g., the proceeds of a sale that does not qualify for revenue recognition) must recognise those amounts as a liability in its opening IFRS statement of financial position and adjust the liability for any significant financing component as required by IFRS 15. [IFRS 1.IG17]. It is therefore possible that revenue that was already recognised under a first-time adopter's previous GAAP will need to be deferred in its opening IFRS statement of financial position and recognised again (this time under IFRS accounting standards) as revenue at a later date.

Conversely, it is possible that revenue deferred under a first-time adopter's previous GAAP cannot be recognised as a contract liability in the opening IFRS statement of financial position. A first-time adopter would not be able to report such revenue deferred under its previous GAAP as revenue under IFRS accounting standards at a later date. See Chapter 28 for matters relating to revenue recognition under IFRS 15.

Some further application issues in relation to IFRS 15 on the transition to IFRS accounting standards are discussed in section 5.20 above.

7.7 IAS 19 Employee Benefits

7.7.1 Sensitivity analysis for each significant actuarial assumption

IAS 19 requires the disclosures set out below about sensitivity of defined benefit obligations. Therefore, for an entity's first IFRS financial statements careful preparation is needed to compile the information required to present the sensitivity disclosure for the current and comparative periods. IAS 19 requires an entity to disclose: [IAS 19.145]

- (a) A sensitivity analysis for each significant actuarial assumption as of the end of the reporting period, showing how the defined benefit obligation would have been affected by changes in the relevant actuarial assumption that were reasonably possible at that date
- (b) The methods and assumptions used in preparing the sensitivity analyses required by (a) and the limitations of those methods
- And
- (c) Changes from the previous period in the methods and assumptions used in preparing the sensitivity analyses, and the reasons for such changes

7.7.2 Full actuarial valuations

An entity's first IFRS financial statements reflect its defined benefit liabilities or assets on at least three different dates, i.e., the end of the first IFRS reporting period, the end of the comparative period and the date of transition to IFRS accounting standards (four different dates if it presents two comparative periods). If an entity obtains a full actuarial valuation at one or two of these dates, it is allowed to roll forward (or roll back) to another date but only as long as the roll forward (or roll back) reflects material transactions and other material events (including changes in market prices and interest rates) between those dates. [IFRS 1.IG21, IAS 19.59].

7.7.3 Actuarial assumptions

A first-time adopter's actuarial assumptions at its date of transition to IFRS accounting standards must be consistent with the ones it used for the same date under its previous GAAP (after adjustments to reflect any difference in accounting policies), unless there is objective evidence that those assumptions were in error (see section 4.2 above). The impact of any later revisions to those assumptions is an actuarial gain or loss of the period in which the entity makes the revisions. [IFRS 1.IG19].

If a first-time adopter needs to make actuarial assumptions at the date of transition to IFRS accounting standards that were not necessary for compliance with its previous GAAP, those actuarial assumptions must not reflect conditions that arose after the date of transition. In particular, discount rates and the fair value of plan assets at the date of transition need to reflect the market conditions at that date. Similarly, the entity's actuarial assumptions at the date of transition about future employee turnover rates must not reflect a significant increase in estimated employee turnover rates as a result of a curtailment of the pension plan that occurred after the date of transition. [IFRS 1.16, IFRS 1.IG20].

How we see it

If there is a material difference arising from a change in assumptions at the date of transition to IFRS accounting standards, consideration needs to be given to whether there was an error under previous GAAP. Errors must be disclosed separately from other transition adjustments (see section 6.3.1 above).

7.7.4 Unrecognised past service costs

IAS 19 requires immediate recognition of all past service costs as an expense. [IAS 19.103]. Accordingly, a first-time adopter that has unrecognised past service costs under previous GAAP must recognise such amounts in retained earnings at the date of transition, regardless of whether the participants are fully vested in the benefit.

7.8 IAS 21 *The Effects of Changes in Foreign Exchange Rates*

7.8.1 Functional currency

A first-time adopter needs to confirm whether all entities included within the financial statements have appropriately determined their functional currency. IAS 21 defines an entity's functional currency as "the currency of the primary economic environment in which the entity operates", [IAS 21.8], and contains detailed guidance on determining the functional currency. [IAS 21.9-14]. See Chapter 16.

If the functional currency of an entity is not readily identifiable, IAS 21 requires consideration of whether the activities of the foreign operation are carried out as an extension of the reporting entity, rather than being carried out with a significant degree of autonomy. [IAS 21.11]. This requirement often leads to the conclusion under IFRS accounting standards that intermediate holding companies, treasury subsidiaries and foreign sales offices have the same functional currency as their parent (see Chapter 16).

Many national GAAPs do not specifically define the concept of functional currency, or they might contain guidance on identifying the functional currency that differs from that in IAS 21. Consequently, a first-time adopter that measured transactions in a currency that was not its functional currency under IFRS accounting standards would need to restate its financial statements because IFRS 1 does not contain an exemption that would allow it to use a currency other than the functional currency under IFRS accounting standards in determining the cost of assets and liabilities in its opening IFRS statement of financial position.

How we see it

While there is an exemption that allows a first-time adopter to reset the cumulative exchange differences in equity to zero (see section 5.6 above), a first-time adopter recognises and measures its assets or liabilities in its functional currency retrospectively in accordance with IAS 21 (see Chapter 16).

The IFRS IC considered whether a specific exemption should be granted to first-time adopters to permit entities to translate all assets and liabilities at the transition-date exchange rate rather than applying the functional currency approach in IAS 21 but declined to offer first-time adopters any exemptions on transition on the basis that the position under IFRS 1 and IAS 21 was clear.⁹

How we see it

The principal difficulty relates to non-monetary items that are measured on the basis of historical cost, particularly property, plant and equipment, since these will need to be re-measured in terms of the IAS 21 functional currency at the rates of exchange applicable at the date of acquisition of the assets concerned, and recalculating cumulative depreciation charges accordingly. It could be that, to overcome this difficulty, an entity considers using the option in IFRS 1 whereby the fair value of such assets at the date of transition is treated as being their deemed cost (see section 5.4.1 above).

The Exposure Draft, *Translation to a Hyperinflationary Presentation Currency - Proposed amendments to IAS 21*, which was published by the IASB in July 2024, addresses the use of a hyperinflationary presentation currency by an entity with a non-hyperinflationary functional currency and it does not propose transition relief for a first-time adopter (see Chapter 17). The final standard is expected to be issued in Q4 of 2025.¹⁰

7.9 IAS 28 Investments in Associates and Joint Ventures

There are a number of first-time adoption exemptions that have an impact on the accounting for investments in associates and joint ventures:

- The business combinations exemption, which also applies to past acquisitions of investments in associates and interests in joint ventures (see section 5.2.1.B above)
 - An exemption in respect of determining the cost of an investment in an associate and a joint venture within any separate financial statements that an entity could prepare (see section 5.7.2 above)
- And
- Separate rules that deal with situations in which an investor or a joint venturer adopts IFRS accounting standards before or after an associate or a joint venture does so (see section 5.8 above)

Otherwise, there are no specific first-time adoption provisions for IAS 28, which means that a first-time adopter of IFRS accounting standards is effectively required to apply IAS 28 as if it had always done so.

How we see it

For some first-time adopters, this could mean application of the equity method for the first time. For other first-time adopters, however, the issue is likely to be that they are already applying the equity method under their previous GAAPs and will now need to identify the potentially significant differences between the methodologies of the equity method under their previous GAAPs and under IAS 28.

⁹ [IFRIC Update](#), October 2004, available on the IFRS Foundation's website.

¹⁰ [IFRS Foundation workplan](#), available on the IFRS Foundation's website (accessed on 1 July 2025).

In particular, there could be GAAP differences related to:

- The criteria used to determine which investments are associates or joint ventures
 - The elimination of transactions between investors or joint venturers and associates or joint ventures
 - The treatment of loss-making associates or joint ventures
 - The permitted interval between the reporting dates of an investor or a joint venturer and an associate or joint venture with non-coterminous year-ends
 - The treatment of investments in entities formerly classified as associates or joint ventures
- And
- The requirement for uniform accounting policies between the investor or joint venturer and the associate or joint venture

In September 2024, the IASB issued an Exposure Draft addressing application questions relating to the equity method.¹¹ See the discussion of the IASB project - Equity Method in Chapter 12.

7.9.1 Impairment test at date of transition to IFRS accounting standards

A first-time adopter is required by IFRS 1 to perform an impairment test in accordance with IAS 36 for any goodwill recognised at the date of transition to IFRS accounting standards, regardless of whether there is any indication of impairment, unless a first-time adopter applies IFRS 3 retrospectively to the related past business combinations. [IFRS 1.C4(gXii)].

IFRS 1 specifically notes that its provisions with regard to past business combinations apply also to past acquisitions of investments in associates, interests in joint ventures and interests in joint operations (in which the activity of the joint operation constitutes a business, as defined in IFRS 3). [IFRS 1.C5]. Therefore, an impairment test for investments in associates or joint ventures whose carrying value includes an element of goodwill must be undertaken as at the date of transition to IFRS accounting standards. This impairment test will, however, need to be carried out on the basis required by IAS 28 as described in Chapter 12. See also section 5.2.5 and Illustration 5-12 above.

7.10 IAS 29 Financial Reporting in Hyperinflationary Economies

The IASB decided not to exempt first-time adopters from retrospective application of IAS 29 “because hyperinflation can make unadjusted financial statements meaningless or misleading.” [IFRS 1.BC67].

Therefore, in preparing its opening IFRS statement of financial position a first-time adopter applies IAS 29 to any periods during which the economy of the functional currency or presentation currency was hyperinflationary. [IFRS 1.IG32]. However, to make the restatement process less onerous, a first-time adopter might want to consider using fair value as deemed cost for property, plant and equipment (see section 5.4.1 above). [IFRS 1.D5, IFRS 1.IG33]. This exemption is also available to other long-lived assets such as investment properties, right-of-use assets and certain intangible assets. [IFRS 1.D7]. If a first-time adopter applies an exemption to use fair value or a revaluation as deemed cost available in IFRS 1.D5-D8, it applies IAS 29 to periods after the date for which the revalued amount or fair value was determined. [IFRS 1.IG34, IFRS 1.D5, IFRS 1.D6, IFRS 1.D7, IFRS 1.D8].

7.11 IFRS 11 Joint Arrangements

The ‘business combinations’ exemption described in section 5.2 above is also applicable to past acquisitions of interests in joint ventures and interests in joint operations in which the activity of the joint operation constitutes a business, as defined by IFRS 3 (see section 5.2.1.B above). [IFRS 1.C5]. Therefore, an impairment test for investments in joint ventures whose carrying value includes an element of goodwill must be undertaken as at the date of transition to IFRS accounting standards (see section 5.2.5 above). [IFRS 1.C4(gXii)]. This impairment test will, however, need to be carried out on the basis required by IAS 28 as described in Chapter 12. See also section 5.2.5 and Illustration 5-12 above.

In addition, the first-time adoption exemptions that are available for investments in associates can be applied to investments in joint ventures (see section 7.9 above).

With respect to interests in joint operations, the requirements of IFRS 11 could well result in the ‘re-recognition’ of assets that were transferred to others and therefore not recognised under previous GAAP. A joint operator is required to recognise its assets and liabilities, including its share of those assets that are jointly held and liabilities that are jointly incurred, based on the requirements of IFRS accounting standards applicable to such assets or liabilities. [IFRS 11.20, IFRS 11.21, IFRS 11.21A, IFRS 11.22, IFRS 11.23].

11 Exposure Draft [IASB/ED/2024/9 Equity Method of Accounting - IAS 28 Investments in Associates and Joint Ventures](#), IASB, September 2024. Available on the IFRS Foundation's website.

7.12 IAS 36 *Impairment of Assets*

As far as goodwill is concerned, first-time adopters that make use of the business combinations exemption are required by IFRS 1 to subject all goodwill carried in the statement of financial position at the date of transition to IFRS accounting standards to an impairment test, regardless of whether there are any indicators of impairment (see section 5.2.5 above). [IFRS 1.C4(g)(ii)].

While IFRS 1 does not specifically call for an impairment test of other assets, a first-time adopter needs to be mindful that there are no exemptions in IFRS 1 from full retrospective application of IAS 36. IFRS 1's implementation guidance reminds a first-time adopter to: [IFRS 1.IG39]

- (a) Determine whether any impairment loss exists at the date of transition to IFRS accounting standards.
And
- (b) Measure any impairment loss that exists at that date, and reverse any impairment loss that no longer exists at that date. An entity's first IFRS financial statements include the disclosures that IAS 36 would have required if the entity had recognised those impairment losses or reversals in the period beginning with the date of transition to IFRS accounting standards. [IFRS 1.24(c)]. See section 6.3.3 above.

As impairment losses for non-financial long-lived assets other than goodwill can be reversed under IAS 36, in many instances, there will be no practical difference between applying IAS 36 fully retrospectively and applying it at the date of transition to IFRS accounting standards. Performing the test under IAS 36 at the date of transition to IFRS accounting standards results in re-measuring any previous GAAP impairment to comply with the approach in IAS 36 and recognition of any additional impairment or reversing any previous GAAP impairment that is no longer necessary.

The estimates used to determine whether a first-time adopter recognises an impairment provision at the date of transition to IFRS accounting standards are required to be consistent with estimates made for the same date under previous GAAP (after adjustments to reflect any difference in accounting policies), unless there is objective evidence that those estimates were in error. [IFRS 1.IG40, IFRS 1.14]. If a first-time adopter needs to make estimates and assumptions that were not necessary under its previous GAAP, they must not reflect conditions that arose after the date of transition to IFRS accounting standards. [IFRS 1.IG41, IFRS 1.16]. See section 4.2 above.

If a first-time adopter's opening IFRS statement of financial position reflects impairment losses, it recognises any later reversal of those impairment losses in profit or loss unless IAS 36 requires that reversal to be treated as a revaluation. This applies to both impairment losses recognised under previous GAAP and additional impairment losses recognised on transition to IFRS accounting standards. [IFRS 1.IG43, IAS 36.119].

In March 2024, the IASB published an Exposure Draft, *Business Combinations-Disclosures, Goodwill and Impairment - Proposed amendments to IFRS 3 and IAS 36*.¹² See the details in Chapter 10 and Chapter 21.

How we see it

A first-time adopter needs to be particularly alert for indicators of impairment where use is made of any of the deemed cost exemptions.

In arguing that it is not necessary to restrict application of the deemed cost exemption to classes of assets to prevent selective revaluations, the IASB effectively relies on IAS 36 to avoid overvaluations:

"... IAS 36 *Impairment of Assets* requires an impairment test if there is any indication that an asset is impaired. Thus, if an entity uses fair value as deemed cost for assets whose fair value is above cost, it cannot ignore indications that the recoverable amount of other assets may have fallen below their carrying amount. Therefore, the IFRS does not restrict the use of fair value as deemed cost to entire classes of asset." [IFRS 1.BC45].

How we see it

Where a first-time adopter uses any of the deemed cost exemptions at the date of transition to IFRS accounting standards (see section 5.4 above), any previous impairment reflected in the deemed cost is effectively subsumed into the new cost and could not subsequently be separated (and hence could never be reversed).

¹² Exposure Draft [IASB/ED/2024/3](#) *Business Combinations-Disclosures, Goodwill and Impairment - Proposed amendments to IFRS 3 and IAS 36*, IASB, March 2024. Available on the IFRS Foundation's website.

While the example below refers to impairment of exploration and evaluation assets, the same considerations apply where a deemed cost is used for other assets, such as property, plant and equipment. For example, if a first-time adopter applies the deemed cost exemption in IFRS 1.D8A, [IFRS 1.D8A], to exploration and evaluation assets which were previously partly impaired (see section 5.4.3 above), the first-time adopter recognises the previously impaired exploration and evaluation assets (which nevertheless still have a net book value) in the opening statement of financial position on a 'net basis' (i.e., with accumulated depreciation of 'zero'). In this case, the previous impairment effectively becomes part of the new cost and hence could never be reversed.

How we see it

However, if a first-time adopter does not elect to use any deemed cost exemptions to the exploration and evaluation assets, it must identify exploration and evaluation assets that were previously expensed, impaired, or written off (whichever terminology was used under previous GAAP) but that are recognised under IFRS accounting standards. The entity recognises both the gross cost and impairment provision in the opening statement of financial position. Exploration and evaluation assets that have previously been derecognised on the basis that no future economic benefits were expected cannot be re-recognised.

7.13 IAS 37 Provisions, Contingent Liabilities and Contingent Assets

The main issue for a first-time adopter in applying IAS 37 is that IFRS 1 prohibits retrospective application of some aspects of IFRS accounting standards relating to estimates. [IFRS 1.14]. This is discussed in detail in section 4.2 above. Briefly, the restrictions are intended to prevent an entity from applying hindsight and making 'better' estimates as at the date of transition to IFRS accounting standards. Unless there is objective evidence that those estimates were in error, recognition and measurement are to be consistent with estimates made under previous GAAP, after adjustments to reflect any difference in accounting policies. The entity has to report the impact of any later revisions to those estimates as an event of the period in which it makes the revisions. [IFRS 1.IG40]. An entity cannot use hindsight in determining the provisions to be included under IAS 37 at the end of the comparative period within its first IFRS financial statements as these requirements also apply at that date. [IFRS 1.14, IFRS 1.15, IFRS 1.16, IFRS 1.17].

At the date of transition to IFRS accounting standards, an entity might also need to make estimates that were not necessary under its previous GAAP. Such estimates and assumptions must not reflect conditions that arose after the date of transition to IFRS accounting standards. [IFRS 1.IG41].

If application of IAS 37 changes the way an entity accounts for provisions it needs to consider whether there are any consequential changes, for example:

- Derecognition of a provision for general business risks could mean that assets in the related cash-generating unit are impaired.
- And
- Remeasurement of a decommissioning provision could indicate that the decommissioning component of the corresponding asset needs to be reconsidered (see Chapter 27).

The above list is not exhaustive and a first-time adopter needs to carefully consider whether changes in other provisions have a consequential impact.

In November 2024, the IASB issued an Exposure Draft, *Provisions - Targeted Improvements - Proposed amendments to IAS 37* aiming to make targeted improvements to the present obligation recognition criterion, what costs are included in measuring a provision and the discount rate requirements.¹³ See the discussion of the IASB project in Chapter 27.

13 Exposure Draft [IASB/ED/2024/11: Provisions - Targeted Improvements - Proposed amendments to IAS 37](#), IASB, November 2024. Available on the IFRS Foundation's website.

7.14 IAS 38 *Intangible Assets*

An entity's opening IFRS statement of financial position: [IFRS 1.IG44]

- (a) Excludes all intangible assets and other intangible items that do not meet the criteria for recognition under IAS 38 at the date of transition to IFRS accounting standards
And
- (b) Includes all intangible assets that meet the recognition criteria in IAS 38 at that date, except for intangible assets acquired in a business combination that were not recognised in the acquirer's consolidated statement of financial position under previous GAAP and also would not qualify for recognition under IAS 38 in the acquiree's separate statement of financial position (see section 5.2.4.B above) [IFRS 1.C4(b)(ii), IFRS 1.C4(f)]

IAS 38 imposes a number of criteria that restrict capitalisation of internally generated intangible assets. An entity is prohibited from using hindsight to conclude retrospectively that the recognition criteria are met, thereby capitalising an amount previously recognised as an expense. [IAS 38.71]. A first-time adopter must be particularly careful that, in applying IAS 38 retrospectively as at the date of transition to IFRS accounting standards, it does not capitalise costs incurred before the standard's recognition criteria were met. Therefore, a first-time adopter is not permitted to capitalise the costs of internally generated intangible assets incurred before the date when it: [IFRS 1.IG46]

- (a) Concludes, based on an assessment made and documented at the date of that conclusion, that it is probable that future economic benefits from the asset will flow to the entity
And
- (b) Has a reliable system for accumulating the costs of internally generated intangible assets when, or shortly after, they are incurred

In other words, it is not permitted under IFRS 1 to reconstruct retrospectively the costs of intangible assets.

If an internally generated intangible asset qualifies for recognition at the date of transition to IFRS accounting standards, it is recognised in the entity's opening IFRS statement of financial position even if the related expenditure had been expensed under previous GAAP. If the asset does not qualify for recognition under IAS 38 until a later date, its cost is the sum of the expenditure incurred from that later date. [IFRS 1.IG47].

How we see it

A first-time adopter that did not capitalise internally generated intangible assets is unlikely to have the type of documentation and systems required by IAS 38 and will therefore not be able to capitalise these items in its opening IFRS statement of financial position. Going forward, a first-time adopter will need to implement internal systems and procedures that enable it to determine whether or not any future internally generated intangible assets are capitalised (for example, in the case of development costs).

Capitalisation of separately acquired intangible assets will generally be easier because there is usually contemporaneous documentation prepared to support the investment decisions and its cost can usually be measured reliably. [IFRS 1.IG48, IAS 38.26]. However, if an entity that used the business combinations exemption did not recognise an intangible asset acquired in a business combination under its previous GAAP, it would only be able to do so upon first-time adoption if the intangible asset were to qualify for recognition under IAS 38 in the acquiree's statement of financial position, with a consequential impact on goodwill (see section 5.2.4.B above). [IFRS 1.C4(b)(ii), IFRS 1.C4(f), IFRS 1.C4(g)(i), IFRS 1.IG49].

If a first-time adopter's amortisation methods and rates under previous GAAP are acceptable under IFRS accounting standards, the entity does not restate the accumulated amortisation in its opening IFRS statement of financial position. Instead, the entity accounts for any change in estimated useful life or amortisation pattern prospectively from the period when it makes that change in estimate. [IFRS 1.14, IAS 38.104]. If an entity's amortisation methods and rates under previous GAAP differ from those acceptable in accordance with IFRS accounting standards and those differences have a material effect on the financial statements, the entity would adjust the accumulated amortisation in its opening IFRS statement of financial position. [IFRS 1.14, IFRS 1.IG51].

When an entity uses the exemption in IFRS 1.D8B for assets used (or previously used) in operations subject to rate regulation (see section 5.4.4 above), it uses the carrying amount of the intangible asset at the date of transition to IFRS accounting standards as deemed cost as if it had acquired an intangible asset with the same remaining service potential for that amount at the date of transition to IFRS accounting standards. Subsequent amortisation is based on that deemed cost and starts from the date of transition to IFRS accounting standards. [IFRS 1.IG51].

The useful life and amortisation method of an intangible asset must be reviewed at least each financial year end (see Chapter 18), which is often something that is not required under a first-time adopter's previous GAAP. [IAS 38.104].

8 Regulatory issues

8.1 First-time adoption by foreign private issuers that are US SEC registrants

8.1.1 US SEC guidance

A foreign private issuer that is registered with the US Securities and Exchange Commission (US SEC) is allowed to use IFRS accounting standards as issued by the IASB (referred to herein as 'IFRS accounting standards') in its filings. A foreign private issuer is normally required to present two comparative periods for its statement of profit or loss and other comprehensive income (or statement of profit or loss, if presented), statement of cash flows, and statement of changes in equity. Converting two comparative periods to IFRS accounting standards was considered to be a significant burden to companies. Therefore, in April 2005, the US SEC published amendments to Form 20-F that provided for a limited period a two-year accommodation for foreign private issuers that were first-time adopters of IFRS accounting standards.¹⁴ In March 2008, the US SEC extended indefinitely the two-year accommodation to all foreign private issuers that are first-time adopters of IFRS accounting standards as issued by the IASB.¹⁵

The amendment states that "An issuer that changes the body of accounting principles used in preparing its financial statements presented pursuant to Item 8.A.2 ("Item 8.A.2") to International Financial Reporting Standards ("IFRS") issued by the International Accounting Standards Board ("IASB") may omit the earliest of three years of audited financial statements required by Item 8.A.2 if the issuer satisfies the conditions set forth in this Instruction G. For purposes of this instruction, the term "financial year" refers to the first financial year beginning on or after January 1 of the same calendar year." The accommodation only applies to an issuer that (a) adopts IFRS accounting standards for the first time by an explicit and unreserved statement of compliance with IFRS accounting standards and (b) the issuer's most recent audited financial statements are prepared in accordance with IFRS accounting standards.

First-time adopters that rely on the accommodation are allowed, but not required, to include any financial statements, discussions or other financial information based on their previous GAAPs. If first-time adopters do include such information, they must prominently disclose cautionary language to avoid inappropriate comparison with information presented under IFRS accounting standards. The US SEC did not mandate a specific location for any previous GAAP information but did prohibit presentation of previous GAAP information in a side-by-side columnar format with IFRS financial information.

Where a narrative discussion of its financial condition is provided, the accommodation requires management to focus on the financial statements prepared under IFRS accounting standards for the past two financial years.

IFRS 1 requires a first-time adopter to present reconciliations from its previous GAAP to IFRS accounting standards in the notes to its financial statements and allows certain exemptions from full retrospective application of IFRS accounting standards in deriving the relevant data. Under the US SEC's accommodation,¹⁶ any issuer relying on any of the elective exemptions or mandatory exceptions from IFRS accounting standards that are contained within IFRS 1 will have to disclose additional information which includes:

- To the extent the primary financial statements reflect the use of exemptions permitted or exceptions required by IFRS 1:
 - Detailed information for each exemption or exception used, including:
 - An indication of the items or class of items to which the exemption or exception was applied
 - A description of what accounting principle was used and how it was applied
 - And
 - Where material, qualitative disclosure of the impact on financial condition, changes in financial condition and results of operations that the treatment specified by IFRS accounting standards would have had absent the election to rely on the exemption

15 Release No. 33-8879, Acceptance From Foreign Private Issuers of Financial Statements Prepared in Accordance With International Financial Reporting Standards Without Reconciliation to U.S. GAAP, Securities and Exchange Commission, 21 December 2007.

16 Form 20-F, United States Securities and Exchange Commission, instruction 4 to item 5 and instruction 3 to item 8.

8.1.2 IPTF guidance

In November 2008, the Center for Audit Quality SEC Regulations Committee's International Practices Task Force ('IPTF') provided guidance as to the reconciliation requirements for an US SEC foreign private issuer the first time it presents financial statements according to IFRS accounting standards in its Form 20-F, when that issuer previously used US GAAP for its primary financial statements filed with the US SEC.¹⁷ Among others, the IPTF guidance addresses the concern that the reconciliations called for by IFRS 1, which are prepared using the issuer's local GAAP rather than US GAAP, would not have sufficient information to help US investors to bridge from the prior US GAAP financial statements filed with the US SEC to IFRS accounting standards. Accordingly, the IPTF guidance requires additional detailed reconciliations in these circumstances from US GAAP to IFRS accounting standards either in a one-step or a two-step format (see below).

The reconciliation requirements for each of the scenarios are described below:

- *US SEC foreign private issuers that currently report under their local GAAP and provide a reconciliation from their local GAAP to US GAAP*

In the year of adoption of IFRS accounting standards, these entities are allowed to file two years rather than three years of profit or loss statements, shareholders' equity and cash flows prepared in accordance with IFRS accounting standards. As part of the IFRS transition, these entities will provide the disclosures and reconciliations required under IFRS 1 including:

- An equity reconciliation as at the date of the transition and as at the comparative year-end
- A comprehensive income (or statement of profit or loss, if presented) reconciliation for the comparative year
- And
- An explanation of material adjustments to the statement of cash flows for the comparative year

If the IFRS 1 disclosures and reconciliations are prepared using the local GAAP as the issuer's previous GAAP rather than US GAAP, no additional US GAAP to IFRS accounting standards or US GAAP to local GAAP reconciliations will be required.

- *US SEC foreign private issuers that currently report under US GAAP only*

Some US SEC foreign private issuers currently use US GAAP as their primary GAAP in both their home jurisdiction and the United States without reconciliation. These registrants would also be eligible to file two years rather than three years of statements of profit or loss and other comprehensive income, shareholders' equity and cash flows in their first set of IFRS financial statements. In the year of adoption of IFRS accounting standards, these entities will be required to provide the IFRS 1 disclosures and reconciliations described above. Such disclosures will be prepared using US GAAP as the issuer's previous GAAP.

- *US SEC foreign private issuers that currently report under local GAAP for local reporting and under US GAAP in their US SEC Form 20-F filings (assuming these issuers adopt IFRS accounting standards in the current period for both local and US SEC reporting purposes)*

These registrants would also be eligible to file two years rather than three years of statements of profit or loss and other comprehensive income, shareholders' equity and cash flows in their first set of IFRS financial statements. Under IFRS 1, such entities might conclude their local GAAPs are their previous GAAPs and their IFRS 1 disclosures and reconciliations would be prepared on that basis. As no reconciliation from the local GAAP to US GAAP was previously provided, the US SEC will require additional disclosure in the Form 20-F to enable investors to understand material reconciling items between US GAAP and IFRS accounting standards in the year of adoption. Two possible forms of disclosure are acceptable:

¹⁷ Highlights, 25 November 2008 IPTF meeting.

- *One-Step Format* - Registrants can provide an analysis of the differences between US GAAP and IFRS accounting standards in a tabular format (consistent with Item 17 of Form 20-F) for the same time period and dates that the IFRS 1 reconciliations are required. The registrant must provide this disclosure for equity as at the beginning and end of the most recent comparative period to the year of adoption and of comprehensive income (or profit or loss) for the most recent comparative year. A description of the differences between US GAAP and IFRS accounting standards for the statement of cash flows is not necessary because registrants are not required to reconcile IAS 7 statements of cash flows to those prepared under US GAAP.

Or

- *Two-Step Format* - Registrants can choose to disclose a two-step reconciliation which would include a quantitative analysis of the differences between US GAAP and their local GAAP (consistent with Item 17 of Form 20-F) and between their local GAAP to IFRS accounting standards (IFRS 1 disclosures and reconciliations). The registrant must provide these reconciliations for equity as of the beginning and end of the most recent comparative period to the year of adoption of IFRS accounting standards and for comprehensive income (or profit or loss) for the most recent comparative year. Registrants will also be required to provide an explanation of the material differences between the statement of cash flows under US GAAP and the statement of cash flows under their local GAAP for the most recent comparative period to the year of adoption of IFRS accounting standards.

And

- *US SEC foreign private issuers that currently report under IFRS accounting standards for local reporting and under US GAAP in their US SEC Form 20-F filings (assuming these issuers adopted IFRS accounting standards for local reporting in a period that preceded the earliest period for which audited financial statements are required in their US SEC filing)*

These registrants would not be eligible to file two years of statements of profit or loss and other comprehensive income, shareholders' equity and cash flows the first time they file IFRS financial statements with the US SEC, since they are not first-time adopters of IFRS accounting standards. Rather, they are required to present a complete set of IFRS financial statements for all periods required by the Form 20-F. In addition, these issuers will be required to present a reconciliation that enables US investors to bridge their previous US GAAP to IFRS accounting standards. Such a reconciliation will be similar to the One-Step Format described above, except that the periods presented will be for equity as of the most recent comparative period presented and for comprehensive income (or profit or loss) for the two most recent comparative periods. However, if the issuers are required to present a statement of financial position as of the end of the third preceding year, the reconciliation will also be required of the equity as of the end of that period.

8.2 Disclosure of IFRS information in financial statements for periods prior to an entity's first IFRS reporting period

8.2.1 Guidance in IFRS accounting standards

Although IFRS 1 provides detailed rules on disclosures to be made in an entity's first IFRS financial statements and in interim reports covering part of its first IFRS reporting period, it does not provide any guidance on presenting a reconciliation to IFRS accounting standards in financial reports before the start of the first IFRS reporting period. An entity wishing to disclose information on the impact of IFRS accounting standards in its last financial statements under its previous GAAP cannot claim that such information is prepared and presented in accordance with IFRS accounting standards because it does not disclose all information required in full IFRS financial statements and it does not disclose comparative information.

8.2.2 Disclosure of expected changes in accounting policies

In certain countries, publicly listed companies are required by regulation to disclose the potential impact that recently issued accounting standards will have on their financial statements when such standards are adopted in the future. The Canadian Securities Administrators (the CSA) in their Management's Discussion & Analysis (MD&A form)¹⁸ require this disclosure for changes in accounting policies that registrants expect to make in the future. In connection with Canada's transition to IFRS accounting standards in 2011, the CSA issued a Staff Notice¹⁹ clarifying that "Changes in an issuer's accounting policies that an issuer expects to make on changeover to IFRS are changes due to new accounting standards and therefore fall within the scope of section 1.13(a) of the MD&A form." Among other matters, the CSA Staff Notice requires certain disclosures of companies that have developed an IFRS changeover plan, in interim and annual MD&A forms starting three years before the first IFRS financial statement date, including the following:

- Accounting policies, including choices among policies permitted under IFRS accounting standards, and implementation decisions such as whether certain changes will be applied on a retrospective or a prospective basis
 - Impact on information technology and data systems
- Changes to internal control over financial reporting
- Impact on disclosure controls and procedures, including investor relations and external communications plan
- Enhancements to financial reporting expertise, including training requirements
 - And
- Changes in business activities, such as foreign currency and hedging activities, as well as matters that may be influenced by GAAP measures such as debt covenants, capital requirements and compensation arrangements

The CSA Staff Notice also specified requirements for updates for periods up to the year of changeover, including discussion of the impact of transition for issuers that are well advanced in their plans.

An entity that is planning to adopt IFRS accounting standards must take note of the regulatory requirements in its jurisdiction or the exchange where it is listed to determine the form of communication that is required in advance of publishing its first IFRS financial statements.

Appendix B - Defined terms

Extract from IFRS standards - Definitions

date of transition to IFRSs	The beginning of the earliest period for which an entity presents full comparative information under IFRSs in its first IFRS financial statements . [IFRS 1 Appendix A].
deemed cost	An amount used as a surrogate for cost or depreciated cost at a given date. Subsequent depreciation or amortisation assumes that the entity had initially recognised the asset or liability at the given date and that its cost was equal to the deemed cost. [IFRS 1 Appendix A].
fair value	<i>Fair value</i> is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. (See IFRS 13.) [IFRS 1 Appendix A].
first IFRS financial statements	The first annual financial statements in which an entity adopts International Financial Reporting Standards (IFRSs) , by an explicit and unreserved statement of compliance with IFRSs. [IFRS 1 Appendix A].
first IFRS reporting period	The latest reporting period covered by an entity's first IFRS financial statements . [IFRS 1 Appendix A].
first-time adopter	An entity that presents its first IFRS financial statements . [IFRS 1 Appendix A].
International Financial Reporting Standards (IFRSs)	Standards and Interpretations issued by the International Accounting Standards Board (IASB). They comprise: (a) International Financial Reporting Standards; (b) International Accounting Standards; (c) IFRIC Interpretations; and (d) SIC Interpretations. ¹ [IFRS 1 Appendix A].
opening IFRS statement of financial position	An entity's statement of financial position at the date of transition to IFRSs . [IFRS 1 Appendix A].
previous GAAP	The basis of accounting that a first-time adopter used immediately before adopting IFRSs. [IFRS 1 Appendix A].
rate-regulated activities	An entity's activities that are subject to rate regulation . [IFRS 14 Appendix A].
rate regulation	A framework for establishing the prices that can be charged to customers for goods or services and that framework is subject to oversight and/or approval by a rate regulator . [IFRS 14 Appendix A].
rate regulator	An authorised body that is empowered by statute or regulation to establish the rate or a range of rates that bind an entity. The rate regulator may be a third-party body or a related party of the entity, including the entity's own governing board, if that body is required by statute or regulation to set rates both in the interest of the customers and to ensure the overall financial viability of the entity. [IFRS 14 Appendix A].
regulatory deferral account balance	The balance of any expense (or income) account that would not be recognised as an asset or a liability in accordance with other Standards, but that qualifies for deferral because it is included, or is expected to be included, by the rate regulator in establishing the rate(s) that can be charged to customers. [IFRS 14 Appendix A].

¹ Definition of IFRSs amended after the name changes introduced by the revised Constitution of the IFRS Foundation in 2010.

We use 'IFRS accounting standards' instead of 'IFRSs' in this chapter. 'Date of transition to IFRS accounting standards' or 'date of transition' is used instead of 'date of transition to IFRSs' defined above as well.

Chapter 7

Consolidated financial statements

Contents

Overview	482
1 Introduction	483
1.1 Background	483
1.2 Development of IFRS 10	485
1.2.1 Post-Implementation Review of IFRS 10	485
1.3 Consolidation procedures	485
1.4 Disclosure requirements	486
2 Objective and scope of IFRS 10	487
2.1 Objective	487
2.2 Scope	487
2.2.1 Exemption from preparing consolidated financial statements by an intermediate parent	487
2.2.1.A Condition (a) - consent of non-controlling shareholders	488
2.2.1.B Condition (b) - securities not traded in a public market	488
2.2.1.C Condition (c) - not filing financial statements for listing securities	489
2.2.1.D Condition (d) - parent's IFRS financial statements are publicly available and include subsidiaries that are consolidated or measured at fair value through profit or loss in accordance with IFRS 10	489
2.2.2 Employee benefit plans and employee share trusts	490
2.2.3 Investment entity exception	491
2.2.4 Entity no longer a parent at the end of the reporting period	491
2.2.5 Interaction of IFRS 10 and EU law	492
2.2.6 Combined and carve-out financial statements	492
2.2.6.A Common control	493
2.2.6.B Purpose and users of combined financial statements	494
2.2.6.C Preparation of combined financial statements	494
2.2.6.D When combined financial statements are not general purpose	495
2.2.6.E The reporting entity in combined financial statements and in consolidated financial statements	496
3 Control	497
3.1 Assessing control	497
3.2 Purpose and design of an investee	498

4	Power over an investee	500
4.1	Relevant activities	500
4.1.1	More than one relevant activity	500
4.1.2	No relevant activities	502
4.1.3	Single asset, single lessee vehicles	503
4.1.4	Management of assets in the event of default	503
4.2	Existing rights	503
4.2.1	Evaluating whether rights are substantive	504
4.2.2	Evaluating whether rights are protective	506
4.2.2.A	Veto rights	507
4.2.2.B	Franchises	507
4.2.2.C	Budget approval rights	508
4.2.2.D	Independent directors	508
4.2.3	Incentives to obtain power	508
4.3	Voting rights	509
4.3.1	Power with a majority of the voting rights	509
4.3.2	A majority of voting rights without power	509
4.3.2.A	Evaluating voting rights during bankruptcy	509
4.3.3	Power without a majority of voting rights (de facto control)	510
4.3.4	Potential voting rights	514
4.3.4.A	Exercise price or conversion price	516
4.3.4.B	Financial ability	517
4.3.4.C	Exercise period	517
4.3.5	Contractual arrangement with other vote holders	518
4.3.6	Additional rights from other contractual arrangements	518
4.4	Contractual arrangements	519
4.4.1	Structured entities	519
4.5	Other evidence of power	521
4.6	Determining whether sponsoring (designing) a structured entity gives power	522
5	Exposure to variable returns	523
5.1	Exposure to variable returns can be an indicator of power	523
5.2	Returns that appear fixed can be variable	523
5.3	Evaluating whether derivatives provide an exposure to variable returns	524
5.3.1	Plain vanilla foreign exchange swaps and interest rate swaps	525
5.3.2	Total return swaps	526
5.4	Exposures to variable returns not directly received from an investee	527
5.5	Exposure to variable returns in bankruptcy filings	527
5.6	Interaction of IFRS 10 with the derecognition requirements in IFRS 9	527
5.7	Reputational risk	527

6	Link between power and returns: principal-agency situations	528
6.1	Delegated power: principals and agents	528
6.2	Scope of decision-making	529
6.2.1	Involvement in design	530
6.2.2	Assessing whether the scope of powers is narrow or broad	530
6.3	Rights held by other parties	530
6.3.1	Evaluating whether a removal right is substantive	531
6.3.1.A	Available replacements	532
6.3.1.B	Exercise period	532
6.3.2	Liquidation rights and redemption rights	532
6.4	Remuneration	533
6.4.1	Evaluating remuneration in the asset management industry	533
6.4.2	Evaluating remuneration in other industries	534
6.5	Exposure to variability of returns from other interests	534
6.5.1	Evaluating returns received via an indirect investment in another entity	535
6.6	Application examples in IFRS 10	536
6.7	Other illustrative examples	540
7	Related parties and de facto agents	541
7.1	Customer-supplier relationships	542
7.2	Non-controlling interests when there is a de facto agent	542
8	Control of specified assets	543
8.1	Identifying a silo	544
8.1.1	Identifying silos in the insurance industry	544
8.1.2	Identifying silos in the investment funds industry	545
8.2	Evaluating control of a silo	545
8.3	Consolidation of a silo	545
9	Continuous assessment	546

Overview

This chapter discusses the requirements of IFRS 10 *Consolidated Financial Statements*, principally relating to which entities are controlled by a parent and therefore consolidated into the financial statements prepared by that parent (except for certain subsidiaries of investment entities). This chapter also deals with the definition of an investment entity (and the assessment thereof) and the accounting by a parent of an investment entity.

The requirements of IFRS 10 relating to consolidation procedures, non-controlling interests and accounting for loss of control are dealt with in Chapter 8.

IFRS 10 provides the principles for the presentation and preparation of consolidated financial statements when an entity controls one or more other entities. It establishes a single control model that applies to all entities, including structured entities. IFRS 10 also defines an investment entity and deals with the accounting requirements for particular subsidiaries of an investment entity.

When management concludes that an entity does not have control of an investee, the requirements of IFRS 11 *Joint Arrangements* and IAS 28 *Investments in Associates and Joint Ventures* must be considered to determine whether it has joint control or significant influence, respectively, over the investee. The requirements of IFRS 11 and IAS 28 are dealt with in Chapter 13 and Chapter 12, respectively.

What you need to know

- The single control model established within IFRS 10 revolves around:
 - Power over an investee
 - Exposure, or rights, to variable returns from involvement with an investee
 - Linkage between power over an investee and variable returns from involvement with an investee
- IFRS 10 provides an exemption for an intermediate parent from preparing consolidated financial statements when it meets certain conditions. When an entity uses this exemption, it may prepare separate financial statements as its only financial statements, which are dealt with in Chapter 9.
- Combined or carve-out financial statements are sometimes prepared in accordance with IFRS accounting standards for a 'reporting entity' that does not comprise a group under IFRS 10.
- When decision-making rights have been delegated or are being held for the benefit of others, it is necessary to assess whether the decision-maker is a principal or an agent to determine whether it has control.
- IFRS 10 requires an investor to consider whether there are other parties who are acting on behalf of the investor by virtue of their relationship with it, i.e., de facto agents for the investor, whereby the investor has the ability to direct those other parties to act on the investor's behalf.
- An investor has to consider whether it treats a portion of an investee as a deemed separate entity (i.e., a silo) and, if so, whether it controls that silo.
- IFRS 10 defines an investment entity and requires a parent that is an investment entity to measure its investments in particular subsidiaries at fair value through profit or loss in accordance with IFRS 9 *Financial Instruments*, with limited exceptions.

1 Introduction

FASB differences

ASC 810 *Consolidation* contains the main guidance for consolidation of financial statements, including variable interest entities (VIEs), under US GAAP. IFRS 10 contains the IFRS guidance.

Under both US GAAP and IFRS accounting standards, the underlying determination of whether entities are consolidated by a reporting entity is based on control although differences exist in the consideration and definition of control.

Key differences relevant to this chapter are highlighted in this section, but this is not an exhaustive list of possible differences (further detail can be found in the *US GAAP/IFRS accounting differences identifier tool*¹):

- US GAAP provides for two consolidation models (VIE model and voting model). The VIE model evaluates control based on determining which party has power and benefits. The voting model evaluates control based on existing voting interests (or kick-out rights for limited partnerships and similar entities). All entities are first evaluated as potential VIEs. If an entity is not a VIE, it is evaluated for control pursuant to the voting model. In contrast, IFRS accounting standards provide a single control model for all entities, including structured entities (the definition of a structured entity under IFRS 12 *Disclosure of Interests in Other Entities* is similar to the definition of a VIE in US GAAP).
- In US GAAP, potential voting rights are generally not considered, while they are considered in IFRS accounting standards.
- The notion of 'de facto control' is only considered under IFRS accounting standards and may result in the consolidation of certain entities that are not consolidated under US GAAP.
- Under US GAAP, consolidated financial statements are required with certain industry-specific exceptions. Under IFRS accounting standards, there is a limited exemption from preparing consolidated financial statements for a parent company that is itself a wholly owned subsidiary, or is a partially owned subsidiary, if certain criteria are met.
- The assessment for determining whether an entity is an investment company under US GAAP is similar to the assessment for determining an investment entity under IFRS accounting standards, except, under IFRS accounting standards, an investment entity must measure and evaluate the performance of substantially all of its investments on a fair value basis and must have an exit strategy for investments without stated maturity dates. Also, under IFRS accounting standards, an investment entity may provide substantive investing-related services to third parties. Therefore, while the assessments are similar, these differences could result in different conclusions regarding whether an entity meets the definition of an investment entity under IFRS accounting standards.
- Under US GAAP, a parent of an investment company is required to retain the investment company subsidiary's fair value accounting in the parent's consolidated financial statements. However, under IFRS accounting standards, a parent of an investment entity consolidates all entities that it controls, including those controlled through an investment entity subsidiary, unless the parent itself is an investment entity.

1.1 Background

An entity may conduct its business not only directly, but also through strategic investments in other entities. IFRS accounting standards broadly distinguish between three types of such strategic investments:

- Entities controlled by the reporting entity (subsidiaries)
- Entities or activities jointly controlled by the reporting entity and one or more third parties (joint arrangements)
- Entities that, while not controlled or jointly controlled by the reporting entity, are subject to significant influence by it (associates)

The first type of investment is accounted for in accordance with IFRS 10.

The *Conceptual Framework for Financial Reporting* (the *Framework*) defines a reporting entity as: [CF 3.10, CF Appendix]

Extract from the Conceptual Framework for Financial Reporting

3.10 A reporting entity is an entity that is required, or chooses, to prepare financial statements. A reporting entity can be a single entity or a portion of an entity or can comprise more than one entity. A reporting entity is not necessarily a legal entity.

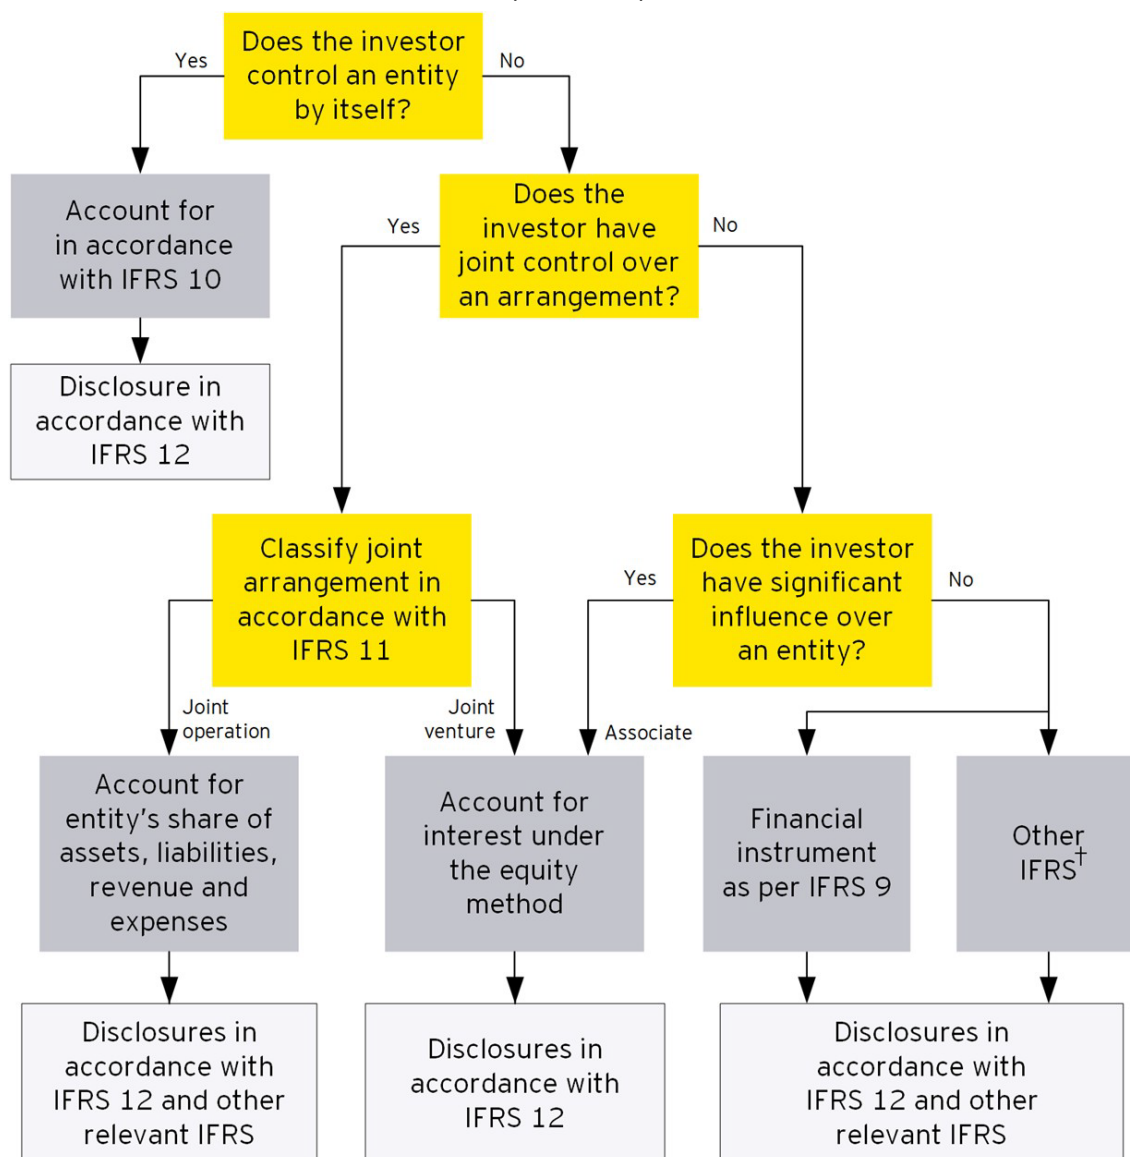

The requirements of the *Framework* are dealt with more fully in Chapter 2.

IFRS 10 establishes a single control model that applies to all entities, including 'structured entities' ('special purpose entities' and 'variable interest entities' under the previous IFRS accounting standards and US GAAP, respectively). In addition, IFRS 10 deals with accounting for subsidiaries by investment entities.

This chapter discusses the requirements of IFRS 10, principally relating to which entities are controlled by a parent and therefore consolidated into the financial statements prepared by that parent (except for certain subsidiaries of investment entities). The requirements of IFRS 10 dealing with consolidation procedures and non-controlling interests are summarised briefly in section 1.3 below and dealt with more fully in Chapter 8.

When management concludes that an entity does not have control of an investee, the requirements of IFRS 11 and IAS 28 must be considered to determine whether it has joint control or significant influence, respectively, over the investee. The requirements of IFRS 11 and IAS 28 are dealt with in Chapter 13 and Chapter 12, respectively. The diagram below summarises the identification and accounting for each type of investment, as well as the interaction between IFRS 10, IFRS 11, IFRS 12 and IAS 28.

Figure 1-1: Interaction between IFRS 10, IFRS 11, IFRS 12 and IAS 28

† This is the case, for example, if an entity has control over (or simply rights to) assets and obligations for liabilities, but *not* control of an entity. In this case, the entity accounts for these assets and obligations in accordance with the relevant IFRS.

1.2 Development of IFRS 10

IFRS 10 was issued in May 2011, together with an amended version of IAS 27 with a new title of *Separate Financial Statements* and IFRS 12. At the same time IFRS 11 and amended IAS 28 were issued.

1.2.1 Post-Implementation Review of IFRS 10

In June 2022, the IASB concluded its PIR of IFRS 10, IFRS 11 and IFRS 12 with the publication of the Project Report and Feedback Statement.² Feedback from stakeholders and research undertaken as part of the PIR showed that the requirements set out in the standards are working as intended, are meeting their objectives and that application of the requirements has not given rise to unexpected costs.

The feedback received did raise several matters, including matters that were raised to the IFRS IC in the past and not addressed. However, the IASB has determined that none of these matters are a high or medium priority and that no further action is required as a result of the PIR. If stakeholders require further guidance, they are encouraged to submit questions to the IFRS IC, provided these questions meet the submission criteria.

The PIR assessed the following topics as low priority:

- Subsidiaries that are investment entities
- Transactions that change the relationship between an investor and an investee
- Transactions that involve corporate wrappers
- Collaborative arrangements outside the scope of IFRS 11
- Additional disclosures about interests in other entities

The second and third of these topics are relevant to Chapter 8 and are discussed further in section 7 below.

The Board concluded that these topics could be explored if identified as priorities in the next agenda consultation (i.e., the Fourth Agenda Consultation, expected to start in 2026).

1.3 Consolidation procedures

When an investor determines that it controls an investee, the investor (the parent) consolidates the investee (the subsidiary). The requirements of IFRS 10 relating to consolidation procedures, non-controlling interests and accounting for loss of control are dealt with in Chapter 8.

A parent consolidates a subsidiary from the date on which the parent first obtains control and continues consolidating that subsidiary until the date on which control is lost. IFRS 3 *Business Combinations* defines the date of acquisition, that is, the date on which control is first obtained. [IFRS 3.8, IFRS 3 Appendix A]. The term 'date of acquisition' is used even if a parent gains control without acquiring an interest, or taking any action, as discussed in section 9.3 below. IFRS 10 deals with consolidation thereafter (see Chapter 8).

When a parent gains control of a group of assets or an entity that is not a business, such transactions are excluded from the scope of IFRS 3. [IFRS 3.2(b)]. This is often the case when a parent gains control of a structured entity. Business combinations under common control are also excluded from the scope of IFRS 3 [IFRS 3.2(c)] which means that if a parent gains control of a subsidiary (as defined in IFRS 10) that was previously controlled by an entity under common control, IFRS 3 also does not apply (see Chapter 11).

A parent consolidates all subsidiaries and recognises non-controlling interests for any interests held by investors outside of the group.

How we see it

The definition of consolidated financial statements in Appendix A of IFRS 10 does not indicate an exemption from consolidation of immaterial subsidiaries. In our view, in a parent's consolidated financial statements, the accounting policies must state that all subsidiaries are consolidated and cannot refer to materiality. However, materiality can be invoked in applying the accounting policy, and whether the consolidated financial statements comply with IFRS accounting standards if certain immaterial subsidiaries are not consolidated.

² [Project Report and Feedback Statement: Post-implementation Review: IFRS 10 Consolidated Financial Statements, IFRS 11 Joint Arrangements, IFRS 12 Disclosure of Interests in Other Entities](#), IASB, June 2022. Available on the IFRS Foundation's website.

1.4 Disclosure requirements

IFRS 10 does not contain any disclosure requirements regarding an entity's interests in subsidiaries included in the consolidated financial statements or its interests in structured entities (whether consolidated or unconsolidated). Such disclosure requirements are contained within IFRS 12.

IFRS 12 contains all disclosure requirements related to an entity's interests in subsidiaries, joint arrangements, associates and structured entities. IFRS 12 requires disclosure of the judgements that were made in determining whether it controls another entity. Even if management concludes that it does not control an entity, the information used to make that judgement will be transparent to users of the financial statements. The required disclosures also assist users of the financial statements in making their own assessment of the financial impact were management to reach a different conclusion regarding consolidation - by providing information about certain unconsolidated entities. The requirements of IFRS 12 are dealt with in Chapter 14.

2 Objective and scope of IFRS 10

2.1 Objective

The objective of IFRS 10 is as follows: [IFRS 10.1, IFRS 10.2]

Extract from IFRS 10

- 1 The objective of this IFRS is to establish principles for the presentation and preparation of consolidated financial statements when an entity controls one or more other entities.
- 2 To meet the objective in paragraph 1, this IFRS:
 - (a) requires an entity (the *parent*) that controls one or more other entities (*subsidiaries*) to present consolidated financial statements;
 - (b) defines the principle of *control*, and establishes control as the basis for consolidation;
 - (c) sets out how to apply the principle of control to identify whether an investor controls an investee and therefore must consolidate the investee;
 - (d) sets out the accounting requirements for the preparation of consolidated financial statements; and
 - (e) defines an investment entity and sets out an exception to consolidating particular subsidiaries of an investment entity.

This chapter deals with (a), (b), (c) and (e). The accounting requirements mentioned in (d) are dealt with in Chapter 8.

IFRS 10 also states that it does not deal with the accounting requirements for business combinations and their effect on consolidation, including goodwill arising on a business combination; these are covered by IFRS 3 (see Chapter 10). [IFRS 10.3].

2.2 Scope

IFRS 10 requires that a parent (unless exempt or an investment entity as discussed below) presents consolidated financial statements. This means that the financial statements of the group in which the assets, liabilities, equity, income, expenses and cash flows of the parent and its subsidiaries are included, must be presented as those of a single economic entity. A group consists of a parent and its subsidiaries (i.e., entities that the parent controls). [IFRS 10.4, IFRS 10 Appendix A].

Under IFRS 10, an entity must assess whether it controls the other entities in which it has an interest (the investees) - see section 3 below. This applies to all types of investees including corporations, partnerships, limited liability corporations, trusts, and other types of entities. However, there is a scope exemption for post-employment benefit plans or other long-term employee plans to which IAS 19 *Employee Benefits* applies (see section 2.2.2 below). In addition, an investment entity generally does not consolidate its subsidiaries (see section 2.2.3 below).

IFRS 10 also provides an exemption from preparing consolidated financial statements for entities that are not an ultimate parent, if they meet certain criteria (see section 2.2.1 below).

2.2.1 Exemption from preparing consolidated financial statements by an intermediate parent

A parent that prepares financial statements in accordance with IFRS is exempt from presenting (i.e., need not present) consolidated financial statements if it meets all of the following conditions:

- (a) It is a wholly owned subsidiary, or is a partially owned subsidiary of another entity and all its other owners, including those not otherwise entitled to vote, have been informed about, and do not object to, the parent not presenting consolidated financial statements.
- (b) Its debt or equity instruments are not traded in a public market (a domestic or foreign stock exchange or an over-the-counter market, including local and regional markets).
- (c) It did not file, nor is it in the process of filing, its financial statements with a securities commission or other regulatory organisation for the purpose of issuing any class of instruments in a public market.
And
- (d) Its ultimate or any intermediate parent produces financial statements that are available for public use and comply with IFRSs, in which subsidiaries are consolidated or are measured at fair value through profit or loss in accordance with IFRS 10. [IFRS 10.4(a)].

Where an entity uses this exemption, it may, but is not required to, prepare separate financial statements (see Chapter 9) as its only financial statements. [IAS 27.8]. However, if separate financial statements are prepared, they must comply with IAS 27. [IAS 27.2].

The conditions for exemption from preparing consolidated financial statements raise the following interpretation issues.

2.2.1.A Condition (a) - consent of non-controlling shareholders

It is not clear whether a parent is required to obtain explicit consent that the owners of a reporting entity do not object to the use of the exemption.

IFRS 10 requires that, where the parent is itself a partly owned subsidiary, any non-controlling shareholders must be informed of the parent's intention not to prepare consolidated financial statements. Since IFRS 10 does not expressly require obtaining explicit consent, the non-controlling shareholders may not have to give explicit consent, i.e., the absence of dissent is sufficient. However, parents that are partly owned subsidiaries and wish to use the exemption from preparing consolidated financial statements are advised to obtain explicit written consent from non-controlling shareholders in advance. This is because IFRS 10 sets no time limit on when the non-controlling shareholders can register any objection. Thus, it is possible for the non-controlling shareholders to object to a parent's proposed use of the exemption just before the separate financial statements are printed and even after they have been issued.

IFRS 10 also requires all non-controlling owners 'including those not otherwise entitled to vote' to be informed of the parent's intention not to prepare consolidated financial statements. [IFRS 10.4(a)]. Thus, for example, the holders of any voting or non-voting preference shares must be notified of, and consent (or not object) to, the entity's intention to use the exemption.

How we see it

In our view, the requirement to inform the non-controlling shareholders where the parent 'is a partially-owned subsidiary of another entity' is ambiguous, as shown by Illustration 2-1 and Illustration 2-2 below. Therefore, judgement is required depending on specific facts and circumstances.

Illustration 2-1: Consent for not preparing consolidated financial statements (1)

A parent (P) wishing to use the exemption is owned 60% by Entity A and 40% by entity B. Entity A and entity B are both wholly owned by entity C. In this case, P is not obliged to inform its non-controlling shareholder B of its intention not to prepare consolidated financial statements since, although it is a partly owned subsidiary of A, it is a wholly owned subsidiary of C (and therefore satisfies condition (a) without regard to its immediate owners).

Illustration 2-2: Consent for not preparing consolidated financial statements (2)

The facts are the same as in Illustration 2-1 above, except that A and B are both owned by an individual (Mr. X). P is not a wholly owned subsidiary of any other entity, and therefore the rules applicable to partly owned subsidiaries apply. Thus, P is required to inform B of any intention not to prepare consolidated financial statements.

2.2.1.B Condition (b) - securities not traded in a public market

It is not clear exactly what constitutes a 'public market'. It is clear that, where quoted prices are available for any of the parent's securities on a generally recognised share exchange, the parent is required to prepare consolidated financial statements, and cannot use the exemption. However, when there are no quoted prices, but the parent's shares are occasionally traded, for example, on a matched bargain basis through an exchange (as opposed to by private treaty between individual buyers and sellers), it is not clear whether this meets the definition of a 'public market' for this condition.

How we see it

In our view, any security that is traded in circumstances where it is necessary to have filed financial statements with a securities commission or regulator is regarded as 'traded in a public market' for condition (b). It is clear that the IASB regarded conditions (b) and (c) in section 2.2.1 above as linked; in other words, that an entity falls within (c) before falling within (b). Condition (c) refers to the filing of financial statements with a securities commission or regulator as a precursor to public listing of securities, and this forms the basis for our view.

The meaning of 'public market' is discussed in more detail in Chapter 32.

2.2.1.C Condition (c) - not filing financial statements for listing securities

It is not clear whether the 'financial statements' referred to are only those prepared under IFRS accounting standards, or include those prepared under local GAAP.

How we see it

In our view, the test is whether the entity currently has, or shortly will have, an ongoing obligation to file financial statements with a regulator in connection with the public trading of any of its securities - whether under IFRS accounting standards or local GAAP. This conclusion is based on our view that the phrase 'financial statements' means any financial statements filed in connection with the public trading of securities.

The IASB's view is that the information needs of users of financial statements of entities whose debt or equity instruments are traded in a public market are best served when investments in subsidiaries, associates, and jointly controlled entities are accounted for in accordance with IFRS 10, IAS 28, and IFRS 11 respectively. The Board therefore decided that the exemption from preparing such consolidated financial statements is not available to such entities or to entities in the process of issuing instruments in a public market. [IFRS 10.BCZ18].

2.2.1.D Condition (d) - parent's IFRS financial statements are publicly available and include subsidiaries that are consolidated or measured at fair value through profit or loss in accordance with IFRS 10

The first part of this condition means that the exemption can be used either where a parent of the reporting entity prepares consolidated financial statements under IFRS accounting standards that are publicly available through a regulatory filing requirement, or where those financial statements are available on request. An entity that uses the exemption from preparing consolidated financial statements must disclose the source for obtaining the financial statements of the relevant parent of the reporting entity (see Chapter 9). [IAS 27.16(a)]. For example, this information can be provided by disclosing:

- Contact details of a person or an e-mail address from which a hard copy of the document can be obtained
- Or
- A website address where the financial statements can be found and downloaded

However, it is not clear whether this condition requires the IFRS consolidated financial statements of the reporting entity's parent to have been issued and made publicly available prior to the issuance of the reporting entity's separate financial statements for the same reporting period. Given IFRS 10 does not specifically address this question, reporting entities ought to consider the relevant facts and circumstances, including local law or regulations.

This condition requires that the parent's financial statements comply with IFRS accounting standards. There are a number of jurisdictions that have a national GAAP which is virtually identical to IFRS accounting standards. However, differences between these national GAAPs and IFRS accounting standards often exist regarding the scope, transitional provisions, effective dates and actual wording of standards. In addition, some national GAAPs contain accounting alternatives not permitted by IFRS accounting standards. The question arises as to whether a reporting entity, that is a parent entity preparing IFRS financial statements, can claim exemption for the requirement to prepare consolidated accounts on the grounds that it has an ultimate or intermediate parent that produces consolidated financial statements under a national GAAP which is similar to IFRS accounting standards (e.g., European Union (EU) adopted IFRS accounting standards).

How we see it

In our view, if the ultimate or intermediate parent:

- Reports under a national GAAP that is identical to IFRS accounting standards in all respects
- Applied the national GAAP equivalent of IFRS 1 *First-time Adoption of International Financial Reporting Standards* when it adopted that national GAAP
- Makes an explicit and unreserved statement of compliance with that national GAAP in its most recent consolidated financial statements
- And
- Could have made an explicit and unreserved statement of compliance with IFRS accounting standards in those consolidated financial statements, if required

Then the exemption from preparing consolidated financial statements is permitted for the reporting entity.

The second part of condition (d) above confirms that the exemption from preparing consolidated financial statements set out in (a) to (d) above is available to an intermediate parent entity that is a subsidiary of an investment entity. The exemption is available even though the investment entity parent may not prepare consolidated financial statements or consolidate the intermediate parent entity subsidiary. [IFRS 10.BC28A, IFRS 10.BC28B]. In making its decision, the IASB observed that, when an investment entity measures its interest in a subsidiary at fair value, the disclosures required by IFRS 12 are supplemented by those required by IFRS 7 *Financial Instruments: Disclosures* and IFRS 13 *Fair Value Measurement*. Accordingly, the IASB decided that this combination of information was sufficient to support the decision to retain an exemption from presenting consolidated financial statements for a subsidiary of an investment entity that is itself a parent entity. The IASB further noted that requiring an intermediate parent that is a subsidiary of an investment entity to prepare consolidated financial statements could result in significant additional costs, without commensurate benefit and this is contrary to its intention in requiring investment entities to measure investments at fair value, which was to provide more relevant information at a reduced cost. [IFRS 10.BC28D].

However, local law or regulations may conflict with this exemption if it is required that an entity has to be included within the consolidated financial statements of a parent by full consolidation in order to obtain the exemption.

2.2.2 Employee benefit plans and employee share trusts

IFRS 10 exempts post-employment benefit plans or other long-term employee benefit plans to which IAS 19 applies. [IFRS 10.4A]. However, it is not clear whether this means that an employee benefit plan that controls an investee is not required to consolidate that investee in its financial statements, or whether an investor that controls an employee benefit plan need not consolidate the plan itself.

How we see it

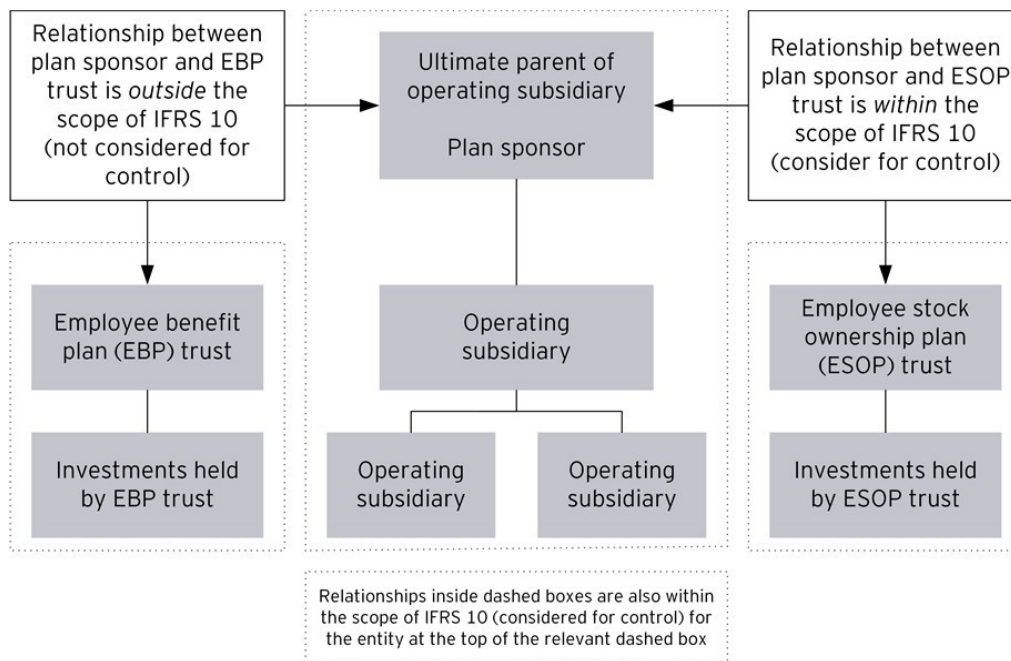

In our view, the latter of the two meanings above was intended: a sponsor of an employee benefit plan need not evaluate whether it controls that employee benefit plan, and, therefore, need not consolidate it.

However, the employee benefit plan applies IFRS 10 if it is preparing financial statements under IAS 26 *Accounting and Reporting by Retirement Benefit Plans*. These employee benefit plans are referred to as 'Employee benefit plan (EBP) trust' in Figure 2-1 below.

In contrast, employee benefit trusts (or similar entities) established for employee share option plans, employee share purchase plans and other share-based payment programmes are not excluded from the scope of IFRS 10. This is because these are outside the scope of IAS 19. These trusts are referred to as 'Employee stock ownership plan (ESOP) trust' in Figure 2-1 below. The sponsoring entity of these trusts needs to evaluate whether it controls (and therefore consolidates) the trusts. If the trust is treated as an extension of the employer or sponsoring entity (see Chapter 30), its assets and liabilities will already be included in the financial statements of the employer entity that are used for preparing the consolidated financial statements of the group. If the trust is not accounted for as an extension of the employer or sponsoring entity, the parent will need to assess whether the trust, as a separate vehicle, needs to be consolidated according to the control criteria of IFRS 10.

The diagram below illustrates what is in scope and out of scope of IFRS 10.

Figure 2-1: Understanding scope in employee benefit plans and employee stock ownership plans

2.2.3 Investment entity exception

As an exception to the consolidation rule, a parent that is an investment entity does not present consolidated financial statements if it is required to measure all of its subsidiaries at fair value through profit or loss. [IFRS 10.4B]. This is discussed in section 10.3 below.

2.2.4 Entity no longer a parent at the end of the reporting period

It is not clear whether IFRS 10 requires an entity to prepare consolidated financial statements only if it is a parent at the end of the reporting period or also if it was a parent at any time during the reporting period.

How we see it

In our view, consolidated financial statements must be prepared by an entity that was a parent during the reporting period, even if that entity is no longer a parent at the end of the reporting period (e.g., because it disposed of all its subsidiaries).

IFRS 10 requires a parent to consolidate a subsidiary until the date on which the parent ceases to control the subsidiary, and such consolidated financial statements are to include the income and expenses of the subsidiary up to the date on which the parent ceases to control the subsidiary. [IFRS 10.20, IFRS 10.B88]. IFRS 10 also requires the gain or loss from loss of control of a subsidiary to be calculated based on the difference between the proceeds and the carrying amounts of the assets and liabilities of the subsidiary at the date when control is lost. The carrying amount as of the date of disposal reflects the income and expense of the subsidiary. The gain or loss recognised on disposal in the consolidated financial statements is therefore generally different from the gain or loss in the separate financial statements of the parent. [IFRS 10.B98].

This means that if a parent does not prepare consolidated financial statements pursuant to a concession in local law (see section 2.2.5 below), the parent may not present separate financial statements in compliance with IFRS accounting standards.

How we see it

Likewise, we believe that an entity that had an associate, or an interest in a joint venture, during the reporting period but no longer does so at end of the reporting period, must apply IAS 28 and/or IFRS 11 to those investments in its financial statements for the reporting period, if not otherwise exempt from doing so.

2.2.5 Interaction of IFRS 10 and EU law

For entities incorporated in the EU, there may, in some cases, be a subtle interaction between the requirements to prepare consolidated financial statements in accordance with IFRS accounting standards as issued by IASB and IFRS accounting standards as adopted by the EU. The determination of whether or not consolidated financial statements are required is made under the relevant national legislation based on the EU Accounting Directive, and not IFRS 10.³ In the majority of cases, this is a technicality with little practical effect. In some cases, however, there will be differences because IAS 27 states that an entity may present separate financial statements as its sole financial statements only if it is exempt from preparing consolidated financial statements in accordance with IFRS 10.4(a). [IAS 27.8].

In contrast, in November 2006, the European Commission stated that in its opinion “...a parent company always has to prepare annual accounts as defined by the 4th Directive. Where, under the 7th Company Law Directive, a parent company is exempted from preparing consolidated accounts, but chooses or is required to prepare its annual accounts in accordance with IFRS as adopted by the EU, those provisions in IAS 27 setting out the requirement to prepare consolidated accounts do not apply. Such annual accounts [i.e., the separate financial statements] are described as having been prepared in accordance with IFRS as adopted by the EU”⁴ (the 4th and 7th Directives have now been replaced by a single EU Accounting Directive 2013/34/EU⁵). While this statement was under the previous IAS 27, the same arguments apply under IFRS 10.

Applying the above discussions, when an entity is not explicitly required to prepare consolidated financial statements under national legislation based on the EU Accounting Directive, even though IFRS 10 obliges it to do so, it will not meet the criterion for exemption under IFRS 10.4(a). Consequently, when that entity presents separate financial statements, such financial statements must be described as having been prepared in accordance with ‘IFRS accounting standards as adopted by the EU’ rather than ‘IFRS accounting standards as issued by the IASB’. An example of this situation is an entity that has an investment in an entity that is not a ‘subsidiary undertaking’ under the EU Accounting Directive 2013/34/EU, but is a subsidiary under IFRS 10.

2.2.6 Combined and carve-out financial statements

Combined or carve-out financial statements are sometimes prepared under IFRS accounting standards for a ‘reporting entity’ that does not comprise a group under IFRS 10.

How we see it

Although some GAAPs draw a distinction between combined and carve-out financial statements, in our view, the determination of whether these financial statements are permitted to be prepared in accordance with IFRS accounting standards is the same. Accordingly, where the term ‘combined financial statements’ is used below, our views apply equally to ‘carve-out financial statements’.

The *Conceptual Framework* defines combined financial statements as “Financial statements of a reporting entity that comprises two or more entities that are not all linked by a parent-subsidiary relationship.” [CF Appendix]. However, the *Framework* does not discuss when or how entities could prepare combined financial statements. The IASB concluded that such discussion would be best developed if the IASB decides in the future to develop a Standard on this topic. [CF 3.12, CF BC3.21].

3 Regulation (EC) No. 1606/2002 of the European Parliament and of the Council of 19 July 2002 on the application of international accounting standards, preamble para. (3).

4 Agenda paper for the meeting of the Accounting Regulatory Committee on 24th November 2006 (document ARC/19/2006), Subject: *Relationship between the IAS Regulation and the 4th and 7th Company Law Directives - Meaning of ‘Annual Accounts’*, European Commission: Internal Market and Services DG: Free movement of capital, company law and corporate governance: Accounting/RC MX D(2006), 7 November 2006, para. 5.1.

5 Directive 2013/34/EU of the European Parliament and of the Council of 26 June 2013 on the annual financial statements, consolidated financial statements and related reports of certain types of undertakings, amending Directive 2006/43/EC of the European Parliament and of the Council and repealing Council Directives 78/660/EEC and 83/349/EEC, preamble para. (1).

Examples of when combined or carve-out financial statements might be requested include the following:

- Two or more legal entities under common control of the same individual or group of individuals (e.g., 'horizontal' groups)
- Or
- A group of business units that are intended to become a group in the future (e.g., following an initial public offering or demerger), which may or may not be separate legal entities

In 2009, the IFRS IC received a request for guidance on whether a reporting entity may, in accordance with IFRS accounting standards, present financial statements that include a selection of entities that are under common control, rather than being restricted to a parent/subsidiary relationship as defined by IFRS accounting standards. The IFRS IC noted that the ability to include entities within a set of IFRS financial statements depends on the interpretation of 'reporting entity' in the context of common control. The IFRS IC decided not to add these issues on to its agenda.⁶

How we see it

In our view, there are limited circumstances in which such combined financial statements can give a true and fair view in accordance with IFRS accounting standards and be presented as 'general purpose' financial statements. As a minimum, there must be both of the following:

- Common control for the full or a portion of the reporting period (see section 2.2.6.A below)
- A clear purpose for which the combined financial statements will be used by clearly identified intended users (see section 2.2.6.B below)

In addition, the preparer must be able to coherently describe the various legal entities, segments, reportable segments, branches, divisions, geographical jurisdictions, or other 'units' that will be included in the combined financial statements. Careful consideration is required when concluding that it is appropriate to exclude any 'units' from the combined financial statements (such as unprofitable operations) that are similar to the 'units' that are being included in the combined financial statements. Such exclusion must be appropriate when considered in the context of the purpose of the financial statements, the intended users, and the terms and conditions of any relevant agreements (e.g., acquisitions, spin-offs). Other practical considerations related to the preparation of combined financial statements are noted in section 2.2.6.C below.

How we see it

Although IFRS accounting standards are unclear on this issue, we believe that the fact that *IFRS for Small and Medium-sized Entities* specifically permits the preparation of combined financial statements, and the fact that the *Conceptual Framework* refers to combined financial statements, together provide a basis for preparing combined financial statements in appropriate circumstances.

2.2.6.A Common control

Determining whether common control exists can be difficult, and requires judgement based on the facts and circumstances (see Chapter 11).

How we see it

In our view, general purpose combined financial statements can only be prepared if the entities are under common control for the full or a portion of the reporting period. Furthermore, the financial results of each combined entity can only be included in the general purpose combined financial statements for the period in which that entity was under common control.

Events that occur after the end of a reporting period that result in common control are non-adjusting events (see Chapter 34).

⁶ [IFRIC Update](#), January 2010, pp.2-3, available on the IFRS Foundation's website.

2.2.6.B Purpose and users of combined financial statements

A reporting entity is an entity that is required, or chooses, to prepare financial statements. [CF 3.10, CF Appendix]. Therefore, it is a matter of judgement of whether it is appropriate to prepare general purpose combined financial statements, depending upon the facts and circumstances related to both the purpose and the users of the financial statements, considerations that are interrelated.

For example, the facts and circumstances usually indicate that it is appropriate to prepare general purpose combined financial statements when required by regulators on behalf of investors. This is because the regulators purport to represent the needs of a wide range of users (investors) for a general purpose, for which the investors cannot otherwise command the financial information. Situations where regulators typically require combined financial statements include:

- Carve-out transactions
 - Spin-off transactions
 - Financing transactions that require approval by a broad group of investors
 - Transactions in which the combined entity will become the predecessor financial statements of a new entity
- Or
- Transactions in which the combined entity will be a material acquisition (for the acquirer)

In addition, there may be circumstances when several third parties (e.g., banks or acquirers in a private bidding process) all request financial statements that combine the same entities - that is, the same combined financial statements. In such cases, the combined financial statements might be 'general purpose', because they are used by a wide range of users.

2.2.6.C Preparation of combined financial statements

Combined financial statements must include all normal consolidation entries (such as elimination of group transactions, unrealised profit elimination, etc.).

How we see it

In our view, the combined financial statements ought to disclose:

- The fact that the financial statements are combined financial statements
 - The reason why combined financial statements are prepared
 - The basis for determining which 'units' are included in the combined financial statements
 - The basis of preparation of the combined financial statements
- And
- The related party disclosures required by IAS 24 *Related Party Disclosures*

Determining the appropriate boundary of a reporting entity can be difficult, as discussed in the 2018 *Conceptual Framework*. [CF 3.13, CF 3.14].

Extract from the Conceptual Framework for Financial Reporting

- 3.13 Determining the appropriate boundary of a reporting entity can be difficult if the reporting entity:
- (a) is not a legal entity; and
 - (b) does not comprise only legal entities linked by a parent-subsidiary relationship.
- 3.14 In such cases, determining the boundary of the reporting entity is driven by the information needs of the primary users of the reporting entity's financial statements. Those users need relevant information that faithfully represents what it purports to represent. Faithful representation requires that:
- (a) the boundary of the reporting entity does not contain an arbitrary or incomplete set of economic activities;
 - (b) including that set of economic activities within the boundary of the reporting entity results in neutral information; and
 - (c) a description is provided of how the boundary of the reporting entity was determined and of what constitutes the reporting entity.

In addition, management should consider who has the appropriate knowledge and authority to authorise the general purpose combined financial statements for issue (see Chapter 34).

While regulators may require combined or carve-out financial statements, IFRS accounting standards does not describe how to prepare such information. Accordingly, practical issues frequently arise when preparing financial statements on a combined or carve-out basis, including the items below:

- **Management judgement and hindsight**
Absent clear legal boundaries, determining whether certain items are part of a combined reporting entity often requires significant management judgement and possibly the use of hindsight.
- **Comparative periods**
There is a risk that comparative information is prepared on a basis that reflects the impact of events before they actually occur (e.g., disposals of assets). Once it is determined what 'units' are being included in the combined financial statements, the comparative information presented is the comparative information for such units.
- **Allocation of overhead costs**
Combined reporting entities that are part of a larger group often benefit from certain overheads (e.g., legal or administrative).
- **Transfers of assets**
The group that owns the combined reporting entity may have been reorganised, resulting in the transfer of assets between 'units'. This raises questions about recognising gains or losses on disposals and the appropriate cost basis of assets acquired.
- **Financing costs**
It is often not clear how to allocate a group's liabilities and equity to the individual 'units' that it owns. The individual 'units' may differ considerably in nature, e.g., a group may own both low-risk established 'units' and a high-risk new venture. Therefore, it is not clear how to allocate interest expenses and other aspects of an entity's funding structure (e.g., embedded derivatives and compound financial instruments).
- **Taxation and employee benefits**
Legal and other requirements often create practical issues when determining the amount of the tax or employee benefit liabilities that are recognised in combined or carve-out financial statements.
- **Designation**
Accounting under IFRS accounting standards sometimes relies on management's stated intent and other designations (e.g., financial instrument and hedge designations, intent regarding assets held for sale and designation of groups of cash-generating units). It is often not clear how to reflect management's intent and designations in combined or carve-out financial statements.

There is a risk that an inappropriate allocation could result in a set of financial statements that does not offer a 'true and fair view' of the reporting entity. Preparation of financial information on a combined or carve-out basis generally requires a substantial number of adjustments and allocations to be made, and draws heavily on pronouncements of other standard-setting bodies that are referred to by the hierarchy of authoritative guidance in IAS 8 *Accounting Policies, Changes in Accounting Estimates and Errors*.

Absent clarification by the IASB or the IFRS IC, diversity in practice will continue to exist. Therefore, the basis of preparation ought to disclose:

- Which accounting standards have been applied
And
- The significant accounting judgements that were made, including the adjustments and allocations

2.2.6.D When combined financial statements are not general purpose

How we see it

In our view, it is generally not appropriate to present 'general purpose' combined financial statements when requested by parties that can obtain the desired combined financial information through other means. In such cases, the combined financial statements are often deemed 'special purpose'.

Examples of such parties include:

- Lenders (e.g., banks) for the purpose of approving a loan or ensuring covenant compliance
- Governments and their agencies other than investor regulators (e.g., tax authorities)
- A single potential acquirer
- A board of directors or management

When a group of family members prepares combined financial statements, judgement is required to assess the facts and circumstances, as to whether such combined financial statements are 'general purpose' or 'special purpose', depending on the purpose for which the family intends to use the combined financial statements.

Where it is not appropriate to present combined financial statements as 'general purpose', either because they are requested by a party that has the ability to otherwise command the information, or because there are deviations from IFRS accounting standards as issued by the IASB due to the specific nature and purpose of the combined or carved-out financial statements, alternative options might include preparing:

- Financial statements of each of the entities that would have been included in the combined financial information
- Or
- Special purpose financial statements

2.2.6.E The reporting entity in combined financial statements and in consolidated financial statements

In certain circumstances, entities prepare general purpose combined financial statements in compliance with IFRS accounting standards followed by consolidated financial statements in accordance with IFRS accounting standards. Sometimes, group entities may be excluded from a parent's combined financial statements despite the fact that they are controlled by the parent, and would otherwise be consolidated by the parent under IFRS 10. For example, a subsidiary that will not form part of a sub-group to be listed may be excluded from the combined financial statements.

How we see it

In our view, the subsequent consolidated financial statements must be prepared according to IFRS 10 and therefore must include all subsidiaries controlled by a parent.

This is because IFRS 10 defines consolidated financial statements as those including assets, liabilities, equity, income, expenses and cash flows of the parent and its subsidiaries. [IFRS 10 Appendix A]. A subsidiary is derecognised at the date that control is lost. [IFRS 10.20, IFRS 10.25]. IFRS 10 does not provide any exceptions to these requirements. Illustration 2-3 below shows the differences in the scope of consolidation that can arise where an entity prepares both combined and consolidated financial statements.

Illustration 2-3: Preparation of consolidated financial statements after combined financial statements

In 20X3, intermediate parent (P), which has three subsidiaries (S1, S2 and S3), is preparing for an IPO. P has historically not prepared consolidated financial statements as it has applied the exemption in IFRS 10.4(a). One of the subsidiaries, S3, is to be transferred to the ultimate parent prior to the listing and will not form part of the sub-group to be listed. In the prospectus, combined financial statements are presented including P, S1 and S2 for the annual periods ending 31 December 20X1 and 20X2. The combined financial statements are deemed to be general purpose financial statements in compliance with IFRS, as the combined entities have been under common control for the entire reporting period, and the combined financial statements are required by the regulator on behalf of investors, representing a wide range of users. The transfer of S3 to the ultimate parent occurred in August 20X3 and P group was listed in October 20X3.

When preparing the 20X3 consolidated financial statements, should (now listed) P:

- (a) Present consolidated financial statements for 20X3 (P+S1+S2+S3), showing comparatives for 20X2 and consolidating S3 until August 20X3?
- Or
- (b) Present consolidated financial statements for 20X3 excluding S3 (P1+S1+S2), showing comparative information for 20X2 for only P1+S1+S2, as per the combined financial statements?

The consolidated financial statements must be prepared according to IFRS 10 and therefore the 20X3 consolidated financial statements of P must include S3 in the 20X2 comparatives and until control ceased in August 20X2 (option (a) above).

3 Control

An investor, regardless of the nature of its involvement with an entity (the investee), determines whether it is a parent by assessing whether it controls the investee. [IFRS 10.5, IFRS 10.6, IFRS 10.7].

Extract from IFRS 10

- 6** An investor controls an investee when it is exposed, or has rights, to variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee.
- 7** Thus, an investor controls an investee if and only if the investor has all the following:
- (a) power over the investee (see paragraphs 10-14);
 - (b) exposure, or rights, to variable returns from its involvement with the investee (see paragraphs 15 and 16); and
 - (c) the ability to use its power over the investee to affect the amount of the investor's returns (see paragraphs 17 and 18).

Although not a defined term, IFRS 10 uses the term 'investor' to refer to a reporting entity that potentially controls one or more other entities, and 'investee' to refer to an entity that is, or may potentially be, the subsidiary of a reporting entity. Ownership of a debt or equity interest may be a key factor in determining whether an investor has control. However, it is also possible for a party to be an investor and potentially control an investee, without having an equity or debt interest in that investee.

An investor has to consider all facts and circumstances when assessing whether it controls an investee. [IFRS 10.8].

Only one party, if any, can control an investee. [IFRS 10.BC69]. However, IFRS 10 notes that two or more investors collectively can control an investee. To control an investee collectively, investors must act together to direct the relevant activities (see section 4.1 below). In such cases, because no investor can direct the activities without the co-operation of the others, no investor individually controls the investee. Each investor would account for its interest in the investee in accordance with the relevant IFRS accounting standards, such as IFRS 11, IAS 28 or IFRS 9. [IFRS 10.9].

3.1 Assessing control

Detailed application guidance is provided by IFRS 10 with respect to the assessment of whether an investor has control over an investee. To determine whether it controls an investee, an investor assesses whether it has all three elements of control described in section 3 above. [IFRS 10.B2].

Each of the three control criteria are explored in more detail in sections 4, 5 and 6 below, respectively.

IFRS 10 notes that consideration of the following factors may assist in making that determination:

- (a) The purpose and design of the investee (see section 3.2 below)
 - (b) What the relevant activities are and how decisions about those activities are made (see section 4.1 below)
 - (c) Whether the rights of the investor give it the current ability to direct the relevant activities (see sections 4.2 to 4.6 below)
 - (d) Whether the investor is exposed, or has rights, to variable returns from its involvement with the investee (see section 5 below)
- And
- (e) Whether the investor has the ability to use its power over the investee to affect the amount of the investor's returns (see section 6 below) [IFRS 10.B3]

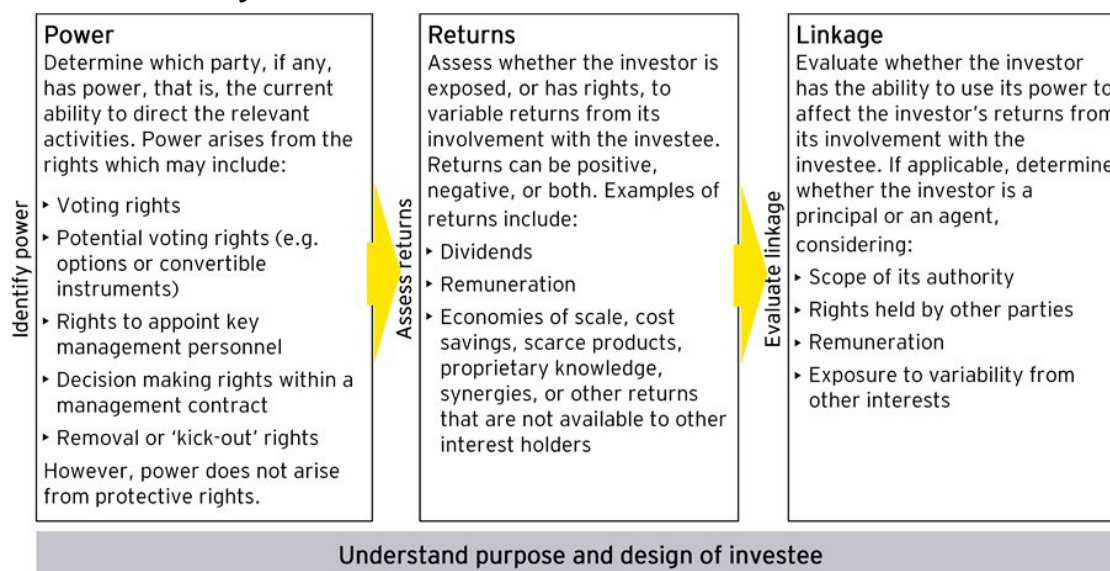

In addition, when assessing control of an investee, an investor considers the nature of its relationship with other parties (see section 7 below). [IFRS 10.B4].

In many cases, when decision-making is controlled by voting rights that also give the holder exposure to variable returns, it is clear that whichever investor holds a majority of those voting rights controls the investee. [IFRS 10.B6]. However, in other cases (such as when there are potential voting rights, or an investor holds less than a majority of the voting rights), it may not be so clear. In those instances, further analysis is needed, and the criteria need to be evaluated based on all facts and circumstances (considering the factors listed above), to determine which investor, if any, controls an investee. [IFRS 10.8]. The diagram below illustrates this assessment.

The control principle outlined above applies to all investees, including structured entities. A structured entity is defined in IFRS 12 as an entity that is designed so that voting or similar rights are not the dominant factor in determining who controls the entity, such as when the voting rights relate to administrative tasks only and the relevant activities are directed by means of contractual arrangements. [IFRS 12 Appendix A].

There are no bright lines to determine whether an investor has an exposure, or has rights, to variable returns from its involvement with a structured entity, or whether it has the ability to affect the returns of the structured entity through its power over the structured entity. Rather, as with all investees, all facts and circumstances are considered when assessing whether the investor has control over an investee that is a structured entity. That is, the process outlined in the diagram below is used for structured entities, although the relevant facts and circumstances may differ from when voting rights are a more important factor in determining control. This is discussed further in section 4.4.1 below.

Figure 3-1: Assessing control

When management concludes that an entity does *not* have control, the requirements of IFRS 11 and IAS 28 must be considered to determine whether it has joint control or significant influence, respectively, over the investee, as shown in the diagram in section 1.1 above.

3.2 Purpose and design of an investee

When assessing control of an investee, an investor considers the purpose and design of the investee in order to identify the relevant activities, how decisions about the relevant activities are made, who has the current ability to direct those activities and who receives returns from those activities. [IFRS 10.B5].

Understanding the purpose and design of an investee is therefore critical when identifying who has control.

When an investee's purpose and design are considered, it may be clear that an investee is controlled by means of equity instruments that give the holder proportionate voting rights, such as ordinary shares in the investee. In this case, in the absence of any additional arrangements that alter decision-making, the assessment of control focuses on which party, if any, is able to exercise voting rights (see section 4.3 below) sufficient to determine the investee's operating and financing policies. In the most straightforward case, the investor that holds a majority of those voting rights, in the absence of any other factors, controls the investee. [IFRS 10.B6].

To determine whether an investor controls an investee in more complex cases, it may be necessary to consider some or all of the other factors listed in section 3.1 above. [IFRS 10.B7].

IFRS 10 notes that an investee may be designed so that voting rights are not the dominant factor in deciding who controls the investee, such as when any voting rights relate to administrative tasks only and the relevant activities are directed by means of contractual arrangements (this is the same wording that IFRS 12 uses in defining a structured entity - see section 3.1 above). In such cases, an investor's consideration of the purpose and design of the investee shall also include consideration of the risks to which the investee was designed to be exposed, the risks it was designed to pass on to the parties involved with the investee and whether the investor is exposed to some or all of those risks. Consideration of the risks includes not only the downside risk, but also the potential for upside. [IFRS 10.B8].

Understanding the purpose and design of the investee helps to determine:

- To what risks was the investee designed to be exposed, and what are the risks it was designed to pass on to the parties with which it is involved?
- What are the relevant activities?
- How are decisions about the relevant activities made?
- Who has the ability to direct the relevant activities?
- Which parties have exposure to variable returns from the investee?
- How do the relevant activities affect returns?
- Do the parties that have power and have exposure to variable returns have the ability to use that power to affect returns?

In short, understanding the purpose and design of the investee helps to understand the goal of each investor; that is, why they are involved with the investee, and what that involvement is.

4 Power over an investee

The first criterion to have control relates to power. An investor has power when it has existing rights that give it the current ability to direct the relevant activities. [IFRS 10.10, IFRS 10.B9]. Therefore, when assessing whether an investor has power, there are two critical concepts:

- Relevant activities
- Existing rights

These concepts are discussed in sections 4.1 and 4.2 below, respectively. Power may be achieved through voting rights (see section 4.3 below) or through rights arising from contractual arrangements (see section 4.4 below). We also discuss other evidence of power (see section 4.5 below) and determine whether sponsoring (designing) a structured entity gives power (see section 4.6 below).

An investor can have power over an investee even if other entities have existing rights that give them the current ability to participate in the direction of the relevant activities. This may occur when another entity has significant influence, [IFRS 10.14], i.e., the power to participate in the financial and operating policy decisions of the investee but does not have control or joint control over those policies. [IAS 28.3].

4.1 Relevant activities

In many cases, it is clear that control of an investee is held through voting rights. However, when it is not clear that control of an investee is held through voting rights, a crucial step in assessing control is identifying the relevant activities of the investee and the way decisions about such activities are made. [IFRS 10.B10]. Relevant activities are the activities of the investee that significantly affect the investee's returns. [IFRS 10.10].

For many investees, a range of activities significantly affect their returns. Examples of relevant activities, and decisions about them, include, but are not limited to:

- Determining or changing operating and financing policies (which might include the items below)
- Selling and purchasing goods and/or services
- Managing financial assets during their life (and/or upon default)
- Selecting, acquiring or disposing of assets
- Researching and developing new products or processes
- Determining a funding structure or obtaining funding
- Establishing operating and capital decisions of the investee, including budgets
- Appointing, remunerating or terminating the employment of an investee's service providers or key management personnel [IFRS 10.B6, IFRS 10.B11, IFRS 10.B12]

4.1.1 More than one relevant activity

In many cases, more than one activity will significantly affect an investee's returns.

Under IFRS 10, if two or more unrelated investors each have existing rights that give them the unilateral ability to direct different relevant activities, the investor that has the current ability to direct the activities that most significantly affect the returns of the investee has power over the investee. [IFRS 10.13].

In some situations, activities that occur both before and after a particular set of circumstances or events may be relevant activities. When two or more investors have the current ability to direct relevant activities and those activities occur at different times, the investors shall determine which investor is able to direct the activities that most significantly affect those returns consistently with the treatment of concurrent decision-making rights. The investors reconsider this assessment over time if relevant facts or circumstances change. [IFRS 10.B13].

Therefore, when there is more than one activity that significantly affects an investee's returns, and these activities are directed by different investors, it is important to determine which activities most significantly affect the investee's returns. This is shown in Illustration 4-1 below, which is from IFRS 10. [IFRS 10.B13 Example 1].

Illustration 4-1: Identifying relevant activities in life sciences arrangements

Two investors form an investee to develop and market a medical product. One investor is responsible for developing and obtaining regulatory approval of the medical product - that responsibility includes having the unilateral ability to make all decisions relating to the development of the product and to obtaining regulatory approval. Once the regulator has approved the product, the other investor will manufacture and market it - this investor has the unilateral ability to make all decisions about the manufacture and marketing of the product. If all the activities - developing and obtaining regulatory approval as well as manufacturing and marketing of the medical product - are relevant activities, each investor needs to determine whether it is able to direct the activities that most significantly affect the investee's returns. Accordingly, each investor needs to consider whether developing and obtaining regulatory approval or the manufacturing and marketing of the medical product is the activity that most significantly affects the investee's returns and whether it is able to direct that activity. In determining which investor has power, the investors would consider:

- (a) The purpose and design of the investee
- (b) The factors that determine the profit margin, revenue and value of the investee as well as the value of the medical product
- (c) The effect on the investee's returns resulting from each investor's decision-making authority with respect to the factors in (b)
- And
- (d) The investors' exposure to variability of returns

In this particular example, the investors would also consider:

- (e) The uncertainty of, and effort required in, obtaining regulatory approval (considering the investor's record of successfully developing and obtaining regulatory approval of medical products)
- And
- (f) Which investor controls the medical product once the development phase is successful

In this Illustration, IFRS 10 does not conclude which of the activities is the most relevant activity (i.e., the activity that most significantly affects the investee's returns). If it were concluded that the most relevant activity is:

- Developing and obtaining regulatory approval of the medical product - then the investor that has the power to direct that activity would have power from the date of entering into the arrangement.
- Or
- Manufacturing and marketing the medical product - then the investor that has the power to direct that activity would have power from the date of entering into the arrangement.

To determine whether either investor controls the arrangement, the investors would also need to assess whether they have exposure to variable returns from their involvement with the investee (see section 5 below) and the ability to use their power over the investee to affect the amount of the investor's returns (see section 6 below). [IFRS 10.7, IFRS 10.B2]. The investors are required to reconsider this assessment over time if relevant facts or circumstances change. [IFRS 10.8].

Illustration 4-1 above shows a situation when two different activities that significantly affect an investee's returns are directed by different investors. Thus, it is important to identify the activity that *most* significantly affects returns, as part of assessing which investor, if any, has power. This differs from joint control, defined as the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require the unanimous consent of the parties sharing control. [IFRS 11 Appendix A]. Joint control is discussed in more detail in Chapter 13.

A second example, also provided by IFRS 10, is reproduced in Illustration 4-2 below. [IFRS 10.B13 Example 2].

Illustration 4-2: Identifying relevant activities in an investment vehicle

An investment vehicle (the investee) is created and financed with a debt instrument held by an investor (the debt investor) and equity instruments held by a number of other investors. The equity tranche is designed to absorb the first losses and to receive any residual return from the investee. One of the equity investors who holds 30% of the equity is also the asset manager. The investee uses its proceeds to purchase a portfolio of financial assets, exposing the investee to the credit risk associated with the possible default of principal and interest payments of the assets. The transaction is marketed to the debt investor as an investment with minimal exposure to the credit risk associated with the possible default of the assets in the portfolio because of the nature of these assets and because the equity tranche is designed to absorb the first losses of the investee.

The returns of the investee are significantly affected by the management of the investee's asset portfolio, which includes decisions about the selection, acquisition and disposal of the assets within portfolio guidelines and the management upon default of any portfolio assets. All those activities are managed by the asset manager until defaults reach a specified proportion of the portfolio value (i.e., when the value of the portfolio is such that the equity tranche of the investee has been consumed).

From that time, a third-party trustee manages the assets according to the instructions of the debt investor. Managing the investee's asset portfolio is the relevant activity of the investee. The asset manager has the ability to direct the relevant activities until defaulted assets reach the specified proportion of the portfolio value; the debt investor has the ability to direct the relevant activities when the value of defaulted assets surpasses that specified proportion of the portfolio value. The asset manager and the debt investor each need to determine whether they are able to direct the activities that *most* significantly affect the investee's returns, including considering the purpose and design of the investee as well as each party's exposure to variability of returns.

Illustration 4-3 below shows a structured entity in which there is more than one activity that affects the investee's returns.

Illustration 4-3: Identifying relevant activities in a structured entity

A structured entity buys dollar-denominated assets, issues euro-denominated notes, and hedges the cash flow differences through currency and interest rate swaps. The activities that affect the structured entity's returns include:

- Sourcing the assets from the market
- Determining the types of assets that are purchased
- Deciding how the structure is hedged
- Managing the assets in the event of default

If each of these activities is managed by different investors (e.g., one investor manages the assets in the event of default, but a different investor determines the types of assets that are purchased), it is necessary to determine which activity most significantly affects the structured entity's returns.

When there are multiple activities that significantly affect an investee's returns, but those activities are all directed by the same investor(s) (which is frequently the case when those activities are directed by voting rights), it is not necessary to determine which activity most significantly affects the investee's returns because the power assessment would be the same in each case.

4.1.2 No relevant activities

How we see it

We believe that structured entities for which there is no substantive decision-making are rare. That is, we believe virtually all structured entities have some level of decision-making and few, if any, are on 'autopilot'. Even if a structured entity operates on 'autopilot', there may be decisions outside the predetermined parameters that may need to be taken if an expected return fails to materialise which could significantly affect the returns of the entity and therefore be relevant activities.

In practice, many entities that may initially have few if any relevant activities can be terminated by at least one of the parties involved in the structure. In this case, the choice of whether to terminate may often be viewed as the relevant activity. IFRS 10 would most likely result in such entities being consolidated by an investor that has the power to dissolve the entity, if this power would affect its variable returns. See section 4.6 below for additional guidance on evaluating relevant activities for structured entities and section 6.3.2 below for additional guidance on liquidation and redemption rights.

However, if a structured entity truly has no decision-making, then no investor controls that structured entity. This is because no investor has power over the structured entity, that is, no investor has the current ability to direct the activities that significantly affect the structured entity's returns if there are no relevant activities after inception significantly affecting those returns. As discussed above, we believe that such situations where there is no substantive decision-making are rare.

4.1.3 Single asset, single lessee vehicles

Some structured entities are single asset, single lease vehicles created to lease a single asset to a single lessee. Between November 2014 and May 2015, the IFRS IC discussed requests for clarification about the interaction of IFRS 10 and IAS 17 *Leases* - in two situations which involved the establishment of a structured entity to lease a single asset to a single lessee.

In the first situation, the lease between the structured entity and the lessee was an operating lease and the question was whether the lessee consolidates the structured entity. In the second situation, the lease between the structured entity and the lessee was a finance lease, and the question was whether the junior lender of the structured entity consolidates the structured entity. In both situations, the consolidation decision is based on an assessment of whether the entity controls the structured entity. The IFRS IC was asked whether the lessee's use of the leased asset was a relevant activity of the structured entity when assessing power over the structured entity.

The IFRS IC was of the view that the lessee's right to use the asset for a period of time does not, in isolation, typically give the lessee decision-making rights over the relevant activities of the structured entity and hence is not typically be a relevant activity of the structured entity. This is because on entering into a lease, regardless of whether it is a finance lease or an operating lease, the structured entity (lessor) has two rights - a right to receive lease payments and a right to the residual value of the leased asset at the end of the lease. Consequently, the activities that affect the structured entity's returns relate to managing the returns derived from those rights; for example, managing the credit risk associated with the lease payments or managing the leased asset at the end of the lease term (for example, managing its sale or re-leasing). How the decision-making relating to those activities significantly affects the structured entity's returns depends on the particular facts and circumstances.

The IFRS IC noted that its conclusion does not mean that a lessee can never control the lessor. For example, a parent that controls another entity for other reasons can lease an asset from that entity. Further, in assessing control, an entity considers all of the rights that it has in relation to the investee to determine whether it has power over that investee. This includes rights in contractual arrangements other than the lease contract, such as contractual arrangements for loans made to the lessor, as well as rights included within the lease contract, including those that go beyond simply providing the lessee with the right to use the asset.

We believe the discussions above also apply to leases as defined in IFRS 16 *Leases*.

4.1.4 Management of assets in the event of default

The management of defaults on assets held by a structured entity will frequently be a relevant activity for that entity (see Illustration 4-2 in section 4.1.1 above). However, in practice, if the assets held by the structured entity are bonds, the activities of a decision-maker that is contracted to manage any defaults may be limited to voting at creditors' meetings, as an independent administrator is appointed to manage the bond default on behalf of all bond holders. Whether the decision-maker has power (i.e., the current ability to direct the management of defaults) or not will probably depend on the size of the structured entity's holding in the individual bonds that have defaulted. The greater the holding, the more likely the decision-maker may be able to control decision-making in a creditors' meeting.

4.2 Existing rights

Once the relevant activities are identified, the next step is to determine which investor, if any, has the current ability to direct those activities (i.e., who has the power). Sometimes, assessing power is straightforward, such as when power over an investee is obtained directly and solely from the voting rights that stem from holding voting interests (e.g., shares), and can be assessed by considering the voting rights from those shareholdings. In other cases, the assessment is more complex and requires many factors to be considered (e.g., instances when power is embedded in one or more contractual arrangements). [IFRS 10.11].

The Application Guidance to IFRS 10 discusses the following, in relation to rights that give an investor power over an investee. [IFRS 10.B14, IFRS 10.B15, IFRS 10.B16].

Extract from IFRS 10

- B14** Power arises from rights. To have power over an investee, an investor must have existing rights that give the investor the current ability to direct the relevant activities. The rights that may give an investor power can differ between investees.
- B15** Examples of rights that, either individually or in combination, can give an investor power include but are not limited to:
- (a) rights in the form of voting rights (or potential voting rights) of an investee (see paragraphs B34-B50);
 - (b) rights to appoint, reassign or remove members of an investee's key management personnel who have the ability to direct the relevant activities;
 - (c) rights to appoint or remove another entity that directs the relevant activities;
 - (d) rights to direct the investee to enter into, or veto any changes to, transactions for the benefit of the investor; and
 - (e) other rights (such as decision-making rights specified in a management contract) that give the holder the ability to direct the relevant activities.
- B16** Generally, when an investee has a range of operating and financing activities that significantly affect the investee's returns and when substantive decision-making with respect to these activities is required continuously, it will be voting or similar rights that give an investor power, either individually or in combination with other arrangements.

4.2.1 Evaluating whether rights are substantive

For a right to convey power, it must provide the current ability to direct the relevant activities. An investor, in assessing whether it has power, considers only substantive rights relating to the investee (held by the investor and others). IFRS 10 notes that "For a right to be substantive, the holder must have the practical ability to exercise that right". [IFRS 10.B22]. An investor that holds only protective rights (see section 4.2.2 below) does not have power over an investee, and consequently does not control the investee. [IFRS 10.14]. Whether rights are substantive depends on facts and circumstances. The table below (although not exhaustive) describes the factors that are considered. [IFRS 10.B23].

Figure 4-1: Factors to consider in assessing whether a right is substantive

Factors	Examples
<ul style="list-style-type: none"> Are there barriers (economic, operational or otherwise) that would prevent (or deter) the holder(s) from exercising their right(s)? 	<ul style="list-style-type: none"> Financial penalties High exercise or conversion price Narrow exercise periods Absence of a mechanism to exercise Lack of information to exercise Lack of other parties willing or able to take over or provide specialist services Legal or regulatory barriers (e.g., where a foreign investor is prohibited from exercising its rights)
<ul style="list-style-type: none"> Do the holders have the practical ability to exercise their rights, when exercise requires agreement by more than one investor? 	<ul style="list-style-type: none"> The more parties necessary to come together to exercise this right, the less likely that the right is substantive A mechanism is in place that provides those parties with the practical ability to exercise their rights collectively if they choose to do so An independent board of directors may serve as a mechanism for numerous investors to act collectively in exercising their rights
<ul style="list-style-type: none"> Would the investor that holds the rights benefit from their exercise or conversion? 	<ul style="list-style-type: none"> A potential voting right is in-the-money An investor would obtain benefits from synergies between the investor and the investee

Furthermore, to be substantive, rights need to be exercisable when decisions about the direction of the relevant activities need to be made. IFRS 10 notes “Usually, to be substantive, the rights need to be currently exercisable. However, sometimes rights can be substantive, even though the rights are not currently exercisable”. [IFRS 10.B24]. This is shown by IFRS 10, [IFRS 10.B24 Example 3-3D], as reflected in Illustration 4-4 below.

Illustration 4-4: Rights exercisable when decisions need to be made

An investee has annual shareholder meetings at which decisions to direct the relevant activities are made. The next scheduled shareholders’ meeting is in eight months. However, shareholders that individually or collectively hold at least 5% of the voting rights can call a special meeting to change the existing policies over the relevant activities, but a requirement to give notice to the other shareholders means that such a meeting cannot be held for at least 30 days. Policies over the relevant activities can be changed only at special or scheduled shareholders’ meetings. This includes the approval of material sales of assets as well as the making or disposing of significant investments.

The above fact pattern applies to each scenario described below. Each scenario is considered in isolation.

Scenario A

An investor holds a majority of the voting rights in the investee. The investor’s voting rights are substantive because the investor is able to make decisions about the direction of the relevant activities when they need to be made. The fact that it takes 30 days before the investor can exercise its voting rights does not stop the investor from having the current ability to direct the relevant activities from the moment the investor acquires the shareholding.

Scenario B

An investor is party to a forward contract to acquire the majority of shares in the investee. The forward contract’s settlement date is in 25 days. The existing shareholders are unable to change the existing policies over the relevant activities because a special meeting cannot be held for at least 30 days, at which point the forward contract will have been settled. Thus, the investor has rights that are essentially equivalent to the majority shareholder in scenario A above (i.e., the investor holding the forward contract can make decisions about the direction of the relevant activities when they need to be made). The investor’s forward contract is a substantive right that gives the investor the current ability to direct the relevant activities even before the forward contract is settled.

Scenario C

An investor holds a substantive option to acquire the majority of shares in the investee that is exercisable in 25 days and is deeply in the money. The same conclusion would be reached as in scenario B.

Scenario D

An investor is party to a forward contract to acquire the majority of shares in the investee, with no other related rights over the investee. The forward contract’s settlement date is in six months. In contrast to the scenarios A to C above, the investor does not have the current ability to direct the relevant activities. The existing shareholders have the current ability to direct the relevant activities because they can change the existing policies over the relevant activities before the forward contract is settled.

This Illustration shows that an investor with the current ability to direct the relevant activities has power even if its rights to direct have yet to be exercised. IFRS 10 states: “Evidence that the investor has been directing relevant activities can help determine whether the investor has power, but such evidence is not, in itself, conclusive in determining whether the investor has power over an investee”. [IFRS 10.12].

It should be noted that an investor in assessing whether it has power needs to consider substantive rights held by other parties. Substantive rights exercisable by other parties can prevent an investor from controlling the investee to which those rights relate. Such substantive rights do not require the holders to have the ability to initiate decisions. As long as the rights are not merely protective (see section 4.2.2 below), substantive rights held by other parties may prevent the investor from controlling the investee even if the rights give the holders only the current ability to approve or block decisions that relate to the relevant activities. [IFRS 10.B25].

It is important to remember that the purpose and design of an investee is critical when assessing whether a right is substantive. For example, the following should be considered when evaluating whether an investor’s rights are substantive:

- Why were the rights granted?
- What compensation was given (or received) for the right? Does that compensation reflect fair value?
- Did other investors also receive this right? If not, why?

These questions should be considered both when a right is first granted, but also if an existing right is modified.

To be substantive and convey power, a right must give the investor the ‘current ability’ to direct the investee’s relevant activities. However, ‘current ability’ does not always mean ‘able to be exercised this instant’. The concept of ‘current ability’ is discussed more in the context of potential voting rights in section 4.3.4 below.

4.2.2 Evaluating whether rights are protective

In evaluating whether rights give an investor power over an investee, the investor has to assess whether its rights, and rights held by others, are protective rights. [IFRS 10.B26].

Under IFRS 10, protective rights are defined as: [IFRS 10 Appendix A]

Extract from IFRS 10

Appendix A

Defined terms

protective rights

Rights designed to protect the interest of the party holding those rights without giving that party power over the entity to which those rights relate.

Since power is an essential element of control, protective rights do not provide the investor control over the investee. [IFRS 10.14]. In addition, holding protective rights cannot prevent another investor from having power over an investee. [IFRS 10.B27].

Protective rights are typically held to prohibit fundamental changes in the activities of an investee that the holder does not agree with and usually only apply in exceptional circumstances (i.e., upon a contingent event). However, the fact that the right to make decisions is contingent upon an event occurring does not mean that the right is always a protective right. [IFRS 10.B26].

Examples of protective rights include (but are not limited to) the right to:

- Restrict an investee from undertaking activities that could significantly change the credit risk of the investee to the detriment of the investor
- Approve an investee’s capital expenditures (greater than the amount spent in the ordinary course of business)
- Approve an investee’s issuance of equity or debt instruments
- Seize assets if an investee fails to meet specified loan repayment conditions [IFRS 10.B28]
- Veto transactions between the investee and a related party

In some cases, a right might be deemed protective, such as the ability to sell assets of the investee if an investee defaults on a loan, because default is considered an exceptional circumstance. However, in the event that the investee defaults on a loan (or, say, breaches a covenant), the investor holding that right will need to reassess whether that right has become a substantive right that gives the holder power (rather than merely a protective right), based on the change in facts and circumstances. This issue has been raised with the IFRS IC which, in September 2013, concluded that reassessment of control is required when facts and circumstances change in such a way that rights, previously determined to be protective, change (for example upon the breach of a covenant in a borrowing arrangement that causes the borrower to be in default). In making its conclusion, the IFRS IC observed that:

- Paragraph 8 of IFRS 10 requires an investor to reassess whether it controls an investee if facts and circumstances indicate that there are changes to one or more of the three elements of control.
- A breach of a covenant that results in rights becoming exercisable constitutes such a change.
- IFRS 10 does not include an exemption for any rights from this need for reassessment.
- The IASB’s redeliberation of this topic during the development of IFRS 10 concluded that rights initially determined to be protective are included in a reassessment of control whenever facts and circumstances indicate that there are changes to one or more of the three elements of control.⁷

⁷ [IFRIC Update](#), September 2013, p.3, available on the IFRS Foundation’s website.

4.2.2.A Veto rights

Whether veto rights held by an investor are merely a protective right or a right that may convey power to the veto holder will depend on the nature of the veto rights. If the veto rights relate to changes to operating and financing policies that significantly affect the investee's returns, the veto right may not merely be a protective right.

Other veto rights that are common, and are typically protective (because they rarely significantly affect the investee's returns) include veto rights over changes to:

- Amendments to articles of incorporation
- Location of investee headquarters
- Name of investee
- Auditors
- Accounting principles for separate reporting of investee operations

4.2.2.B Franchises

Many have questioned how to consider franchise rights, and whether they give power (to the franchisor), or whether they are merely protective rights. IFRS 10 notes that a franchise agreement for which the investee is the franchisee often gives the franchisor rights that are designed to protect the franchise brand.

Franchise agreements typically give franchisors some decision-making rights with respect to the operations of the franchisee. [IFRS 10.B29].

The standard goes on to say that, generally, franchisors' rights do not restrict the ability of parties other than the franchisor to make decisions that have a significant effect on the franchisee's returns. Nor do the rights of the franchisor in franchise agreements necessarily give the franchisor the current ability to direct the activities that significantly affect the franchisee's returns. [IFRS 10.B30].

It is necessary to distinguish between having the current ability to make decisions that significantly affect the franchisee's returns and having the ability to make decisions that protect the franchise brand. The franchisor does not have power over the franchisee if other parties have existing rights that give them the current ability to direct the relevant activities of the franchisee. [IFRS 10.B31].

By entering into the franchise agreement, the franchisee has made a unilateral decision to operate its business in accordance with the terms of the franchise agreement, but for its own account. [IFRS 10.B32].

Control over such fundamental decisions as the legal form of the franchisee and its funding structure often are not made by the franchisor and may significantly affect the returns of the franchisee. The lower the level of financial support provided by the franchisor and the lower the franchisor's exposure to variability of returns from the franchisee the more likely it is that the franchisor has only protective rights. [IFRS 10.B33].

When analysing whether a franchisor has power over a franchisee, it is necessary to consider the purpose and design of the franchisee. The assessment of whether a franchisor has power hinges on the determination of the relevant activities, and which investor (the franchisor or owner of the franchisee) has the current ability to direct that activity through its rights. The rights held by the franchisor must be evaluated to determine if they are substantive, (i.e., the franchisor has the practical ability to exercise its rights when decisions of the relevant activities need to be made so that it has the current ability to direct the relevant activities), or whether they are merely protective rights. A determination will need to be made in each case, based on the specific facts and circumstances. This is shown in Illustration 4-5 below.

Illustration 4-5: Rights held by franchisor

A franchisor has certain rights that are designed to protect its brand when it is being licensed by a franchisee. Activities that significantly affect the franchisee's returns include:

- Determining or changing its operating policies
- Setting its prices for selling goods
- Selecting suppliers
- Purchasing goods and services
- Selecting, acquiring or disposing of equipment
- Appointing, remunerating or terminating the employment of key management personnel
- Financing the franchise

If certain of the activities above are directed by one investor (e.g., the owners of the franchisee), and other activities are directed by another investor (e.g., the franchisor), then the investors will need to determine which activity most significantly affects the franchisee's returns, as discussed in section 4.1.1 above.

4.2.2.C Budget approval rights

Approval rights over budgets are fairly common in shareholders' agreements and form part of the assessment as to the level of power held by investors. If the budget approval rights held by a shareholder (or other investor) are viewed as substantive, that might indicate that the entity having those rights has power over an investee.

However, the purpose and design of arrangements is key to the analysis of who has power. Therefore, the right to approve budgets is not automatically considered substantive but is based on a careful consideration of the facts and circumstances. Factors to consider in assessing whether budget approval rights are substantive or protective include (but are not limited to):

- The level of detail of the budget that is required to be approved
- Whether the budget covers the relevant activities of the entity
- Whether previous budgets have been challenged and if so, the practical method of resolution
- Whether there are any consequences of budgets not being approved (e.g., may the operator/directors be removed?)
- Whether the entity operates in a specialised business for which only the operator/directors have the specialised knowledge required to draw up the budget
- Who appoints the operator and/or key management personnel of the investee
- The nature of the counterparty with budget approval rights and their practical involvement in the business

4.2.2.D Independent directors

In some jurisdictions, there are requirements that an entity appoints directors who are 'independent'. The phrase 'independent director' has a variety of meanings in different jurisdictions but generally means a director who is independent of a specific shareholder. In some situations, a majority of directors of an entity may be 'independent'.

The fact that a majority of directors of an entity are 'independent' does not mean that no shareholder controls an entity. IFRS 10 requires that all facts and circumstances be considered and in the context of an entity with independent directors it is necessary to determine the role that those directors have in decisions about the relevant activities of the entity. The power to appoint and remove independent directors is considered as part of this assessment.

Similarly, an entity may have more than one governing body and it is not assumed that because one body (which may consist of a majority of independent directors) has oversight of another this means that the supervisory body is the one that makes decisions about the relevant activities of the entity.

4.2.3 Incentives to obtain power

There are many incentives to obtain rights that convey power; generally, the more exposure to variable returns (whether positive or negative), the greater that incentive. IFRS 10 notes this in two contexts:

- The greater an investor's exposure, or rights, to variability of returns from its involvement with an investee, the greater the incentive for the investor to obtain rights sufficient to give it power. Therefore, having a large exposure to variability of returns is an indicator that the investor may have power. However, the extent of the investor's exposure is not determinative regarding whether an investor has power over the investee. [IFRS 10.B20].
- An investor may have an explicit or implicit commitment to ensure that an investee continues to operate as designed. Such a commitment may increase the investor's exposure to variability of returns and thus increase the incentive for the investor to obtain rights sufficient to provide it with power. Therefore, a commitment to ensure that an investee operates as designed may be an indicator that the investor has power, but does not, by itself, give an investor power, nor does it prevent another party from having power. [IFRS 10.B54].

Thus, even though there may be an incentive to obtain rights that convey power when there is an exposure to variable returns, that incentive, by itself, does not represent power. Rather, the investor must analyse whether it actually does have power through existing rights, which might be in the form of voting rights, or rights through a contractual agreement, as discussed in sections 4.3 and 4.4 below, respectively.

4.3 Voting rights

Power stems from existing rights. Often an investor has the current ability, through voting or similar rights, to direct the relevant activities. [IFRS 10.B34].

In many cases, assessing power can be straightforward. This is often the case when, after understanding the purpose and design of the investee, it is determined that power over an investee is obtained directly and solely from the proportionate voting rights that stem from holding equity instruments, such as ordinary shares in the investee. In this case, in the absence of evidence to the contrary, the assessment of control focuses on which party, if any, is able to exercise voting rights sufficient to determine the investee's operating and financing policies. In the most straightforward case, the investor that holds a majority of those voting rights, in the absence of any other factors, controls the investee. [IFRS 10.B6].

Nevertheless, when taking into account other factors relating to voting rights, an investor can have power even if it holds less than a majority of the voting rights of an investee, for example, through:

- (a) A contractual arrangement between the investor and other vote holders (see section 4.3.5 below)
- (b) Rights arising from other contractual arrangements (see section 4.3.6 below)
- (c) The investor's voting rights being sufficient (see section 4.3.3 below)
- (d) Potential voting rights (see section 4.3.4 below)

Or

- (e) A combination of (a)-(d) [IFRS 10.B38]

If the relevant activities of an investee are directed through voting rights, an investor needs to consider the requirements of IFRS 10 in relation to such matters as discussed in sections 4.3.1 to 4.3.6 below. [IFRS 10.B34].

See section 4.4 below for a discussion of cases when voting rights are *not* the right that gives power over an investee.

4.3.1 Power with a majority of the voting rights

In many cases, the legal environment or corporate structure dictate that the relevant activities are directed by the agreement of shareholders who hold more than half of the voting rights of the investee.

Alternatively, a governing body, e.g., a board of directors, might make decisions regarding the investee and that board might be appointed by whoever has the majority of the voting rights to direct an investee's relevant activities. In both cases, when one investor has more than half the voting rights, it has power, assuming that no other facts and circumstances are relevant. [IFRS 10.B35].

However, there may be other facts and circumstances that are relevant, as discussed in section 4.3.2 below. In addition, any potential voting rights need to be considered (see section 4.3.4 below).

4.3.2 A majority of voting rights without power

In some cases, voting rights do *not* provide the holder the power to direct the relevant activities. This might be the case, when:

- Relevant activities are directed by another party with existing rights under a contract, and that party is not an agent of the investor (see section 4.4 below) [IFRS 10.B36]
- Voting rights are not substantive (see section 4.2.1 above). For example, if the relevant activities are directed by government, judiciary, administrator, receiver, liquidator, or regulator (see section 4.3.2.A below) [IFRS 10.B37]
- Voting rights have been delegated to a decision-maker, which then holds the voting rights as an agent (see section 6 below)

Or

- Voting rights are held as a *de facto* agent of another investor (see section 7 below)

4.3.2.A Evaluating voting rights during bankruptcy

Many jurisdictions have laws that offer protection from creditors when an entity is in financial difficulty. For example, an investee in such a position might be placed in the hands of liquidators, receivers or court-appointed managers under a reorganisation plan. Evaluating whether an investor holding the majority of voting rights still has power over an investee in such situations requires the exercise of judgement based on the facts and circumstances. It also requires an assessment as to whether the holder of the voting rights continues to have the current ability to direct the activities that most significantly affect the investee's returns.

In this evaluation, it is determined whether the shareholders (who hold voting rights) can still direct the operating and financial policies of the investee (assuming that this is the relevant activity), once the investee enters into bankruptcy proceedings. Alternatively, the bankruptcy court (or trustee, or administrator) may direct operating and financial policies. Consideration is given to the following:

- Who appoints management during the bankruptcy period?
- Who directs management (e.g., the shareholders, or a trustee for the creditors)?
- Does management have to seek approval from parties besides the shareholders (e.g., for significant and/or unusual transactions)?
- Who negotiates the plan of reorganisation?

Even if it appears that the shareholders retain power once the investee enters bankruptcy (i.e., they retain the current ability to direct the relevant activities), this does not mean that a majority shareholder automatically controls the investee. This is because the shareholder may not have any exposure to variable returns (see section 5 below), or the ability to affect its returns through its power (see section 6 below), which are the other two criteria for having control. Depending on the facts and circumstances, a shareholder might lose power (or control) when the investee files for bankruptcy protection, or when the investee exits from bankruptcy. Determining the appropriate method of accounting for the interest in the investee upon loss of power (or control) requires careful consideration of the nature of the rights and interests, such as whether the shareholder has significant influence over the investee, in which case it applies the equity method under IAS 28 see Chapter 12. Alternatively, if the investor does not have significant influence, it likely accounts for its investment in the investee as a financial instrument under IFRS 9.

When an investee files for bankruptcy, parties holding other rights with respect to that investee might also have to consider whether the control assessment has changed. For example, a right that was previously deemed protective (such as the right to appoint an administrator in the event of a bankruptcy - a right that is frequently held by creditors), may be considered to be a right that now gives power. Alternatively, the trustee itself might have power, through its ability to direct the activities of the investee in bankruptcy.

4.3.3 Power without a majority of voting rights (*de facto* control)

An investor might have control over an investee even when it has less than a majority of the voting rights of that investee if its rights are sufficient to give it power, because such rights give the investor the practical ability to direct the relevant activities unilaterally (a concept known as '*de facto* control'). [IFRS 10.B41].

When assessing whether an investor's voting rights are sufficient to give it power, an investor considers all facts and circumstances, including:

- (a) The size of the investor's holding of voting rights relative to the size and dispersion of holdings of the other vote holders, noting that:
 - (i) The more voting rights an investor holds, the more likely the investor is to have existing rights that give it the current ability to direct the relevant activities.
 - (ii) The more voting rights an investor holds relative to other vote holders, the more likely the investor is to have existing rights that give it the current ability to direct the relevant activities.

And

 - (iii) The more parties that need to act together to outvote the investor, the more likely the investor is to have existing rights that give it the current ability to direct the relevant activities.
- (b) Potential voting rights held by the investor, other vote holders or other parties
- (c) Rights arising from other contractual arrangements

And

- (d) Any additional facts and circumstances that indicate the investor has, or does not have, the current ability to direct the relevant activities at the time that decisions need to be made, including voting patterns at previous shareholders' meetings [IFRS 10.B42]

In addition, IFRS 10 states that if it is not clear that the investor has power, having considered the factors above, then the investor does not control the investee. [IFRS 10.B46].

Whether an investor includes voting rights held by related parties not controlled by the investor (e.g., shareholdings held by its parent, sister companies, associates or shareholdings held by key management personnel or other individuals who are related parties) depends on the specific facts and circumstances (i.e., whether the related parties are *de facto* agents of the investor). See section 7 below.

Potential voting rights and rights arising from other contractual arrangements are discussed in sections 4.3.4 to 4.3.6 below. *De facto* control is discussed in more detail below.

IFRS 10 includes several examples illustrating the assessment of power when an investor has less than a majority of voting rights. Some of these are summarised in Illustration 4-6 to Illustration 4-9 below. Our variation on the examples provided in IFRS 10 is introduced in Illustration 4-10 below. In each of the Illustrations below, it is assumed that, after understanding the purpose and design of the investee:

- Voting rights give an investor the ability to direct activities that most significantly affect the investee's returns (i.e., voting rights give power).
- None of the shareholders has arrangements to consult any of the other shareholders or make collective decisions.
- Decisions require the approval of a majority of votes cast at the shareholders' meeting.
- No other facts or circumstances are relevant.

When the direction of relevant activities is determined by majority vote and an investor holds significantly more voting rights than any other party, and the other shareholdings are widely dispersed, it may be clear, after considering the factors listed in (a)-(c) above alone, that the investor has power over the investee. [IFRS 10.B43]. This is shown in Illustration 4-6 below (although factors (b) and (c) are not applicable).

Illustration 4-6: Less than a majority of voting rights (1)

A holds 48% of the voting rights of B; the remaining 52% of B is widely held by thousands of shareholders (none of whom individually holds more than 1% of the voting rights, and none of the shareholders has any arrangements to consult any of the others or make collective decisions).

A has power over B, because A has a dominant voting interest (based on the absolute size of its holding, and relative to other shareholders), and a large number of shareholders have to agree to outvote A.

[IFRS 10.B43 Example 4].

In other situations, it may be clear after considering the factors listed in (a)-(c) above alone that an investor does not have power. [IFRS 10.B44]. This is shown in Illustration 4-7 below (although factors (b) and (c) are not applicable).

Illustration 4-7: Less than a majority of voting rights (2)

C holds 45% of the voting rights in D. Two other investors each hold 26% of the voting rights (total 52%), with the remaining 3% held by three other shareholders, each holding 1%. There are no other arrangements that affect decision-making.

C does *not* have power over D, because the two remaining significant shareholders (i.e., a relatively small number) could easily cooperate to outvote C. The size of C's holding, and size of that holding relative to other shareholders, does *not* give it power. [IFRS 10.B44 Example 6].

However, the factors listed in (a)-(c) above alone may not be conclusive. If an investor, having considered those factors, is unclear whether it has power, it considers additional facts and circumstances, such as whether other shareholders are passive in nature as demonstrated by voting patterns at previous shareholders' meetings. [IFRS 10.B45].

When evaluating past voting patterns, significant judgement will be required to determine how far back to review. Judgement will also be required to determine whether past voting patterns may have been influenced by conditions that existed at a point in time, such as how well the entity was operating during the periods reviewed. For example, if an entity was profitable and operating smoothly, other shareholders may have been less motivated to exercise their voting rights. The fewer voting rights the investor holds, and the fewer parties that need to act together to outvote the investor, the more reliance placed on the additional facts and circumstances to assess whether the investor's rights are sufficient to give it power. [IFRS 10.B45]. Consideration of additional facts and circumstances, referred to in IFRS 10.B45, includes the assessment of the factors that provide evidence of the practical ability to direct the relevant activities of the investee (IFRS 10.B18), and the indicators that the investor may have power as a result of any special relationship with the investee (IFRS 10.B19) or due to the extent of its exposure to variability of returns (IFRS 10.B20), which are discussed in section 4.5 below. When the facts and circumstances in IFRS 10.B18 to B20 are considered together with the investor's rights, greater weight is given to the evidence of power in IFRS 10.B18 than to the indicators of power in IFRS 10.B19 and B20. [IFRS 10.B45].

Illustration 4-8 below shows a situation where the factors in (a)-(c) above alone are not conclusive, and therefore facts and circumstances need to be considered.

Illustration 4-8: Less than a majority of voting rights (3)

E holds 45% of the voting rights in F. The rest of F is dispersed among 11 investors, who each hold 5%. None of the shareholders has contractual arrangements to consult any of the others or make collective decisions.

The size of E's holding and the dispersion of the other shareholders are *not* conclusive in determining whether E has power over F. Other relevant facts and circumstances (such as those discussed in section 4.5 below) are considered to determine whether E has power over F. [IFRS 10.B45 Example 7].

Comparing Illustration 4-7 and Illustration 4-8 above shows that judgement will need to be applied in determining whether an investor has power. The IASB considers that it may be easy for two other shareholders to act together to outvote an investor (as in Illustration 4-7 above), but that it may be more difficult for 11 other shareholders to act together to outvote an investor (as in Illustration 4-8 above).

Illustration 4-9 below shows a situation where additional facts and circumstances need to be considered. For example, this may include whether other shareholders are passive in nature as demonstrated by voting patterns at previous shareholders' meetings.

Illustration 4-9: Less than a majority of voting rights (4)

G holds 35% of the voting rights in H. Three other shareholders each hold 5% of the voting rights of H. The remaining 50% of the voting rights are held by numerous other shareholders, none individually holding more than 1% of the voting rights. None of the shareholders has arrangements to consult any of the others or make collective decisions. At recent shareholders' meetings, 75% of the voting rights have been represented (including G).

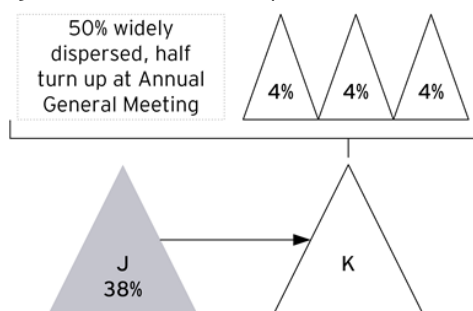

G does not have power over H because the size of G's holding relative to other shareholders, when considering their active participation at recent shareholders' meetings, does not give G the current ability to direct the activities of H. This is the case regardless of whether there is evidence that G directed H in the past, or whether other shareholders voted in the same way as G. [IFRS 10.B45 Example 8].

In Illustration 4-9 above, G cannot have power because it does not have, at a minimum, more than half the votes of shareholders that have turned up at recent meetings. That is, since 75% have turned up at recent meetings, G needs a minimum of 37.5% to have power. A variation of the above scenario is shown in Illustration 4-10 below.

Illustration 4-10: Less than a majority of voting rights (5)

J holds 38% of the voting rights of K. Three other shareholders each hold 4% of the voting rights of K. Numerous other shareholders hold the remaining 50% of the voting rights, although none individually holds more than 1%. At recent shareholders' meetings, 75% of the voting rights have been represented, including J. None of the shareholders has arrangements to consult any of the others or make collective decisions.

There are diverse views regarding the conclusion on this fact pattern, and judgement will need to be applied in practice. Some believe that J has power, because it has more than half the voting rights of those who have turned up at recent shareholder meetings. (J has more than half the voting rights, because J holds 38%, which is more than 37.5%, or half of 75%). Others believe that it is inconclusive whether J has power, because, while J has more than half the voting rights of those who have turned up at recent shareholder meetings, this is just barely the case. Contrast this fact pattern with Illustration 4-6 above, where IFRS 10 concludes that, after all relevant facts and circumstances have been considered, holding 48% in combination with remaining ownership that is widely dispersed results in an entity (A) having power.

Applying the concept of *de facto* control in the absence of 'bright lines' will require significant judgement of the facts and circumstances. For example:

- How large does an investor's interest need to be relative to others?
- How widely dispersed are the other investors? Could three shareholders easily act together?
- Are past voting patterns expected to be indicative of future voting patterns? How much history is needed to make an assessment?
- Are there other relevant agreements between shareholders?

Generally, the lower the percentage held by one investor (the dominant shareholder, in Illustration 4-6 to Illustration 4-10 above), the less likely that investor has *de facto* control.

Although perhaps rare, an investor could find itself in control of an investee simply because of circumstances that exist at a point in time, rather than because of deliberate action (see section 9.3 below). In addition, while it may be easy to use hindsight to determine whether an investor had (or has) control, it might be difficult to apply this principle on a real-time basis. Information will need to be gathered and analysed (e.g., how widely dispersed are the other shareholders), so that management can reach a timely conclusion. It will also be necessary to monitor the changes in the profile of the other shareholders as this could mean that the investor has gained or lost power over the investee (see section 9.3 below).

The following Practical example shows the disclosure of the significant judgements used in determining the existence of *de facto* control.

Practical example 4-1: ENGIE SA (2021)

France

2021 MANAGEMENT REPORT AND ANNUAL CONSOLIDATED FINANCIAL STATEMENTS [extract]**03 NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS [extract]****NOTE 3 MAIN SUBSIDIARIES AT DECEMBER 31, 2021 [extract]****3.2 Significant judgements exercised when assessing control [extract]****Entities in which the Group does not have the majority of the voting rights**

In the entities in which the Group does not have a majority of the voting rights, judgment is exercised with regard to the following items, in order to assess whether there is a situation of *de facto* control:

- dispersion of the shareholding structure: number of voting rights held by the Group relative to the number of rights held respectively by the other vote holders and their dispersion;
- voting patterns at shareholders' meetings: the percentages of voting rights exercised by the Group at shareholders' meetings in recent years;
- governance arrangements: representation in the governing body with strategic and operational decision-making power over the relevant activities;
- rules for appointing key management personnel;
- contractual relationships and material transactions.

The main fully consolidated entities in which the Group does not have the majority of the voting rights at December 31, 2021 are Compagnie Nationale du Rhône (49.98%).

Compagnie Nationale du Rhône ("CNR" – France excluding Infrastructures): 49.98%

The Group holds 49.98% of the share capital of CNR, with CDC holding 33.2%, and the balance of 16.82% being dispersed among around 200 local authorities. In view of the current provisions of the French "Murcef" law, under which a majority of CNR's share capital must remain under public ownership, the Group is unable to hold more than 50% of the share capital. However, the Group considers that it exercises *de facto* control as it holds the majority of the voting rights exercised at shareholders' meetings due to the widely dispersed shareholding structure and the absence of evidence of the minority shareholders acting in concert.

4.3.4 Potential voting rights

When assessing whether it has power over an investee, an investor also considers the potential voting rights that it holds, as well as potential voting rights held by others. Common examples of potential voting rights include options, forward contracts, and conversion features of a convertible instrument. Those potential voting rights are considered only if the rights are substantive (see section 4.2.1 above). [IFRS 10.B47]. In the remainder of this section, reference is made to 'options', but the concepts apply to all potential voting rights.

When considering potential voting rights, an investor considers the purpose and design of the entity, including the rights associated with the instrument, as well as those arising from any other involvement the investor has with the investee. This includes an assessment of the various terms and conditions of the instrument as well as the investor's apparent expectations, motives and reasons for agreeing to those terms and conditions. [IFRS 10.B48].

If the investor also has voting or other decision-making rights relating to the investee's activities, the investor assesses whether those rights, in combination with potential voting rights, give the investor power. [IFRS 10.B49].

Substantive potential voting rights alone, or in combination with other rights, may provide an investor the current ability to direct the relevant activities. [IFRS 10.B50]. For example, if an investor has less than a majority of voting rights, but holds a substantive option that, if exercised, gives the investor a majority of voting rights, that investor likely has power. [IFRS 10.B42, IFRS 10.B50]. Illustration 4-11 below shows when holding an option would likely give an investor power.

Illustration 4-11: Potential voting rights (1)

A holds 40% of the voting rights of B, and holds a currently exercisable in-the-money option to acquire a further 20% of the voting rights of B.

Assuming that voting rights give power over B, the option is substantive, and no other facts and circumstances are relevant to this assessment, A would likely have power over B, because A can currently exercise its right to obtain a majority of B's voting shares at any time.

The opposite is also true. If an investor holds a majority of the voting rights, but those voting rights are subject to a substantive option held by another investor, the majority shareholder would likely not have power.

Another example provided by IFRS 10 of a situation where substantive potential voting rights, in combination with other rights, can give an investor the current ability to direct the relevant activities is reflected in Illustration 4-12 below.

Illustration 4-12: Potential voting rights (2)

Investor A and two other investors each hold a third of the voting rights of an investee. The investee's business activity is closely related to investor A. In addition to its equity instruments, investor A also holds debt instruments that are convertible into ordinary shares of the investee at any time for a fixed price that is out of the money (but not deeply out of the money). If the debt were converted, investor A would hold 60% of the voting rights of the investee. Investor A would benefit from realising synergies if the debt instruments were converted into ordinary shares. Investor A has power over the investee because it holds voting rights of the investee together with substantive potential voting rights that give it the current ability to direct the relevant activities. [IFRS 10.B50 Example 10].

IFRS 10 is silent on whether the intention of the holder (i.e., whether the holder intends to exercise the option or not) is considered in the assessment of potential voting rights. However, IFRS 10 is clear that power arises from rights in themselves, and the ability those rights give the investor to direct the relevant activities. [IFRS 10.B14]. Therefore, an option is only considered in the assessment of power if it is substantive (i.e., the holder has the practical ability to exercise the option when decisions about the direction of relevant activities need to be made). [IFRS 10.B22, IFRS 10.B24, IFRS 10.B47]. As discussed in section 4.2.1 above, whether an option is substantive depends on facts and circumstances. Common factors to consider when evaluating whether an option is substantive include:

- Exercise price or conversion price, relative to market terms
- Ability to obtain financing
- And
- Timing and length of exercise period

These factors are each discussed in more detail below, and their implications are indicated in the table below. The evaluation of whether an option is substantive considers all the factors discussed in section 4.2.1 above, rather than limited to only one of the factors.

Figure 4-2: Evaluating whether potential voting rights are substantive

Evaluation	Non-substantive	Depends on facts and circumstances	Substantive
Exercise price	Deeply-out-of-the-money	Out-of-the-money or at market (fair value)	In-the-money
Financial ability to exercise	Holder has no financial ability	Holder would have to raise financing	Holder has cash or financing readily available
Exercise period	Not exercisable	Exercisable before decisions need to be made	Currently exercisable

4.3.4.A Exercise price or conversion price

IFRS 10 is clear that the exercise price (or conversion price) can and must be considered, in evaluating whether an option can give power, because it might represent a barrier to exercise. [IFRS 10.B23(a)(ii)]. Factors to consider are:

- **Deeply-out-of-the-money**
Generally, these are considered non-substantive.
- **Out-of-the-money (but not deeply)**
Judgement will be needed to assess whether the cost of paying more than fair value is worth the potential benefits of exercise, including the exposures to variable returns that are associated with exercising that option (see section 5 below for examples of exposures to variable returns).
- **At market (fair value)**
Consideration must be given as to whether the option conveys rights that differ from those that are available to third parties in an open market.
- **In-the-money**
Generally, in-the-money options are considered substantive.

IFRS 10 does not define 'deeply-out-of-the-money' or provide a list of indicators for management to consider when exercising judgement in determining whether an option is deeply-out-of-the-money (as opposed to merely out-of-the-money). A call option with a strike price significantly above the value of the underlying interest is normally considered to be deeply-out-of-the-money.

When evaluating the exercise price, consideration is given as to whether the nature of the exercise price (e.g., deeply-out, out, or in-the-money) is expected to remain so for the entire exercise period, or whether the nature of the exercise price may change in the future. That is, the evaluation is not solely based on the nature of the option at inception or as at the end of the reporting period. This is because to convey power, an option must give an investor the current ability to direct the relevant activities when the decisions need to be made. Thus, for example, if an option was deeply-out-of-the-money at the reporting date, but the exercise price was subject to decrease such that the option was expected to become in-the-money before the relevant activities of the investee need to be directed, then the option may be substantive (or *vice versa*). This evaluation will require the exercise of judgement based on all relevant facts and circumstances. As noted above, the evaluation is not solely based on the nature of the option as at the end of the reporting period, i.e., whether a potential voting right is substantive is not based solely on a comparison of the strike or conversion price of the instrument and the then current market price of its underlying share. Although the strike or conversion price is one factor to consider, determining whether potential voting rights are substantive requires a holistic approach, considering a variety of factors. This includes assessing the purpose and design of the instrument, considering whether the investor can benefit for other reasons such as by realising synergies between the investor and the investee, and determining whether there are any barriers (financial or otherwise) that prevent the holder of potential voting rights from exercising or converting those rights. Accordingly, a change in market conditions (i.e., the market price of the underlying shares) alone does not typically result in a change in the consolidation conclusion. [IFRS 10.BC124].

Illustration 4-13 below reflects an example from IFRS 10 of an option that is currently exercisable but is deeply-out-of-the-money and is expected to remain so for the whole of the exercise period. [IFRS 10.B50 Example 9].

Illustration 4-13: Potential voting rights (3)

Investor A holds 70% of the voting rights of an investee. Investor B has 30% of the voting rights of the investee as well as an option to acquire half of investor A's voting rights. The option is exercisable for the next two years at a fixed price that is deeply out of the money (and is expected to remain so for that two-year period). Investor A has been exercising its votes and is actively directing the relevant activities of the investee. In such a case, investor A is likely to meet the power criterion because it appears to have the current ability to direct the relevant activities. Although investor B has currently exercisable options to purchase additional voting rights (that, if exercised, would give it a majority of the voting rights in the investee), the terms and conditions associated with those options are such that the options are not considered substantive.

4.3.4.B Financial ability

The financial ability of an investor to pay the exercise price must be considered when evaluating whether an option is substantive, because this could be an 'economic barrier' as contemplated by IFRS 10.

[IFRS 10.B23(a)]. For example, if there is evidence that an investor cannot obtain financing to exercise an in-the-money option, this might indicate that the option is not substantive. However, financial ability is generally considered to be linked to the exercise price, because an investor is usually able to obtain financing for an in-the-money option. As such, instances in which an investor is unable to obtain financing for in-the-money options are expected to be uncommon.

In contrast, it is probably more common that the holder has the financial ability to exercise an option that is out-of-the-money (but not deeply so) and considers exercising that option to benefit from synergies. This might be the case when the investee has strategic importance to the option holder.

4.3.4.C Exercise period

To have power over an investee, an investor must have existing rights that give the investor the current ability to direct an investee's relevant activities. [IFRS 10.10]. This implies that an option needs to be currently exercisable to give power. However, under IFRS 10, an option can give an investor the current ability to direct an investee's relevant activities even when it is not currently exercisable. Although 'current' often means 'as of today' or 'this instant' in practice, the IASB's use of the term in IFRS 10 broadly refers to the ability to make decisions about an investee's relevant activities when they need to be made.

[IFRS 10.B24]. This is shown in Illustration 4-14 below.

Illustration 4-14: Potential voting rights (4)

An investee holds annual shareholder meetings, at which decisions to direct the relevant activities are made. An investor holds an option to acquire the majority of shares in the investee, which is not currently exercisable. However, the option is exercisable before the next scheduled shareholder meeting, and before the next special shareholder meeting could be held (based on the investee's governance policies).

When considering solely the exercise period, the investor's option is a substantive right that gives the investor power (since it gives the holder a majority of shares). This is because the investor *does have* the current ability to direct the investee's relevant activities when decisions need to be made, i.e., at the next scheduled shareholder meeting or next special shareholder meeting.

However, when concluding whether an investor has power over the investee in real fact patterns, all relevant facts and circumstances are considered, to evaluate whether the option is substantive, not solely the exercise period.

In contrast, if the next shareholders' meeting occurs (or could be held) before the option is exercisable, that option is not a right that gives the holder the current ability to direct the investee's activities (and therefore does not give the holder power). This is consistent with the conclusion for Scenario D in Illustration 4-4 in section 4.2.1 above.

IFRS 10 does not contain separate requirements for different types of potential voting rights; that is, employee options are subject to the same requirements as those that are held by a third party. However, it is unlikely that an option held by an employee gives that employee power (or control) over an investee in practice, usually because the employee options represent a small percentage of the outstanding shares, even if exercised. However, in a very small, privately owned entity it is possible for an employee (such as a member of management) to have power, if an option gives the employee the current ability to direct the relevant activities, or if the employee has other interests in the investee.

It is noted that the IASB considered, but did not change, similar requirements in IAS 28 related to how options are considered when evaluating whether an investor has significant influence. That is, IAS 28 does not incorporate the IFRS 10 concept of evaluating whether an option is substantive (see Chapter 12). Accordingly, an option might give power under IFRS 10, but the same option might not result in significant influence under IAS 28.

Simply holding a currently exercisable option that, if exercised, gives the investor more than half of the voting rights in an investee is not sufficient to demonstrate control of the investee. All facts and circumstances must be considered to assess whether an investor has power over an investee, including whether an option is substantive (including, but not limited to consideration of the exercise period). This may require considerable judgement to be exercised.

4.3.5 Contractual arrangement with other vote holders

A contractual arrangement between an investor and other vote holders can give the investor the right to exercise voting rights sufficient to give the investor power, even if the investor does not have voting rights sufficient to give it power without the contractual arrangement. However, a contractual arrangement might ensure that the investor can direct enough other vote holders on how to vote to enable the investor to make decisions about the relevant activities. [IFRS 10.B39].

It is noted that the contractual arrangement has to ensure that investor can direct the other party to vote as required. When the arrangement is merely that the parties agree to vote the same way, that only represents joint control; defined as the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require the unanimous consent of the parties sharing control. [IFRS 11 Appendix A]. Joint control is discussed in more detail in Chapter 13.

In some jurisdictions, investors holding a certain number of issued shares of a public company may be able to obtain proxy votes from other shareholders by public request or other means for voting at shareholder meetings. The question as to whether the investor has the ability to obtain a majority of votes (and hence power over an investee) through control of proxy votes will depend on the specific facts and circumstances of the process such as, for example, the investor's freedom to use the proxy vote and whether any statements of voting intent must be provided by the investor as a condition of obtaining the proxy vote. A situation where, for example, proxies must be requested each year makes it more difficult to demonstrate that the investor had power as a result of its ability to obtain proxy votes.

4.3.6 Additional rights from other contractual arrangements

Other decision-making rights, in combination with voting rights, can give an investor the current ability to direct the relevant activities. For example, the rights specified in a contractual arrangement in combination with voting rights may be sufficient to give an investor the current ability to direct the manufacturing processes of an investee or to direct other operating or financing activities of an investee that significantly affect the investee's returns. However, in the absence of any other rights, economic dependence of an investee on the investor (e.g., relations of a supplier with its main customer) does not lead to the investor having power over the investee. [IFRS 10.B40].

Illustration 4-15 below reflects an example from IFRS 10 of a situation where an investor with less than a majority of the voting rights is considered to have power of the investee, taking into account rights under a contractual arrangement. [IFRS 10.B43 Example 5].

Illustration 4-15: Less than a majority of voting rights combined with additional rights under a contractual arrangement

Investor A holds 40% of the voting rights of an investee and twelve other investors each hold 5% of the voting rights of the investee. The shareholder agreement grants investor A the right to appoint, remove and set the remuneration of management responsible for directing the relevant activities. To change the agreement, a two-thirds majority vote of the shareholders is required. In this case, investor A concludes that the absolute size of the investor's holding and the relative size of the other shareholdings alone are not conclusive in determining whether the investor has rights sufficient to give it power. However, investor A determines that its contractual right to appoint, remove and set the remuneration of management is sufficient to conclude that it has power over the investee. The fact that investor A might not have exercised this right or the likelihood of investor A exercising its right to select, appoint or remove management shall not be considered when assessing whether investor A has power.

4.4 Contractual arrangements

Power stems from existing rights. Sometimes, the relevant activities are not directed through voting rights, but rather, are directed by other means, such as through one or more contractual arrangements.

[IFRS 10.11]. For example, an investor might have the contractual ability to direct manufacturing processes, operating activities, or determine financing of an investee through a contract or other arrangement.

Similarly, when voting rights cannot have a significant effect on an investee's returns, such as when voting rights relate to administrative tasks only and contractual arrangements determine the direction of the relevant activities, the investor needs to assess those contractual arrangements in order to determine whether it has rights sufficient to give it power over the investee. To determine whether an investor has rights sufficient to give it power, the investor considers the purpose and design of the investee (see IFRS 10.B5 to B8 discussed in section 3.2 above) and the requirements in IFRS 10.B51 to B54 (discussed below) together with IFRS 10.B18 to B20 (see section 4.5 below). [IFRS 10.B17].

When these contractual arrangements involve activities that are closely related to the investee, then these activities are, in substance, an integral part of the investee's overall activities, even though they may occur outside the legal boundaries of the investee. Therefore, explicit or implicit decision-making rights embedded in contractual arrangements that are closely related to the investee need to be considered as relevant activities when determining power over the investee. [IFRS 10.B52].

When identifying which investor, if any, has power over an investee, it is important to review the contractual arrangements that the investor and the investee entered into. This analysis includes the original formation documents and governance documents of the investee, as well as the marketing materials provided to investors and other contractual arrangements entered into by the investee.

It is common that the relevant activities of a structured entity are directed by contractual arrangement. This is discussed further in section 4.4.1 below.

4.4.1 Structured entities

IFRS 12 defines a structured entity as: [IFRS 12 Appendix A]

Extract from IFRS 12

Appendix A

Defined terms

structured entity

An entity that has been designed so that voting or similar rights are not the dominant factor in deciding who controls the entity, such as when any voting rights relate to administrative tasks only and the relevant activities are directed by means of contractual arrangements. Paragraphs B22-B24 provide further information about structured entities.

Therefore, an entity that is controlled by voting rights is not a structured entity. Accordingly, although it might be thought that an entity that receives funding from third parties following a restructuring is a structured entity, this is not the case, if that entity continues to be controlled by voting rights after the restructuring. [IFRS 12.B24].

A structured entity often has some or all of the following features:

- Restricted activities
- A narrow and well-defined objective, such as:
 - Holding a tax-efficient lease
 - Carrying out research and development activities
 - Funding an entity
 Or
 - Providing investment opportunities for investors by passing on risks and rewards associated with assets to investors
- Insufficient equity to finance its activities without subordinated financial support
- Financing in the form of multiple contractually linked instruments to investors that create concentrations of credit or other risks (tranches) [IFRS 12.B22]

Examples of structured entities include:

- Securitisation vehicles
- Asset-backed financings
- Some investment funds [IFRS 12.B23]

Management needs to evaluate whether it controls a structured entity using the same approach as for 'traditional entities' (those that are controlled through voting rights). That is, management evaluates whether an investor has power over the relevant activities, exposure to variable returns and the ability to affect those returns through its power over the structured entity, as shown in the diagram in section 3.1 above. Frequently, as discussed above, the relevant activities of a structured entity are directed by contractual arrangement.

For some investees, relevant activities occur only when particular circumstances arise or events occur. The investee may be designed so that the direction of its activities and returns are predetermined unless and until those particular circumstances arise or events occur. In this case, only the decisions about the investee's activities when those circumstances or events occur can significantly affect its returns and thus be relevant activities. The circumstances or events need not have occurred for an investor with the ability to make those decisions to have power. The fact that the right to make decisions is contingent on circumstances arising or an event occurring does not, in itself, make those rights protective. [IFRS 10.B53].

This is shown in Illustration 4-16 below, which is summarised from an example included in IFRS 10. [IFRS 10.B53 Example 11].

Illustration 4-16: Power through contractual arrangements

An investee's only business activity, as specified in its founding documents, is to purchase receivables and service them on a day-to-day basis for its investor. The servicing includes collecting the principal and interest payments as they fall due and passing them on to the investor. For any receivable in default, the investee is required to automatically put the receivable in default to the investor, as contractually agreed in the put agreement between the investor and the investee.

The relevant activity is managing the receivables in default because it is the only activity that can significantly affect the investee's returns. Managing the receivables before default is not a relevant activity because it does not require substantive decisions to be made that could significantly affect the investee's returns - the activities before default are predetermined and amount only to collecting cash flows as they fall due and passing them on to investors.

The purpose and design of the investee gives the investor decision-making authority over the relevant activity. The terms of the put agreement are integral to the overall transaction and the establishment of the investee. Therefore, the put agreement, together with the founding documents of the investee, gives the investor power over the investee. This is the case, even though:

- The investor takes ownership of the receivables only in the event of default.
- And
- The investor's exposures to variable returns are *not* technically derived from the investee (because the receivables in default are no longer owned by the investee and are managed outside the legal boundaries of the investee).

To conclude whether the investor has control, it also needs to assess whether the other two criteria are met, i.e., it has exposure to variable returns from its involvement with the investee (see section 5 below) and the ability to use its power over the investee to affect the amount of its returns (see section 6 below). [IFRS 10.7, IFRS 10.B2].

IFRS 10 also includes a much simpler example where the only assets of an investee are receivables and when the purpose and design of the investee are considered, it is determined that the only relevant activity is managing the receivables upon default. In this situation, the party that has the ability to manage the defaulting receivables has power over the investee, irrespective of whether any of the borrowers have defaulted. [IFRS 10.B53 Example 12].

An investor may have an explicit or implicit commitment to ensure that an investee continues to operate as designed. Such a commitment may increase the investor's exposure to variability of returns and thus increase the incentive for the investor to obtain rights sufficient to give it power. Therefore, a commitment to ensure that an investee operates as designed may be an indicator that the investor has power, but does not, by itself, give an investor power, nor does it prevent another party from having power. [IFRS 10.B54].

Notwithstanding the fact that the same approach is used to evaluate control for structured entities and traditional entities, it is still important to identify which entities are structured entities. This is because certain disclosure requirements of IFRS 12 apply only to structured entities, as discussed in Chapter 14.

4.5 Other evidence of power

In some circumstances, it may be difficult to determine whether an investor's rights give it power over an investee. In such cases, the investor considers other evidence that it has the current ability to direct an investee's relevant activities unilaterally. Consideration is given, but is not limited, to the following factors, which, when considered together with its rights, the indicators of a special relationship with the investee and the extent of the investor's exposure to variability of returns (see below), may provide evidence that the investor's rights are sufficient to give it power over the investee:

- The investor can, without having the contractual right to do so, appoint, approve or nominate the investee's key management personnel (or board of directors) who have the ability to direct the relevant activities
- The investor can, without having the contractual right to do so, direct the investee to enter into, or veto any changes to, significant transactions for the benefit of the investor
- The investor can dominate either the nominations process for electing members of the investee's governing body, or obtaining proxies from other holders of voting rights
- The investee's key management personnel are related parties of the investor (for example, the chief executive officer of the investee and the chief executive officer of the investor are the same person)

Or

- The majority of the members of the investee's governing body are related parties of the investor [IFRS 10.B18]

When the above factors and the indicators set out below are considered together with an investor's rights, IFRS 10 requires that greater weight is given to the evidence of power described above. [IFRS 10.B21].

Sometimes, there will be indications that an investor has a special relationship with the investee, which suggests that the investor has more than a passive interest in the investee. The existence of any individual indicator, or a particular combination of indicators, does not necessarily mean that the power criterion is met. However, having more than a passive interest in an investee may indicate that the investor has other rights that give it power over the investee or provide evidence of existing power over the investee. For example, IFRS 10 states that this might be the case when the investee:

- Is directed by key management personnel who are current or previous employees of the investor
- Has significant:
 - Obligations that are guaranteed by the investor
 Or
 - Activities that either involve or are conducted on behalf of the investor
- Depends on the investor for:
 - Funds for a significant portion of its operations
 - Licences, trademarks, services, technology, supplies or raw materials that are critical to the investee's operations
 Or
 - Key management personnel, such as when the investor's personnel have specialised knowledge of the investee's operations

Or

- The investor's exposure, or rights, to returns from its involvement with the investee is disproportionately greater than its voting or other similar rights. For example, there may be a situation in which an investor is entitled, or exposed, to more than half of the returns of the investee but holds less than half of the voting rights of the investee. [IFRS 10.B19].

As noted in section 4.2.3 above, the greater an investor's exposure, or rights, to variability of returns from its involvement with an investee, the greater is the incentive for the investor to obtain rights sufficient to give it power. IFRS 10 adds the following: "Therefore, having a large exposure to variability of returns is an indicator that the investor may have power. However, the extent of the investor's exposure does not, in itself, determine whether an investor has power over the investee." [IFRS 10.B20].

4.6 Determining whether sponsoring (designing) a structured entity gives power

IFRS 10 discusses whether sponsoring (that is, designing) a structured entity gives an investor power over the structured entity.

In assessing the purpose and design of an investee, an investor considers the involvement and decisions made at the investee's inception as part of its design and evaluates whether the transaction terms and features of the involvement provide the investor with rights that are sufficient to give it power. Being involved in the design of an investee alone is not sufficient to give an investor control. However, involvement in the design may indicate that the investor had the opportunity to obtain rights that are sufficient to give it power over the investee. [IFRS 10.B51].

An investor's involvement in the design of an investee does not mean that the investor necessarily has control, even if that involvement was significant. Rather, an investor has control of an investee when all three criteria of control are met (see section 3.1 above), considering the purpose and design of the investee. Thus, an investor's involvement in the design of an investee is part of the context when concluding if it controls the investee, but is not determinative. There appear to be relatively few structured entities that have no substantive decision-making. [IFRS 10.13].

That is, virtually all structured entities have some level of decision-making and few, if any, are on 'autopilot' (see section 4.1.2 above). In such cases, if that decision-making can significantly affect the returns of the structured entity, the investor with the rights to make those decisions has power. This is because IFRS 10 clarifies that an investor has power when it has existing rights that give it the current ability to direct the relevant activities, even if those relevant activities only occur when particular circumstances arise or specific events occur (see section 4.1.1 above).

However, a structured entity with limited decision-making requires additional scrutiny to determine which investor, if any, has power (and possibly control) over the structured entity, particularly for the investors that have a potentially significant explicit or implicit exposure to variable returns. Careful consideration is required regarding the purpose and design of the structured entity.

In addition, the evaluation of power may require an analysis of the decisions made at inception of the structured entity, including a review of the structured entity's governing documents, because the decisions made at formation may affect which investor, if any, has power.

For a structured entity with a limited range of activities, such as certain securitisation entities, power is assessed based on which activities, if any, significantly affect the structured entity's returns, and if so, which investor, if any, has existing rights that give it the current ability to direct those activities. The following considerations may also be relevant when determining which investor, if any, has power (and possibly control):

- An investor's ability to direct the activities of a structured entity only when specific circumstances arise or events occur may constitute power if that ability relates to the activities that most significantly affect the structured entity's returns (see section 4.1.1 above).
 - An investor does not have to actively exercise its power to have power over a structured entity (see section 4.2.1 above).
- Or
- An investor is more incentivised to obtain power over a structured entity the greater its obligation to absorb losses or its right to receive benefits from the structured entity (see section 4.2.3 above).

5 Exposure to variable returns

The second criterion for assessing whether an investor has control of an investee is determining whether the investor has an exposure, or has rights, to variable returns from its involvement with the investee.

[IFRS 10.B55, IFRS 10.15, IFRS 10.16].

Extract from IFRS 10

Returns

- | | |
|----|--|
| 15 | An investor is exposed, or has rights, to variable returns from its involvement with the investee when the investor's returns from its involvement have the potential to vary as a result of the investee's performance. The investor's returns can be only positive, only negative or both positive and negative. |
| 16 | Although only one investor can control an investee, more than one party can share in the returns of an investee. For example, holders of non-controlling interests can share in the profits or distributions of an investee. |

Variable returns are returns that are not fixed and have the potential to vary as a result of the performance of an investee. As discussed in section 5.2 below, returns that appear fixed can be variable. [IFRS 10.B56].

Examples of exposures to variable returns include:

- Dividends, fixed interest on debt securities that expose the investor to the credit risk of the issuer (see section 5.2 below), variable interest on debt securities, other distributions of economic benefits and changes in the value of an investment in an investee
- Remuneration for servicing an investee's assets or liabilities, fees and exposure to loss from providing credit or liquidity support, residual interests in the investee's assets and liabilities on liquidation of that investee, tax benefits and access to future liquidity that an investor has from its involvement with the investee
- Economies of scale, cost savings, scarce products, proprietary knowledge, synergies, or other exposures to variable returns that are not available to other investors (see section 5.4 below) [IFRS 10.B57]

Simply having an exposure to variable returns from its involvement with an investee does not mean that the investor has control. To control the investee, the investor also needs to have power over the investee, and the ability to use its power over the investee to affect the amount of the investor's returns. [IFRS 10.7, IFRS 10.B2]. For example, it is common for a lender to have an exposure to variable returns from a borrower through interest payments that it receives from the borrower, that are subject to credit risk. However, the lender does not control the borrower if it does not have the ability to affect those interest payments (which is frequently the case).

It is emphasised that with respect to this criterion, the focus is on the existence of an exposure to variable returns, not the amount of the exposure to variable returns.

5.1 Exposure to variable returns can be an indicator of power

Exposure to variable returns can be an indicator of power by the investor. This is because the greater an investor's exposure to the variability of returns from its involvement with an investee, the greater the incentive for the investor to obtain rights that give the investor power. However, the magnitude of the exposure to variable returns is not determinative of whether the investor holds power. [IFRS 10.B20].

When an investor's exposure, or rights, to variable returns from its involvement with the investee are disproportionately greater than its voting or other similar rights, this might be an indicator that the investor has power over the investee when considered with other rights. [IFRS 10.B19, IFRS 10.B20].

5.2 Returns that appear fixed can be variable

An investor assesses whether exposures to returns from an investee are variable, based on the substance of the arrangement (regardless of the legal form of the returns). Even a return that appears fixed may actually be variable.

IFRS 10 gives the example of an investor that holds a bond with fixed interest payments. The fixed interest payments are considered an exposure to variable returns, because they are subject to default risk and they expose the investor to the credit risk of the issuer of the bond. How variable those returns are depends on the credit risk of the bond. [IFRS 10.B56]. The same logic extends to the investor's ability to recover the principal of the bond.

Similarly, IFRS 10 also explains that fixed performance fees earned for managing an investee's assets are considered an exposure to variable returns, because they expose the investor to the performance risk of the investee. That is, the amount of variability depends on the investee's ability to generate sufficient income to pay the fee. [IFRS 10.B56]. Performance fees that vary based on the value of an investee's assets are also an exposure to variable returns using the same reasoning.

In contrast, a non-refundable fee received up-front (wherein the investor does not have exposure to credit risk or performance risk) is likely to be considered a fixed return.

5.3 Evaluating whether derivatives provide an exposure to variable returns

Investors need to evaluate whether being party to a derivative gives them an exposure to a variable return. As indicated in section 3.2 above, an investee may be designed so that voting rights are not the dominant factor in deciding who controls the investee, such as when any voting rights relate to administrative tasks only and the relevant activities are directed by means of contractual arrangements. In such cases, an investor's consideration of the purpose and design of the investee also includes consideration of the risks to which the investee was designed to be exposed, the risks that it was designed to pass on to the parties involved with the investee and whether the investor is exposed to some or all of these risks. Consideration of the risks includes not only the downside risk, but also the potential for upside. [IFRS 10.B8].

When evaluating whether being party to a derivative is an exposure to a variable return, it is helpful to follow these steps:

- Analyse the nature of the risks in the investee - for example, assess whether the purpose and the design of the investee exposes the investor to the following risks:
 - Credit risk
 - Interest rate risk (including prepayment risk)
 - Foreign currency exchange risk
 - Commodity price risk
 - Equity price risk
 - Operational risk
 - Determine the purpose(s) for which the investee was created - for example, obtain an understanding of the following:
 - Activities of the investee
 - Terms of the contracts the investee has entered into
 - Nature of the investee's interests issued
 - How the investee's interests were negotiated with, or marketed to, potential investors
 - Which investors participated significantly in the design or redesign of the entity
- And
- Determine the variability that the investee is designed to create and pass along to its interest holders - considering the nature of the risks of the investee and the purposes for which the investee was created

Some might argue that any derivative creates an exposure to variable returns, even if that exposure is only a positive exposure. However, we do not believe that this was the IASB's intention, given the following comments made by the IASB in both the Basis for Conclusions accompanying IFRS 10 and the Application Guidance of IFRS 12. [IFRS 10.BC66, IFRS 12.B9].

Extract from IFRS 10

BC66 Some instruments are designed to transfer risk from a reporting entity to another entity. During its deliberations, the Board concluded that such instruments create variability of returns for the other entity but do not typically expose the reporting entity to variability of returns from the performance of the other entity. For example, assume an entity (entity A) is established to provide investment opportunities for investors who wish to have exposure to entity Z's credit risk (entity Z is unrelated to any other party involved in the arrangement). Entity A obtains funding by issuing to those investors notes that are linked to entity Z's credit risk (credit-linked notes) and uses the proceeds to invest in a portfolio of risk-free financial assets. Entity A obtains exposure to entity Z's credit risk by entering into a credit default swap (CDS) with a swap counterparty. The CDS passes entity Z's credit risk to entity A, in return for a fee paid by the swap counterparty. The investors in entity A receive a higher return that reflects both entity A's return from its asset portfolio and the CDS fee. The swap counterparty does not have involvement with entity A that exposes it to variability of returns from the performance of entity A because the CDS transfers variability to entity A, rather than absorbing variability of returns of entity A.

This principle is applied in the following Illustration.

Illustration 5-1: Derivatives that create risk for an investee

A structured entity (Entity A) enters into a CDS whereby a bank passes the credit risk of a reference asset to the structured entity and, hence, to the investors of that structured entity. In this Illustration, if the bank has the power to amend the referenced credit risk in the CDS, it has power over a relevant activity. However, as the bank, through the CDS, creates rather than absorbs risk, the bank is not exposed to a variable return. Consequently, the bank is not able to use its power to affect its variable returns and so does not control the structured entity.

How we see it

In our view, a derivative that introduces risk to an investee (e.g., a structured entity) is not normally considered an exposure to variable returns under IFRS 10. Only a derivative that exposes a counterparty to risks that the investee was designed to create and pass on is considered an exposure to variable returns under IFRS 10. We believe this view is consistent with the IASB's intentions.

5.3.1 Plain vanilla foreign exchange swaps and interest rate swaps

It is important to consider the purpose and design of the entity when evaluating whether a plain vanilla foreign exchange or interest rate swap is considered a creator or absorber of variable returns.

How we see it

It is our view that an exposure to variable returns generally absorbs the variability created by the investee's assets, liabilities or other contracts, and the risks the investee was designed to pass along to its investors. Therefore, if a derivative is entered into to reduce the variability of a structured entity's cash flows (such as might arise from movements in foreign currency or interest rates), it is not intended to absorb the cash flows of the entity. Instead, the derivative is entered into to align the cash flows of the assets of the structured entity with those of the investors and so reduce the risks to which the investors in the structured entity are exposed. Accordingly, the counterparty does not have an exposure to a variable return.

Meanwhile, a counterparty to a foreign exchange or interest rate swap typically has a senior claim on any cash flows due under the swap relative to any noteholders. Consequently, it is unlikely to be exposed to the credit risk of the assets held by the structured entity, or else that risk will be deemed to be insignificant (i.e., losses on the assets would need to be so large that there are insufficient funds in the structured entity to settle the derivatives).

However, if payments on a swap were subordinate to the rights of noteholders, or contractually referenced to the performance of the underlying assets in the structured entity, the counterparty is exposed to the risk associated with the performance of the underlying assets (i.e., the risk that the structured entity may be unable to fulfil its obligations under the swap). In that case, if the swap counterparty had power over the structured entity because it has the ability to manage its assets, it is likely that it is deemed to have the ability to affect its variable returns and so controls the structured entity.

The above principles are shown in Illustration 5-2 below.

Illustration 5-2: Structured entity that enters into foreign currency and interest rate swaps

A bank designs a structured entity to meet the requirements of European investors, who wish to be exposed to US corporate bonds without the foreign exchange risk. The structured entity buys dollar-denominated debt securities through the bank, issues euro-denominated notes and hedges the cash flow differences through a series of swaps entered into with the bank. Subsequently, the structured entity collects and pays the resultant cash flows. The bonds will be held by the structured entity until maturity and cannot be substituted. The bank manages the assets, including in the event of their default and earns a fixed fee for its services. The right to receive the fee ranks more senior than the notes.

Most of the activities of the structured entity are predetermined. It is possible that the relevant activity is the management of the assets in the event of default as discussed in section 4.1.4 above. If this is the case, power is held by the bank, since it has the existing rights that give it the current ability to direct this activity. In evaluating the bank's exposure to variable returns from its involvement with the structured entity:

- The foreign currency and interest rate risks were not risks that the structured entity was designed to be exposed to or to pass on to the bank.
- The bank's exposure to movements in foreign exchange and interest rate risks is not affected by its power over the relevant activity.
- The fixed fee that the bank earns is not considered a variable return as its payment is unlikely to be affected by the credit risk of the bonds.
- The bank's exposure to potential credit risk on its derivatives is considered insignificant, as that risk only arises if losses on the bonds were so large that there were insufficient funds in the structured entity to settle the derivatives.

In conclusion, even if the bank has power by virtue of managing the defaults (i.e., the relevant activity), the bank has no exposure to variable returns, and thus does not control the structured entity and so does not consolidate it.

5.3.2 Total return swaps

The principles discussed in section 5.3.1 above are also relevant where a structured entity enters into a total return swap, since the swap creates an equal, but opposite risk to each party, as shown in Illustration 5-3 below.

Illustration 5-3: Structured entity that enters into a total return swap

A structured entity acquires a portfolio of equity securities from the market, issues fixed rate notes to investors and hedges the mismatch in cash flows between the equity securities and the notes through entering into a total return swap with a bank. The choice of equity securities that make up the portfolio is pre-agreed by the bank and the note investors. However, the bank also has substitution rights over the equity securities held by the structured entity within certain parameters. The terms of this swap are that the structured entity pays the bank any increase in value of the securities and any dividends received from them, while the bank pays the structured entity any decline in the value of the securities and interest at a fixed rate.

The structured entity was designed to give equity risk to the bank while the noteholders earn a fixed rate of interest. The bank's substitution rights over the equity securities is likely the relevant activity, because it may significantly affect the structured entity's returns. Therefore, the bank has power. The bank also has an exposure to variable returns since it absorbs the equity risk. Since it has the ability to use its power to affect its returns from the total return swap, all three criteria for control are met and the bank consolidates the structured entity.

5.4 Exposures to variable returns not directly received from an investee

When identifying an exposure to variable returns, an investor must include all variable returns resulting from its investment including not only those directly received from the investee but also returns generated as a result of the investment that are not available to other interest holders. [IFRS 10.B57].

Generally, the focus is on the variable returns that are generated by the investee. However, depending on the purpose and design of the arrangements and the investee, when the investor receives variable returns that are not generated by the investee, but stem from involvement with the investee, these variable returns are also considered.

Examples of such variable returns include using assets in combination with the assets of the investee, such as combining operating functions to achieve economies of scale, cost savings, sourcing scarce products, gaining access to proprietary knowledge or limiting some operations or assets, to enhance the value of the investor's other assets. [IFRS 10.B57(c)].

5.5 Exposure to variable returns in bankruptcy filings

As discussed in section 4.3.2.A above, evaluating whether an investor has control when its investee files for bankruptcy requires the exercise of judgement based on the facts and circumstances. Part of the assessment includes an evaluation of whether the investor has an exposure to variable returns from the investee once the investee files for bankruptcy. For example, based on the requirements for the particular type of bankruptcy in the relevant jurisdiction:

- Is the investee restricted from paying dividends to the investors upon filing for bankruptcy?
- Are the investors exposed to a variable return through their interests in the investee, notwithstanding the bankruptcy (e.g., do shares in the investee retain any value)?
- Do the investors have a loan receivable, or other financial interest in the investee, that is expected to provide a return (or is the loan worthless)?
- Do the investors have access to other synergies from the investee?

For an investor to have control, it must also have power (as discussed in section 4.3.2.A above) and the ability to use its power over the investee to affect the amount of the investor's returns (see section 6 below).

5.6 Interaction of IFRS 10 with the derecognition requirements in IFRS 9

In evaluating whether an entity has an exposure to the variable returns of a structured entity, it is also necessary to consider the interaction with the derecognition requirements set out in IFRS 9 (see Chapter 48). Specifically, it is relevant to consider the impact of whether or not the transfer criteria have been satisfied by the transferor or whether a transferor has exposure to variable returns arising from its involvement with a structured entity. The following Illustration will help show this issue.

Illustration 5-4: Structured entity that enters into a total return swap with the transferor

Assume the same facts as in Illustration 5-3 in section 5.3.2 above, except that the bank originally sold the equity securities to the structured entity (rather than the structured entity acquired the equity securities from the market).

As the bank has, through the total return swap, retained substantially all of the risks and rewards of ownership of the securities, it does not derecognise them. Consequently, the structured entity does not recognise the securities but, instead recognises a loan to the bank, collateralised by the securities. As the bank has not derecognised the securities, it has no variable return from its involvement with the structured entity. Hence, it does not have control of the structured entity and does not consolidate it. The investors have no power over the structured entity, so none of the investors consolidate it either.

5.7 Reputational risk

The term 'reputational risk' often refers to the risk that failure of an entity could damage the reputation of an investor or sponsor. To protect its reputation, the investor or sponsor might be compelled to provide support to the failing entity, even though it has no legal or contractual obligation to do so. During the financial crisis, some financial institutions stepped in and provided financing for securitisation vehicles that they sponsored, and in some cases took control of these vehicles. The IASB concluded that reputational risk is not an indicator of power in its own right, but may increase an investor's incentive to secure rights that give the investor power over an investee. Accordingly, reputational risk alone is not regarded as a source of variable returns and so does not require a bank to consolidate a structured entity that it sponsors.

[IFRS 10.BC37, IFRS 10.BC38, IFRS 10.BC39].

6 Link between power and returns: principal-agency situations

The third criterion for having control is that the investor must have the ability to use its power over the investee to affect the amount of the investor's returns. [IFRS 10.7(c)]. An investor controls an investee if the investor not only has power over the investee and exposure or rights to variable returns from its involvement with the investee, but also has the ability to use its power to affect the investor's returns from its involvement with the investee. [IFRS 10.17].

Thus, an investor with decision-making rights determines whether it is a principal or an agent. An investor that is an agent in accordance with IFRS 10.B58 to B72 does not control an investee when it exercises decision-making rights delegated to it. [IFRS 10.18]. This is discussed further in section 6.1 below.

In January 2015, the IFRS IC noted that a fund manager that concludes that it is an agent in accordance with IFRS 10 then assesses whether it has significant influence in accordance with the guidance in IAS 28.⁸ See Chapter 12.

The link between power over an investee and exposure to variable returns from involvement with the investee is essential to having control. An investor that has power over an investee, but cannot benefit from that power, does not control that investee. An investor that has an exposure to a variable return from an investee, but cannot use its power to direct the activities that most significantly affect the investee's returns, does not control that investee. This is shown in Illustration 6-1 below.

Illustration 6-1: Link between power and returns is essential for control

A structured entity is created and financed by debt instruments held by a senior lender and a subordinated lender and a minimal equity investment from the sponsor. The subordinated lender transferred receivables to the structured entity. Managing the receivables in default is the only activity of the structured entity that causes its returns to vary, and this power has been given to the subordinated lender by contract. The subordinated loan is designed to absorb the first losses and to receive any residual return from the structured entity. The senior lender has exposure to variable returns due to the credit risk of the structured entity.

When analysing which investor, if any, has control the first step is to identify the relevant activities. In this Illustration, managing the receivables in default is the only activity of the structured entity that causes its returns to vary. Therefore, it is the relevant activity. The next step is to determine which investor, if any, has the current ability to direct that relevant activity. In this Illustration, the subordinated lender has the power that it was granted by contract. The subordinated lender is exposed to variable returns from its involvement with the structured entity through its subordinated debt. The subordinated lender has the ability to affect those returns through its power to manage the receivables in default. Since all three elements of control are present, the subordinated lender has control over the structured entity. This evaluation is made in the context of understanding the structured entity's purpose and design.

While the senior lender's exposure to variable returns is affected by the structured entity's activities, the senior lender has no power to direct those activities. Thus, the senior lender does *not* control the structured entity, because it is missing two of the elements of control.

6.1 Delegated power: principals and agents

When decision-making rights have been delegated or are being held for the benefit of others, it is necessary to assess whether the decision-maker is a principal or an agent to determine whether it has control. This is because if that decision-maker has been delegated rights that give the decision-maker power, it must assess whether those rights give the decision-maker power for its own benefit, or merely power for the benefit of others. An agent is a party primarily engaged to act on behalf of another party or parties (the principal(s)), and therefore does not control the investee when it exercises its decision-making powers. [IFRS 10.B58]. As an agent does not control the investee, it does not consolidate the investee. [IFRS 10.18].

While principal-agency situations often occur in the asset management and banking industries, they are not limited to those industries. Entities in the construction, real estate and extractive industries also frequently delegate powers when carrying out their business. This is especially common when an investee is set up and one of the investors (often the lead investor) is delegated powers by the other investors to carry out activities for the investee. Assessing whether the lead investor is making decisions as a principal, or simply carrying out the decisions made by all the investors (i.e., acting as an agent) will be critical to the assessment.

⁸ [IFRIC Update](#), January 2015, p.10, available on the IFRS Foundation's website.

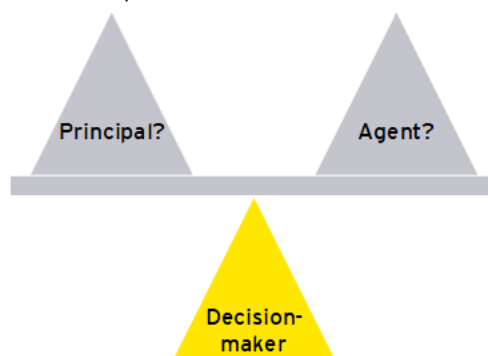

An investor may delegate decision-making authority to an agent on some specific issues or on all relevant activities, but, ultimately, the investor as principal retains the power. This is because the investor treats the decision-making rights delegated to its agent as held by the investor directly. [IFRS 10.B59]. Accordingly, a decision-maker that is not an agent is a principal. However, it is noted that:

- A decision-maker is not an agent simply because others benefit from the decisions that it makes. [IFRS 10.B58].
- An obligation to act in the best interest of those who have delegated the power does not prevent the decision-maker from being a principal.

The terms and conditions of the arrangement are considered to assess whether an entity is an agent or a principal. The determination of whether a decision-maker is an agent or a principal is made based on the following:

- Scope of decision-making authority
 - Rights held by other parties (e.g., existence of removal rights)
 - Remuneration of the decision-maker
- And
- Exposure to variability of returns through other interests [IFRS 10.B60]

Each of these factors is discussed in more detail below. When reaching a conclusion, each of the factors is weighted according to the facts and circumstances of each case, [IFRS 10.B60], which will require judgement. The only situation that is conclusive by itself is when removal rights are held by a single investor and the decision-maker can be removed without cause. [IFRS 10.B61]. This is discussed in more detail in section 6.3 below. Accordingly, although each of the factors are discussed in isolation below, a conclusion must be based on all of the factors considered together. Of the four factors that need to be considered when assessing whether the decision-maker is acting as principal or agent, generally it will be the rights held by third parties to remove the decision-maker (see section 6.3 below) and the exposure to variability of returns (see section 6.5 below) that will require careful consideration.

6.2 Scope of decision-making

To assess whether a decision-maker is a principal or an agent, the scope of its authority is evaluated by considering both:

- The activities that the decision-maker is permitted to direct (e.g., by agreement or by law)
- The discretion that the decision-maker has when making decisions about those activities [IFRS 10.B62]

It is implicit in the definition of control that, for a decision-maker to control the entity over which it has been delegated decision-making authority, the decision-maker must have power. This means that it must have been delegated the rights that give the current ability to direct the relevant activities (the activities that most significantly affect that investee's returns). If a decision-maker has been delegated rights that do not relate to the relevant activities, it does not have control over the investee.

For this reason, it is imperative to understand the purpose and design of the investee, the risks to which it was designed to be exposed and the risk it was designed to pass on to the other parties involved. Understanding the purpose and design of the investee often helps in assessing which rights were delegated, why they were delegated, and which rights have been retained by other parties, and why those rights were retained.

6.2.1 Involvement in design

IFRS 10 requires that a decision-maker considers the purpose and design of the investee, the risks to which the investee was designed to be exposed, the risks it was designed to pass on to the parties involved and the level of involvement the decision-maker had in the design of an investee. For example, if a decision-maker is significantly involved in the design of the investee (including in determining the scope of decision-making authority), that involvement may indicate that the decision-maker had the opportunity and incentive to obtain rights that result in the decision-maker having the ability to direct the relevant activities. [IFRS 10.B63].

However, a decision-maker's involvement in the design of an investee does not mean that decision-maker necessarily is a principal, even if that involvement was significant.

A decision-maker is a principal if it is not primarily engaged to act on behalf of and for the benefit of others. This determination is made in the context of considering the purpose and design of the investee, and the other factors listed in section 6.1 above. While not determinative, a decision-maker's involvement in the design of an investee is part of the context when concluding if it is a principal or agent.

How we see it

In our view, similar to the considerations for structured entities discussed in section 4.6 above, when a decision-maker sponsors an investee and establishes certain decisions in the governing documents of the investee, there must be increased scrutiny as to whether that decision-maker is a principal or an agent with respect to the investee, particularly if the other factors are indicative of the decision-maker being a principal. However, when there are many parties involved in the design of an investee, the decisions established in the governing documents might be less relevant.

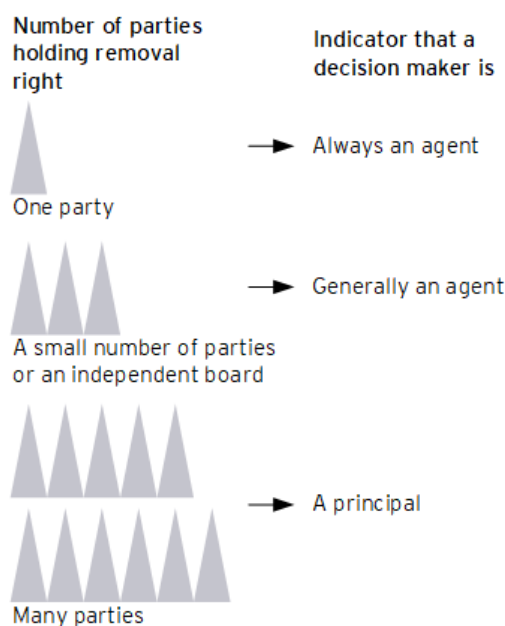

6.2.2 Assessing whether the scope of powers is narrow or broad

When evaluating whether a decision-maker is a principal or an agent, in considering the scope of its decision-making authority, it appears that a relevant factor is whether the scope of powers that have been delegated (and the discretion allotted) is narrow or broad. In an example in IFRS 10 where a decision-maker (fund manager) establishes, markets and manages a publicly traded, regulated fund according to narrowly defined parameters set out in the investment mandate, it is stated that this is a factor that indicates that the fund manager is an agent. [IFRS 10.B72 Example 13]. In another example, where the decision-maker (fund manager) has wide decision-making authority, it is implied that the extensive decision-making authority of the fund manager is an indicator that it is a principal. [IFRS 10.B72 Example 14-14A]. This suggests that where the scope of powers is broad, this is an indicator that the decision-maker is a principal. However, to conclude whether a decision-maker is an agent or a principal, the scope of power needs to be evaluated with the other three factors in totality.

6.3 Rights held by other parties

The decision-maker may be subject to rights held by other parties that may affect the decision-maker's ability to direct the relevant activities of the investee, such as rights of those parties to remove the decision-maker. Rights to remove are often referred to as 'kick-out' rights. Substantive removal rights may indicate that the decision-maker is an agent. [IFRS 10.B64]. Liquidation rights and redemption rights held by other parties, which may in substance be similar to removal rights, are discussed in section 6.3.2 below.

Other substantive rights held by other parties that restrict a decision-maker's discretion are considered similarly to removal rights when evaluating whether the decision-maker is an agent. For example, a decision-maker that is required to obtain approval from a small number of other parties for its actions is generally an agent. [IFRS 10.B66].

Figure 6-1: Evaluating rights to remove without cause

As shown in the diagram above, when a single investor holds substantive rights to remove the decision-maker without cause, that fact in isolation is sufficient to conclude that the decision-maker is an agent. [IFRS 10.B65]. That is, the decision-maker does not consolidate the entity.

However, if multiple investors hold such rights (i.e., no individual investor can remove the decision-maker without cause without the others), these rights do not, in isolation, determine whether a decision-maker is an agent or a principal. That is, all other facts and circumstances need to be considered. The more parties that must act together to remove a decision-maker and the greater the magnitude of, and variability associated with, the decision-maker's other economic interests, the less weighting that is placed on the removal right. [IFRS 10.B65]. This is reflected in an example provided by IFRS 10 where there is a large number of widely dispersed unrelated third-party investors. Although the decision-maker (the asset manager) can be removed, without cause, by a simple majority decision of the other investors, this is given little weighting in evaluating whether the decision-maker is a principal or agent. [IFRS 10.B72 Example 15].

If an independent board of directors (or governing body), which is appointed by the other investors, holds a right to remove without cause, that is an indicator that the decision-maker is an agent. [IFRS 10.B23(b), IFRS 10.B67]. This is the position taken in an example in IFRS 10 (see Illustration 6-8 in section 6.6 below) where a fund has a board of directors, all of whose members are independent of the decision-maker (the fund manager) and are appointed by the other investors. The board of directors appoints the fund manager annually. The example explains that the board of directors provides a mechanism to ensure that the investors can remove the fund manager if they decide to do so.

6.3.1 Evaluating whether a removal right is substantive

When evaluating removal rights, it is important to determine whether they are substantive, as discussed in section 4.2.1 above. If the removal right is substantive, this may be an indicator that the decision-maker is an agent. [IFRS 10.B64]. On the other hand, if the removal right is not substantive, this may be an indicator that the decision-maker is a principal, but this indicator is given less weight. The determination of whether the decision-maker is a principal needs to be based on the three other factors, i.e., scope of decision-making authority, remuneration and exposure to variability of returns through other interests.

Some of the criteria that might be more relevant when evaluating whether a removal right is substantive are shown in the diagram below. However, all of the factors noted in section 4.2.1 above and IFRS 10 must be considered in this evaluation.

Figure 6-2: Evaluating whether removal rights are substantive

Non-substantive right	Substantive right
Exercisable only for cause	Exercisable without cause
Significant financial penalty to exercise	Insignificant financial penalty to exercise
Skills held by decision-maker are unique	Several other parties could fulfil role of decision-maker
Not currently exercisable	Currently exercisable
Principal	Agent

Decision-maker

Evaluating whether a removal right is substantive will depend on facts and circumstances. [IFRS 10.B23].

6.3.1.A Available replacements

When evaluating whether a removal right is substantive, consideration is given as to whether suitable replacements exist. This is because if there are no (or few) suitable replacements for the decision-maker, this is an operational barrier that would likely prevent the parties holding the removal right from exercising that removal right. [IFRS 10.B23(a)(vi)].

In the asset management industry, suitable replacements are generally available. However, in other industries (e.g., construction, real estate, extractive), it is more common for the decision-maker to possess unique traits. For example, the decision-maker may have experience with a particular geographic location, local government, or proprietary intellectual property or tools. That might make it more difficult to assess whether there are other parties that could replace the decision-maker if the parties wanted to remove the decision-maker. However, regardless of the industry, an assessment of whether there are available replacements depends upon the specific facts and circumstances and will require judgement.

6.3.1.B Exercise period

A removal right may not be exercisable until a date in the future. In such cases, judgement must be exercised to determine whether (or when) that right becomes substantive. Similarly, when a removal right can only be exercised during a narrow period (e.g., for one day on the last day of the reporting period), judgement is necessary to determine whether the right is substantive.

When a removal right is exercised, there is typically a period (e.g., six months) until the decision-maker transitions decision-making back to the principal (or to another decision-maker) in an orderly manner. In such cases, judgement will be required to assess whether the principal has the current ability to direct the relevant activities when decisions need to be made, and therefore whether the removal right is substantive.

How we see it

In our view, even if there is a transition period between when the decision-maker is removed and when the principal (or another decision-maker) becomes responsible for making decisions, the removal right may still be substantive.

6.3.2 Liquidation rights and redemption rights

In some cases, rights held by other parties (such as some liquidation rights and some redemption rights) may have the same effect on the decision-maker's authority as removal rights. When a liquidation right or a redemption right is in substance the same as a removal right, its consideration in the evaluation of whether a decision-maker is a principal or an agent is the same.

For example, if a limited partnership is required to be liquidated upon the withdrawal of one limited partner, that is considered a removal right if it is substantive (as discussed in sections 4.2.1 and 6.3.1 above). However, such rights must be analysed carefully, based on the facts and circumstances.

6.4 Remuneration

The third factor to evaluate when assessing whether a decision-maker is a principal or an agent is remuneration.

The greater the magnitude of, and variability associated with, the decision-maker's remuneration relative to the returns expected from the activities of the investee, the more likely the decision-maker is a principal. [IFRS 10.B68]. Therefore, when determining if a decision-maker is a principal or an agent, the magnitude and variability of exposure to returns through remuneration are always considered. This applies even if the remuneration is at market rates. However, as discussed in section 6.4.1 below, IFRS 10 does not include any examples of remuneration arrangements where it is clear the remuneration is of such significance that it, in isolation, indicates that the decision maker is a principal.

Extract from IFRS 10

- B69 In determining whether it is a principal or an agent the decision maker shall also consider whether the following conditions exist:
- (a) The remuneration of the decision maker is commensurate with the services provided.
 - (b) The remuneration agreement includes only terms, conditions or amounts that are customarily present in arrangements for similar services and level of skills negotiated on an arm's length basis.

IFRS 10 states that a decision-maker cannot be an agent unless the conditions set out in (a) and (b) above are present. However, meeting those conditions in isolation is not sufficient to conclude that a decision-maker is an agent. [IFRS 10.B69, IFRS 10.B70].

6.4.1 Evaluating remuneration in the asset management industry

When evaluating whether a decision-maker is a principal or an agent, an entity is required to evaluate the magnitude and the variability of the remuneration relative to the expected returns from the investee. In examples related to the asset management industry, IFRS 10 describes three common remuneration structures:

- 1% of net assets under management [IFRS 10.B72 Example 13]
- 1% of assets under management and performance-related fees of 10% of profits if the investee's profits exceed a specified level [IFRS 10.B72 Example 15]
- 1% of assets under management and 20% of all the fund's profits if a specified profit level is achieved [IFRS 10.B72 Example 14]

In each case, the examples assume that the remuneration is commensurate with the services provided. In addition, the remuneration aligns the interests of the decision-maker with those of other investors. However, IFRS 10 concludes for each of these cases that the level of remuneration does not create an exposure to variable returns that is of such significance that, in isolation, it indicates that the fund manager is a principal. IFRS 10 does not include any examples of remuneration arrangements where the remuneration is of such significance that, in isolation, it does indicate that the fund manager is a principal. Additionally, IFRS 10 does not provide any examples of remuneration arrangements that are not market-based although this always needs to be assessed.

How we see it

In our experience, in most asset management scenarios involving retail investors, management will be able to conclude that the remuneration is commensurate with services provided and only includes market terms. This is because otherwise, retail investors would take their business elsewhere.

As discussed in section 6.4 above, a decision-maker cannot be an agent unless conditions (a) and (b) are met. However, meeting both criteria is not conclusive. The decision-maker must evaluate whether the magnitude and exposure to variable returns received through the remuneration, together with other factors, indicates that it is an agent or a principal.

6.4.2 Evaluating remuneration in other industries

IFRS 10 does not include any examples of principal-agency evaluations in the construction, real estate and extractive industries.

How we see it

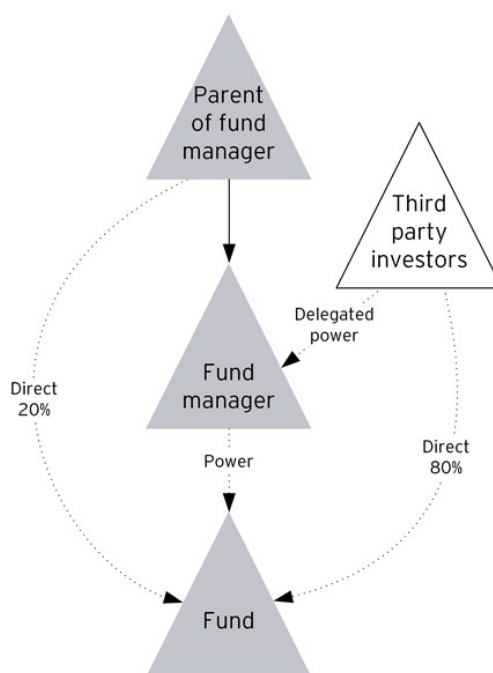

In our view, in these industries, it is more common for the decision-maker to possess unique traits (see section 6.3.1.A above). That might make it more difficult to assess whether the remuneration is commensurate with the skills provided and includes only market terms.

6.5 Exposure to variability of returns from other interests

When an investor has exposure to variable returns from its involvement with an investee (e.g., an investment in that investee, or provides a guarantee), and has been delegated decision-making authority by other parties, the investor considers that exposure to variable returns when assessing whether it has control over that investee. [IFRS 10.B59, IFRS 10.B71]. This is shown in Illustration 6-2 below as well as in the examples provided by IFRS 10 reproduced in section 6.6 below.

Illustration 6-2: Illustration of exposure to variability of returns through other interests

A parent of a fund manager has a 20% direct interest in a fund. The other 80% of the fund is held by third-party investors, who have delegated their rights with respect to the fund to the fund manager. When evaluating whether the parent controls the fund, it assesses whether the fund manager (which the parent controls) can use the power that has been delegated to it by the third parties holding the 80% interest, to benefit the parent, since the parent has a 20% direct interest in the fund and could benefit from that power.

As discussed in section 5 above, being an 'investor' and having an 'interest' in an investee is not limited to holding equity or debt instruments. A variety of exposures to variable returns can represent an 'interest' and any potential controlling party is referred to as an 'investor.'

IFRS 10 states that if a decision-maker has interests in an investee, just by virtue of holding those other interests, the decision-maker may be a principal. [IFRS 10.B71]. In the Basis for Conclusions accompanying IFRS 10, the IASB notes that a decision-maker might use its decision-making authority primarily to affect its exposure to variable returns from that interest. That is, the decision-maker has power for its own benefit. [IFRS 10.BC132]. The IASB also notes in its Basis for Conclusions that it is inappropriate to conclude that every decision-maker that is obliged, by law or contract (i.e., having any fiduciary responsibility) to act in the best interests of other parties is always an agent. This is because it assumes that a decision-maker that is legally or contractually obliged to act in the best interests of other parties will always do so, even if that decision-maker receives the vast majority of the returns that are influenced by its decision-making. [IFRS 10.BC130]. Accordingly, IFRS 10 requires an entity to evaluate the magnitude and variability of its other interests when determining if it is a principal or an agent, notwithstanding its fiduciary responsibility.

In evaluating its exposure to variability of returns from other interests in the investee a decision-maker considers the following:

- (a) The greater the magnitude of, and variability associated with, its economic interests, considering its remuneration and other interests in aggregate, the more likely the decision-maker is a principal.
- (b) Whether its exposure to variability of returns is different from that of the other investors and, if so, whether this might influence its actions. For example, this might be the case when a decision-maker holds subordinated interests in, or provides other forms of credit enhancement to, an investee.

The decision-maker evaluates its exposure relative to the total variability of returns of the investee. This evaluation is made primarily on the basis of returns expected from the activities of the investee but does not ignore the decision maker's maximum exposure to variability of returns of the investee through other interests that the decision-maker holds. [IFRS 10.B72].

As indicated at (a) above, in evaluating its exposure to variability of returns from other interests, the investor considers its remuneration and other interests in aggregate. So, even if the initial assessment about remuneration is that the decision-maker is an agent (see section 6.4 above), the remuneration needs to be considered in the assessment of exposure to variability of returns.

Since the magnitude and variability of exposure to returns are considered together with the other factors, there is no bright line as to what level of other direct interests, on their own, causes a decision-maker to be a principal or an agent. That is, the scope of authority, removal rights, and remuneration also need to be considered. The examples in IFRS 10 (see section 6.6 below) also do not specify the magnitude and variability of the remuneration.

6.5.1 Evaluating returns received via an indirect investment in another entity

In Illustration 6-2 above, the exposure of the investor (the parent of the fund manager) to variable returns was through a direct investment in the fund. However, what if the exposure to variable returns arises from an investor's indirect involvement with an investee, e.g., via a joint venture or an associate?

When assessing whether an investor has control of an investee, the investor determines whether it is exposed, or has rights, to variable returns from its involvement with the investee. IFRS 10 discusses 'returns' as a broad term, and the examples in IFRS 10.B57 (see section 5 above) suggest the exposure to variable returns encompasses both direct and indirect involvement with the investee.

The Basis for Conclusions accompanying IFRS 10 further clarifies that the IASB intended the term 'returns' as a broad term, stating that "The Board confirmed its intention to have a broad definition of 'returns' that would include synergistic returns as well as more direct returns, for example, dividends or changes in the value of an investment. In practice, an investor can benefit from controlling an investee in a variety of ways. The Board concluded that to narrow the definition of returns would artificially restrict those ways of benefiting." [IFRS 10.BC63].

How we see it

Given the clarification above, in our view, when an investor evaluates the exposure to variable returns from its involvement with another entity, the returns received indirectly via another entity that is not under the control of that investor, are included in that assessment. This is regardless of the structure of the indirect involvement - that is, whether it is held through a joint venture, an associate, or neither influence nor joint control exists such that it is just an investment.

In the case of an indirect interest, there are essentially two different ways of assessing the returns - the dividend flow and/or the change in fair value of the intermediate investment. While the dividend flow is not in the control of the investor, it still receives the returns via the change in value of its intermediate investment, and therefore these returns cannot be ignored.

Illustration 6-3: Illustration of exposure to variability of returns through indirect interests

Company A has a wholly owned subsidiary, GP, which is the General Partner and fund manager of a Fund. A has a 50% interest in the shares of Company B and, as a result of the contractual arrangement with the other investors in B, has joint control of B. GP has a 1% interest in the Fund, with the remaining 99% of the Fund owned by B.

It has been assessed and concluded that GP, in its capacity as the fund manager, has power over the Fund. Therefore, by extension, A has power over the Fund. At the same time, GP also concluded that it is acting on behalf and for the benefit of another party or parties, i.e., as an agent for the investors, and therefore does not control the Fund.

B also evaluated its involvement with the Fund and determined it has no power over the Fund, and therefore does not control it.

A has joint control of B. It does not have control over B and therefore does not control how the returns from the Fund are ultimately distributed to the investors in B.

While A does not control how the returns from the Fund are ultimately distributed, its indirect entitlement to the returns of the Fund is considered with its direct investment through the GP when evaluating whether there is sufficient exposure to variable returns, when combined with power, to conclude that control exists.

6.6 Application examples in IFRS 10

IFRS 10 provides a number of application examples in relation to the determination of whether a decision-maker is a principal or an agent. These are reflected in Illustration 6-4 to Illustration 6-10 below.

As with all of the examples included in the Application Guidance, the examples portray hypothetical situations. Although some aspects of the examples may be present in actual fact patterns, all relevant facts and circumstances of a particular fact pattern need to be evaluated when applying IFRS 10. [IFRS 10.B1].

When reaching a conclusion on a particular fact pattern, each of the factors discussed above is weighted according to the facts and circumstances of each case, which will require judgement. [IFRS 10.B60].

Illustration 6-4: Determining whether a decision-maker is a principal or agent (1)

A decision-maker (fund manager) establishes, markets and manages a publicly traded, regulated fund according to narrowly defined parameters set out in the investment mandate as required by its local laws and regulations. The fund was marketed to investors as an investment in a diversified portfolio of equity securities of publicly traded entities. Within the defined parameters, the fund manager has discretion about the assets in which to invest. The fund manager has made a 10% *pro rata* investment in the fund and receives a market-based fee for its services equal to 1% of the net asset value of the fund. The fees are commensurate with the services provided. The fund manager does not have any obligation to fund losses beyond its 10% investment. The fund is not required to establish, and has not established, an independent board of directors. The investors do not hold any substantive rights that affect the decision-making authority of the fund manager, but can redeem their interests within particular limits set by the fund.

Analysis

Although operating within the parameters set out in the investment mandate and in accordance with the regulatory requirements, the fund manager has decision-making rights that give it the current ability to direct the relevant activities of the fund - the investors do not hold substantive rights that could affect the fund manager's decision-making authority. The fund manager receives a market-based fee for its services that is commensurate with the services provided and has also made a *pro rata* investment in the fund. The remuneration and its investment expose the fund manager to variability of returns from the activities of the fund without creating exposure that is of such significance that it indicates that the fund manager is a principal.

In this example, consideration of the fund manager's exposure to variability of returns from the fund together with its decision-making authority within restricted parameters indicates that the fund manager is an agent. Thus, the fund manager concludes that it does not control the fund. [IFRS 10.B72 Example 13].

Illustration 6-5: Determining whether a decision-maker is a principal or agent (2)

A decision-maker establishes, markets and manages a fund that provides investment opportunities to a number of investors. The decision-maker (fund manager) must make decisions in the best interests of all investors and in accordance with the fund's governing agreements. Nonetheless, the fund manager has wide decision-making discretion and there are no other rights held by others that affect this discretion. The fund manager receives a market-based fee for its services equal to 1% of assets under management and 20% of all the fund's profits if a specified profit level is achieved. The fees are commensurate with the services provided. The fund manager does not hold a direct interest in the fund.

Analysis

Although it must make decisions in the best interests of all investors, the fund manager has extensive decision-making authority to direct the relevant activities of the fund. The fund manager is paid fixed and performance-related fees that are commensurate with the services provided. In addition, the remuneration aligns the interests of the fund manager with those of the other investors to increase the value of the fund, without creating exposure to variability of returns from the activities of the fund that is of such significance that the remuneration, when considered in isolation, indicates that the fund manager is a principal. Therefore, the fund manager is an agent. [IFRS 10.B72 Example 14].

See Illustration 6-6 to Illustration 6-8 below for an evaluation of other factors based on the same fact pattern and initial analysis.

Illustration 6-6: Determining whether a decision-maker is a principal or agent (3)

Assume the fact pattern and initial analysis in Illustration 6-5 above.

However, in this example, the fund manager also has a 2% investment in the fund that aligns its interests with those of the other investors. The fund manager does not have any obligation to fund losses beyond its 2% investment. The investors can remove the fund manager by a simple majority vote, but only for breach of contract.

Analysis

The fund manager's 2% investment increases its exposure to variability of returns from the activities of the fund without creating exposure that is of such significance that it indicates that the fund manager is a principal. The other investors' rights to remove the fund manager are considered to be protective rights because they are exercisable only for breach of contract. In this example, although the fund manager has extensive decision-making authority and is exposed to variability of returns from its interest and remuneration, the fund manager's exposure indicates that the fund manager is an agent. Thus, the fund manager concludes that it does not control the fund. [IFRS 10.B72 Example 14A].

Illustration 6-7: Determining whether a decision-maker is a principal or agent (4)

Assume the fact pattern and initial analysis in Illustration 6-5 above.

However, in this example, the fund manager has a more substantial *pro rata* investment in the fund (than the 2% in Illustration 6-6 above), but does not have any obligation to fund losses beyond that investment. The investors can remove the fund manager by a simple majority vote, but only for breach of contract.

Analysis

In this scenario, the other investors' rights to remove the fund manager are considered to be protective rights because they are exercisable only for breach of contract. Although the fund manager is paid fixed and performance-related fees that are commensurate with the services provided, the combination of the fund manager's investment together with its remuneration could create exposure to variability of returns from the activities of the fund that is of such significance that it indicates that the fund manager is a principal. The greater the magnitude of, and variability associated with, the fund manager's economic interests (considering its remuneration and other interests in aggregate), the more emphasis the fund manager places on those economic interests in the analysis, and the more likely the fund manager is a principal.

For example, having considered its remuneration and the other factors, the fund manager might consider a 20% investment to be sufficient to conclude that it controls the fund. However, in different circumstances (i.e., if the remuneration or other factors are different), control may arise when the level of investment is different. [IFRS 10.B72 Example 14B].

Illustration 6-8: Determining whether a decision-maker is a principal or agent (5)

Assume the fact pattern and initial analysis in Illustration 6-5 above.

However, in this example, the fund manager has a 20% *pro rata* investment in the fund, but does not have any obligation to fund losses beyond its 20% investment. The fund has a board of directors, all of whose members are independent of the fund manager and are appointed by the other investors. The board appoints the fund manager annually. If the board decided not to renew the fund manager's contract, the services performed by the fund manager could be performed by other managers in the industry.

Analysis

Although the fund manager is paid fixed and performance-related fees that are commensurate with the services provided, the combination of the fund manager's 20% investment together with its remuneration creates exposure to variability of returns from the activities of the fund that is of such significance that it indicates that the fund manager is a principal. However, the investors have substantive rights to remove the fund manager - the board of directors provides a mechanism to ensure that the investors can remove the fund manager if they decide to do so.

In this scenario, the fund manager places greater emphasis on the substantive removal rights in the analysis. Thus, although the fund manager has extensive decision-making authority and is exposed to variability of returns of the fund from its remuneration and investment, the substantive rights held by the other investors indicate that the fund manager is an agent. Thus, the fund manager concludes that it does not control the fund. [IFRS 10.B72 Example 14C].

Illustration 6-9: Determining whether a decision-maker is a principal or agent (6)

An investee is created to purchase a portfolio of fixed rate asset-backed securities, funded by fixed rate debt instruments and equity instruments. The equity instruments are designed to provide first loss protection to the debt investors and receive any residual returns of the investee. The transaction was marketed to potential debt investors as an investment in a portfolio of asset-backed securities with exposure to the credit risk associated with the possible default of the issuers of the asset-backed securities in the portfolio and to the interest rate risk associated with the management of the portfolio. On formation, the equity instruments represent 10% of the value of the assets purchased. A decision-maker (the asset manager) manages the active asset portfolio by making investment decisions within the parameters set out in the investee's prospectus. For those services, the asset manager receives a market-based fixed fee (i.e., 1% of assets under management) and performance-related fees (i.e., 10% of profits) if the investee's profits exceed a specified level. The fees are commensurate with the services provided. The asset manager holds 35% of the equity in the investee.

The remaining 65% of the equity, and all the debt instruments, are held by a large number of widely dispersed unrelated third-party investors. The asset manager can be removed, without cause, by a simple majority decision of the other investors.

Analysis

The asset manager is paid fixed and performance-related fees that are commensurate with the services provided. The remuneration aligns the interests of the fund manager with those of the other investors to increase the value of the fund. The asset manager has exposure to variability of returns from the activities of the fund because it holds 35% of the equity and from its remuneration.

Although operating within the parameters set out in the investee's prospectus, the asset manager has the current ability to make investment decisions that significantly affect the investee's returns - the removal rights held by the other investors receive little weighting in the analysis because those rights are held by a large number of widely dispersed investors. In this example, the asset manager places greater emphasis on its exposure to variability of returns of the fund from its equity interest, which is subordinate to the debt instruments. Holding 35% of the equity creates subordinated exposure to losses and rights to returns of the investee, which are of such significance that it indicates that the asset manager is a principal. Thus, the asset manager concludes that it controls the investee. [IFRS 10.B72 Example 15].

The conclusions in Illustration 6-4 to Illustration 6-9 above in respect of whether the fund manager is a principal (and therefore has control) or an agent (and therefore does not have control) can be summarised as follows:

Remuneration	Equity holding	Removal rights	Control?
1% of NAV	10%	None	No
1% of NAV plus 20% profits above a certain level	None	None	No
1% of NAV plus 20% profits above a certain level	2%	Only for breach of contract	No
1% of NAV plus 20% profits above a certain level	20% (illustrative)	Only for breach of contract	Yes
1% of NAV plus 20% profits above a certain level	20%	Yes - annually by board appointed by other investors	No
1% of NAV plus 10% profits above a certain level	35% of equity (0% of debt)	Yes - by simple majority of other widely diverse investors	Yes

Illustration 6-10 below shows a slightly different type of structure where there is an entitlement to a residual return rather than a *pro rata* return.

Illustration 6-10: Determining whether a decision-maker is a principal or agent (7)

A decision-maker (the sponsor) sponsors a multi-seller conduit, which issues short-term debt instruments to unrelated third-party investors. The transaction was marketed to potential investors as an investment in a portfolio of highly rated medium-term assets with minimal exposure to the credit risk associated with the possible default by the issuers of the assets in the portfolio. Various transferors sell high-quality medium-term asset portfolios to the conduit. Each transferor services the portfolio of assets that it sells to the conduit and manages receivables on default for a market-based servicing fee. Each transferor also provides first loss protection against credit losses from its asset portfolio through over-collateralisation of the assets transferred to the conduit. The sponsor establishes the terms of the conduit and manages the operations of the conduit for a market-based fee. The fee is commensurate with the services provided. The sponsor approves the sellers permitted to sell to the conduit, approves the assets to be purchased by the conduit and makes decisions about the funding of the conduit. The sponsor must act in the best interests of all investors.

The sponsor is entitled to any residual return of the conduit and also provides credit enhancement and liquidity facilities to the conduit. The credit enhancement provided by the sponsor absorbs losses of up to 5% of all of the conduit's assets, after losses are absorbed by the transferors. The liquidity facilities are not advanced against defaulted assets. The investors do not hold substantive rights that could affect the decision-making authority of the sponsor.

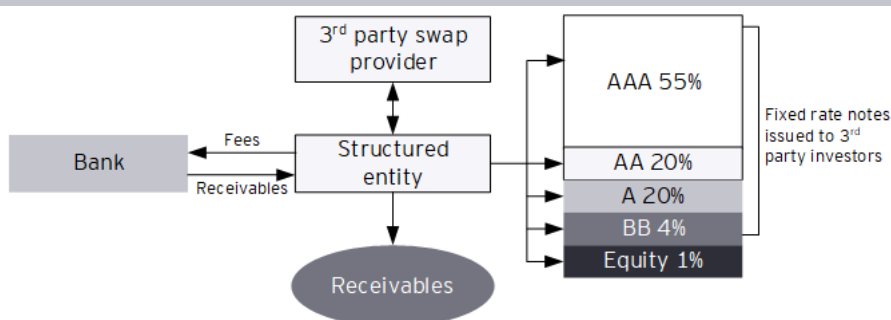

Analysis

Even though the sponsor is paid a market-based fee for its services that is commensurate with the services provided, the sponsor has exposure to variability of returns from the activities of the conduit because of its rights to any residual returns of the conduit and the provision of credit enhancement and liquidity facilities (i.e., the conduit is exposed to liquidity risk by using short-term debt instruments to fund medium-term assets). Even though each of the transferors has decision-making rights that affect the value of the assets of the conduit, the sponsor has extensive decision-making authority that gives it the current ability to direct the activities that most significantly affect the conduit's returns (i.e., the sponsor established the terms of the conduit, has the right to make decisions about the assets (approving the assets purchased and the transferors of those assets) and the funding of the conduit (for which new investment must be found on a regular basis)). The right to residual returns of the conduit and the provision of credit enhancement and liquidity facilities expose the sponsor to variability of returns from the activities of the conduit that is different from that of the other investors. Accordingly, that exposure indicates that the sponsor is a principal and thus the sponsor concludes that it controls the conduit. The sponsor's obligation to act in the best interest of all investors does not prevent the sponsor from being a principal. [IFRS 10.B72 Example 16].

6.7 Other illustrative examples

Illustration 6-11 below shows the application of the guidance relating to the determination of a principal or an agent for a bank that establishes a structured entity to facilitate a securitisation.

Illustration 6-11: Determining whether a bank is a principal or agent in relation to a securitisation

A bank establishes a structured entity to facilitate a securitisation. It transfers floating rate receivables to the structured entity. The structured entity issues fixed rate notes in tranches to investors (rated AAA, AA, A and BB) and an equity tranche to the bank. The AAA tranche is the most senior and the equity tranche is the most junior in the event that there is insufficient cash to meet the payments under the terms of the notes.

The bank services the receivables on behalf of the structured entity including the management of defaults (if any), and has substitution rights over the receivables within certain parameters (for example, asset quality).

The bank receives a fee for managing the receivables, that is 1% of the notional amount of the receivables and is commensurate with the level of work performed and only includes market terms. The investors are not able to remove the bank from performing this function, other than in exceptional circumstances, such as negligence by the bank.

A third party provides an interest rate swap to convert the cash flows of the receivables into the cash flows required to be paid to meet the terms of the notes.

As the bank retains only the equity tranche, it concludes that it is no longer exposed to substantially all the risks and rewards of ownership and can derecognise the receivables on transfer to the structured entity and recognises just the equity tranche as its continuing involvement in the receivables.

Analysis

The purpose and design of the structured entity was to:

- Enable the bank to generate external funding through the securitisation structure
- Provide investors with an attractive investment opportunity

The activities of the structured entity that significantly affect its returns are:

- Selection and transfer of assets at inception
- Determining which assets are held by the structured entity (i.e., asset substitution)
- Management of defaults on the receivables

The bank has decision-making rights over all of these relevant activities in its capacity as sponsor and service provider, so it has power over the structured entity.

The bank has exposure to variable returns through its holding of the equity tranche of the notes, in addition to the 1% management fee.

However, the question arises as to whether the bank is using its power as principal or as agent. To make that determination, the four factors (scope of decision-making authority, rights held by other investors, remuneration and exposure to variability of returns through other interests) need to be evaluated. Although the bank was involved in the design of the structured entity, the scope of the bank's decision-making authority is considered to be narrow as substitution rights have to be within certain parameters. However, the rights of the investors to remove the bank is not considered to be substantive, as it can only be removed by the investors in exceptional circumstances. In respect of remuneration, the bank earns a modest fee for services rendered that is commensurate with the services provided. Taking account of all the factors, the variability of returns of the equity tranche is likely to be significant relative to the total returns of the entity, such that the bank is considered to exercise its power as principal rather than as agent. As a result, it is likely that the bank would be considered to use its power to affect its returns.

In conclusion, the bank has control and therefore consolidates the structured entity.

7 Related parties and *de facto* agents

IFRS 10 also requires an investor to consider whether there are other parties who are acting on behalf of the investor by virtue of their relationship with it. That is, IFRS 10 requires consideration of whether the other parties are acting as *de facto* agents for the investor. The determination of whether other parties are acting as *de facto* agents requires judgement, considering not only the nature of the relationship but also how those parties interact with each other and the investor. [IFRS 10.B73].

Such relationships need not be contractual. A party is a *de facto* agent when the investor has, or those that direct the activities of the investor have, the ability to direct that party to act on the investor's behalf. In these circumstances, the investor considers its *de facto* agent's decision-making rights and its indirect exposure, or rights, to variable returns through the *de facto* agent together with its own when assessing control of an investee. [IFRS 10.B74]. Paragraph B74 has been amended to clarify that the relationship described in B74 is just one example of various relationships that might exist between the investor and other parties acting as *de facto* agents of the investor. The amendment is intended to remove the inconsistency with the requirement in paragraph B73 for an entity to use judgement to determine whether other parties are acting as *de facto* agents. The amendment was finalized in July 2024. [IFRS 10.B74].

IFRS 10 lists several examples of parties that might be *de facto* agents for an investor:

- (a) The investor's related parties
- (b) A party that received its interest in the investee as a contribution or loan from the investor
- (c) A party that has agreed not to sell, transfer or encumber its interests in the investee without the investor's prior approval (except for situations in which the investor and the other party have the right of prior approval and the rights are based on mutually agreed terms by willing independent parties)
- (d) A party that cannot finance its operations without subordinated financial support from the investor
- (e) An investee for which the majority of the members of its governing body or for which its key management personnel are the same as those of the investor
- (f) A party that has a close business relationship with the investor, such as the relationship between a professional service provider and one of its significant clients [IFRS 10.B75]

However, just because a party falls within the examples above, that does not mean that it is necessarily a *de facto* agent for the investor, as shown in the diagram below. It simply means that management must carefully evaluate whether that party is a *de facto* agent for the investor. Parties that are actually *de facto* agents are only a sub-set of the list above. Therefore, management must determine whether the other party is acting on behalf of the investor because of its relationship to the investor. IFRS 10 does not provide much explanation on how this evaluation is to be made; IFRS 10 only states that the evaluation considers the nature of the relationship and how the parties interact with each other. [IFRS 10.B73].

Figure 7-1: Identifying parties that might be *de facto* agents

How we see it

Given the breadth of the parties that might be a *de facto* agent in IFRS 10, there are likely to be numerous parties that need to be evaluated to determine if they are actually *de facto* agents, which requires careful evaluation of the facts and circumstances, including the purpose and design of the investee.

If a party is determined to be a *de facto* agent, then its rights and exposures to variable returns are considered together with those of the investor when evaluating whether an investor has control of an investee. [IFRS 10.B74]. Just because one party is a *de facto* agent of the other party, that does not mean that the *de facto* agent is controlled by the investor. Consolidation procedures in situations when a *de facto* agent exists are discussed in section 7.2 below.

7.1 Customer-supplier relationships

Normally, a typical supplier-customer relationship is not expected to result in one party being a *de facto* agent of the other. This is because, in a typical supplier-customer relationship, one party cannot direct the other party to act on its behalf. Instead, the activities of each are directed by their respective shareholders (and board of directors and management).

However, a party with a 'close business relationship' is an example of a *de facto* agent. [IFRS 10.B75(f)].

Accordingly, where a close business relationship exists between a customer and a supplier, consideration needs to be given to whether the supplier is a *de facto* agent of the customer. For example, this might be the case if:

- An entity has only one significant customer
 - The customer and supplier have common management or common shareholders
 - The customer has the ability to direct product design, sales, etc.
- Or
- The supplier is a service provider (e.g., investment banker, attorney) that assists in structuring a transaction

7.2 Non-controlling interests when there is a *de facto* agent

When consolidating a subsidiary, a parent only reflects its exposures to variable returns (including those held by its subsidiaries), in its consolidated financial statements. Any rights or exposures to variable returns held by a *de facto* agent that is not in the group are generally shown as non-controlling interests. This is shown in Illustration 7-1 below.

Illustration 7-1: Control evaluation and consolidation with a *de facto* agent

A has a 40% interest in Z, whose relevant activities are directed by voting shares that entitle the holder to a *pro rata* share of returns of Z. Based on the facts and circumstances, A concludes that, by itself, its 40% interest does not give A control over Z.

B holds a 15% interest in Z.

A evaluates the facts and circumstances and concludes that B is a *de facto* agent of A. This might be concluded if, for example, A and B are members of the same group - that is, when A and B have the same ultimate parent, but B is not part of A's group in its sub-level consolidated financial statements. Based on the combined interest, A concludes that it controls Z, because it can direct B how to vote by virtue of being a *de facto* agent. Accordingly, A consolidates Z in its consolidated financial statements and reflects a non-controlling interest in Z of 60% (that is, all interests not held by A).

Careful evaluation of arrangements between the parties is needed to ensure that there are no other rights and exposures that are required to be accounted for in the consolidated financial statements.

8 Control of specified assets

IFRS 10 requires that an investor has to consider whether it treats a portion of an investee as a deemed separate entity and, if so, whether it controls the deemed separate entity (a 'silo'). [IFRS 10.B76].

It therefore clarifies that an investor can have control over specified assets of an investee (i.e., whether a 'silo' exists within a host entity). IFRS 10 gives a very strict rule as to when a portion of an entity is deemed to be a silo, and therefore, evaluated separately for consolidation from the remainder of the host entity: [IFRS 10.B77]

Extract from IFRS 10

B77 An investor shall treat a portion of an investee as a deemed separate entity if and only if the following condition is satisfied:

Specified assets of the investee (and related credit enhancements, if any) are the only source of payment for specified liabilities of, or specified other interests in, the investee. Parties other than those with the specified liability do not have rights or obligations related to the specified assets or to residual cash flows from those assets. In substance, none of the returns from the specified assets can be used by the remaining investee and none of the liabilities of the deemed separate entity are payable from the assets of the remaining investee. Thus, in substance, all the assets, liabilities and equity of that deemed separate entity are ring-fenced from the overall investee. Such a deemed separate entity is often called a 'silo'.

The description of a silo above includes the phrase 'in substance', but it is unclear how this is interpreted. Some proponents take the view that this allows a portion of an investee to be regarded as ring-fenced if the possibility of using the assets of the silo to meet liabilities of the rest of the investee (or *vice versa*) was remote.

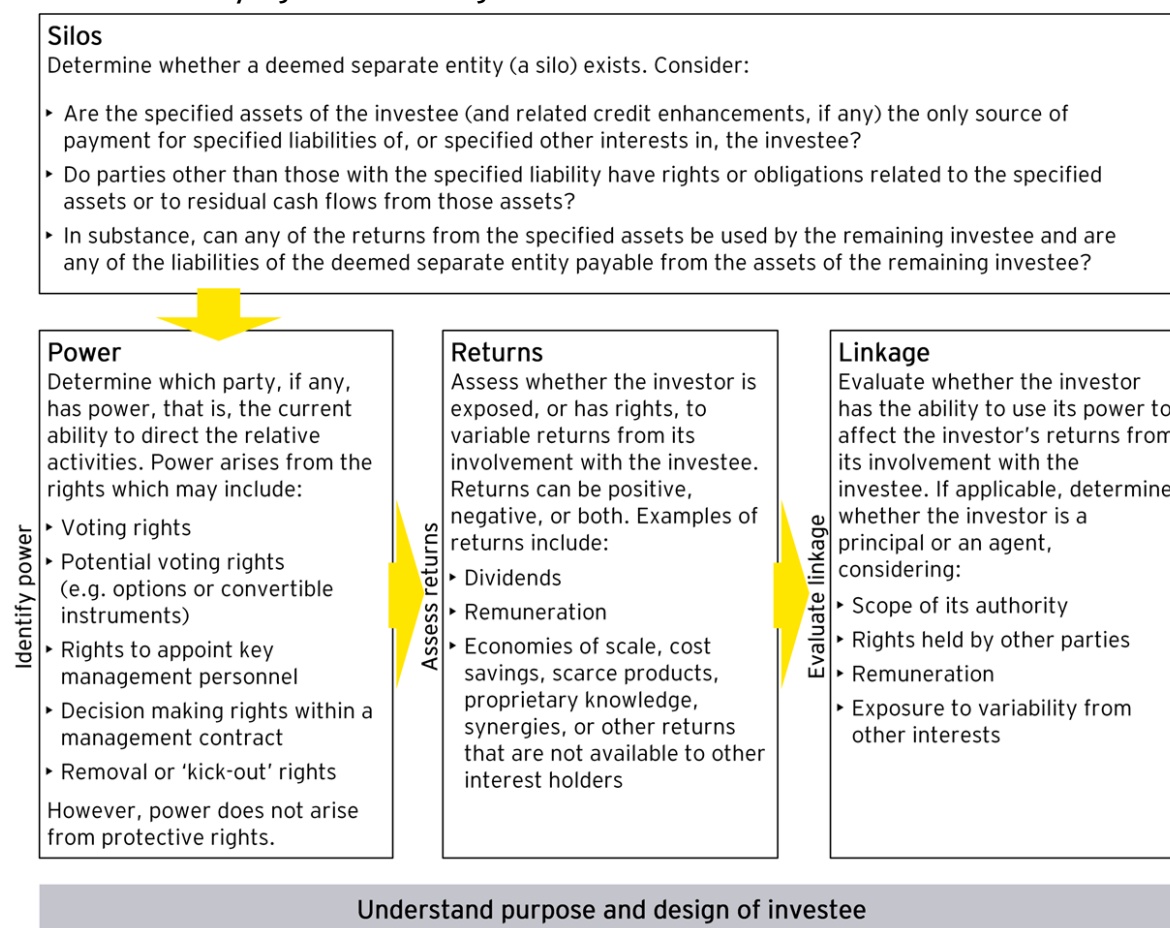

How we see it

In our view, this means that the silo has to be 'legally ring-fenced', and if there is any possibility that the assets could be used to meet liabilities of the rest of the investee, it is not a silo. The phrase 'in substance' is used in the standard to ensure that any terms in the contract that might override a ring fence needs to have substance, not that a silo can be established through 'in substance' ring fencing.

In many cases, where a silo exists, it will be because a trust or similar legal structure exists to ring-fence the assets and liabilities from the host and other silos within the host entity.

Under IFRS 10, it is clear that an investor needs to identify and consolidate any silos that it controls. Accordingly, it is crucial to identify silos (as discussed in section 8.1 below).

Identifying whether a silo exists, and whether an investor controls a silo, can be complex. However, the same process outlined in the diagram for assessing control included in section 3.1 above can be used for silos, with the initial step of identifying a silo, as shown in the diagram below. Understanding the purpose and design of an investee is critical when identifying whether a silo exists, and if so which investor, if any, has control of that silo.

Figure 8-1: Identifying and assessing control of a silo

8.1 Identifying a silo

When identifying a silo, it is important to meet the condition that IFRS 10 requires to be satisfied for there to be a silo (see section 8 above). Silos occur most often in the following industries:

- Insurance (see section 8.1.1 below)
- Investment funds (see section 8.1.2 below)

8.1.1 Identifying silos in the insurance industry

For insurers, silos may arise in a structure such as a multi-cell reinsurance vehicle, which is an entity comprised of a number of 'cells' where the assets and liabilities are legally ring-fenced.

Insurers evaluate whether investments made on behalf of insurance contract holders (policyholders) are considered silos under IFRS 10. The evaluation will depend on the facts and circumstances of the particular case, and may vary by jurisdiction and by policy, given the differences in regulatory environments and types of policies offered by insurance entities.

When determining whether investments held on behalf of policyholders are ring-fenced (i.e., whether a silo exists) relevant facts and circumstances, including local laws and contractual arrangements with the contract holder, must be assessed.

Where a silo exists and the investments in the silo are held by the insurance company on behalf of policyholders and all returns from the silo are passed to the policyholders, the following needs to be considered:

- Does the insurance company have a contractual obligation to hold investments in the silo?
- Are the investments legally ring-fenced such that they may not be used to satisfy other liabilities of the insurance company in the event of liquidation?
- Do the policyholders select the investments?
- Will other funds beyond the value of the specified assets in the silo be necessary to fulfil the obligation to the policyholders?
- Is there an exact matching of the policy to the assets held?

All of the relevant facts and circumstances need to be considered to determine if a silo exists. As discussed in section 8.2 below, if a silo exists, control is evaluated for each silo. However, if a silo does not exist, this simply means that the control evaluation is made at the entity level.

8.1.2 Identifying silos in the investment funds industry

Silos may exist in the investment fund industry. Certain investment vehicles are set up as ‘umbrella funds’ with a number of sub-funds, each with its own investment goals and strategies e.g., a sub-fund may specialise in the shares of small companies, or in a particular country, or a particular industry. An assessment will need to be made as to whether a sub-fund is considered a silo under IFRS 10. The evaluation will depend on the facts and circumstances of the particular case as to whether the sub-funds are legally ring-fenced from each other and the investment vehicle itself, and may vary by jurisdiction, given the differences in regulatory environments and types of such investment vehicles.

8.2 Evaluating control of a silo

If a silo exists, the next step is to identify the relevant activities (the activities that most significantly affect the silo’s returns). Only the relevant activities of that silo are considered, even if other activities affect the returns from other portions of the host.

The next step is then to identify which investor has the ability to direct the relevant activities, (i.e., who has the power over the silo). Only rights that affect the relevant activities of the silo are considered. Rights that affect the relevant activities for other portions of the host entity are not considered.

To conclude whether an investor has control over the silo, the investor also evaluates whether the investor has exposure to variable returns from that silo, and whether the investor can use its power over the silo to affect the amount of the investor’s returns. Only exposure to variable returns from that silo are considered; exposures to variable returns from other portions of the host are excluded. [IFRS 10.B78].

8.3 Consolidation of a silo

If an investor concludes that it controls a silo, it consolidates only the silo. That investor does not consolidate the remaining portions of the host entity. [IFRS 10.B79].

Similarly, if an investor concludes that it controls a host entity, but not a silo within that entity, it only consolidates the host entity, but excludes the silo.

9 Continuous assessment

IFRS 10 clarifies that an investor is required to reassess whether it controls an investee if the facts and circumstances indicate that there are changes to one of the three elements of control, [IFRS 10.8, IFRS 10.B80], which are repeated below. For example, the following are likely to be triggers:

- Power over the investee:
 - An investor increases or decreases its holdings in the investee - see Illustration 9-1 below
 - A potential voting right is granted, expires, or changes from being substantive to non-substantive (or *vice versa*) - see Illustration 9-2 in section 9.1 below
 - A change in how power over an investee can be exercised. For example, changes to decision making rights, which mean that the relevant activities of the investee are no longer governed through voting rights, but instead, are directed by contract (or *vice versa*) [IFRS 10.B81]
 - Bankruptcy filings - see Illustration 9-5 in section 9.2 below
 - Troubled debt restructurings - see Illustration 9-6 in section 9.2 below
 - Changes in voting patterns
 - Action taken by others without the investor being involved in the event - see Illustration 9-7 in section 9.3 below [IFRS 10.B82]
- Exposures, or rights, to variable returns from involvement with the investee - in many cases, these changes occur concurrent with a change in power, such as when acquiring an interest or selling an interest in an investee:
 - An investor can lose control of an investee if it ceases to be entitled to receive returns or to be exposed to obligations because, for example, a contract to receive performance related fees is terminated. [IFRS 10.B83].
- Ability of the investor to use its power over the investee to affect the amount of the investor's returns:
 - When the investor is a decision-maker (i.e., a principal or agent), changes in the overall relationship between the investor and other parties can mean that the investor no longer acts as agent, even though it has previously acted as agent or *vice versa*. [IFRS 10.B84].

Therefore, it is possible that a previously unconsolidated investee needs to be consolidated (or *vice versa*) as facts and circumstances change. However, absent a change in facts and circumstances, control assessments are not expected to change.

Illustration 9-1: Providing seed money for a fund

A fund manager provides all of the seed money for a new fund upon inception. Until such times as other investors invest in that fund, the fund manager likely controls that fund. This is because the fund manager has the power to direct the relevant activities of that fund, exposure to variable returns from its involvement with the fund, and the ability to use its power over the fund to affect the amount of its returns.

As third parties invest in the fund and dilute (or acquire) the fund manager's interest, this would likely result in a reassessment of whether the fund manager has control. As the third parties invest, they are likely to obtain rights to direct the relevant activities (that is, the third parties will gain power). In many cases, analysing the facts and circumstances may indicate that the fund manager is acting as an agent of those third parties (as discussed in section 6 above). Accordingly, the fund manager deconsolidates the fund upon its determination that it no longer had control.

9.1 Changes in market conditions

IFRS 10 discusses when a change in market conditions triggers a reassessment of control.

An investor's initial assessment of control or its status as a principal or an agent does not change simply because of a change in market conditions (e.g., a change in the investee's returns driven by market conditions), unless the change in market conditions changes one or more of the three elements of control listed in IFRS 10.7 (see section 9 above) or changes the overall relationship between a principal and an agent (see section 6 above). [IFRS 10.B85].

In response to concerns, the IASB decided to add this guidance to address the reassessment of control when there are changes in market conditions. The IASB observed that a change in market conditions alone would not generally affect the consolidation conclusion, or the status as a principal or an agent, for two reasons. The first is that power arises from substantive rights, and assessing whether those rights are substantive includes the consideration of many factors, not only those that are affected by a change in market conditions. The second is that an investor is not required to have a particular specified level of exposure to variable returns in order to control an investee. If that were the case, fluctuations in an investor's expected returns might result in changes in the consolidation conclusion. [IFRS 10.BC152].

Accordingly, only a market condition that causes a change in one of the three criteria triggers a reassessment (see Illustration 9-7 below). Evaluating whether a change in a market condition triggers a reassessment of control is considered in the context of the investee's purpose and design.

As discussed in section 5 above, with respect to the second criterion, the focus is on the existence of an exposure to variable returns, not the amount of the variable returns. While a change in market conditions often affects the amount of the exposure to variable returns, it typically does not affect whether the exposure exists.

However, when power has been delegated to a decision-maker, a change in market conditions could change whether the magnitude and variability of exposures to variable returns from remuneration and/or other interests are such that they indicate that the decision-maker is a principal (as discussed in sections 6.4 and 6.5 above, respectively). That is, a change in market conditions could change the evaluation of whether a decision-maker has the ability to use its power over the investee to affect the amount of the decision-maker's returns (the linkage between power and returns). Accordingly, a change in market conditions may trigger a reassessment of control in principal-agency evaluations.

As discussed in section 4.3.4.A above, when evaluating the exercise price of an option in the context of whether potential voting rights give control, the evaluation is not solely based on the nature of the option as at the end of the reporting period. During the development of IFRS 10, some constituents raised concerns as to whether frequent changes in the control assessment solely because of market conditions mean that an investor consolidates and deconsolidates an investee if potential voting rights moved in and out of the money. In response, the IASB noted that determining whether a potential voting right is substantive is not based solely on a comparison of the strike or conversion price of the instrument and the then current market price of its underlying share. Although the strike or conversion price is one factor to consider, determining whether potential voting rights are substantive requires a holistic approach, considering a variety of factors. This includes assessing the purpose and design of the instrument, considering whether the investor can benefit for other reasons such as by realising synergies between the investor and the investee, and determining whether there are any barriers (financial or otherwise) that prevent the holder of potential voting rights from exercising or converting those rights. Accordingly, a change in market conditions (i.e., the market price of the underlying shares) alone does not typically result in a change in the consolidation conclusion. [IFRS 10.BC124].

Illustration 9-2: Value of option changes from 'in-the-money' to 'out-of-the-money'

A holds 40% of the voting rights of B, and holds a currently exercisable in-the-money option to acquire a further 20% of the voting rights of B. Assuming that voting rights give power over B, the option is substantive and no other facts and circumstances are relevant, A likely has power over B, because A could currently exercise its right to obtain a majority of B's voting shares.

Consider a situation in which the in-the-money option changed to being slightly (but not deeply) out-of-the-money, due to a change in market conditions (and this change was not previously expected to occur, as discussed in section 4.3.4 above). This would probably not trigger reassessment, because the option is likely to remain substantive, and therefore there is no change in how power over B is evaluated.

Consider a second situation in which the option changed to being deeply-out-of-the-money due to a change in market conditions (and this change was not previously expected to occur and it was now expected to remain deeply-out-of-the-money for the remainder of the option period, as discussed in section 4.3.4 above). This would likely trigger reassessment, since the option would no longer be substantive, and the fact that the option was previously a substantive right was a critical factor in assessing whether A had power over B.

Illustration 9-3: Structured entity reassessments

There are two investors in a structured entity; one holds the debt, and the other holds the equity. In the initial assessment, the investors concluded that the equity holder had control because it had the power to direct the relevant activities, exposure to variable returns through its equity interests, and the ability to use its power over the structured entity to affect the equity holder's returns. Due to a change in market conditions, the value of the equity diminishes. This fact, by itself, would probably not trigger reassessment, because the equity holder continues to have exposure to variable returns (i.e., it continues to be exposed to further decreases in equity, and has potential upside if market conditions improve). Accordingly, the conclusion that the equity holder had control of the structured entity would probably not change.

However, if, concurrently with the deterioration of the equity, there are other changes in facts and circumstances (e.g., the equity holder loses its ability to direct the relevant activities), this might trigger a reassessment. In this case, the trigger is actually the other change in facts and circumstances, not the decrease in equity itself. In this case, whether the debt holder has control depends on whether it has rights that give it the current ability to direct the relevant activities, and the ability to affect its exposure to variable returns.

Illustration 9-4: Investee loses money due to change in market conditions

C holds 100% of the voting rights of D, which is a profitable entity. In its initial assessment, C concludes that it controls D.

Due to a change in the market conditions, D begins to lose money and is no longer profitable (e.g., due to a decrease in demand for its products). This would probably *not* trigger reassessment, because the change in market conditions would likely not change the identification of the relevant activities, how those activities are directed, the investors' exposure to variable returns, or the linkage between power and returns.

However, at some point, D might become so unprofitable as to consider restructuring its debt or filing for bankruptcy. This situation is discussed in section 9.2 below.

9.2 Bankruptcy filings and troubled debt restructurings

Filing for bankruptcy or restructuring a debt will usually trigger reassessment as to which investor, if any, controls the investee (see section 4.3.2 above). While control is reassessed at such triggering points, it does not necessarily mean the conclusion as to which entity consolidates will change. Illustration 9-5 and Illustration 9-6 below show situations when the control conclusion might change, and possibly result in a bank consolidating an entity that it had previously concluded it did not control.

Illustration 9-5: Bankruptcy filing

A made a loan to B. Because of A's position as a senior creditor, if B defaults on the loan, A has the right to direct B to sell certain assets to repay the loan to A. In its initial assessment of control, A concluded that this right was a protective right, because it concluded that defaulting on the loan would be an exceptional circumstance. Consequently, this right did not give A power over B, and therefore, A did not control B. A concluded that the voting rights, which are held by the equity investors, give the equity investors power over B.

B later defaults on the loan and files for bankruptcy, giving A the right to direct B to sell certain assets to repay the loan to A. Upon B filing for bankruptcy, A would need to evaluate whether having this right, which was previously protective, gives A power.

Before concluding which investors, if any, control B once it files for bankruptcy, consideration would also be given to what rights the equity investors have, if any, to direct the relevant activities of B, and also to whether A and the equity investors have exposure to variable returns from B.

Illustration 9-6: Troubled debt restructuring

Consider the same facts as Illustration 9-5 above, except that A and B agree to restructure the loan, rather than B filing for bankruptcy. During the restructuring, A determines which assets will be sold to repay the loan, with management and the equity investors agreeing to this plan. In addition, management agreed to an incentive scheme under which payments are based on asset sale and loan repayment targets.

Upon restructuring the loan, A would need to evaluate whether determining which assets are sold to repay the loan gives A power. This might be the case if voting rights do not give power over B, because management is required to comply with the asset sale plan mandated by A.

Before concluding which investors, if any, control B, consideration is also given to what rights the equity investors have, if any, to direct the relevant activities of B, and also to whether A and the equity investors have exposure to variable returns from B.

In some jurisdictions, it is possible that a trustee or court administrator may have power (and possibly control) over an investee that files for bankruptcy. In such situations, consideration needs to be given not only to whether the trustee has power, but also whether it has an exposure to variable returns from the investee, and if so, whether it has the ability to use that power to affect its exposure to variable returns. In many cases, a trustee or court administrator might have power, but this power is held as an agent (see section 6 above). However, a determination will need to be made as to whether the trustee or court administrator is an agent for a specific lender, or for the creditors as a group. This will depend on individual facts and circumstances for the jurisdiction.

The following facts and circumstances are examples of those that are considered in assessing whether the parent still controls the investee, and which may indicate a loss of control:

- Management's decisions regarding the daily financial and operating policies are directed for the benefit of the creditors, or management is restricted from making any significant financial decisions without the approval of the bankruptcy court, trustee or administrator.
- The pre-bankruptcy shareholders' voting interests are expected to be diluted (thereby resulting in the parent ultimately losing control) upon exiting from bankruptcy.
- While the existing management may remain in place during the bankruptcy proceedings, management must now seek approval from the relevant bankruptcy court, trustee or committee of creditors to make any significant decisions.
- The parent is frequently not among the largest creditors, and therefore excluded from the committee.
- The parent's retained ownership interest is likely to be significantly diluted or even deemed worthless upon commencement of the filing.

The items above are not individually determinative; that is, all facts and circumstances must be carefully considered.

In the situations in Illustration 9-5 and Illustration 9-6 above, it might be determined that the lender obtained control over the investee. In this case, judgement will also be needed to determine the date at which the lender obtained control over the investee. Is it the date that the investee filed for bankruptcy or restructured the debt? Or, did the lender obtain control over the investee before the actual filing, or restructuring, when it became evident that the investee would likely have to file for bankruptcy or restructure the debt?

9.3 Control reassessment as a result of action by others

An investor may gain or lose power over an investee as a result of action by others (i.e., without direct involvement in the change in circumstances). For example, an investor can gain power over an investee because decision-making rights held by another party or parties that previously prevented the investor from controlling an investee have elapsed. [IFRS 10.B82].

Alternatively, actions of others, such as a government, could cause an investor to lose the ability to make key operational decisions and therefore direct the relevant activities of the investee. However, IFRS 10 does not include any consolidation exception when the functional currency of an investee is subject to a long-term lack of exchangeability. As explained in the Basis for Conclusions, the Board decided to remove from the previous version the exclusion of a subsidiary from consolidation when there are severe long-term restrictions that impair a subsidiary's ability to transfer funds to the parent. It did so because such circumstances may not preclude control. The Board decided that a parent, when assessing its ability to control a subsidiary, considers restrictions on the transfer of funds from the subsidiary to the parent. In themselves, such restrictions do not preclude control. [IFRS 10.BC221].

Another example is when other investors acquire rights from other parties. In such cases, it might be more difficult to determine whether an event has happened that causes an investor to reassess control, because the information might not be publicly available. Consider the situation in Illustration 9-7 below.

Illustration 9-7: Control reassessment without being involved

A holds 48% of the voting rights of B, with the remaining 52% being widely dispersed. In its initial assessment, A concludes that the absolute size of its holding, relative to the other shareholdings, gives it power over B.

Over time, some of the shareholders begin to consolidate their interests, such that eventually, the 52% is held by a much smaller group of shareholders. Depending on the regulatory environment, and rights held by A regarding the right to receive information when shareholders acquire other interests in B, it is possible, although perhaps unlikely, that A would not be aware of this occurrence. Nonetheless, it seems that IFRS 10 would require A to re-evaluate whether it has control over B, because the other shareholders are no longer widely dispersed, and thus A may not have the current ability to direct the relevant activities of B.

While the situation in Illustration 9-7 above might be uncommon, management considers what systems and processes are needed to monitor external events for changes that could trigger reassessment. Without knowledge of such events, and a process for gathering this information, it may be difficult to determine the date when the other voters became sufficiently concentrated to conclude that the investor no longer has control. The same might apply where an investor has determined that it does not have control due to there being a relatively small number of other shareholders, but the other voters become sufficiently dispersed or disorganised such that the investor now has control. Depending on the facts and circumstances, there could be a lag in the period between when the facts and circumstances actually change, and when management is able to conclude that the investor has control.

10 Investment entities

IFRS 10 has an exception for investment entities which entails investment entities to account for their investments at fair value instead of consolidating them. This exception is intended to address what many in the asset management and private equity industries, and users of their financial statements, believe is a significant issue with the consolidation requirements in IFRS 10.

10.1 Definition of an investment entity

IFRS 10 requires that a parent must determine whether it is an investment entity. [IFRS 10.27].

Extract from IFRS 10

- 27** A parent shall determine whether it is an investment entity. An investment entity is an entity that:
- (a) obtains funds from one or more investors for the purpose of providing those investor(s) with investment management services;
 - (b) commits to its investor(s) that its business purpose is to invest funds solely for returns from capital appreciation, investment income, or both; and
 - (c) measures and evaluates the performance of substantially all of its investments on a fair value basis.
- Paragraphs B85A-B85M provide related application guidance.

An entity considers all facts and circumstances when assessing whether it is an investment entity, including its purpose and design. An entity that possesses all of the three elements (a) to (c) above is an investment entity. [IFRS 10.B85A].

In addition, when considering the investment entity definition, an entity considers whether it has the following typical characteristics:

- It has more than one investment
 - It has more than one investor
 - It has investors that are not related parties of the entity
- And
- It has ownership interests in the form of equity or similar interests [IFRS 10.28]

The absence of any of these typical characteristics does not necessarily disqualify an entity from being classified as an investment entity. However, it indicates that additional judgement is required in determining whether the entity is an investment entity and therefore, where any of these characteristics are absent, disclosure is required by IFRS 12 of the reasons for the entity concluding that it is nonetheless, an investment entity. [IFRS 10.28, IFRS 10.B85N, IFRS 12.9A].

In November 2016, the IFRS IC discussed a number of questions regarding the investment entity requirements in IFRS 10, including whether an entity qualifies as an investment entity if it does not have one or more of the typical characteristics of an investment entity listed in IFRS 10.28. In its March 2017 agenda decision not to add this question to its standard-setting agenda, the Committee concluded that an entity that possesses all three elements of the definition of an investment entity in IFRS 10.27 is an investment entity, even if that entity does not have one or more of the typical characteristics of an investment entity listed in IFRS 10.28.⁹

If facts and circumstances indicate that there are changes to one or more of the three elements (a) to (c) above, that make up the definition of an investment entity, or changes to the typical characteristics of an investment entity, a parent reassesses whether it is an investment entity. [IFRS 10.29].

A parent that either ceases to be an investment entity or becomes an investment entity accounts for the change in its status prospectively from the date at which the change in status occurred. [IFRS 10.30].

⁹ [IFRIC Update](#), March 2017, pp.7-8, available on the IFRS Foundation's website.

10.2 Determining whether an entity is an investment entity

The first part of the definition of an investment entity in IFRS 10.27 is the requirement that an investment entity provide investors with investment management services. IFRS 10 does not specify how the investment entity must provide these services. In March 2017 (see section 10.1 above), the IFRS IC noted that IFRS 10 does not preclude an investment entity from outsourcing the performance of these services to a third party and therefore concluded that an investment entity responsible for providing investment management services to its investors can engage another party to perform some or all of the services on its behalf.¹⁰

Application guidance is provided in respect of the definition (b) in section 10.1 above, as follows:

- Business purpose (see section 10.2.1 below)
- Exit strategies (see section 10.2.2 below)
- Earnings from investments (see section 10.2.3 below)

Application guidance is provided in respect of definition (c) in section 10.1 above, as follows:

- Fair value measurement (see section 10.2.4 below)

Application guidance is provided in respect of the four typical characteristics described in section 10.1 above, as follows:

- More than one investment (see section 10.2.5 below)
- More than one investor (see section 10.2.6 below)
- Unrelated investors (see section 10.2.7 below)
- Ownership interests (see section 10.2.8 below)

10.2.1 Business purpose

The definition of an investment entity requires that the purpose of the entity is to invest solely for capital appreciation, investment income (such as dividends, interest or rental income), or both. [IFRS 10.B85B].

Documents that include a discussion of an entity's investment objectives, such as offering memoranda, publications distributed by the entity and other corporate or partnership documents, typically provide evidence of an entity's business purpose. Further evidence may include the manner in which an entity presents itself to other parties (such as potential investors or potential investees). [IFRS 10.B85B].

However, an entity that presents itself as an investor whose objective is to jointly develop, produce or market products with its investees, has a business purpose that is inconsistent with the business purpose of an investment entity. This is because the entity will earn returns from the development, production and marketing activity as well as from its investments. [IFRS 10.B85B].

10.2.1.A Entities that provide investment-related services

An investment entity may provide investment-related services (e.g., investment advisory services, investment management, investment support and administrative services), either directly or through a subsidiary, to third parties as well as its investors and not lose its investment entity status. This applies even if those activities are substantial to the entity, subject to the entity continuing to meet the definition of an investment entity. [IFRS 10.B85C]. In March 2017, the IFRS IC confirmed that an investment entity may provide investment-related services to third parties, either directly or through a subsidiary, as long as those services are ancillary to its core investment activities and thus do not change the business purpose of the investment entity (see section 10.1 above).¹¹

Extract from IFRS 10

- B85D** An investment entity may also participate in the following investment-related activities, either directly or through a subsidiary, if these activities are undertaken to maximise the investment return (capital appreciation or investment income) from its investees and do not represent a separate substantial business activity or a separate substantial source of income to the investment entity:
- (a) providing management services and strategic advice to an investee; and
 - (b) providing financial support to an investee, such as a loan, capital commitment or guarantee.

¹⁰ [IFRIC Update](#), March 2017, pp.7-8, available on the IFRS Foundation's website.

¹¹ [IFRIC Update](#), March 2017, pp.7-8, available on the IFRS Foundation's website.

The rationale for these provisions is that investment-related services to third parties are simply an extension of the investment entity's investing activities and do not prohibit an entity from qualifying as an investment entity. [IFRS 10.B85D, IFRS 10.BC239].

An investment entity must consolidate a subsidiary that is itself not an investment entity and whose main purpose and activities are providing services that relate to the investment entity's investment activities. [IFRS 10.32]. If the subsidiary that provides the investment-related services or activities is itself an investment entity, the investment entity parent must measure that subsidiary at fair value through profit or loss. [IFRS 10.B85E].

This means that only those entities that are not investment entities that provide investment related services are consolidated. See section 10.3 below for further discussion of the accounting consequences resulting from this requirement.

The requirement to consolidate particular subsidiaries of an investment entity is intended to be a limited exception, capturing only operating subsidiaries that support the investment entity's investing activities as an extension of the operations of the investment entity parent. [IFRS 10.BC240E]. When an entity assesses whether it qualifies as an investment entity, it considers whether providing services to third parties is ancillary to its core investing services. However, the definition of an investment entity requires that the purpose of the entity is to invest solely for capital appreciation, investment income or both (see section 10.1 above). Consequently, an entity whose main purpose is to provide investment-related services in exchange for consideration from third parties has a business purpose that is different from the business purpose of an investment entity. This is because the entity's main activity is earning fee income in exchange for its services in contrast to an investment entity whose fee income will be derived from its core activities, which are designed for earning capital appreciation, investment income or both. [IFRS 10.BC240F].

If the subsidiary is not an investment entity, the investment entity parent must assess whether the main activities undertaken by the subsidiary support the core investment activities of the parent. If so, the subsidiary's activities are considered to be an extension of the parent's core investing activities and the subsidiary must be consolidated. These support services provided to the parent and other members of the group could include administration, treasury, payroll and accounting services. [IFRS 10.BC240H].

In November 2016, the IFRS IC received a question as to whether a subsidiary provides services that relate to its parent investment entity's investment activities by holding an investment portfolio as beneficial owner. In its agenda decision in March 2017, the Committee concluded that an investment entity does not consider the holding of investments by a subsidiary as beneficial owner (and recognised in the subsidiary's financial statements) to be a service that relates to the parent investment entity's investment activities (see section 10.1 above), and observed that it had previously discussed a similar question in March 2014 (see section 10.2.1.B below).¹²

The requirement that an investment entity measures at fair value through profit or loss all of its subsidiaries that are themselves investment entities is consistent with the decision not to distinguish between investment entity subsidiaries established for different reasons. [IFRS 10.BC240B]. See section 10.2.1.B below.

10.2.1.B Entities that are intermediate holding companies established for tax optimisation purposes

Some investment entities establish wholly owned intermediate subsidiaries in some jurisdictions which own all or part of the portfolio of investments in the group structure. The sole purpose of the intermediate subsidiaries is to minimise the tax paid in the 'parent' investment entity. There is no activity within the subsidiaries and the tax advantage arises from returns being channelled through the jurisdiction of the intermediate subsidiary. In March 2014, the IFRS IC discussed a request to clarify whether the 'tax optimisation' described above is considered investment-related services or activities. The IFRS IC noted that the IASB believes that fair value measurement of all of an investment entity's subsidiaries provide the most useful information, except for subsidiaries providing investment-related services or activities and that the IASB had decided against requiring an investment entity to consolidate investment entity subsidiaries that are formed for tax purposes. The IFRS IC further noted that one of the characteristics of the 'tax optimisation' subsidiaries described is 'that there is no activity within the subsidiary'. Accordingly, the IFRS IC concluded that the parent does not consolidate such subsidiaries and accounts for such intermediate subsidiaries at fair value because they do not provide investment-related services or activities and therefore do not meet the requirements for consolidation.¹³

¹² [IFRIC Update](#), March 2017, pp.7-8, available on the IFRS Foundation's website.

¹³ [IFRIC Update](#), March 2014, p.4, available on the IFRS Foundation's website.

10.2.2 Exit strategies

IFRS 10 notes “One feature that differentiates an investment entity from other entities is that an investment entity does not plan to hold its investments indefinitely; it holds them for a limited period”. [IFRS 10.B85F].

For investments that have the potential to be held indefinitely (typically equity investments and non-financial asset investments), the investment entity must have a documented exit strategy. This documented exit strategy must state how the entity plans to realise capital appreciation from substantially all of these potentially indefinite life investments. An investment entity must also have an exit strategy for any debt instruments that have the potential to be held indefinitely (e.g., perpetual debt instruments). [IFRS 10.B85F].

The investment entity need not document specific exit strategies for each individual investment but must identify different potential strategies for different types or portfolios of investments, including a substantive time frame for exiting the investments. Exit mechanisms that are only put in place for default events, such as breach of contract or non-performance, are not considered exit strategies. [IFRS 10.B85F].

Exit strategies can vary by type of investment. Examples of such strategies for investments in equity securities include an initial public offering, selling the investment in a public market, a private placement, a trade sale of a business, distributions (to investors) of ownership interests in investees and sales of assets (including the sale of an investee’s assets followed by a liquidation of an investee). For real estate investments, an example of an exit strategy includes the sale of the real estate through specialised property dealers or the open market. [IFRS 10.B85G].

An investment entity may have an investment in another investment entity that is formed in connection with the entity for legal, regulatory, tax or similar business reasons. In this case, the investment entity investor need not have an exit strategy for that investment, provided that the investment entity investee has appropriate exit strategies for its investments. [IFRS 10.B85H]. This is intended to prevent an entity that conducts most of its investing activities through a subsidiary that is a holding company from failing to qualify as an investment entity. [IFRS 10.BC248].

10.2.3 Earnings from investments

An investment entity must commit to its investors that its business purpose is to invest funds solely for returns from capital appreciation, investment income or both.

An entity does not meet this condition when it, or another member of the group containing the entity (i.e., the group that is controlled by the entity’s ultimate parent) obtains, or has the objective of obtaining, other benefits from the entity’s investments that are not available to other parties that are not related to the investee. ‘Other benefits’ means benefits in addition to capital appreciation or investment return and such benefits include:

- The acquisition, use, exchange or exploitation of the processes, assets or technology of an investee including the entity or another group member having disproportionate, or exclusive, rights to acquire assets, technology, products or services of any investee; for example, by holding an option to purchase an asset from an investee if the asset’s development is deemed successful
- Joint arrangements or other agreements between the entity or another group member and an investee to develop, produce, market or provide products or services
- Financial guarantees or assets provided by an investee to serve as collateral for borrowing arrangements of the entity or another group member (however, an investment entity would still be able to use an investment in an investee as collateral for any of its borrowings)
- An option held by a related party of the entity to purchase from that entity or another group member, an ownership interest in an investee of the entity
- Except as described below, transactions between the entity or another group member and an investee that:
 - Are on terms that are unavailable to entities that are not related parties of either the entity, another group member or the investee
 - Are not at fair value
 - Or
 - Represent a substantial portion of the investee’s or the entity’s business activity, including business activities of other group entities [IFRS 10.B85I]

These requirements in respect of 'other benefits' are anti-avoidance provisions. As explained in the Basis for Conclusions, the Board was concerned that an entity that meets the definition of an investment entity could be inserted into a larger corporate group in order to achieve a particular accounting outcome. This concern is illustrated by an example of a parent entity using an 'internal' investment entity subsidiary to invest in subsidiaries that may be making losses (e.g., research and development activities on behalf of the overall group) and therefore record its investments at fair value, rather than reflecting the underlying activities of the investee. Because of these concerns, the Board included the requirement that the investment entity, or other members of the group containing the entity, should not obtain benefits from its investees that are unavailable to other parties that are not related to the investee. [IFRS 10.BC242].

It is also clarified that an entity should demonstrate that fair value is the primary measurement attribute used to evaluate the performance of its investments, both internally and externally. [IFRS 10.BC252].

An entity is not disqualified from being classified as an investment entity because it has investees in the same industry, market or geographical area that trade with each other. This applies where the investment entity has a strategy to invest in more than one investee in that industry, market or geographical area in order to benefit from synergies that increase the capital appreciation and investment income from those investees. [IFRS 10.B85J]. The Board decided that trading transactions or synergies that arise between the investments of an investment entity should not be prohibited because their existence does not necessarily mean that the investment entity is receiving any returns beyond solely capital appreciation, investment return, or both. [IFRS 10.BC243].

10.2.4 Fair value measurement

In order to qualify as an investment entity, a reporting entity must measure and evaluate the performance of substantially all of its investments on a fair value basis. This is because using fair value results in more relevant information than, for example, consolidation for subsidiaries or the use of the equity method for interests in associates or joint ventures. In order to demonstrate fair value measurement, an investment entity must:

- (a) Provide investors with fair value information and measure substantially all of its investments at fair value in its financial statements whenever fair value is permitted in accordance with IFRS accounting standards
- And
- (b) Report fair value information to the entity's key management personnel who use fair value as the primary measurement attribute to evaluate the performance of substantially all of its investments and to make investment decisions [IFRS 10.B85K]

In order to meet the requirements in (a) above, an investment entity:

- Elects to account for any investment property using the fair value model in IAS 40 *Investment Property*
- Elects the exemption from applying the equity method in IAS 28 for its investments in associates and joint ventures
- And
- Measures its financial assets at fair value using the requirements in IFRS 9 [IFRS 10.B85L]

As described in the Basis for Conclusions, investments measured at fair value in the statement of financial position with fair value changes recognised in other comprehensive income rather than through profit or loss still satisfy the fair value measurement condition of the definition of an investment entity. [IFRS 10.BC251]. However, an investment entity does not account for more than an insignificant amount of financial assets at amortised cost under IFRS 9, nor fail to elect the fair value measurement options in IAS 28 or IAS 40. [IFRS 10.BC250].

Fair value measurement applies only to an investment entity's investments. There is no requirement to measure non-investment assets such as property, plant and equipment or liabilities such as financial liabilities at fair value. [IFRS 10.B85M].

10.2.5 Holding more than one investment

Extract from IFRS 10

B850 An investment entity typically holds several investments to diversify its risk and maximise its returns. An entity may hold a portfolio of investments directly or indirectly, for example by holding a single investment in another investment entity that itself holds several investments.

[IFRS 10.B85O].

Holding a single investment does not necessarily prevent an entity from meeting the definition of an investment entity. Examples where an investment entity may hold only a single investment are when the entity:

- Is in its start-up period and has not yet identified suitable investments and, therefore, has not yet executed its investment plan to acquire several investments
- Has not yet made other investments to replace those it has disposed of
- Is established to pool investors' funds to invest in a single investment when that investment is unobtainable by individual investors (e.g., when the required minimum investment is too high for an individual investor)
- Is in the process of liquidation [IFRS 10.B85P]

As holding only one investment is not a typical characteristic of an investment entity, this requires disclosure as a significant judgement (see section 10.1 above).

10.2.6 Having more than one investor

An investment entity typically has several investors who pool their funds to gain access to investment management services and investment opportunities they might not have had access to individually. In the Board's opinion, having more than one investor makes it less likely that the entity, or other members of the group containing the entity, would obtain benefits other than capital appreciation or investment income (see section 10.2.3 above). [IFRS 10.B85Q].

Although the Board considers that an investment entity typically has more than one investor, there is no conceptual reason why an investment fund with a single investor should be disqualified from being an investment entity. Therefore, the presence of more than one investor is a typical characteristic of an investment entity rather than as part of the definition of an investment entity. [IFRS 10.BC260].

An investment entity may be formed by, or for, a single investor that represents or supports the interests of a wider group of investors such as a pension fund, a government investment fund or a family trust. [IFRS 10.B85R].

The Board acknowledges that there may be times when the entity temporarily has a single investor. For example, an investment entity may have a single investor when it:

- Is within its initial offering period and the entity is actively identifying suitable investors
 - Has not yet identified suitable investors to replace ownership interests that have been redeemed
- Or
- Is in the process of liquidation [IFRS 10.B85S]

These examples are not stated to be exhaustive and there could be other reasons why an investment entity might have only one investor. Having only one investor is not a typical characteristic of an investment entity. The fact that an entity is considered to be an investment entity despite having only one investor is a significant judgement requiring disclosure (see section 10.1 above).

10.2.7 Unrelated investors

An investment entity typically has several investors that are not related parties of the entity or other members of the group containing the entity. The existence of unrelated investors makes it less likely that the entity, or other members of the group containing the entity, would obtain benefits other than capital appreciation or investment income (see section 10.2.3 above). [IFRS 10.B85T].

As the definition of a related party includes an entity which has significant influence over a reporting entity, when read literally this means that, typically, an entity that is significantly influenced by one or more parties by, for example, having investors with a greater than 20% ownership interest (see Chapter 11), cannot be an investment entity.

However, an entity may still qualify as an investment entity even though its investors are related to the entity. To support this, an example is illustrated in which an investment entity sets up a separate 'parallel' fund for a group of its employees (such as key management personnel) or other related party investors, which mirrors the investment of the entity's main investment fund. It is stated that this 'parallel' fund may qualify as an investment entity even though all of its investors are related parties. [IFRS 10.B85U]. In this example, the key determinant in concluding that the parallel fund is an investment entity is that it is being managed for capital appreciation or investment income.

Although IFRS 10 provides only one example of a fund which qualifies as an investment entity with investors that are related parties, it is explained in the Basis for Conclusions that respondents to the Investment Entities ED provided "...examples of entities with related investors that they believed should qualify as investment entities." [IFRS 10.BC261].

10.2.8 Ownership interests

An investment entity is typically, but is not required to be, a separate legal entity. Ownership interests in an investment entity will usually be in the form of equity or similar interests (e.g., partnership interests), to which proportionate shares of the net assets of the investment entity are attributed. However, having different classes of investors, some of which have rights only to a specific investment or groups of investments or which have different proportionate shares of the net assets, does not preclude an entity from being an investment entity. [IFRS 10.B85V].

It is rationalised in the Basis for Conclusions that holding a proportionate share of the net assets of an investment entity explains in part why fair value is more relevant to investors of an investment entity because the value of each ownership interest is linked directly to the fair value of the entity's investments. [IFRS 10.BC263]. However, whether there is this form of ownership interest in an entity is not a deciding factor and would inappropriately exclude certain structures from investment entity status. One example illustrated by the Basis for Conclusions of entities that do not have units of ownership interest in the form of equity or similar interests is a pension fund or sovereign wealth fund with a single direct investor which may have beneficiaries that are entitled to the net assets of the investment fund, but do not have ownership units. Another example is funds with different share classes or funds in which investors have discretion to invest in individual assets. [IFRS 10.BC264, IFRS 10.BC266]. In both of these examples, the investors are entitled to a proportionate share of at least part of the assets of the fund although not the entire fund.

An entity that has significant ownership interests in the form of debt that does not meet the definition of equity may still qualify as an investment entity, provided that the debt holders are exposed to variable returns from changes in the fair value of the entity's net assets. [IFRS 10.B85W].

10.2.9 Investment entity illustrative examples

The following Illustrations show the application of the investment entity criteria and are based on illustrative examples contained in IFRS 10.

Illustration 10-1: A limited partnership that is an investment entity

An entity, Limited Partnership (LP), is formed in 20X3 with a 10-year life. The offering memorandum states that LP's purpose is to invest in entities with rapid growth potential, with the objective of realising capital appreciation over their life. Entity GP (the general partner of LP) provides 1% of the capital to LP and has responsibility for identifying suitable investments for the partnership. Approximately 75 limited partners, who are unrelated to Entity GP, provide 99% of the capital to the partnership. LP begins its investment activities in 20X3 but no investments are identified until 20X4 when LP acquires a controlling interest in ABC Corp.

The group structure at 31 December 20X4 is illustrated as follows:

In 20X4, LP acquires equity interests in five additional operating companies. Other than acquiring those equity interests, LP conducts no other activities. LP measures and evaluates its investments on a fair value basis and this information is provided to Entity GP and the external investors.

LP plans to dispose of its interests in each of its investees during the 10-year stated life of the partnership. Such disposals include the outright sale for cash, the distribution of marketable equity securities to investors following the successful public offering of the investees' securities and the disposal of investments to the public or other unrelated entities.

In this example, LP meets the definition of an investment entity from formation in 20X3 to 31 December 20X4 because:

- LP has obtained funds from limited partners and is providing them with investment management services.
- LP's only activity is acquiring equity interests in operating companies with the purpose of realising capital appreciation over the life of the investments. LP has identified and documented exit strategies for its investments, all of which are equity investments.
- LP measures and evaluates its investments on a fair value basis and reports this financial information to its investors.

In addition, LP displays the following typical characteristics of an investment entity:

- LP is funded by many investors.
- Its limited partners are unrelated to LP.
- Ownership in LP is represented by units of partnership interests acquired through a capital contribution.

LP does not hold more than one investment throughout the period. However, this is because it was still in its start-up period and had not identified suitable investment opportunities. [IFRS 10.IE1-IE6].

Illustration 10-2: Start-up high technology fund that is not an investment entity

An entity, High Technology Fund, is formed by Technology Corp. to invest in start-up technology companies for capital appreciation. Technology Corp. holds a 70% interest in High Technology Fund and controls it; the other 30% ownership interest is held by 10 unrelated investors. Technology Corp. holds options to acquire investments held by High Technology Fund, at their fair value, which would be exercised if the technology developed by the investees would benefit the operations of Technology Corp.

The group structure is illustrated below:

High Technology Fund has no plans for exiting the investments. High Technology Fund is managed by an investment advisor that acts as agent for the investors in High Technology Fund.

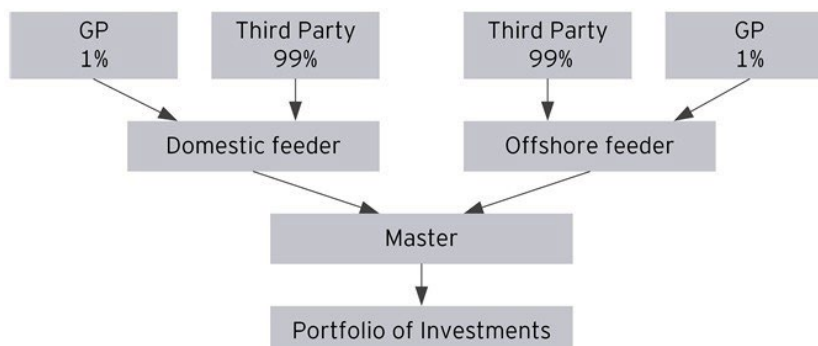

In this Illustration, although High Technology Fund's business purpose is investing for capital appreciation and it provides investment management services to its investors, High Technology Fund is not an investment entity because:

- Technology Corp., the parent of High Technology Fund, holds options to acquire investments in investees held by High Technology Fund if assets developed by the investees would benefit the operations of Technology Corp. This provides a benefit in addition to capital appreciation and investment income.
- The investment plans of High Technology Fund do not include exit strategies for its investments, which are equity instruments. The options held by Technology Corp. are not controlled by High Technology Fund and do not constitute an exit strategy. [IFRS 10.IE7, IFRS 10.IE8].

Illustration 10-3: Master and feeder funds that are investment entities

An entity, Master Fund, is formed in 20X4 with a 10-year life. The equity of Master Fund is held by two related feeder funds. The feeder funds are established in connection with each other to meet legal, regulatory, tax or similar requirements. The feeder funds are capitalised with a 1% investment from the general partner and 99% from equity investors that are unrelated to the general partner (with no party holding a controlling financial interest).

The group structure is illustrated below:

The purpose of Master Fund is to hold a portfolio of investments in order to generate capital appreciation and investment income (such as dividends, interest or rental income). The investment objective communicated to investors is that the sole purpose of the master-feeder structure is to provide investment opportunities for investors in separate market niches to invest in a large pool of assets. Master Fund has identified and documented exit strategies for the equity and non-financial investments that it holds. Master Fund also holds a portfolio of short and medium-term debt instruments, some of which will be held until maturity and some of which will be traded but Master Fund has not specifically identified which investments will be held and which will be traded. Master Fund measures and evaluates substantially all of its investments, including its debt investments, on a fair value basis. In addition, investors receive periodic financial information, on a fair value basis, from the feeder funds. Ownership in both Master Fund and the feeder funds is represented through units of equity.

In this example, Master Fund and the two feeder funds all meet the definition of an investment entity because:

- Both Master Fund and the two feeder funds have obtained funds for the purpose of providing investors with investment management services.
- The business purpose of the master-feeder structure, which was communicated directly to investors of the feeder funds, is investing solely for capital appreciation and investment income and Master Fund has identified and documented potential exit strategies for its equity and non-equity financial instruments.
- Although the feeder funds do not have an exit strategy for their interests in Master Fund, the feeder funds can nevertheless be considered to have an exit strategy for their investments because Master Fund was formed in connection with the feeder funds and holds investments on behalf of the feeder funds.
